Briefly, it may be said then that the Indian's primary view of disease (excluding surgical injuries) is that it is caused by a bad spirit or evil god, his secondary idea of it being derived from actual empirical observation. And, acting upon these two theories, he applies as best he can the means at his disposal. To meet the necessities of the first he hires his shaman or medicine man, for the second he uses such simples as he has been taught by experience will be of benefit. The Indian is a tolerably fair anatomist and a moderately good surgeon, he seems to understand the relation of certain muscles to the bones, and in his treatment of fractures he often puts to shame his white brother. He knows that in delayed parturition, in some cases prolonged epulsine efforts are necessary; and he has certain methods of bringing about this result which, if not quite as elegant as those taught by the schools and approved by Lucina, are equally effective. This is the result of reasoning pure and simple, and I think we should be unjust did we fail to ascribe to him more reasoning powers and reflections in this regard than whites have usually credited him with. That he believes more than his original theory of the demoniac origin of disease, cannot be doubted, for when he finds that the prayers and incantations of his medicine man fail to relieve his suffering, how sagely in many instances do we find him applying to his white brother for relief.

It will be noticed that throughout this entire narrative, although the medicine men perform certain rites to dislodge the evil spirits, at the same time from the decoctions given, we must infer that they recognized the existence of fever and sought to reduce this by means of diuretics, diaphoretics and sweating, this certainly indicates something more than a mere belief in exorcism by noise and prayers. Crude as the observations may be I have brought them before the society hoping that in the discussion which may follow we shall be able to obtain an interchange of opinion which will be of value to all of us who are interested in Indian medicine.

I should state that the greater part of the information regarding the Navajo method of curing ague has been furnished me by my friend Mr. A. M. Stephen, of Keam's Cañon, Ariz., well known as a conscientious and careful observer of Indian myths and customs. With this slight introduction I may be permitted to read the notes sent me by Mr. Stephen:

KEAM'S CAÑON, Ariz., Sept. 16, 1886.

MY DEAR DOCTOR— * * * You may remember having met here a Navajo friend of ours, one of their silversmiths, whom we familiarly call "John the Jeweller." He went over to the Kohonimo Cañon and stayed there four days. The day after leaving the cañon he was taken with ague, and every day for twenty subsequent days he had a chill followed by fever and delirium. The strangeness of the disease had an extraordinary depressing effect on him, and during these twenty days he was in a state of utter collapse. He is a medicine man, a minor priest of considerable repute, and numbers of his friends came to see him. But none of them knew aught about, or had ever seen such a disease. The priests and the patient were inclined to attribute it to "a bad smell" emanating from the Kohonimos; but as there was also a band of wandering Pah-Utes there during the time of the patient's visit, they are still uncertain. Possibly the "bad smell" may have originated with the Pah-Utes. The friends concluded in this emergency to call in the best mediciners of the region. The sequence of the different mediciners in this case may be taken as typical in similar cases, that is, where the patient is suffering from some uncommon or unknown disease, or one considered specially dangerous.

It is to be understood that each of these mediciners is also a priest, in the sense of being a recognized medium of communication between men and the gods, by virtue of the rites and song-prayers pertaining to the priesthood or fraternity. Each priesthood or fraternity has its own exclusive beliefs, rites, fetiches and song-prayers. Each

priest, or commonly two associates of the same fraternity, while they are practicing upon a patient, cannot be assisted in their own particular rites by a priest of a different fraternity. But in the chorus of song-prayers and in the dances, in preparing fetiches and sand-picture altars, and in the erection of singing-house and sweat-houses, it is expected that all male visitors will give willing assistance. These ceremonies are always liable to interruption—numerous classes of accidents arising either from chance or design; or the happening of some bad omen may cause an abrupt adandonment. But the fee of the mediciner is invariably settled upon before the treatment begins, and must be unconditionally paid, no matter at how early a stage an accident may have compelled the priest to desist. Nor is it reckoned whether, after the close of the treatment, the patient may be better or worse. In other words, payment of the mediciner's fee is considered a religious duty, because it is well understood that the gods never listen until a gift is proffered them. The exaction of the fee in these degenerate days is now, I fear, prompted by a more sordid motive. But there are still very evident traces among both Moki and Navajo that in earlier days the "medicine fee" was merely indicated by the gift of an emblem from patient to priest—a feather, a shell, a pinch of pollen, a whiff of smoke. A substantial fee is now usually produced and appraised before any of the ceremonies are entered upon.

The following memoranda must be taken as but a brief summary of the ceremonies. I aim in this to give you but the gist of the *curatio*. I have ignored a multitude of minor rites, etc., which, although interesting as studies, would be tiresome to recapitulate in this instance.

The first priest to officiate was Oj-kái-yós-na (Osh-ki-yos-nah). *Theory*—The rites and song-prayers of this priest are directed immediately to the Yè who dwells at the mouth of the pit through which all people came up to this world, and through which the spirits of the dead return to the lower worlds. This pit, Ne-chro-yose-cha-chee, is in the concave summit of that mountain in the north called Tjolĭ-i (Cho-le-he), described by Dr. Matthews in his "Part of the Navajo's Mythology," p. 6. Between the patient and the mouth of that pit, this priest makes a fire with certain woods, and beside this fire the priest sings prayers to the Yè who "sits on this side" the mouth of the pit. He beseeches the Yè not to call the patient to descend the ladder leading to the regions of the dead. He rubs the ashes and pulverized charcoal of his medicine fire all over the body of the patient—first having rubbed him with a mixture obtained by melting the fat of the bison, mountain sheep, elk, deer and a small portion of the fat of the domestic sheep. The patient is rubbed with this fatty mixture so that the coals and ashes of the medicine fire may adhere closely to the skin. The priest sings at the fire, and after having rubbed the patient with coal and ashes sings the same songs beside him. In other words this priest stands between the patient and death. His rites lasted two days and nights and his fee was one horse, say $50.

The next physician summoned was Kuma bi-ge (bi-geh). *Theory*—Good medicine smell—the inhalation of fumes from burning herbs. In the sick man's hut the mediciner makes a small medicine fire. A little, hollow mound of clay is made, and within the hollow three stones are set. On these are laid splinters of piñion and cedar which are then set afire. When they have burned to embers the priest shakes his rattle and sings to the Yès of his (the priest's) father. (See Kuma further on.) He then lays upon the embers five herbs. The patient is then laid naked upon the sand—close to the fire-place—and a blanket is spread over the fire-place and patient, who thus lies there inhaling the fumes of the herbs, while the mediciner sits beside him—outside the blanket, of course—shaking his rattle and continuing his song. The dry herbs were als bruised fine in the mediciner's hands, and after being mixed with water in a bowl were rubbed over the entire body of the patient. This treatment is performed at sunrise and sunset, and should last four days, with songs and dances and other ceremonies at night. But in this instance at the close of the second day an embarrassing circumstance occurred—the patient's wife was taken ill. This at once put a stop to all further treatment by this priest. Fee, one horse, say $50.

After the wife got well Et-sĭdĭ bĭ-kĭs (be-ges) was summoned. *Theory*—Inherent virtue of the winds. The mediciner signs to the "Leader" of the four winds, viz.: White (east), Blue (south), Black (north), Yellow (west). Before the people emerged from the lower world, these winds were taken up the pit at Tjolĭ-i (Cho-le-he) by the "Leader" and their directions were assigned them by him. He caused them to blow upon the muddy surface which was still new and damp until the world became dry enough for habitation. The winds expelled the evil influence of the bad Yès and the new world became beautiful. So it is to this "Leader" that Et-sĭdĭ bĭ-kĭs sings, asking him to bring all these winds together and expel the evil influence that threatens the patient. The ceremonies last four days and nights and consist of song-prayers, the exhibition of fetiches, shaking the rattle, blowing the whistle and swinging the Tsĭn-bo-os-ni. This is the same performance as swinging the Thunder Baho with the Mokis. Fee, a large horse, or say $60.

The next one called was Hostin bĭ-kân. *Theory*—Administering the herb roots, both raw and infusions. These are of the same number—five—as those used in the medicine fire, but they are entirely different plants. The raw root of the *Datura meteloides* was given the patient at sunrise, noon and sunset. Each dose was something less than half an ounce of the recently dug root. This was chewed and swallowed. Closely following each of these doses he was given a piece of the stalk of golden alexander, about six inches long and as thick as the thumb. This he chewed, swallowing the saliva, but not the fibre. Between the songs during the day and night, infusions were given the patient to drink in quantities never to exceed a half a pint at once. These were separate infusions from the roots of herbs known to the Navajos as Azé Klo-hĭ (laughing medicine or medicine hay, *Arenaria aculeata*), Azé bĭ-ni (bad talk, dreaded medicine), To-jo-zhe-tso (Great Chief of all medicines). These three herbs were jealously guarded, thus I have had no opportunity to examine them. This old fellow's ceremonies lasted only a day and a night. His fee was one horse, say $50.

The last and most potent of the priestly mediciners called to complete the cycle of exorcism, was Kumà. Perhaps you may remember him. He is the chief of the gens to which the patient belongs, and lives about thirty miles southwest from here. *Theory*—Sweathouse decorated upon outside with rainbow in colored sands. Singing-house (built for this special occasion); sand pictures—altars—upon floor of the singing-house. Dances of the four, and of the twelve participants, etc. A series of elaborate ceremonies very similar to those which Dr. Matthews observed at Fort Defiance three years ago and which will be described in an elaborate report to the Bureau of Ethnology by Dr. Matthews and Mr. Stevenson. Kumá's prayers were directed to Hos-djch-hog-wan (the Killer) and Hos-dje- yeltĭ (the Talker) guardian deities of Tjolĭ-i (Chi-le-he). But all these prayers are more immediately addressed to the Yès who dwell in the "Half-White-House," asking their mediation, that the "Killer" might withhold his hand, that the "Talker" might withhold the word—of death. I am under the impression that the ceremonies Dr. Matthews observed were addressed to the Yès of the "Half-Red-House," but the motive is very similar.

Apropos of these Yès. I suppose you know there is a mythic region in the North. It extends from Nadir to Zenith and has no horizon. It is a land of vertical strata of various colored sandstone, each stratum reaching from the below to the above. At the junction of each stratification is the house of a Yé—half in one stratum, half in the other.

Kumá's ceremonies lasted five days and nights. Every morning at sunrise the patient was placed in the sweat-house for about twenty minutes—that is about ten minutes in each. Nothing of special significance was done during the day, but from sunset until dawn the maskers danced before the singing-house, the priests sang their prayers, made the prescribed sand pictures and placed the proper fetiches upon these pictures. For a fee Kumá received a fine horse and colt worth at least $100.

Aside from all these fees, sheep were killed to provide mutton, and other provisions were purchased to feed the priests and their associates, the dancers; and the numerous gathering of idlers and spectators that flocked around when any of these religious ceremonies are in progress. In these expenses, however, the patient is usually assisted by some of his relatives.

In these ceremonies, with the alternating days, three weeks went by—every day an attack of ague. At the end of that time the patient said he was "looking down the descending ladder." His friends then covered him up on a saddle and brought him here muffled up in a blanket—just like a bag of bones—and we had him dumped in the wool room. This was four days ago. We had no calomel, so we gave him a generous dose of blue mass—about 30 grains. The following morning we administered a liberal dose of castor oil, and then we gave him about 30 grains of quinine in four doses daily. Two days ago his ague left him and he is now almost well.

This morning he and his friends returned home, and just as he was leaving he told me he was feeling so well he thought by to-morrow he could resume the performance of duties, which in an Indian's mind stand for the acme of physical and mental vigor.

OLD-TIME NATURAL HISTORY.

Editor Forest and Stream:

While reading a quaint old volume, which was published nearly half a century since, I found quite a number of interesting items of the early natural history of Long Island. The title is as follows:

HISTORY OF LONG ISLAND;
CONTAINING
An Account
OF THE
DISCOVERY AND SETTLEMENT;
WITH OTHER
IMPORTANT AND INTERESTING MATTERS
TO THE
Present Time.

By BENJAMIN F. THOMPSON,
Counsellor-at-Law.

NEW YORK:
1839.

The work contains the usual preface, which is followed by a general description of Long Island, its geology, discovery and Indian tribes, and an account of the Dutch, English and Colonial governments. The bulk of the work, however, is devoted to the history of the counties and towns of Long Island. The early records, Mr. Thompson states, are all made in the Dutch language.

When writing of the discovery he quotes from a "History of New York," by Joseph W. Moulton, as follows: "When Hudson first arrived within the waters of Sandy Hook, he observed them swarming with fish, and sent his men to obtain a supply. It may well be that they landed upon Coney Island, in the town of Gravesend, which was the nearest land. Two hundred and twenty-nine years ago, being the 3d of September, 1609, the chivalric Hudson first saw the shores of this island. On the 4th, it is related, he sent his men on shore in a boat, who, according to the words of his journal, 'caught ten great mullet, a foot and a half long, and a ray as great as four men could haul into the ship.' Here, he says, they found the soil of white sand, and a vast number of plum trees loaded with fruit, and many of them covered with grapevines of different kinds. They saw, also, a great quantity of snipe and other birds." The natives were clothed, he says, "in the skins of elks, foxes and other animals."

"*Seawan* was the name of Indian money, of which there were two kinds: *wompan* (which signifies white) and *suckauhock* (*sucki* signifying black). Wompan, or the white money, was made of the stem or stock of the metauhock or periwinkle; suckauhock, or black money, was manufactured from the inside of the shell of the quahang, a round thick shellfish that buried itself but a little way in the sand and was generally found lying on it in deep water, and gathered by rakes or by diving after it. The *seawan* was manufactured most abundantly on Long Island which abounded in shells and was called, for this reason, Seawan-hacky, or the Island of Shells. The poquanhock or quahang and the periwinkle were extremely plenty."

In speaking of the Indians of Kings county he says: "They depended, in great measure, upon the flesh of the deer and other wild game, and the great abundance of fish, clams and oysters which were found on every shore and in every creek and harbor."

It is also stated "that when the English first commenced the settlement of Long Island the Indians annoyed them much by the multitude of dogs they kept, which ordinarily were young wolves brought up tame, and continuing of a very ravenous nature."

Part of the rental James, Duke of York, promised for himself, his heirs and assigns, was "Yearly, and every year, forty beaver skins."

Among the statutes passed March 1, 1665, by the deputies assembled at Hempstead was the following: "The value of an Indian coat, to be given to any one who shall bring the head of a wolf to any constable on Long Island, provided it be killed up the island." "On November 2, 1717, an act was passed for destroying foxes and wildcats upon Long Island, they having become both numerous and mischievous. The reward for killing a wildcat was nine shillings, and for a fox five shillings."

The careless use of firearms, it seems, is a hereditament which has descended to us from the earlier times. Mr. Thompson quotes from *Rivington's New York Gazette*, Jan. 16, 1774, as follows: "From Huntington, on Long Island, we are informed that last Christmas-day, Mr. Ebenezer Platt being hunting deer with some other young men near that village, they surrounded a swamp where the game were, and agreed with each other not to enter any part of it. Mr. Platt seeing a buck at some distance, rushed forward, and one of his companions, hearing a noise in the bushes, immediately fired and lodged five swan-shot in Mr. Platt, three of which entered his arm and two his body, which render his life despaired of."

The natives, when selling what is now known as the town of Easthampton, covenanted as follows: "Alsoe we, the sayd Sachems, have covenanted to have libertie ffor ourselves to ffish in any or all the cricks and ponds, and hunting upp and downe in the woods, without molestation; they giving to the English inhabytants noe just offence, or injurie to their goods and chattels. Alsoe, thoy are to have flynnes and tayles of all such whales as shall be cast upp, to their proper right, and desire they may be friendly dealt with in the other parte. Alsoe they reserve libertie to ffish in convenient places for shells to make wampum. Alsoe Indyns hunting any deare they should chase into the water, and the English should kill them, the English shall have the body and the Sachems the skin. And in testymony of our well performance hereof, we have set our hands, the day and yeare above written.

Signed,

In presence of Richard Woodhull, Thomas Stanton, Robert Bond, and Job Sayre.

POYGRATASUCK, ×
WAYANDANCH, ×
MOMOMETOU. ×
NOWEDONAH, ×

At a general court held in the same town, March 7, 1650, it was "Ordered that any man may set guns to kill wolves, provided they be not set within half a mile of the town, and also to take up the guns by sunrise; and further, that it shall not be lawful to sell any dog or bitch, young or old, to any Indian, upon penalty of thirty shillings."

From Fisher's Island, which is a part of the town of Southhold, "An attempt was made in the year 1712, to transport a pair of moose deer to England, as a present to Queen Anne, which failed by the death of one and the other breaking its leg; and Her Majesty was finally presented with the horns only."

The town of Brookhaven seems to have been an earthly paradise for sportsmen, and also to have possessed a poet to perpetuate some of its charms in verse:

"THE GROVES OF MASTIC.

Far in a sunny, cool retreat,
From folly and from noise remote,
I shun the scorching noonday heat,
Contented in my peaceful cot;
Thro' towns and glades I often stray,
Of turn somewhat monastic,
And spend the solitary day
Amongst the groves at Mastic.

Dame Nature, in a kinder mood,
When things were first created,
Decreed this spot near ocean's flood,
An Eden when completed;
Here all the luxuries of life,
She spreads with hand all plastic,
Beyond the reach of noise and strife,
Among the groves at Mastic.

When spring her annual visit pays,
Sol puts a brighter face on,
And Zephyr fills our creeks and bays,
With brant and geese in season;
Here, on Smith's Point, we take our stand,
When free from toils gymnastic,
Where Death and lead go hand in hand,
Among the fowl at Mastic.

Sometimes the tim'rous trout we wait
Along the streamlet's border,
With well-dissembled fly or bait,
And tackle in good order.
Or catch the huge enormous bass,
Be his course e'er so drastic,
While sitting on the verdant grass,
Close by the groves at Mastic.

The grouse, the pheasant and the quail,
In turn we take by changes,
Or hunt the buck with flippant tail,
As through the wood he ranges;
This strings our nerves! oh, pleasant toil,
We want no epispastic,
Nor doctor, with his castor oil,
Among the groves at Mastic."

The deer hounders of the present day are only following the bad example set them by the early hunters of the town of Islip, of whom it is related, "The extensive forests which border upon this pond (Ronkonkoma) are stocked with herds of deer, who, when hard pressed by the sportsman and his dogs, often, as a last resort, betake themselves to the water in the hope of escape; but this resource avails them not; boats are procured and the poor

terror-stricken animals are soon overtaken and destroyed."

In the town of Huntington, on Dec. 27, 1685, it was "ordered that the Indians have ten shillings for as many wolves as they kill within our bounds; that is, ten shillings a year, if they make it evident they were so killed." It is also stated that "At the first settlement of the town, wolves, wildcats, wild turkies, swans and pelicans were found in abundance, and wolves were so mischievous, that bounties were freely given for their destruction."

In the town of Hempstead in the year 1658, "six bushels of corn was allowed by the town for the killing of a wolf."

That stocking ponds with fish was carried on to some extent is evident from the following: "In 1790 my uncle, Uriah Mitchell, sheriff of Queens county, and myself, went to Ronkonkoma Pond in Suffolk county, a distance of forty miles, in a wagon, for the purpose of transporting alive some of the yellow perch, from thence to Success Pond. We took about three dozen of those least injured by the hook and put all but two in Success Pond in good condition and in two years thereafter they had so multiplied as to be caught by the hook in every part of the pond."

That wolves also troubled the people of the town of Jamaica is potent from the fact that "In 1661, Jan. 15, it was ordered that a rate be made to pay for a wolf of Abraham's killing, and one that John Townsend's pit catched," and that the town "Agreed, Feb. 6, 1663, that whoever shall kill any wolf, the head being shown to the town or nailed upon a tree, shall have seven bushels of Indian corn."

In the town of Gravesend "Wolves were both plentiful and mischievous at that time, appears from the fact that on the 8th of August, 1650, three guilders were offered for each wolf killed in the town, and two guilders for a fox."

The town of Flatlands tried to exterminate the wolves by authorizing "The constable and two overseers to pay the value of an Indian coat for each wolf killed, and cause the wolf's head to be nailed over the door of the constable, there to remain; as also to cut off both the ears in token that the head is brought in and payed for."

The town of New Utrecht seemed to have been the only one that was troubled with a ministerial scandal, in which case the sentence of the court was "a fine of two hundred guilders and forty beaver skins." WM. DUTCHER.

NEW YORK CITY, February, 1887.

THE NATIONAL MUSEUM BUFFALO.

THE Washington *Evening Star* says of the National Museum buffalo: "On the floor of a large room in a big wooden building adjoining the National Museum building are stretched out the furry hides of two dozen buffalo. In corners of the room are boxes and bundles of bones, and here and there are bleached bison skulls, picked up on the plains. These are the trophies brought home by Mr. William T. Hornaday, the naturalist and taxidermist who went recently on an expedition for the Smithsonian Institution, to secure specimens of the American buffalo before the species became extinct. Millions of buffalo once roamed the plains, and in the days of Daniel Boone were found in West Virginia, southeastern Pennsylvania and other places about the Appalachian range; but to-day the buffalo has become so rare an animal that Prof. Baird deemed it desirable, in the interest of science, to send out a special expedition to secure specimens. Mr. Hornaday, who has followed the chase in the interest of science in African forests, in the monkey-haunted woods of Borneo and the jungles of India, was naturally chosen for the work. He made Miles City, Mont., the base of his operations, and with a well-equipped party of cowboys went on a hunting expedition which resulted in his securing within two months over twenty-five buffalo, beside specimens of antelope, deer, wolves, badgers, porcupines, sage cocks and grouse. Only a few years ago buffalo were so numerous that trains on the trans-continental railroads had often to stop while large herds crossed the tracks. Now Mr. Hornaday figures that there are but 200 in the country outside of the small herd of about 100 that range through the Yellowstone Park and are there protected by law from the hunter's rifle. Where Mr. Hornaday hunted he thinks there are twenty-five or thirty buffalo left, but they will all be killed next spring or the following spring when the cowboys make their annual "round-up." The terrible work of destruction following upon the completion of the railroads has been done by hunters who killed scores for sport, men who shot buffalo for their hides, and when buffalo were in large herds, used to be able to take a "stand" near a herd and shoot them by the hundred, and cowboys that never see a buffalo without shooting. In the buffalo that were killed by Mr. Hornaday in several instances bullet marks, encysted bullets, or bones shattered by rifle balls, were found, showing how closely and relentlessly this last remnant of a great family had been pursued. The plains were a few years ago whitened with the bleaching bones of the slaughtered animals, but even these traces of the buffalo are being rapidly removed. The bones are gathered up and shipped to the cities to be ground up and used as fertilizers. There are about 100 buffalo left in the panhandle of Texas. The specimens brought from Montana by Mr. Hornaday, some of which will be mounted for the National Museum, comprise eight old bulls, eleven young bulls, six old cows, five young cows, two yearlings and one three-months-old calf. The calf which was secured on Mr. Hornaday's visit to Montana last spring, and was brought here alive, but soon died from a colic contracted by eating damp clover. The animal has been mounted, and now stands as a sentry in front of the taxidermists' work room in the old armory building. Last spring Mr. Hornaday shot also three or four buffalo, but they were then shedding their coats, and the skins are considered useless for the taxidermist's purposes. Mr. Hornaday brought with him also sixteen complete buffalo skeletons, besides fifty-one skulls, picked up on the prairie. A sufficient number of these specimens to give a fair representation of the buffalo, from the naturalists' standpoint, will be prepared for exhibition in the National Museum, and the remainder will be kept, to exchange with other institutions. One huge skin Mr. Hornaday points to with special pride. It is that of a huge bull that stood 5ft. 8in. high. Mr. Hornaday gave chase to the bull on horseback and brought him to bay. The bull turned to charge, but a shot crippled him, so that he tumbled to the ground. The bull regained his feet and stood motionless. Mr. Hornaday leaped from his horse and made rapid sketches of the fine animal as he stood. Such an opportunity of sketching a buffalo in life could not be neglected. So by rapid work he secured considerable material to aid him in his work as a taxidermist before he gave the animal his death shot."

PRAIRIE OWLS AND SCORPIONS.

AMONG all the birds of America there are none better deserving to receive the protection of the laws than the little prairie owls of the Pacific slope. Although very numerous they are harmless and unobtrusive. They may generally be seen sitting on a heap of sand thrown up by the prairie dog in digging his hole. This hole is appropriated by the owl for his house, and as you drive past, he never fails to salute you with a very polite bow, and in the style of the real gentleman. The female may often be seen with her half-grown brood sitting at the entrance of the invariable prairie dog hole. Should you come too near she makes her obeisance and retires with her little ones as gracefully as might a fashionable lady. Because of the positive good he does in the destruction of many harmful insects and reptiles, and especially of the scorpion, he should have protection. In southern California and the warmer parts of Utah and Arizona, every summer evening brings forth great numbers of scorpions. They get into the houses and infest the paths and walks about door yard and gardens; and but for the appetite and industry of the owl they would become an intolerable nuisance in those hot climates for three or four months of the year. At such seasons our little owl comes quietly about the house at dusk every night and picks up the scorpions by scores. Usually he has some place near by, as the cornice of the house or some broad beam in the barn, where he deposits his load and eats what he desires. He devours only the soft part of the body of the scorpion, leaving the head, claws and tail of the reptile until there may often be found a quart or more of such remnants at the place he has chosen for his nightly banquet. One owl having selected a perch under the cornice of my house as the spot for devouring his nightly catch of scorpions, left in a few weeks so large a quantity of remnants as to prove he must have destroyed the reptiles by the score every night, and of course the yard about the house and the garden were correspondingly thinned of these most unpleasant creatures. This good work, as well as the grave courtly manners of our little prairie owl, have made him our special friend and induce us to speak a good word for him. GEO. H. WYMAN.

ST. GEORGE, Utah.

THE HERMIT THRUSH (TURDUS PALLASI) NEAR BALTIMORE, MD., IN WINTER.—In a paper read before the Academy of Sciences, Feb. 11, 1880, on birds to be found wintering near Baltimore, Md., I made the following remarks about the hermit thrush (*Turdus pallasi*), which I will quote verbatim: "Twice we (my brother and I) observed thrushes during the winter season, one specimen a few years ago, Feb. 6, 1876, while the ground was covered with snow for some days previously; a second specimen a few weeks ago, Jan. 29, 1880, also a very cold day. Unfortunately, however, neither one I could obtain so as to identify the species, which can not be easily done when the bird is at a distance from you, all our thrushes bearing more or less the same color. Nevertheless, from the fact that none of our thrushes, with the exception of the hermit, winter north of the Gulf States, I infer that this was the species, for it is altogether a more northern bird than our other thrushes. However, I could not say positively it was that thrush." What I could not do at that time I am able to do now. On Jan. 8, 1887, a very cold day, the thermometer about 10° below the freezing point, while on one of my ornithological rambles through the woods, about five miles north from this city, my friend, F. Fisher, who was with me that day, shot a thrush, which I at once recognized as our hermit thrush. Mr. R. Ridgway, of Washington, to whom I wrote about this observation, informed me that in the severe winter of 1879-80 the same bird was found near Georgetown, D. C., in sheltered ravines. Our bird when shot was sitting on a fence, not very far—about 10 or 20yds.—from a farm house. The other two I found more in the woods. It would be interesting to know how far north this bird can be traced during winter.—ARTHUR RESLER (Baltimore, Md.).

THE JACK SNIPE A HARDY WINTER BIRD.—Under date of Feb. 1, your mountain correspondent "P.," in a private letter, asks: "Do you know much of the jack-snipe? A pair of them have been caught, probably by the excessive snow blizzards up here, and not being able to get away are spending the winter here, and thus far they have passed through a very severe winter all right, the only water open for them being three or four springs of very small extent. I saw them yesterday, Jan. 31, after a —36° night, and yesterday with the highest temperature —25° during the day." I am unable to satisfactorily answer this interesting question of natural history, and perhaps some other person will do it. How these tiny, bare-legged birds can live up in that very cold region, about 5,000 feet above sea level, is a wonder to me, and let the naturalist note the fact, for "P." is a man of truth.—H. W. MERRILL.

DESCRIPTION OF A NEW PLUMED PARTRIDGE FROM SONORA (*Callipepla elegans bensoni*).—Characters: Similar to *C. elegans* (Less.), but with throat much more heavily spotted with black (this color predominating); rusty of scapulars, tertials and flanks much duller; lower back, rump, and upper tail coverts much grayer; tail and breast more bluish gray, and under tail coverts edged with much paler buffy. Hab. Sonora (Campos).—Five specimens of this interesting and handsome new partridge have recently been received by the National Museum from Lieut. H. C. Benson, U. S. A., to whom I take great pleasure in dedicating it, as a testimonial to his zeal in ornithological investigations along our Southwestern frontier.—ROBERT RIDGWAY (Smithsonian Institution, Feb. 26, 1887).

WHERE DO MEADOW LARKS WINTER?—It is a little surprising that "C. H. A." should ask if meadow larks winter so far north as Boston, as a stroll through the borders of almost any salt marsh (and salt marshes abound near Boston) would answer the question in the affirmative.—L.

WHAT ARE THESE BIRDS?—Sheridan, O., Dec. 16, 1886. —*Editor Forest and Stream:* In your issue of Nov. 25 is a note dated Madison, Wis., Nov. 15, by C. F. Carr, on eagle measurement, wherein he states that a friend of his in Nebraska had shot an eagle that measured 10ft. 3in. from tip to tip and 40in. in length. I have in my possession an eagle's head from a bird that measured 10ft. 4in. from tip to tip and was 42in. in length and weighed over 23lbs. I am not certain about the weight, but it was near about the above. I am sorry to say that I could not get the body, as the person that killed it just saved the head and wings and threw the remainder away. By mere chance I got possession of the head and had it mounted. It was a female bird of the gray eagle species.—CHARLES WHITMER.

GOLDEN EAGLE IN RHODE ISLAND.—Providence, R. I., Feb. 21.—*Editor Forest and Stream:* I desire to put upon record in your valuable paper the taking of a golden eagle at Westerly a few days since. It is a magnificent specimen and is (presumably) a female; weight, 12lbs. It will be mounted, of course, and is the only one I have known taken in Rhode Island in an experience of over thirty years hard work in natural history.—NEWTON DEXTER.

BELATED NOTE OF AN EARLY ROBIN.—Bradford, Pa., Jan. 31.—"Robin (a dare)" was on hand Sunday morning, Jan. 30, with his whistle.—SIALIA.

Game Bag and Gun.

Address all communications to the Forest and Stream Pub. Co.

A BEAR IN A HOLE.

THIS bear story of so long standing seems yet to remain fresh in my mind, while other things that happened long since have faded and gone from recollection. As nearly as I can recollect, it was in the winter of 1840 that David Moreland (who was quite a sportsman and who afterward became my father-in-law, and for the last twenty years has been sleeping the sleep that needs no waking) came to my cabin, situated on the south bank of the Big Turkey River, formerly known as Peck's Ferry (now Osterdock), Clayton county, Iowa, for the purpose of taking a hunt with me. When we had finished our hunt we concluded to hunt through the timber some ten miles to his place, which is now owned by Mr. Jacob Smith, three-quarters of a mile south from Colesburg, Delaware county, Iowa. Our hunt was to be up the Peck Branch, a tributary to the Turkey, putting in on the south bank one mile below my cabin, and heading near Mr. Moreland's place on the prairie. According to arrangements, we started from the mouth of the Branch, he taking the east bluff and I the west. I think we did not meet until we reached his house after dark.

On relating our hunt and discoveries (as hunters will) he told me that he had seen the tracks of a bear, but the snow had melted so that he could not track it. The consequence was that I took the bear fever right away, but the next morning I was able to start with rifle and tomahawk, following Mr. M.'s tracks some four miles to where he had come out into a trail leading to his house. Following this track probably three miles further, I discovered the dim tracks of a bear in the ice from melted snow, and I began trying to trail it out. After a lengthy hunt, circling back and forth, I found where I thought the bear had gone into a cave in the rocks, where I concluded it had previously made its headquarters in the fore part of the winter. I then cut poles and fastened up the hole, and returned well pleased to Mr. Moreland's and reported. Arrangements having been made, a jolly sled load started next morning, equipped with guns, dogs, among them a large bulldog, axes, ropes, stone hammers, knives and everything that we thought necessary. We cut our way through the timber and went to the den. When we got there and unfastened the hole the first thing was to break off some rock to enable me to get through. The next thought was a light. Bad luck for us. The big beeswax candle had been forgotten. What next? Go back badly disappointed. "Not yet," said I. "Gather some dry bark and light a torch." That being done, I went down into the den; the torch was handed down to me burning nicely, and I started in search of the bear. But as there was no circulation of air the candle would not burn, and the den was soon filled so full of smoke as to compel me to get back and hand out the torch and get out as soon as possible. After giving the smoke time to clear away, I descended again with a butcher knife and told them to hand me down the best dog in the lot. No sooner had the dog landed than he commenced a fierce barking; but he would not go any further than I pushed him along ahead of me. About that time a little daylight or candle light would have been very acceptable, but as I had neither, I pushed the dog along, at the same time stabbing ahead with the knife in different directions, until I struck the bear with the knife in some place, at the same time springing back toward the entrance. Dog and bear both landed on my feet and legs, and you can safely wager that I got out as quick as practicable, and it was not necessary to call the dog after me. My next move was to cut a slim pole, leaving a long limb, and cutting the top off above the limb. In the meantime we kept the hole closed to prevent his getting out. Then with the crooked pole and limb I punched around the rocks and got him so enraged that when I would draw the pole back he would follow it out around the rocks where we could see him, and he would fight and strike the wickedest kind. I then gave the pole to some one to work, and fixed a slip-noose on a rope and let it down, and when he would rear up to strike I'd jerk the rope. Finally I got him fast by one paw, including a part of his toes. We then pulled his foot up gently to where we could reach his foot. We then fastened the other end of the rope below. Then loosening the first knot, we unfastened the hole and began trying to drag him forth. But we soon discovered that all of us could not drag him out forthwith. He would brace against the rocks, and it was only by steady and hard pulling that we could move him a little at a time. Finally we got him out; and then for a dog and bear fight, big bulldog and all. The dogs fought him until they were tired out, but the bear did not seem to

mind it. There were trees enough that we could take turns around in any direction with the rope to keep the bear from us. When the fight was ended and the fun was over, I told one of the two boys who had come along (and they are now my brothers-in-law) to get a gun and shoot him. This ended the fight, or what you may please to call it. He was then loaded up and taken to Mr. Moreland's. I don't know how much he would weigh; I have shot larger ones. He was two if not three years old.

If this should ever come before the public, I suppose that, like other bear tales and fish stories, the truth of it will be doubted. If so, I should be glad to furnish a good recommend from any and all the best men in the country that I am acquainted with. The above statement is the truth, word for word, as near as I can recollect true. It is a long time ago that it happened. My two brothers-in-law are still living in this State. They saw it all. Excuse the OLD PIONEER.

GAME OF BRITISH COLUMBIA.

IN HIS forthcoming book, "British Columbia: Forest, Stream and Mountain," Mr. John Fannin, curator of the Provincial Museum, Victoria, British Columbia, will give the following account of the game of that province. By his contributions to the FOREST AND STREAM, Mr. Fannin is known to its readers as an enthusiastic sportsman and a close naturalist:

MOUNTAIN SHEEP (Big-Horn, *Ovis montana*).—This animal is found on nearly all the mountains of the interior, from the forty-ninth parallel to the Arctic slope, approaching the coast in the neighborhood of Howe Sound to within a distance of eight or ten miles. Very abundant in the mountains of the Similkameen and Ashanola rivers, Bridge River and Douglas. A wary animal, keen of scent, fleet of foot and difficult of approach, it affords the hunter the rarest of sport. The general color of the mountain sheep is dark brown, with portions of the under parts, muzzle, and a large patch on the buttocks, white. The coat, which is of hair, resembles that of a caribou. Both male and female have horns, those of the female small and curved backward and outward. The flesh of the mountain sheep is excellent, and with some hunters stands at the head of all our game in this respect. An adult male will weigh 300 pounds, the head and horns alone weighing fifty or sixty pounds.

MOUNTAIN GOAT (*Aplocerus columbianus*).—Abundant throughout the mountains of the interior and coast range, from our southern boundary to the watershed of the Arctic. On the mountains of Burrard Inlet and Howe Sound, on the Hope and Similkameen Mountains, and in the neighborhood of Pitt and Harrison lakes are the places most convenient to the settlements where this animal may be found in fairly abundant numbers. Although an animal of the mountain peaks, yet during the winter months it may be found on the lower levels within a short distance of the salt water, and, in fact, are sometimes caught during summer swimming rivers and narrow portions of the inlets and sounds. The average weight of the mountain goat does not exceed 100lbs., probably less, and its coat, which is pure white, is of two qualities, namely, a fine wool next the skin, and a long, straight and coarse hair. The Indians of nearly all the coast tribes make their blankets from the fleece of this animal, but not nearly to such an extent now as in former days or before the advent of the whites. These blankets are made in the following manner: The wool is taken from the hide and spun by the squaws by twisting it with the palms of their hands on the bare knee. It is then wove on a rude kind of loom by passing the weft over and under the warp with the hand only and without the use of a shuttle. Both male and female of the white goat have horns of jet black, those of the female averaging longer than the male. They bring forth their young in April, below the timber line and not on the remotest peaks as some think. They are a very clumsy looking animal, with short, stout legs and large hoofs, but probably the most sure-footed one in the mountains. The flesh is coarse and unsavory and will hardly, I think, be relished by many. The mountain goat is not an animal of speed, and even under the most trying circumstances, when the report of the hunter's rifle warns it of the presence of danger, it does not always show an inclination to increase its naturally slow gait. Owing to the great difficulties which generally have to be encountered in reaching the home of this animal and the very few people who have hunted them, very little is known respecting it, and a few writers, taking advantage of this ignorance, have told some wonderful stories concerning it, all of which have about as much foundation in truth as the one told me this fall by a hunter of the Similkameen, which was to the following effect: "That the animal when closely cornered had the power of sticking out its hair to a great length, thus giving itself such a prodigious appearance, at the sight of which the average hunter generally threw down his rifle and fled for his life!"

MOOSE (*Alce americana*).—This animal is strictly an inhabitant of the far north, and its occurrence on the Pacific slope of the Rocky Mountains, in British Columbia, is rare, though it has been taken in the neighborhood of Fort George and Stuart's Lake; and I have been informed by a gentleman of this city, whose opportunities for knowing are unquestionably good, that the distribution of the moose has changed materially in the last two years, and that its occurrence in these two localities above mentioned is now more frequent than formerly. It is plentiful in the Peace River country and in the district of Cassiar. The moose is the largest of the deer family, the weight of a full grown male being, by some, placed as high as 1,500lbs. The horns are palmated, of immense size, and after the second year are shed annually, during December and January.

WOODLAND CARIBOU (*Rangifer caribou*).—Irregularly distributed through the interior of the province from the forty-ninth parallel to the water-shed of the Arctic. It is found in the Selkirk Mountains, in the Caribou country, along the North Thompson, Skeena, Naas and Stickeen rivers; and in the far north when deep snows cover the high hills and arctic frosts have chained the rivers and lakes, the chase of this animal is the chief sport of the hardy miners who brave the long winters of Cassiar. The Barren Ground Caribou, which is said to be a distinct species, though its only difference is that of size, the woodland being the larger, is found north of the sixtieth parallel of north latitude.

HORNS OF THE FEMALE CARIBOU.—I take the liberty here of quoting the following authors on this subject: Sir John Richardson, ("Fauna Boreali Americanu") says: "The old males have, in general, the largest and most palmated horns, while the young ones and females have them less branched and more cylindrical and pointed, but this is not uniformly the case, and the variety of forms assumed by the horns of the caribou is indeed so great that it is difficult to comprehend them all in a general description." Prof. Owen ("Anatomy of Vertebratis," London, 1860,) says: "The chief peculiarity in the skull of the deer tribe is the annual development, from the frontals, of the solid deciduous ecostosis, which serves as weapons during a portion of the year, in the males of all kinds, and in both sexes of the reindeer." The Hon. J. D. Caton, the best living authority on all subjects relating to the deer family, in his "Antelope and Deer of America," says of the caribou: "Antlers of the male curved, long and slender, with branches more or less palmated and very irregular in form. Antlers of the female smaller and less palmated." My own experience with the caribou, so far as it goes, certainly confirms the evidence of the authors above quoted, nor would I allude to it here were it not for the fact that many hunters and miners with whom I have conversed on this subject maintain the absence of antlers on the females at all seasons, while many others as stoutly affirm that they are so armed like the males, and it seems strange that in British Columbia, where the opportunities for observing this animal are so frequent, where it is to be met with in the neighborhood of nearly every mining camp from Big Bend to Cassiar, such a difference of opinion should exist concerning it.

ELK (Wapiti, *Cervus canadensis*).—This noble animal at one time ranged through many portions of British Columbia, where it is now and has been for years, unknown. It was found on the peninsula between Burrard Inlet and Fraser River, and from there to the boundary line; also at the head of Pitt Lake. A few places yet remain not too remote from the settlements where it may be hunted with success, such as Campbell and Salmon rivers, and other localities further north on this island.

MULE DEER (*Cervus macrotis*).—Habitat, east of the Cascades only. They are abundant along that portion of the country lying between the Hope Mountains and Kamloops, and southward to the boundary line. They are generally found occupying the higher altitudes. Some of the most extraordinary forms occur in the antlers of these animals, and in their growth nature appears to revel in abnormal and fantastic shapes. A pair now in the possession of a gentleman at New Westminster is peculiarly interesting in this respect. The weight of the mule deer runs from 200 to 350 pounds, and when in good condition its flesh is about as fine an article of food as the hunter generally falls in with in the mountains.

WHITE-TAILED DEER (*Cervus leucurus*).—Much the same distribution as the last species, and it is said also to occur west of the Cascades, though I have never met it there. It may be found along the willow bottoms and borders of streams, and in the many wooded ravines which occur in the open districts east of the Cascades. I also found it on the summit of Mount Ah-ach-ho, valley of the Ashanola.

BLACK-TAILED DEER (*Cervus columbianus*).—A Pacific coast species, which does not extend its range much east of the Cascades. It is abundant along the coast of British Columbia from our southern boundary to Alaska. It is found on Vancouver and nearly all the islands of the Gulf (not on Queen Charlotte), and is the one so plentiful in our markets during the season of game. White deer of this species have been frequently taken along the lower Fraser and Pitt rivers. The weight of the deer runs from 75 to 200lbs., the latter weight being rarely exceeded. Some very fine specimens of this deer are taken at the Skeena, Naas, and in the neighborhood of Wrangel. On Vancouver and other islands of the Gulf, the opportunities for still-hunting this animal are more favorable than on the adjoining mainland, as the tangled network of undergrowth so characteristic of the coast district of British Columbia, sets up an almost absolute barrier in this respect, in consequence of which the rather unsportsmanlike method of hounding is sometimes resorted to.

RUFFED GROUSE (Partridge, Pheasant, Drummer, *Bonasa umbella sabinei*).—This is the Pacific coast variety of the bird which is known in the Eastern and Northern States as partridge, and in the Southern States as pheasant. The two birds are essentially the same, the only difference being that of color. It is abundant along the coast of British Columbia from the southern boundary to Alaska, on Vancouver Island and most of the islands of the Gulf. Along the borders of creeks, in crab-apple thickets, in patches of the wild rose and the different kinds of berries peculiar to the Province are favorite resorts of the ruffed grouse, and its loud whirr sometimes startles the hunter as he explores the gloomy solitude of the deep forest. The drumming of the ruffed grouse may be heard every month in the year, though more frequently in the spring. This is the bird so abundant in our markets during the open season.

GRAY RUFFED GROUSE (*Bonasa umbella umbeloides*).—Another variety found only east of the Cascades, along the foothills of the Rocky Mountains, in Cariboo and southward to the boundary line. A magnificent looking bird. Tolerably abundant.

DUSKY GROUSE (Blue Grouse, Mountain Grouse, *Canace obscura*).—From the Rocky Mountains to the sea coast, and from our southern boundary to Alaska. It is abundant on Vancouver and nearly all the islands of the gulf. In some portions of the Province, for instance, some of the islands up Howe Sound, on the summit of many of the mountains along the Similkameen and Ashanola valleys, this grouse is exceedingly plentiful. Richardson's variety of this bird, lacking terminal band on the tail, occurs east of the Cascades. I have found blue grouse breeding within a short distance of the sea level and also above the timber line.

FRANKLIN'S GROUSE (Spruce Partridge, Fool Hen, *Canace canadensis franklinii*).—In the timbered districts east of the Cascades, north to Dease Lake, south to the boundary line. Not found on the coast. Abundant on the summits of the Hope Mountains, in the Caribou districts and nearly all the wooded portions of the interior. It is strictly an inhabitant of the thick timber, among the groves of spruce and fir. A beautiful bird, but not so highly prized an article of food as any of the former, though it often occupies a very welcome place on the bill of fare at the camp-fire of the hunter and miner. Stupidity appears to be peculiar to this bird, and the most simple means are often used in its capture.

SHARP-TAILED GROUSE (Prairie Chicken, *Pediocœtes phasianellus*).—Irregularly distributed throughout the open grassy country east of the Cascades. Tolerably abundant in the Similkameen Valley, the Nicola and north and south forks of the Thompson, as well as other places along the line of the C. P. R. By the lovers of sport with the dog and gun this bird is much sought after.

BLACK-TAILED PTARMIGAN (*Lagopus rupestris*).—Pretty well distributed throughout the Province, from the Rocky Mountains to the coast and north to Dease Lake; also Vancouver Island. Fairly abundant along the summits of the coast range. Under tail feathers black at all seasons.

WHITE-TAILED PTARMIGAN (*Lagopus lucurus*).—Much the same distribution as the last species, though I do not think it approaches so near the coast. Both are found in the Cascades, and in Cassiar and Caribou. In winter the white-tail is often found in the willow patches along river banks. Both species change their plumage from white in the winter to a reddish brown or mottled gray and white in summer. Specimens of all the above birds can be seen in the Provincial museum.

SHOOTING IN CUBA.

HERE is a report of two days' quail shooting in the province of Habana, Cuba, by the Vice-President of the Havana Field Sport Club. It is told after the manner approved by "Critic," as follows:

January 29, 1887, killed 40, retrieved 35.
February 13, 1887, killed 43, retrieved 40.
In addition he also bagged sundry wild guineas, rails and wild pigeons.

Those who do not approve of "Critic's" literary methods have the unreserved permission of the author to extend the above written matter into two or more columns of commentaries upon meteorology, natural history, hygiene and general philosophy, which will have the very great advantage that all tastes may be thus gratified.

First, as to meteorology. Ye shivering Nimrods, fix your attention upon the dates and the thermometer at 65° to 70°. Do you like the picture? Next, as to natural history; the intertropical flora in charming forms, verdure and luxuriant growths upon all sides, a strong temptation to the poetic fancies and dangerous to cold critical judgments which do not thrive in this latitude; then the fauna, or that part of it that forms the chief element of the above scores, is the real *Ortyx virginianus cubanensis*, with all the enticing game qualities of his Yankee prototypes.

About the question of hygiene, there was a time, still recent, when it was treated with almost contemptuous neglect in the sunny clime, when it was supposed that old Sol imposed his relentless *non possumus* on all physical exercise out of doors; when the brilliant, quick wit which endows the nervous-billious temperament wrought out by these climatic influences and slave labor were relied on as the fountains of intellectual and social happiness not elsewhere to be attained. That dream is past. The "Siempre Fiel" is now in the process of an awakening of the most cruel severity to the fact that physical and intellectual cultivation and activity is the only possible means to the industrial social and political regeneration required, first to drive famine away, and then to obtain an honorable position in the ranks of modern civilization. Gymnasia, bathing houses, base ball, shooting clubs and skating rinks are now naturalized here, and the supposed tyranny of the god of day is found to be only a weak invention of the arch enemy indolence. Necessity is proved again to be not only the mother of invention, but also of progress in its multiform evolutions, and no weak inventions can do more than retard its course here or elsewhere.

The legitimate benefits of field sports have already secured a recognition as useful elements in the new departure, and the Habana Club, entering upon the third year of its existence, sends its fraternal greeting to its kindred clubs at the North, and assures them that the quail here are quite as lively and astute as theirs, and "at home" from October to March, and are never snowed under.

If our brother sportsmen in Yankeeland can show us better bags than ours, we will feel greatly obliged if they will tell us in the columns of FOREST AND STREAM where they are to be had, when, perhaps, some of us may feel inclined to go there occasionally to try our sensations on better fields. Our close season is from March 1 to Oct. 1, and the Habana Field Sport Club last season made a gallant fight under peculiar difficulties for the enforcement of the then new game protective law, and succeeded in preventing open sales in the public markets during the close season. It will make still further efforts during the coming season, will continue faithful in such efforts, and as we have no hard winters to decimate the bevies of quail, it has well grounded expectations of largely increasing the stock of our principal game bird in this province.

This club has also been making efforts to import into and acclimate in this island other species of game birds, such as the partridge of Spain, and others, but of these only 20 out of 400 gathered together in Spain have arrived alive and continued in good health up to the present time.

The officers of the club during its first year were: Don Emilio A. Prida, President; Dr. José Clairac, Secretary; Don Perez Galvan, Treasurer. In its second year, now about to terminate on March 1, Don Emilio A. Prida, President; Dr. E. Wilson, Vice-President; Dr. José Clairac, Secretary, and Don Ricardo Narganes, Treasurer.

Considerable interest is manifested in the club in its acclimation experiments, and as the habits of the Spanish partridge are so nearly similar to those of the quail it is believed its introduction may succeed. Perhaps the sharp-tailed grouse may be the subject of experiment in the spring of 1888. Any suggestions in regard to the possibilities or probabilities of its success or otherwise, communicated in your columns, would gratify the members of our club. NEMO.

HABANA, Cuba, Feb. 16.

A VIOLENT COUGH continued through the winter often brings consumption in the spring. Soothe and tone the irritated and weakened lungs with Hale's Honey of Horehound and Tar, and the cough yields and the danger disappears. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

A CANADIAN DEER HUNT.

AS I sit before my blazing grate to-night there come memories awakened by a pair of lordly antlers that grace the wall over my mantle, and hold out toward me their grim arms.

"A thousand fantasies
Begin to throng into my memory,
Of calling shapes, and beckoning shadows dire,
And airy tongues, that syllable men's names
On sands, and shores, and desert wildernesses."

How well I remember the day and date when the royal buck which proudly bore these branching antlers was brought low. It was but one incident in the fortnight spent in the forest of Canada when, with two friends of my own age, and in the full vigor and rush of twenty-five, we determined to brave the untried rigors of a Canadian winter among the big game.

Mackland, a hunter skilled in woodcraft, is engaged with his dogs. He brings his sleigh freighted with a well-fatted carcass of mutton, bred, biscuit, tea, sugar, coffee, pepper and salt. Our clothing was chosen with special reference to the probable exposure in the forests; fur leggins and moccasins, tanned as soft as a kid glove, the universal heavy Mackinaw blanket overcoat with a hood, and coon skin or fox skin caps. We stowed ourselves away in the sleigh among an abundance of robes, with our rifles between our knees. The ride was a merry one, and we glided over the snow, the sleigh skimming along its frozen surface like a bird, now past clearings, then through dense forests of pine, hemlock and fir, which greatly relieved the monotonous dazzling whiteness of winter landscape. We at length reached the lake Opeonga, and the log dwelling of the hunter, and were glad to gather round the roaring, blazing, crackling fire in the huge chimney place, while the hospitable hostess and two bright-eyed, rosy-cheeked daughters bustled about getting us a substantial lunch. The juicy venison steaks, rashers of bacon, baked potatoes and fragrant coffee rise up before me even now a "sweet-smelling savor" through the long interim of nearly forty years, and the picture is made not less inviting by the trim figures and shy glances of the nimble maidens skipping about to do honors to the visitors. The room was what the common room of a hunter and backwoodsman might have been expected to be, the walls garnishsd with rifles, powder horns, bullet pouches, shot pouches, steel traps, while here and there the indications of a feminine taste at decoration were observable. The hour for retiring in the settlement was perforce an early one—there was "nothing to set up for" as one of the boys said. But before we had been there twenty hours there seemed to be a good deal to "sit up for." Rolled up in our blankets and furs we ranged ourselves around the fire on the floor, and slept the refreshing sleep which is indeed tired nature's sweet restorer.

At the earliest dawn there was a movement. Your backwoodsman and true hunter rises with the lark, but the city bred young gentlemen made many a turn and twist and remonstrance, but finally, with much effort and rubbing of eyes and horrible yawning and inward anathematising the folly which induced them to join a party one form of whose insanity was to get up in the middle of the night, they pulled themselves together and arose. A hearty breakfast was prepared and duly dispatched. Our host and his sons mustered their dogs, and the hunters separated to place themselves in pairs at the runways toward which the deer would be driven by the dogs. The lake was a beautiful expanse of water some fifteen or twenty miles long and a mile or two wide, surrounded by fine woods, and studded here and there with small islands, some of them densely wooded. The scenery here when nature puts on her gorgeous livery of autumn is sublime; the sugar-maple displays its multitudinous shades of crimson and scarlet, verging into deep and paler orange; the birch and elm flaunt in yellow livery; the ash and basswood put on their sober suits of brown, while the deep green of the fir tribe forms an effective setting for the glories of the picture. Fish abound, and the balsamic odors of the forest fill the air with health-giving properties. But now everything is held in the icy fetters of winter, the branches of all the monarchs save the firs are barren, the waters are fast locked in ice 20in. thick and covered with snow, no wing of bird about it or upon it, yet with the warm days of April come myriads of wildfowl and the place is transformed into the sportsman's paradise.

On our way to the runways we were met by three shabby looking chaps with long rifles, who were lounging along through the woods, one of them a settler who generally gave up the working of the farm to his wife, while he passed the time on the trail of deer and foxes in the winter and other game in their season. They reported "no game" to be seen and soon were out of sight in the opposite direction, while we were at once posted at our different stations on the runways by our leader. My partner and myself took up our watch at a point indicated by the recent tracks of a deer in the snow, passing from north to south among the pine and spruce trees. We walked to and fro partly concealed by a large hemlock, our "shooting irons" ready at hand. Not a sound was heard in the wood save the occasional tapping of the woodpecker, now far off and faintly, now loud and close at hand. The snow was not more than a foot deep, the dense woods protected us from the wind, and the heavy fur moccasins and leggins made us quite insensible to the cold. Nevertheless, we waited impatiently for the baying of the hounds; the forty minutes seemed two hours when sharp and loud came the welcome notes of Turk and Howler, and a few seconds later the crackling of breaking twigs told us the game was moving in our direction; then a noble buck flashed upon our excited vision. Aye, a noble fellow he was, a hundred and a quarter pounds weight, brown sides, snowy white belly, bushy tail erect, bounded toward us. He was "end on" in bad position, but delays being dangerous I concluded to take things as I found them, and pulled "Old Cromwell," my never-failing ally, on the oncoming game. A sharp crack was followed by a violent leap into the air, and the beautiful animal fell fully ten feet away. Immediately regaining his feet he was bounding away again when the bullet from the rifle of my companion arrested his headlong career, and he once more lay struggling in the snow. The keen blade of my hunting knife quickly dispatched him, but we had not time to dispose of the carcass before a sharp report at some distance to our left caused us to at once place ourselves in readiness for another shot. The baying of the hounds, however, told us that the game was not coming down our way, but in the direction of the party on our left. We heard the crash through the underbrush, another report of a rifle and a shout: "Hi over there! there's three—I've got one, look sharp now!" With the last words a young buck dashed by us with the speed of a cyclone, which no bullet could hope to arrest, although it was essayed by both of us.

"I think he was wounded slightly," said my partner.

"So slightly that you never will know how much, young man"—and he never did.

While we were considering future proceedings, another yelp was heard, and a plump doe rushed past us about twenty yards distant. A fatal bullet and a charge of buckshot sped from two barrels, and she plunged forward and fell near the trunk of a fallen tree. The long hunter, who was close in pursuit, reached her first, and fleshed his knife in her neck. We tied the legs of the two deer, thrust a branch through each and dragged them to the sleigh at the edge of the wood, requiring "a long pull, a strong pull and a pull all together."

We were soon joined by the hunters, who brought with them a fine doe and a fox, and all proceeded to the rendezvous at our host's, when we discussed the exciting events of the day and a stupendous dinner, wherein a haunch of venison, well larded, roasted partridges and rashers of bacon figured conspicuously, to which a couple of succulent mince pies of ample proportions formed a fitting accompaniment. It was a jolly meal, and we were in no hurry to bring it to a conclusion. Our host had many an adventure to relate, and each one of the rest was fully competent to "keep his end up." Mackland related that one day, when looking for a stick of timber in the forest, he espied the dogs coming toward him running for dear life. Presently a large wolf appeared in full chase. The hunter stepped behind a tree, and as the varmint passed close to his place of concealment he reached over with his tomahawk, and with a dexterous blow disabled the beast, dispatched it with another, and carried home the skin.

Wolves become dangerous in these Canadian forests after the heavy snowfalls, and instances are related of travelers being attacked and killed by the ravenous brutes while journeying from the military posts to the settlements.

An explorer of the line of the military road while alone near the Meganatawan River, was suddenly surrounded by a pack of hungry wolves barking and howling for their prey. He tried to escape, but there seemed no avenue. He shouted himself hoarse in the endeavor to make his axemen hear; this also kept back the beasts for a time, but he would undoubtedly have been destroyed had not the axemen at last heard his cries and rushed to his rescue. An instance of extraordinary craftiness in wolves was related to me by a friend living near Quebec. He was once on the wooded heights commanding a view of the picturesque Lake Memphremagog. It was near sunset, and at some distance below him was an open meadow where a solitary deer was seen grazing; presently two wolves issued from the forest and glanced at the unsuspecting deer. They were apparently planning an attack, when after due deliberation one went off and circling around the deer lay down at some distance behind it; the other then made an open attack, when the deer turned and fled, but as it passed the first wolf lying concealed, the creature sprang up and fastened upon the unfortunate animal, which was speedily devoured by the two wolves.

The second day at our hunters was as successful as the first, and two more deer were added to our number. The third did not prove so good, our host being the only one of the party who brought down his venison, though we put in a long day in the woods, and standing in a runway for hours; watching for the expected game is by no means an exciting or exhilarating occupation. One of our party was disabled by a fall caused by tripping over a hidden branch in the snow, and striking his knee against the sharp point of a projecting limb. Altogether we secured five splended deer in four days' hunting, having been gone six days. These we carried in triumph to town, and the antlers from the big buck which grace the wall above my mantle, are the direct suggestion of this brief chronicle.

FRANK HEYWOOD.

CAPE COD RABBIT SNARES.

Editor Forest and Stream:

I was much interested in report of the thirteenth annual dinner of the Massachusetts Association for the Protection of Fish and Game, contained in a recent number of FOREST AND STREAM. I believe President Samuels of the association right in his prediction of the early extermination of quail in Massachusetts, unless provision be made against the sale of these birds during close season. I also believe that another valuable species of game, the rabbit, is in great danger of speedy extermination, at least in some portions of Massachusetts, unless the pernicious practice of trapping them be stopped.

While surveying woodlands in Plymouth and Bristol counties, a few years since, I first observed the wholesale and inhuman method of destroying rabbits. It is no exaggeration to say I saw miles of the little hedges upon which were set numerous snares, which were far worse than death-traps, *i. e.*, traps producing immediate death to the timid little victims. These traps were generally found in the thick woods, quite remote from human dwellings, and I was told that the game caught was sent to New York and Boston markets. As the trapping is done in cold weather there is no danger of the captured game spoiling in the traps, consequently they are not visited for the removal of game very often, for to make the round of these long lines of snares gives the trapper a long tramp which he does not care to take oftener than necessary. Hence many rabbits are suspended for days and perhaps weeks, being caught forward of the hind legs around the body by the fine wire, head downward, swinging about in the air as their struggles spring the sapling to which the wire is attached. Perhaps a limber sprout to which the unfortunate rabbit is hung will allow it to reach, in its efforts to free itself, twigs or other sustenance, and this only defers death by starvation and prolongs the torture. Our surveying party destroyed every trap we came across—released rabbits which must have been hanging for more than one and perhaps two weeks, everything eatable within reach had been devoured, and when liberated they were unable to stand, breathing being about the only sign of life. I visited Plymouth county lately to hunt, and found that rabbit trapping had been carried on to such an extent that in many sections this game is well nigh exterminated. It seems as if this most inhuman mode of trapping the rabbit should be stopped not only because of its cruelty but that it is fast exterminating a game which, as food, is delectable and valuable, and the sport of hunting which with the musical beagle is fascinating and healthful.

I sincerely hope the Massachusetts Association for the Protection of Fish and Game, which has rendered such praiseworthy and valuable service in the protection of game will, in due time, do something in the way of influencing the enactment of a law or, if there be one already, to cause its enforcement against this cruel and destructive rabbit trapping.

G. K. O.

MY LAST PARTRIDGE.

PARTRIDGE shooting had not been quite up to the average, and usually we were satisfied with a bag of seven to ten for one day. Just before the first snow fell, Fred and I thought we would try a new place, for we had heard of a section where, according to reports, they could almost be clubbed from the trees. Rising at 4 o'clock one November morning we started. It was a pleasant ride but for the south wind which made us button our coats to the neck. When out about a mile we took in the older of our pointer dogs, Rex, and let Grace continue her run, taking in every piece of brush along the road, and once when passing a turn in the road we found her on a point to a brush pile, but when I was about to get out the gun out ran a cat.

At 8 o'clock A. M. we arrived at our hunting ground and were soon at it. In the first pieces we entered three birds were raised, two shots fired but not a feather; turning back toward the horse I saw one leave the brush ahead of us and fly forty rods across the road to another woods. I told Fred "That is one of those birds I like to get, old, wild and cunning." Walking to the road and looking the brush over I concluded that I would walk around her and leave Fred on the outside to guard the flight backward. Passing into the timber twenty rods below I began to work toward where I supposed she lit, and to my surprise I saw her coming directly toward me. Standing still she passed within a few feet of me; I turned and gave her my right barrel; immediately she rose and and wheeling around and around until she was above the tops of the trees, swinging behind me she again passed me and I gave her the left barrel; she struck a high limb of a beech tree and came reluctantly to the ground. During this performance Grace stood at my heel, and now was anxious to retrieve the game. Calling Fred we proceeded to surround the spot, thinking perhaps she would rise again. When within 20ft. both dogs took the scent and pointed. I knew she was not dead, for they will not stand a dead bird. We told Rex to "fetch" and he obeyed. Fred reached to take the bird, and as Rex opened his mouth off she flew, much to our surprise and chagrin, as we had put the hammers of our guns down and were not prepared to shoot. Following her, Grace pointed a log pile and I told her to fetch. She went in and it was some seconds before she was able to capture her bird. She brought it to me and the prize was bagged. On dressing this bird it was found to have only one shot mark, and that in the head, hence those strange movements.

It now began to rain and we repaired to the barn and remained two hours, when, the rain having slacked, we started out, Fred to drive down the road, I to work out a short neck of heavy timber and meet him. When within a short distance of where Fred stood waiting for me, Grace came to a point. I bade her flush him. Out came a cat and started toward the road, and climbed a hemlock tree. The cat being gray with dark stripes around its body, and Fred getting an indistinct view of it as it mounted to its perch on a high limb, he exclaimed: "By the horn spoon! here is a coon," and the way he dismounted from that wagon and leveled his Ithaca at that coon in double quick, while I stood laughing to myself. He rushed into the brush to bring out his coon, but returned empty-handed. Rain falling now in torrents we returned to the barn, ate our lunch, concluded to adjourn and drove home in the storm and mud with thirty miles' drive, one partridge and no coon.

G. P. B.

EXPLOSIVE BULLETS.—*Editor Forest and Stream:* My attention was called to the subject of explosive bullets by an article treating of them contributed by your correspondent, Mr. L. I. Flower, and published in your issue of Feb. 3. I am using a 12-gauge gun provided with an inserted rifle barrel taking a .40-50-260 cartridge. Following the directions very carefully, I doctored one of these cartridges, and fired it into a 5in. basswood block. It passed through the block, an inch pine fence board, struck a box and fell to the ground. On examining it I came to the conclusion that I was not a good doctor, as it had not exploded. I then conceived the idea of inserting a .22 long revolver cartridge into the end of the rifle cartridge. The process was simple in the extreme. Cutting off the part of the bullet which projected beyond the cartridge, it was introduced into a cavity of sufficient depth and diameter, which had been drilled in the end of the rifle bullet and pressed down until the flange on the head of the cartridge rested upon the end of the lead. The effect of this projectile is shown by the section of a hard maple block which I send to you. After numerous experiments, I consider this a sample of what it will do in a block. The question yet remained, What would it do to "bears and things?" By a combination of circumstances an opportunity to settle this question soon presented itself. A friend of mine had a sick hog which he requested me to shoot. A more expeditious manner of putting a sick porker out of misery cannot be conceived. I shot a distance of four or five rods, and planked one in just back of the shoulder. The unclean beast immediately appeared uncommonly dead. I sent another, this time square between the eyes. We peeled off the scalp and found the skull completely shattered. With the point of a knife pieces of the skull were turned back, and the entire contents of the head were found blown fine; the eyes also had been forced from their places by the explosion within the head. On examining the effect of the first shot, a small hole was found where the bullet en-

tered, just the size of a .40-cal. ball, while the small cartridge had exploded just beneath the skin, making an opening sufficiently large to receive a man's fist. The vitals were terribly lacerated, being a shapeless mass. On the further side two holes were discovered, each larger than the bullet fired. These were about two inches apart, and doubtless occasioned by rough pieces of lead. This is certainly a very effective missile, as shown by the execution it did in this instance, and will doubtless work as well in the field as in the barnyard. It is also very easily constructed and as safe to carry in a magazine gun as any cartridge. Next.—DYNAMITE.

INTRODUCTION OF FOREIGN RABBITS.—Washington, Feb. 20.—The Agricultural Department has received many letters from different parts of the country with reference to the introduction of Australian rabbits into this country. Commissioner Coleman has prepared the following in answer thereto: "For some time past the press of the country has contained paragraphs relating to the expected introduction in the United States of the 'Australian rabbit,' and the gravest fears have been expressed concerning the probable effect of such importation upon our agricultural industries. Hence a few facts concerning this rabbit may prove of interest. In the first place it should be stated that in reality there is no 'Australian' rabbit, no species being native to that country. The rabbit that has done so much harm in Australia and New Zealand is an introduced species, namely, the common rabbit of Europe (*Lepus cuniculus*). Not only did this rabbit become a pest to the gardener and fruit grower, but it soon multiplied to such an extent as to seriously interfere with sheep raising, by destroying the pasturage. In New Zealand the Legislature took the matter in hand in 1876, and began the enactment of a series of stringent laws for the suppression of the rabbit scourge. In 1881 more than 500,000 acres of sheep runs had been abandoned on account of the rabbits, and the loss to the exports of the colony was calculated to be $2,500,000 per annum; and it was estimated that upward of 180,000,000 of rabbits were killed in New Zealand in little over three years. In the United States we certainly have enough rabbits of our own, and the injury they now inflict upon our agricultural industries is by no means insignificant, if any reliance is to be placed upon the complaints of fruit growers in the Mississippi valley and in California. As to the power of an officer of the Government to prevent the introduction of the pest in the United States, I know of no law conferring any such authority. Congress might enact a law conferring upon the Commissioner of Agriculture the power to prevent the landing of any animal, bird, or other pest in any port of the United States that, in his opinion, would be injurious to agriculture, on the same principle that it prevents the introduction of cattle affected with contagious diseases. Unless there is premeditated importation by dealers, there would seem to be no occasion for alarm, as this rabbit has, during three centuries of communication with Europe, not been introduced or at least has not become established, and there would seem to be still less danger from Australia."

THE ARKANSAS GAME LAW.—The Senate bill which inhibits the exportation of game from the State has passed the House by a vote of 46 to 40. As the bill passed the Senate, fish were included, but the house rejected this. Quite a fight was made against its passage. Many men who oppose the game law do so because the moment the open season begins hundreds of hunters from other States teem in and kill off the game by the wholesale, and ship it away by car loads. It is thought, therefore, that this bill will tend to make the game law more popular and protect the game more successfully. It appears also that if the game law were changed so as to permit the killing of deer on Aug. 1 there would be scarcely any objection to it. Farmers contend that the deer fatten in their fields, but are killed off by sportsmen of leisure in September, when the farmers are picking cotton. They argue that deer are fat and fine in August and that is really the only month of leisure they have.

IOWA.—Nelson D. Merrill writing from Creston, Union county, southwestern Iowa, Feb. 22, says: "We have had quite a cold winter and considerable snow, but not as much as last winter. I saw a flock of wild geese going north last night. There are more prairie chickens here this winter than common, as last winter was very dry and good for the young chickens; but the last winter, from its great severity, nearly killed off the quail, and I rarely see one now anywhere on my farm or the prairies. —H. W. MERRILL.

THE RABBIT PEST IN VICTORIA.

CONSUL-GENERAL MORGAN in a recent report on the rabbit pest in Victoria says:

It is doubtful whether many persons are aware of the immense loss that has been sustained in this colony through the ravages of the rabbits, but it is an undoubted fact that as much £24,000 has been expended to clear one estate and keep the pests under, and in many others it has cost owners large sums, from £15,000 downward. In addition to the expense incurred by private owners, shire councils and the government in destroying the pests, the great depreciation in the value of land and its grazing capabilities has to be considered. For instance, the stony rises, consisting of about 20,000 acres, and surrounded by some of the finest grass land in Victoria, has been rendered of little value except for rabbits, the owners of the land obtaining a small rental from trappers, and about 4,000 acres were, some while back, disposed of at the low figure of 10 shillings per acre. In the discussions in the Colonial Parliament on the introduction of the late "Malle Pastoral Leases Act," it was clearly pointed out that the country (12,000,000 acres) affected by the bill had been rendered almost useless and uninhabitable through the damage caused by the ruthless invader. Stations on which smiling homesteads, fine orchards, and other improvements had, a few years back, existed, were fallen into ruin and deserted by all living creatures except the rabbits. Here, where the grass and salt bush in 1875 were sufficient for nearly 700,000 sheep, enough did not grow in 1882 for one-seventh of that number, the loss during the past five years being estimated as at least three-quarters of a million sterling, besides £40,000 decrease to government in rents, and £20,000 expended in destroying the pests. To illustrate the damage here, I cannot do better than attach the particulars given of a few stations in the above discussion:

Year 1877, Bruin Station carried 36,000 sheep, rental £500; in 1879, 10,000; run abandoned; relet under grazing license for £56. Wonga and Nipo, once carrying 20,000 sheep, rental, £400; now not a sheep on the run, which was also abandoned and relet for £20. Lake Hindmarsh carried, in 1877, 33,000 sheep; lost 25,000 in two years; rent £700, now £72. Corong, 1877, 36,000 sheep, now 3,000; rent £1,050, now £150; and several others were mentioned as being in an equally bad position.

In the years 1875 and 1876 the production of wool in the Mallee country was about 6,000 bales, value £100,000. In 1882 this had fallen to 900 bales, worth, say £18,000. Eighteen runs in this district in the year 1878 yielded 1,700 bales; in 1882, only 332 bales. The runs were all abandoned and the land held from Government under grazing leases, at an almost nominal rent, by persons who trusted that something would be done to improve the tenure under which the land could be held, and give them an opportunity and sufficient inducement to endeavor by combined action to destroy the rabbit pest, and render the land once more fit for profitable occupation. Whether the lengthened tenure now given to this part of the colony will enable the desired result to be achieved remains to be seen.

During the past three years the Government has expended about £30,000 in Victoria on the extirpation of the rabbit, the principal means used being poison, such as phosphorized oats and wheat, arsenic mixed with bran and chaff, and bisulphide of carbon. The various shire councils in the badly infected districts have also adopted similar means, though in the majority of cases the rabbit act has not been strictly enforced, many of the shires not being in a position to incur the extra expense necessary to do so.

In addition to the means above mentioned, the councils have arranged for the purchase of rabbit skins or ears and scalps, and have been assisted by the Government to the extent of a bonus of 3d. per dozen on all the skins or ears and scalps purchased by them. From reports published at various times in the papers, and inquiries made, the number of rabbits destroyed has been considerable—at least 157,000 dozen, equal to 1,884,000 scalps and ears and skins, being paid for in less than two years, the St. Armand and Swan Hill shires being the largest purchasers.

THE WORCESTER FUR COMPANY.

THE papers have been full of it. The ministers, lawyers, doctors, business men, the ladies, in fact, almost everybody have talked about it. It is over. A pleasant event long to be remembered by those who participated in it. To say that the hunt was a great success would be drawing it mildly.

There was, however, an accident early in the day which marred the pleasure, especially until it was found that the wounded man's condition was not likely to prove dangerous. The following is a correct account of the accident: Mr. Samuel Thayer was descending a steep slope when he stepped on ice which was hidden by the snow. His feet slipped from under him and in falling he threw up his arms and lost his grip upon his gun, and went sliding down the slope with the gun following about twenty feet behind him. In some way—just how will never be known—the gun was discharged and about thirty pellets of No. 1 shot entered the fleshy part of his back near the hip. He was at once removed to a farmhouse near by and from there to his home as soon as a carriage could be made ready. His physician arrived soon after he reached home and after a thorough examination pronounced the wound by no means dangerous though probably to be quite painful for some days. Mr. Thayer is about sixty years old, an experienced fox hunter, and exhibited great nerve after the accident, remarking as the team drove away that he "should hunt foxes some more yet." He had two sons in the hunt who did not learn of the accident till several hours after it occurred.

At the meeting of the Fur Company last Wednesday evening, after the final arrangements had been completed, ex-Alderman John R. Thayer remarked, "You won't have a decent day, and you needn't expect it," and so thought the party, for the weather had been rough and windy for two weeks. Sunday night was cloudy and gave promise of a storm, but with the dawn of Monday it was found that about an inch of snow had fallen during the night, with mild weather and no wind. Briefly stated, it was a perfect day for a fox hunt. The meet was at Heywood Farm, on the edge of Shrewsbury, about four miles from the city, and thither the hunters were wending their way soon after 6 o'clock. There were fully fifty men and about thirty-five dogs in the party. About a third of the number were not really fox hunters, but came out merely to hear the music and see the sport; among this class were professional men and several prominent business men, who remained the entire day till darkness closed the hunt. The ground chosen consists of three ranges of hills running parallel, each about two miles long, and a direct line struck across the three ranges would be from two to two and a half miles. The one to the west is Bond's Hill, on the north end of which is "Hillside," the beautiful home of the late John B. Gough. The middle range is Sewell's Hill, and the one to the east is known as East Ridge. The latter being highest a man occupying a high point has a lovely view of all these ranges with three pretty lakes and meadow land between. The atmosphere was so clear that men could be plainly seen on the new snow from one hill to the other, a distance of a mile or more.

It was thought best to divide the company and the dogs, sending a party on to each range. About 7:30 the first fox was "on his pins" on Bond's Hill, driven by a pack of six dogs; and at 8:30 there were three more being chased by as many packs of hounds on the hills to the eastward. Brother sportsmen, stand with me now on a high point on East Ridge facing west. There is just the least bit of a breeze from the northwest. Listen now and hear four packs of hounds at full cry driving four foxes, and if there is blood in your veins it will surely tingle. Look the country over; every high point on land, the barways in the meadows, every probable runway is coverd by an expectant hunter. Hark! hear the pack on Bond's, away to the north end. Hear that! Bang goes a gun about a half mile north of the Gough mansion. A few minutes later the pack stop barking and soon two men are seen coming down the hill toward the road; they are going down past us within easy call—Andrew Thayer and Fred Sears. "Hello, Andrew, what have you done? He holds up a splendid large dog fox. "Good enough; first blood for you!" And the happy hunters go on down the road. Hark, now! That pack to the south are swinging toward Sewell's Lake. Look! do you see that fox going up the lake? There go the dogs, five of them; isn't that grand? It's a sight never to be forgotten.

Reader, did you ever attempt to describe a fox hunt? Possibly, a hunt with one pack of dogs, or perhaps a hunt where ladies and gentlemen on horseback with a pack of hounds chase a half-tame fox across the open country, but never a hunt like this, for I am satisfied it is the first of the kind on record, and I confess my inability to do the occasion justice. Your correspondent, with a horse and carriage, spent the entire day making the rounds from point to point that he might be able to give a better idea of the hunt to the readers of FOREST AND STREAM than he could possibly do if he remained on some favorable runway trying to secure a fox. There were many amusing incidents, a few of which I will attempt to relate.

Mr. Joseph Gross, a wealthy German resident, has taken to shooting and has provided himself with dogs and equipments. He joined in the hunt with much enthusiasm and stationed himself on an excellent crossing. It was, however, simply luck, for as a fox hunter he is an amateur. Driving down the road past his stand I found Joseph in deep trouble, and he insisted on my stopping to hear his story. To fully appreciate one should witness the gestures and the excitement of the teller. His dog had failed to "get on" with the pack and he held him by his side. Following is the story, imperfectly given, in Joseph's broken dialect: "Well, now, I hear dem dogs and I see dot fox vite up by dot leetle pine trees. Vell he turns and comes vite to me. Says I dot fox ish mine. Vell now I musht let go mine dog to shoot—dot dog he holt vite for dot fox. Vell dot fox don't come to me some more, he turn right up over der hill! It vos too bad, but I couldn't shoot mine dog. See!" "Yes, Joe, I see, and it was too bad. Good-by," and the writer left him mourning over his ill-luck.

Mr. R. L. Golbert, last manufacturer, is a bird shooter, but has always turned up his nose at fox hunting. His superintendent, Mr. M. A. Linfield, is, however, a great lover of the sport, and coaxed his employer out with the determination of putting him on the right spot to kill a fox. A pack of dogs were coming toward them and Linfield saw the fox coming right lively. "See him, Robert," says he, in a whisper, "now give it to him." The fox was passing within easy range, but Robert was looking away off toward the dogs. Linfield was frantic, and seizing Gilbert's arms, pointed the gun toward the fox. "Oh! I see him," said Golbert, but before he could get ready it was too late and he gave him a shot at long range, only to see him run the faster. "Oh dear," said Robert, "I would have given fifteen dollars to have killed that fox," and his stock in fox hunting has gone up several points.

One more incident was the crowning event of a long and most delightful day's sport, and occurred just before darkness closed the entertainment. The hunt had been very exciting throughout the entire day, with no time that there was not a fox being driven in the immediate neighborhood of some of the party. Only two had been killed, but eight or nine members had been favored with good shots, and some of them were within easy range, but somehow the shooters failed to connect. It was near sunset and the fellows were leaving their stands and coming together preparatory to going home, and nearly a dozen had gathered on the road under Sewell's Hill, bordering the lake, when Asa R. Jacobs and "Jumbo" and three of Kinney's pack broke in hearing from the south and swung over the "Randall Rocks" west of the lake. Making a sharp turn the fox broke on to the lake and came down nearly half a mile in full view of the hunters. The men had spread out and the fox must run plumb into the arms of somebody. The dogs were in close pursuit; it was red hot, and the excitement was at the highest pitch. He was a beauty and coming right toward Wm. S. Perry; but now he bears away, and as it is a last chance Will gives him a long range shot. On he fairly flies right into the face of three men who were standing together; three more shots at 20ft. range. On past another man, and then another, who give him two more shots at easy range—and the little beauty has run the gauntlet of about a dozen guns and gone on over the hill apparently unharmed. It was as quiet as a Quaker meeting for perhaps two minutes, no longer. Then the men huddled together and began to sass each other and call each other "pet names." But the scene can never be fittingly described, and I leave it to the imagination of the reader.

It was fast growing dark and the tired hunters separated to their teams and to their homes. In the evening they began to gather at the rendezvous, which is the store of the writer, and by 7:30 o'clock it was "standing room" only. The men talked over the events of the day, and all agreed that the first grand fox hunt of the Worcester Fur Company had been an immense success. It was the first, but I prophesy it will not be the last. E. SPRAGUE KNOWLES, Sec'y.

WORCESTER, Mass., Feb. 22.

HUNTING RIFLES AND BULLETS.

Editor Forest and Stream:

The FOREST AND STREAM is a welcome visitor to my household every week. I have long been a lover of the rifle, and will discard it only when no longer able to "draw a bead."

You have allotted much space of late to the advocates of the muzzleloader. All that I now ask is that you accord to me space enough in your valuable paper to make a fair and impartial statement of the matter, viewing it from my standpoint. This I do with the kindest feelings for all parties who have entered into this discussion; but I do it more in the interest of the young men of the country not posted in such matters than anything else. Young men who can ill afford to buy more than one rifle, if influenced to buy muzzleloaders for hunting purposes, will, in nine cases out of ten, be sure to regret it. When twelve years old I was allowed to go to the woods with a rifle, a muzzleloader. That was forty years ago. Since that time I have never been without a rifle. In after years, when the breechloader came into use, I discarded the old-fashioned rifle and adopted the new. Now I say to the young men of the country that there is very little difference between the two kinds as regards accuracy and trajectory, but as regards convenience and rapidity of action, there is the greatest difference, with the advantages all in favor of the breechloader. Maj. Merrill has labored very hard to prove that he has the best rifle, and that a muzzleloader. Any one who has studied the trajectory test of the FOREST AND STREAM during the fall of 1885 would not buy Maj. Merrill's rifle, or one like it. Shot No. 4, with that rifle, in that test, will condemn any rifle of any make for any purpose whatever. At 25yds. the bullet is 1.170in. above the point blank line. At 50yds. it is 1.051in. above, and at 75yds. it is the same as at 50. Such a record would kill any rifle on earth. A good rifleman would tell you that he would not have it. But, says one, this is not a trial of accuracy, but of trajectory. Be that as it may, by that single shot No. 4, this Major Merrill muzzleloader has shown to riflemen that it is not accurate. If a man tells four truths and one lie in five trials, no one would be willing to trust him afterward. So it is with the Major's rifle.

The Major seems to have a particular spite against the little Remington-Hepburn .32 breechloader, which was also in that test. Now I ask the Major to point out a single shot by that little arm that was not perfectly natural. That rifle made a splendid record. I ask the young men of the country to study this trajectory test before buying rifles. It is the surest guide to go by that I know of. It shows which rifles are accurate, and which are not.

The Major says his rifle beat all the breechloaders as regards trajectory. Not a single American breechloader in that trial used Curtis & Harvey No. 6, imported powder. The two muzzleloaders were the only rifles that used it. Well, I cannot say what the Merrill rifle would do at a distance of over 200yds., as it was not tried over that distance, and I can say that its record for trajectory has been beaten by a breechloader of much less weight, less powder and more bullet. As will be seen, the Romer rifle weighed over 14lbs., and used over 130grs. of Curtis & Harvey's No. 6 powder, and a bullet weighing 267grs., being as one of powder to about two of lead, its trajectory height was 6.399in.

At a test near Bozeman, Montana, during the spring of 1885, there was tested a Sharp's breechloading rifle, weighing 9¾lbs., using Curtis & Harvey's No. 6 powder, 113grs., with a bullet weighing 270grs., and the trajectory height was 6.130in. over 200yds. Here we see a breechloader of much less weight, using less powder and more ball, beating the Romer muzzleloader, the great muzzleloader in favor of which so much has been said.

Now I trust the friends of the muzzleloader will not ascribe this defeat to the difference in climate, for at that very place some other rifles were tested that were tested at the FOREST AND STREAM trials, and the trajectory in Montana was about as high as at New York. For instance, the Winchester .45-75-350 was tested at both places, and in New York the trajectory was 11.979in., and in Montana 11.820in.

But Major Merrill says that the muzzleloader was tried when the wind was blowing eighteen miles an hour, and when the little Remington-Hepburn was tried it blew only seven miles an hour, and claims a disadvantage to the muzzleloader on that account. Now the truth of the matter is, that when the muzzleloader was tried the wind was blowing from the five o'clock quarter, going almost in a direct line with the bullet and was, therefore, a great help instead of a hindrance. Not so with the Remington-Hepburn. The wind was only blowing seven miles an hour it is true, but it was blowing from the ten o'clock quarter, which was almost square against the bullet, and therefore a great disadvantage. The Remington used one grain of Hazard powder to three of lead, while the Merrill used one grain of Curtis & Harvey's No. 6 imported powder to 2.13 grains of lead.

Under all the circumstances, I say that the Remington .32 beat the Merrill in that trial, as regards trajectory; and as regards

accuracy no one will pretend to deny that the record of the Remington is the best.

For further proof of the accuracy of the breechloader I refer all admirers of the rifle to the targets lately made by Mr. F. J. Rabbeth, of Boston, Mass., and others. He also uses a Remington-Hepburn.

No, Messrs. Merrill and Romer, you must march along with the arts and sciences, or go down into North Carolina where the boys are still voting for General Jackson, and shooting muzzleloading rifles. SMALL BORE.

EVANSVILLE, Ind.

Editor Forest and Stream:

I rather regretted to see the somewhat flippant article that appeared in your last issue, in the shape of an open letter to "P." from "Mestier."

Either "Mestier" must be a very superficial student or his mental caliber is to small to enable him to properly appreciate the very great value of the careful experiments made by "P." and his able deductions therefrom.

The point established, that a very flat trajectory, combined with a fair degree of accuracy, can be obtained from an express cartridge shot from one of our quick twist target rifles, is of the highest importance.

"P." shows that his gun is capable of giving a flatter curve and a higher degree of accuracy than has been obtained from the slow twist English express rifles.

The result is especially gratifying to me, as I advanced the opinion, some years ago, that a quick twist would present no obstacle to a satisfactory performance of these particulars, provided that the bullet was correctly proportioned, both as to hardness and diameter.

I find that I must differ from "P." in the opinion that a patched bullet is essential to accuracy when a high powder charge is used. I can see no reason why a properly designed cannolured bullet should not perform well. Those heretofore used have generally been too soft, and the cannelures have been too few and too deep.

My experience has been that, with the same powder charge and weight of bullet, a cannelured bullet will give an appreciably flatter curve (due to less friction between the well-lubricated surfaces of contact) than will a patched one. While in dirty shooting (the only practical style for hunting) the advantage in accuracy is likely to be with the naked bullet.

I would ask "P." if there is not danger of the patch being roughened and abraided by exposure to moisture and careless handling, so that the cartridge will enter hard and the patch be stripped from the bullet in firing, giving wild shooting with a tendency to leading. I have not used a patched bullet in fixed ammunition to a sufficient extent to be sure on this point, but should think that this difficulty would be likely to occur, especially if the cartridge is carried in a belt.

In conclusion, I wish to thank "P." for the valuable data he has already furnished us, and to express the hope that no ill-considered criticisms may deter him from continuing in well-doing.

NEW YORK, Feb. 26, 1887. JAMES DUANE.

A MODEL GAME LAW.

WESTERN N. Y. CLUB, Feb. 14, 1887.—*Dear Sir:* In view of the adverse and selfish opinions upon the subject of protecting fish and game, and confusion of laws, the proposed draft of a law is submitted for your approval. It is deemed sufficiently broad and comprehensive to satisfy this diversity and selfishness, afford all "consistent" protection and latitude, and is concise and easily understood. With an influential following in this direction, it is thought you are the best man to recommend, and have the honor of getting it through. It is approved by this Club and by all marketmen. It will be cheerfully obeyed by pot-hunters. Yours, etc., B. FROG, President.

An Act to protect and regulate the killing, transportation and sale of fish and game.

The people of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. The lawful season for killing fish and game of all kinds, shall commence on the first day of January and end on the 31st day of December in each and every year. During the period aforesaid fish and game may be lawfully sold, transported or had in possession, but not until after caught or killed.

Sec. 2. All persons violating this law shall forfeit all rights of fishing or hunting prior to the violation.

Sec. 3. All acts or parts of acts inconsistent or contrary to the provisions hereof are hereby repealed.

Sec. 4. State game protectors may enforce this law according to discretion, and use their best efforts in aid of the political candidate by whom they are appointed.

Sec. 5. This act to take effect immediately.

Sea and River Fishing.

SURFACE SCHOOLS OF FISH.

Editor Forest and Stream:

I am glad to notice in the late numbers of your paper that the discussion of "Surface Schools of Fish" is in order. In reply to "Jay Beebe" in your issue of Feb. 7, I have no doubt whatever that the fish I saw were trout; my party, guides and all, agree in this. I failed to land the fish I hooked, but we all were often within a dozen feet of the schools, so near that we could see their mottled backs, and I do not think it possible that we were mistaken. Again, in this chain of lakes, I am not aware that any other kind of fish are taken; none to my knowledge, except now and then a sucker. During several seasons' fishing I have seen over a thousand speckled trout caught and not a dozen suckers; so I again state with the greatest certainty that we saw "schools of trout swimming with their backs out of water packed like sardines." Further, let me state that they were "out on business," their uneasy ways impressed us so; they were not feeding or playing. The most satisfactory explanation given me is, that they were seeking their spawning beds; it was late in the season and some of the fish we dressed were filled with roe. Another friend suggests that as the water was low and very warm it might not have held a full supply of oxygen, and they came to the surface to "get their breath." I am glad "the question is now before the house." SPICEWOOD.

CENTRALIA, Pa.

Editor Forest and Stream:

I have read with great interest several letters concern- trout playing on the surface of the water. I give you an instance or two which have come within my experience, and which, though they differ to a certain extent from what is related by your correspondents, may throw some light on the matter.

Some years ago I had the good fortune to fish on a lake in Finland, the time of the year was June, and as the days were hot and the water clear, most of our fishing was done in the short nights. At time about sunset (at that time of the year the sun only dipped below the horizon for about two hours) the surface of the water would be broken in all directions by large fish. The rise lasted about half an hour, when they left off. These fish were apparently not feeding, as they would not look at the flies I offered them. All we caught in the lake were caught with an artificial minnow. Later in the year, however, I believe they are caught there with a large red- or black-palmer.

Two years ago, in the autumn, I was fishing in Norway, in a rapid stream flowing from a large lake. The day was cold and cloudy, threatening rain. We had rather poor sport, the fish we caught were good ones. About midday the rain came down in torrents, and the fish immediately began rising in great numbers. I never saw so many fish before nor since. With each throw we covered three or four rising fish. Our flies, however, were not right, the fish were feeding on a small iron blue dun, which had suddenly appeared in swarms on the water. I had left my book of small flies at home, and only had with me a lot of larger and rather brilliant flies, which I found most serviceable on the same river a day or two before. My friend changed his hooks several times, and hooked one fish by the back fin, which being a two-pounder led him such a dance that the rise was over before he got him into the boat. I have seen the same sort of thing happen in other rivers, and I am sure that unless one has the exact fly the fish are taking it is very little good fishing at all. For when there is a large rise of a certain fly, the fish leave all other food and even other flies, and confine their attention to the one sort alone.

All this is experience from the other side. Whether trout have the same habits and customs here as their cousins in the older countries, I hope to learn this spring. KISMET.

PHILADELPHIA, Feb., 28, 1887.

Editor Forest and Stream:

In your issue of Feb. 17, "Jay Beebe" hazards the opinion that the fish referred to were not trout. I happened to be fishing in another of the Mastigouche lakes on the same day that "Spicewood" noticed the peculiar actions of the fish. I had been out all day with my wife in a canoe trout fishing, and as we had rather poor success before noon, were on our way back to camp, but stopped for a short time near an island in Lake Seymour, where I tried a few casts. The surface of the lake was like a mirror, unbroken save where an occasional riffle showed where some wary trout had discovered an unsuspecting insect and taken him in out of the wet. After several ineffectual attempts to seduce some of the more eager fish into accepting the artificial for the natural, I was about putting up my rod when my wife called attention to a peculiar appearance on the surface of the water about 100yds. from us. A space of 15 or 20ft. in diameter seemed to be alive with fish, which kept the water in a perfect boil, the whole school moving slowly toward our boat. When they passed within a few yards of us, we saw they were trout, apparently of all sizes, rushing back and forth so close to the surface that their dorsal fins were visible. I made several casts right among them, but succeeded in hooking only one, and that near the tail. On landing the fish I found it to be a plump, healthy trout of about 10in. in length. The school had disappeared as suddenly as it came and we saw no more of it that afternoon. The old guide with us, who had been on these lakes for years, said he never saw anything like it before. On speaking of this novel occurrence in camp that evening, "Spicewood" and two of his friends, who had been camped on another lake for two or three days and had just returned, spoke of the same thing as having been seen by their party several times during that and the previous day, and there was not a doubt in the minds of any one that the fish seen were genuine *Salmo fontinalis*. The supposition of "Jay Beebe" that they might be herring is not borne out by the facts as noted by eye witnesses. The Mastigouche Lakes are full of genuine speckled trout, and no other fish are known in these waters except suckers and such small kinds as serve for food for the trout.

The theory of an old Yorkshire fisherman residing in this city, to whom I mentioned this phenomena, was that in lakes with a soft bottom, when the trout could not find sand or gravel beds to clear themselves from parasites, they collected in schools and rubbed against each other for the purpose of getting rid of obnoxious company.

I have fished in numerous lakes in our Laurentian region for a number of years, but never saw nor heard of any such peculiarity among the trout before.

HENRY W. ATWATER, Sec'y M. F. C.

MONTREAL, Canada.

BASS AT BREAK OF DAY.

Editor Forest and Stream:

With the wind shrieking and howling and the mercury nearly out of sight "below," there is little out of doors to attract the attention of the sportsman. The best that can be done is to sit by a glowing grate, whose warmth seems the more cheerful as compared with the chilling blasts without, and read the FOREST AND STREAM between intervals of dreaming of pleasant days that are passed, and in planning for those to come. The trim little rifle we see resting on the rack reminds us of days devoted to squirrel and woodchuck in which it played so important a part. Trustworthy and companionable we always found it, and its whip-crack was ever to our ear the sweetest music. The less shapely, though none the less business like shotgun, brings pleasant recollections of days afield, when every tree and shrub was clothed in autumn's rich and varied tints. Again we feel the thrill caused by a grouse springing from cover and whirring away through the tree tops like a small cyclone, to come again to earth with a dull thud, while a shower of feathers come floating back on the air; or, quite as often, to safely disappear while we look ruefully at our smoking barrels. In memory, a rabbit starts from beneath a tuft of grass at our very feet, and bounds away with springs that scatter the dry leaves from his path. Instinctively our gun comes to shoulder, a hasty glance along the barrels, a sharp report, a prompt recoil, and, through the drifting cloud of smoke we see a tuft of white cotton describing circles in the air, and when the smoke clears up, there, on a bed of moss, lies our game ready for the bag as soon as a fresh shell is placed in the gun.

None the less pleasant are the recollections of days spent upon the water with rod and line. The reading of a correspondent's first acquaintance with bass recalls my first experience with that gamy fish. All preparations were made the night before. Very early we started, for the day's sport was to be prefaced by a ride of ten miles through the keen air of a frosty October morning. In due time we reach favorite fishing grounds along the "Old Susquehanna," with which my companion is well acquainted, and without disturbing the inmates of a farmhouse on the river bank, who are not yet astir, we leave our team in the barn, procure a boat, and are soon afloat; and even before the first faint blush of the approaching dawn appears in the east we are ready for the sport.

The boat—a good one for the purpose—is moored squarely across the stream by nsing two anchors in water 12ft. deep. Our tackle is of the simplest kind, consisting merely of lines 25yds. in length and furnished with two hooks, sinker and float. After being duly baited with live nummy chogs, the hooks were thrown out below the boat and the lines paid out as they floated gently away with the current, the float keeping the hooks from fouling the bottom.

And now we impatiently await a strike. At last it comes, but is not quite what we had expected. And, as we manipulate the line, we quickly conclude that the accounts read and the stories heard told of the gamy qualities of this much-talked fish must have been decidedly "fishy." Our catch is quickly towed alongside (no other terms will express the manner of doing) and, in extreme disgust, we drag a bullhead into the boat. But as the first rays of the morning sun gild with light the topmost pines on the mountains at our right, and awaken to busy life the occupants of the farmhouses at our left, the bass give us their attention and very quickly secure ours. The glorious dawns, the grand old mountains, the gently flowing river, the peaceful rural scenes, all are forgotten in the excitement and pleasure of landing bass after bass in rapid succession; and we were soon ready to believe everything we had heard of their good qualities. Those we took that morning were not very large, but the quantity was all a reasonable sportman would ask. The largest one hooked was lost, as is usually the case, as, with exultant pride, we raised him over the side of the boat. There was a quick slap of the broad tail on the rowlock, a splash, a swirl in the water, and we stood looking where he disappeared, and we felt—well, if you are a fisherman you know how we felt.

As the dinner hour approached, a call from Farmer B. summoned us ashore, and a genial, hospitable gentleman we found him. He took pride in showing, for our amusement, the accomplishments of a fine pointer of which he is the owner. We had noticed him during the forenoon hunting in the willows along the river bank. We fished a short time in the afternoon and added six to our string, but the best of the fishing was had in the early part of the day. Our score numbered thirty-six black bass, one goggle-eye and a pickerel that tipped the scales at 2¼lbs., besides the aforementioned bullhead. Two better pleased anglers never beached their boat and took from it their catch at the end of a day's fishing; and I seldom joint a rod or bait a hook without thinking of that—my first day with black bass. BON AMI.

SUSQUEHANNA COUNTY, Pa.

SALMON IN THE HUDSON.

THE following letter from Col. Marshall McDonald, of the U. S. Fish Commission, to Mr. A. N. Cheney, of Glens Falls, N. Y., is of great interest. Now that there is a prospect of having salmon in the river, as was evidenced by the capture of five er six adult specimens last year, it is important that steps should be taken to protect them not only while they are becoming established, but for all time. The recommendations of Colonel McDonald are excellent, and to the point. He writes:

WASHINGTON, D. C., Jan. 31, 1887.

Mr. A. N. Cheney:

DEAR SIR—I have been greatly interested in your communication to the Albany *Argus* in regard to salmon in the Hudson, but have been so overwhelmed with official work for weeks past, that I have not had time before to give it the consideration and thought it well deserves.

The success of the experiments already made with salmon, indicates that fish (fry) placed in the Hudson, are under favorable conditions for growth, and that after migrating to salt water they will return to the river to spawn.

To render the Hudson permanently a salmon river; furnishing a great addition to the food supply for the people; affording fine sport for the anglers and greatly enhancing the attractions of that section of the State drained by its headwaters; bringing greater influx of visitors, greater profits for your hotels and boarding houses, better markets for home supplies, profitable employment for guides and boatmen, and directly or indirectly profit to the community generally, three things are necessary:

First—To open the way over natural and artificial obstructions so that the sea-run-salmon may find a ready passage from salt water to the extensive and favorable natural spawning grounds at the sources of the river.

Second—To continue the work of artificial hatching and planting until an abundant annual run of salmon is established in the river.

Third—Stringently enforced laws for protecting fry, parr, grilse and salmon, from capture by any means whatever, for a period of years; and afterward by a close season and prohibition of their capture by other means than hook and line above tide water. Their capture in tide water should also be regulated.

During the past season, in October, I spent several weeks on the Mohawk, and gave it most careful study. The habitual clearness and purity of its waters and the low summer temperature, indicate favorable conditions for salmon. In these respects, and in the pale amber tint of the waters in mass, I was strongly reminded of the Tay in Scotland, which is a stream not so large as the Mohawk, but affords the finest salmon fishing in Scotland, and yields to the proprietors of its fisheries an annual rental of £40,000.

Above the falls at Cohoes there are no material obstructions on the Mohawk. The dam at Schenectady has now an efficient fishway, which will, I think, demonstrate to afford an easy and accessible passage for all species of fish; moreover the dam itself being only six feet high will be no obstacle to salmon which will readily pass any part of it in ordinary or full stages of water.

At Cohoes the total height of the fall to be overcome is about 110 or 120 feet, vertical. This locality presents unusual engineering difficulties; a part of the way would be through tunnel in solid rock, and all parts would have to be of the utmost strength. The cost of a fishway there would be from $15,000 to $20,000—to erect such a construction as I would recommend.

I think it would be wise to concentrate all interests concerned on the Hudson for the present. I do not know the aggregate height of the obstructions, natural

and artificial, on the Hudson. As a general estimate the cost of fishways would not exceed $100 per foot in height or fall of dam; that is, for a ten foot dam, $1,000. The fishways to be built in the strongest manner, giving four to six feet in width of water-way and thoroughly protected against damage. The fish chute in the dam at Troy, properly located, can be readily converted into a suitable fishway protected against damage at a cost of $1,000.

My experience in New York last fall, and studies based on that experience, has enabled me greatly to simplify and strengthen construction; and it also enables me to get rid of sand and mud automatically, so that none can settle in and clog the working of the fishways.

I note what you say in regard to strength of fishways; permanence of construction is a *sine qua non*. This is a question to which I have given special attention in studying the conditions to be encountered in your New York rivers, and there is no difficulty in assuring that fishways shall be as stable as the dams to which they are attached. This requires in general that they shall be covered, but there is no objection to this; indeed, it is, I believe, an advantage in the case of the bass and all of the *Salmonidæ*, and I am not sure that it is objectionable in the case of the shad. In regard to amount of water, I would say that a fishway easily practicable for salmon can be provided with a flow of water amounting to ten cubic feet per second or 625 pounds per second. The consumption of water in that case is equal to a little over one horse power for every foot of fall—or for a ten foot dam the loss of power by reason of the fishway would be equal to about twelve horse power.

A fishway of this capacity would be from three to four feet wide, would be covered with heavy timber and would receive the shock of ice, logs or timber without damage. Yours very truly, MARSHALL MCDONALD.

THE MENHADEN QUESTION.

AS our columns have always been open to the discussion of the effect of the menhaden oil and guano industry on the supply of food-fish, we quote the remarks of the Commissioners of Inland Fisheries of Rhode Island, in their report for 1886, in their entirety. They say:

The important problem whether the bay and coast fisheries should be protected by statute, is one that is fast solving itself. With few exceptions (those of shad and rock bass), this kind of fishing seems to be in a fair way of becoming extinct, or at least, so destroyed by the menhaden fishers and trappers, that instead of furnishing one of the cheapest kinds of food for the masses, it will become the dearest, as the extremely high prices which have ruled the past season show.

From information obtained from wholesale fish dealers of the prices of the various kinds of food-fishes natural to the waters of the State for the last five years, it is apparent that the prices have been steadily advancing, and the supply as steadily diminishing until the season of 1887 shows higher prices for nearly all food fishes than was ever known before. The only remedy which suggests itself to the Commissioners is a law preventing menhaden fishing in the bay or within three miles of the coast, and for the shore fisheries a close time law which can be enforced (the present law having been found by previous experience, difficult in this respect), should be enacted. Menhaden and other trap and net fishing is, in the opinion of the Commissioners, largely the cause of this scarcity of fish, and they are sustained in this belief by the reports of Commissioners of other States. As an illustration they quote from the report of the Commissioners of New Jersey, 1884-1885, page 8: "The colonies of fishermen at Seabright and Galilee were loud in their denunciation of the menhaden fishermen, and, as at Holly Beach, threats were made of procuring cannon and firing upon the marauding steamers. In speaking of this matter an old fisherman said: 'There is no certainty about the fishing. The oil fishermen destroy everything that comes in the compass of their immense nets, and spoil the fishing not only off shore, but in the bays and sounds along the Jersey coast.'

"They are always on the lookout, and at the first sight of a school of fish making for an inlet or skirting along shore, they are out with their boats, and in a twinkling the purse net is around the school, and all, pursued and pursuers, big and little, menhaden, bluefish, weakfish, drumfish, Spanish mackerel and all are gathered in to be ground into pulp and pressed for oil and manure, that a few rich monopolists may grow richer at the expense of the thousands who depend upon fishing for their bare existence. This thing is all wrong and should be stopped; it is crippling a great and vital industry and robbing the State. It robs the shore men of thousands of dollars every year. The oil manufacturers claim that they give employment to hundreds of men, but at the same time they are robbing thousands. One of the most profitable sources of income to the bay fishermen exists in catering to the anglers who come to the shore every year. They are growing fewer every season, because the fishing is being destroyed. These thousands of men spend money freely among the fishermen, farmers and boarding-house keepers. It is safe to say that for every dollar spent in the State by menhaden fishermen, the anglers spend hundreds. Nor is this all; the wholesale destruction of food fishes, as the bluefish, weakfish and mackerel, is a wicked waste of what Providence provides for the poor and hungry, and to continue to permit the piratical invasion of the menhaden boats along the coast in the face of a common protest, is a great wrong to the whole people. It was announced at the close of the season that the menhaden fishing had been unprofitable, and that the business would probably be relinquished by many of the companies. This looks like an effort to forestall legislation by quieting the opposition.

"It is to be hoped that it will not succeed in producing any indifference to the great evil which now exists and which will certainly continue until the last fish is caught or driven from the coast. The enormity of the business may be understood when it is known that over 200 steamers, each with a capacity of catching from 40,000 to 50,000 fish per day, are constantly patrolling the coast."

The Commissioners say that the same applies to the waters of their State, and some action should be taken which shall prevent this wholesale destruction of the shore and bay fisheries. So important has this subject become that Congress has been appealed to for special legislation in this matter.

MAINE WATERS.—Fishermen are preparing for the summer campaign. Going into one of Boston's largest dry goods jobbing houses the other day, the head of the firm brought me the catalogue of a well-known rod maker, with the remark that he was going to purchase a couple of rods, and he desired my advice in the selection. Of course I advised him to purchase no maker's rod without first seeing it. The gentleman is something of a novice in the business. It was only a year ago last June that he made his first trip to the Maine trout waters—the Seven Ponds—but he is none the less an enthusiast. He made that first trip at the earnest solicitation of a friend, but it converted him. He has talked a great deal about it since. Last year he was kept at the store by the illness of another partner—lately deceased. Mr. C. P. Stevens, whom I mentioned in a former letter as about ready to start for the woods to locate a camp he is building, with four of his friends, on the border of the Narrows, Richardson Lake, Maine, left a week and a half ago. Not a word has been heard of him since he left the settlement at Bethel. He there found four or five feet of snow, but also a report that there was a road up the lake to the Narrows, and a road from Sunday Cove to the Middle Dam. Mr. Stevens wrote that the next day he was to have his first experience on snowshoes. No fears are entertained for Mr. Stevens's safety, for he is in the good keeping of Adana Brooks and four or five other thorough woodsmen; only it is probable that the recent blizzards and snow storms have cut them off from the mails for a season. They propose to camp on the spot and get into the new camp as fast as it is built. It will hardly be *Vive Vale*—the name that the camp is to be called—at first up there. By the way, the telegraph made a recent number of the FOREST AND STREAM get that name "Vine Vale" instead of the Latin term, which means to live well. This latter name has a sound something like grapes or strawberries, but Mr. Stevens and his fellows hardly expect to clothe that piece of the wilderness in "the figtree, the olive and the vine" just at present. To be honest about it, they prefer trout and about as much of wilderness thrown in as can be had to the square rod. As for grape juice—well, true sportsmen do not use it.—SPECIAL.

SALMON ANGLING IN MAINE.—The success of those who fished for salmon with the fly near Bangor, on the Penobscot last summer has attracted much attention, and we hear of several anglers who will visit Maine during the next salmon season to test their skill and the excellence of the fishing. The river has been well stocked during the years past, and the results of the plantings are now apparent. Last year there were many salmon taken by local anglers, most of whom were novices in fly-fishing, and several visitors from outside the State also fished the river, and their success was recorded in our columns. This has attracted attention far and wide, and the result will be a movement of anglers toward Bangor when the season opens.

SUBSCRIBERS who may chance to receive mutilated or defective copies will confer a favor by returning them to this office, and others will be supplied in exchange.

THE FISHING MAIDEN.

SHE was full of cunning crinkles, little tricks and wily wrinkles
to catch crabs and periwinkles in the waters of the bay.
She knew all the leading jobbers in fish tackle, reels and bobbers,
and she always caught the robbers that would steal her bait
away.
She could see without her glasses how to catch her trout and
basses, and she gathered in by masses victims of her wily
skill.
Only one thing was the matter—she could fish but couldn't flatter;
and that made the young men scatter—she could never fill the
bill. —*Seneca, in Railway Advocate.*

Fishculture.

THE GEORGIA COMMISSION.

THE fisheries and fishculture of Georgia comprise a department under the control of Hon. John T. Henderson, Commissioner of Agriculture, assisted by Dr. H. H. Cary, Superintendent of Fisheries. We have the report of the Commissioner embracing the years 1885 and 1886, which contains several pages devoted to the fisheries, from which we learn that the subject of the artificial propagation of migratory fish that naturally seek the waters of Georgia, has never received the full meed of attention from the State authorities which its importance and peculiar interest demands. The supply of shad has greatly diminished within the last thirty or forty years, from several causes, chief among which is the increasing demand of the population, the facilty with which the fish may now be distributed to distant northern markets, and the consequent undue encroachment upon the supply of spawners. Every device has been resorted to at the shad fisheries in the endeavor to capture all the shad that enters the mouths of the rivers. In addition to this, most of the rivers of Georgia are so obstructed by dams that it is practically impossible for the shad to reach the upper waters. This not only deprives the dwellers in the up country of this source of fish supply, but the barely ripe spawners are hemmed in, so to speak, below these obstructions, and until quite recently were taken day and night by the fishermen.

Under date of Oct. 16, 1886, Superintendent H. H. Cary submits his fourth biennial report covering the time since his last report dated Oct. 16, 1884. A very limited appropriation has limited and embarrassed the work of fishculture, but with the means at his disposal the Superintendent has advanced the work of the Fish Commission as far as possible. He alludes to the fact that nearly all the rivers in the State have more or less obstructions to the passage of anadromous fishes to their spawning grounds, which consist mainly of dams constructed for milling or manufacturing purposes, and suggests that these may be overcome by the construction of fishways. From careful observations extending nearly the entire length of the Atlantic coast and of a portion of the Gulf of Mexico, he is satisfied that the shad is the only anadromous fish, with perhaps one or two exceptions, that would be profitable to attempt to propagate in Georgia.

In 1885 the Legislature passed an act authorizing the Commissioner of Agriculture to appoint one or more game wardens, who should have power to make arrests for violations of the fishery laws. Immediately after the passage of the act the Superintendent made a tour of inspection to most of the fisheries in the State, and found that little attention was paid to the laws at any point. In about a month after the appointments were made a second tour of inspection was undertaken, and it was found that the fishermen on receiving notification had promptly stopped fishing.

There is but one fishway in operation in the State, and there is no law requiring any. The one mentioned is in the dam at the head of the canal near Augusta, and was the result of the compromise between the State of South Carolina and city of Augusta. It has never received proper care and attention, and has been choked up with material brought down by the floods. The United States Fish Commission has made many plantings of shad in the State, and the fact is stated that before the artificial hatching and propagation of shad fry no shad appeared in the rivers that empty into the Gulf of Mexico, but now they have appeared in nearly every river emptying into the Gulf, not only in Georgia but in adjoining States. Grown shad have been taken both at Columbus and Albany. None have been taken, so far as known, in the Chattahoochee above Columbus, from the fact that they cannot pass the obstruction at that place. It is recommended that the fish wardens give the sturgeon the benefit of the protection which they extend to the other migratory fish, also that the State should take some action in the matter of oyster culture.

The number of carp ponds in the State is very large, and where proper attention has been given success has resulted.

THE RHODE ISLAND COMMISSION.

WE have received the annual report of the Commissioners of Inland Fisheries of Rhode Island for 1886. From it we learn that in January, 1886, 10,000 trout spawn were received from the U. S. Fish Commission, and were very successfully hatched, which, together with 30,000 other trout fry purchased by the Commission, were distributed in the various waters of the State. They also received from the U. S. Fish Commission, in May, 1886, 1,500,000 shad fry, which were placed in the head waters of the Palmer River, and from the same source 2,000 German carp were obtained in November, 1886, which have been freely applied for by parties interested in their culture.

Concerning salmon, it is the opinion of the Commissioners that if proper fishways could be constructed at the dams of the manufacturing companies along the Pawtuxet River to allow the fish to pass up and return to the salt water, that this fine stream could be restocked with this game fish.

The Commissioners state that from personal observations, as well as from information derived from other valuable sources, they are convinced that the efforts to re-stock the streams of the State with trout, which were once so plentiful, have been rewarded with a very satisfactory degree of success, and that the present system of placing a few thousand trout fry of the various kinds, which they can obtain from the U. S. Fish Commission, from other States and by purchase each year, would be a judicious course to continue to pursue.

Black bass continue to thrive and increase, and are being more highly valued each year as a food and game fish. At the May session, 1886, on petition of citizens of North Scituate, all restrictions upon the taking, or fishing for black bass were removed from Moswaneicut Pond, thereby allowing this fish to be taken at all times, not affording them any protection during the spawning season. This oversight has been brought to the attention of the General Assembly and will probably be corrected.

Since the State began the re-stocking of its waters with shad, this fish has shown the best results, as evidenced by the increased catch each year. It is a matter of doubt with the Commissioners whether the waters of the State are adapted to the successful cultivation of the German carp. The wide distribution of the present invoice may enable them to determine this more satisfactorily later on. In another column we give their views on the coast fisheries and the menhaden question.

THE WISDOM OF FISHCULTURE.—*Editor Forest and Stream:* In your issue of Feb. 10 "Special" quotes the suggestions of a veteran Maine sportsman relative to game protection. The majority of his views are sound, and I for one heartily indorse them, but cannot agree with him on the subject of artificial propagation, for on many of our streams and rivers I believe propagation has solved the question of protection to an extent otherwise nearly impossible. For instance, we will take Crooked River, where our Commissioners so successfully operated this fall. Here some three miles of the favorite spawning beds of the *Salmo schago* lie surrounded by woods and away from habitations, the residents have from earliest history practiced spearing, and many of them to-day consider that they have a "divine right" to kill a spawning fish, and no one warden, be he paid ever so well, can thoroughly protect them. He may be able to procure evidence and prosecute, but even that is not protection in its fullest sense, for the mischief has been done, and the loss of one female fish heavy with eggs is great, and only time can repair the damage. And with the difficulty of procuring witnesses and unbiased juries, I believe an ounce of protection to be worth many pounds of prosecution. This year the Commissioners constructed a weir and pound as near the mouth of the river as was practical, and held and guarded every salmon that entered it. After delivering them of their eggs they were again returned to Sebago Lake without the loss of a single fish. Whether the million of eggs taken and now in the hatching house at Edes Falls prove a failure or not I am willing to let time decide, but will acknowledge that I shall be greatly surprised if good results do not come from them. Of one thing I am certain, that for once landlocked salmon have enjoyed protection while in Crooked River, and in no other way do I believe it could have been so efficiently accomplished at the same expense. For another locality where I think protection and propagation would go hand in hand take Roger's Brook, a tributary to Long Lake and a stream with which your correspondent "Special" is also familiar. Here again the spawning beds are surrounded by woods for a distance of nearly two miles, and I would not fear to wager that once a week during the spawning season, were I so disposed, I could take a salmon from it undiscovered, even if it were constantly guarded by two of the best wardens procurable, and they experienced guides; but the establishment of a weir by the Commissioners (and I have reason to believe it will be done next season) near the mouth of the brook for the purpose of taking eggs for artificial propagation would not only hold the fish where they could be better protected, but would, I believe, be productive of good results in stocking our waters. —J. C. MEAD.

THE PERILS OF FISHCULTURE.—R. J. Richardson has a game preserve three miles north of Dunbar's Hotel at Stillwater on the Beaver River, Adirondacks. Mr. Richardson procured some young fish at the State hatching house, and having two men to assist him, started with the fry for his preserve. Sheriff Hugh Mullen, of Lewis county, either by invitation or from curiosity to see the country, accompanied them. They drove to Dunbar's Hotel and thence to the end of the road 1½ m. toward the waters to be stocked. From there they were obliged to draw the fish the remaining 1¼ m. on a hand sled. This required much labor, and the Sheriff, who is a large, powerful man, took hold, for he is of that make that was never known to look on and see others work without taking hold himself; and in this case report says that he did more than the others. Not being accustomed to walking on snow shoes, he became much exhausted. They planted the fish and late in the afternoon started on their return to the hotel. The Sheriff became so paralyzed that he proceeded with difficulty. The two men soon left him behind with Richardson. They had not proceeded far,

when, crossing a pond, the Sheriff became so paralyzed that he could not walk nor even stand up, but sank down on the ice. Here he was abandoned by Richardson, who went to the hotel. When he arrived at the hotel he persuaded two young boys of Mr. Dunbar's to go back where he left the Sheriff. The boys said they found him lying on the ice with his head nearly buried in the snow by his struggles. He did not have on his overcoat, nor any mittens on his hands, and was insensible. His clothing being wet by perspiration caused by hard labor through the day, and lying on the ice for three hours or more since abandoned by Richardson, he had become chilled beyond sensibility. The boys put on his coat, and mittens on his hands, cut some evergreen boughs and put under him, and built a fire by his side. Thus, left alone with this almost dead man, the boys cut wood and kept a fire burning on the ice all that long night. In the latter part of the night one of the boys while chopping wood cut his foot so badly that he had to leave for home for fear of bleeding to death, thus leaving the youngest boy alone with the Sheriff. Although informed of the condition of affairs by the boys' arrival at the hotel, I am informed that Richardson and his men did not start out to render aid until after breakfast next morning. They carried the Sheriff to the hotel and sent for a physician, who, owing to distance, did not arrive until about midnight. The Sheriff was insensible for more than twenty-four hours, fourteen or fifteen hours of which he lay on the ice. He is still delirious and very low, and his recovery is doubtful. Two physicians attend him. Had the boys arrived an hour later life would undoubtedly have been extinct. Much blame is attached to Richardson and his two men for leaving the Sheriff to lie on the ice all night, when the whole party could have reached him from the hotel early in the evening.—NORTHWOODS. [Sheriff Mullen died at Stillwater last Saturday. He was a veteran of the Fourteenth New York Volunteers, and was shot through the right lung in the seven-days' battle. He was elected sheriff of Lewis county in 1875, and has served in that capacity ever since.]

THE SHORT LOBSTER LAW.—Boston, Mass., Feb. 28.—The law court has scored another victory for the Massachusetts Fish and Game Protective Association, or more particularly for one of its most earnest workers, Mr. F. R. Shattuck. The readers of the FOREST AND STREAM have been made familiar with the celebrated short lobster cases which that gentleman has brought to trial, and they will remember that Mr. Augustus Russ, the attorney employed by a large number of the arrested lobster fishermen, asked the lower court to allow one of the fishermen to plead *nolo contendere* in the case of a few lobsters, and to allow him (Mr. Russ) to test the validity of the statute before the full bench. This the lower court concluded to allow him to do. Mr. Russ contended that the clause in the statute making the possession of lobsters under 10½in. in length *prima facie* evidence to convict was all wrong; that such evidence could not be construed as *prima facie*, and hence that the statute was faulty and could not be enforced. He has carried up this case, in an extended brief, to the full bench, and that body has rendered its decision. This decision maintains the validity of the law. Mr. Russ also claimed that the law is repugnant and inconsistent; that the complaint did not set out any criminal offense, and that the defendant could not be convicted under it. In overruling the defendant's exceptions, the court is of the opinion that the law is sufficiently clear and explicit in its provisions and that it is valid. The penalty is $5 for each offense, and now Mr. Shattuck proposes that the five or six other cases, which were to abide by the decision, shall walk up and pay the fines. He expects, however, as some of them are poor, that the plea of poverty will be set up, and that it may be claimed that the enforcing of the law is oppressive. Mr. Russ is full of fight in these cases, and his defense has several times taken on something of the nature of abuse, and it is very gratifying to the Fish and Game Protective Association to find that they are thoroughly sustained by the full bench. It is especially gratifying to find that the possession of game out of season, or of illegal proportions, can still be used as evidence to convict, since this clause is pretty generally interwoven into the fish and game protective statutes of the State. The lobster protective laws will continue to be enforced in Massachusetts, at least so long as Mr. Shattuck is able to look after the lawbreakers; and the public may soon look for more cases, provided certain fishermen do not suddenly begin to mend their ways. Speaking of lobsters, it is a curious feature of the present market that these shellfish are so scarce as to be worth a high price, and yet, according to Mr. Shattuck, the buyer gets about double the usual portion of shell and consequently half the usual quantity of meat; or, in other words, the lobster has not yet filled up his shell since the time he cast off his old one and donned the new. By April, however, these shells will begin to be full again, and by the last of May a lobster which now weigh's 3lbs. should weigh 4½lbs.—SPECIAL.

EVERY policy in The Travelers, of Hartford, is sure of payment whether any other policy holder pays or not; the Company has $8,055,000 assets and $2,089,000 surplus to rely upon.—*Adv.*

FIXTURES.

DOG SHOWS.

March 8 to 11.—Second Annual Dog Show at Buffalo, N. Y. Geo. H. Chadeayne, Secretary, No. 6 Brown's Building, Buffalo, N. Y. Entries close Feb. 28.

March 22 to 25, 1887.—Spring Show of the New Jersey Kennel Club, Newark, N. J. A. C. Wilmerding, Secretary, 17 Murray street, New York.

March 29 to April 1, 1887.—Inaugural Dog Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence. Entries close March 15.

April 5 to 8, 1887.—Third Annual Dog Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass. Entries close March 19.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 19 to 22.—Annual Dog Show of the Philadelphia Kennel Kennel Club. E. Comfort, President.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

FIELD TRIALS.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4697.**

TENNESSEE FIELD TRIALS.

[From a Special Correspondent.]

THE first annual trials of the Tennessee Field Trials Association came off at Athens, Ala., commencing Feb. 15, and lasting three days. It was thought, until a short time before, that the running would take place at Galatin, Tenn., but after drawing the grounds the association decided to go to Athens. There was quite a good crowd present and the local sportsmen turned out in force, many of whom lent their aid to make the meeting a success, foremost among these latter it gives us pleasure to mention Dr. Moebes and John Tanner, Jr.

THE ALL-AGED STAKE.

It was decided to run the All-Aged-Stake first. This stake closed with nine entries, four pointers and five setters, many of these first class both in field and breeding qualities. As none of the judges named by the association were present, the owners and handlers without a dissenting voice decided upon Mr. B. Waters as their choice for judge, to which Mr. W. was very much opposed, but after being shown the necessity for using his great experience and talent in this work and the favor he would be granting, he reluctantly consented and right well did he fill the place. In our opinion a better selection could not have been made.

Tuesday opened very unfavorable, raining in the morning, but about 9 o'clock it was decided to start. The drawing resulted as follows:

A. M. Young's Dash Bryson, black and white English setter dog (Dan Bryson—Rose),

against

J. W. Besserer's Nortier, black, white and tan English setter dog (Paul Gladstone—Bo-Peep).

J. E. Gill's Richmond, lemon and white pointer dog (Don—Beulah),

against

J. R. Purcell's Flake of Flockfinder, lemon and white pointer bitch (Flockfinder—Ione).

Dr. R. Douglass's Fannie Whitfield, blue belton English setter bitch (Dash Bryson—Daisy Whitfield),

against

J. R. Purcell's Lady Spottswood, lemon and white pointer bitch (Flockfinder—Ione).

After driving three miles south of town the first brace was cast off in a very pretty bird country, but one in which too much stock had been pastured.

TUESDAY.

First Series.

DASH BRYSON AND NORTIER.

Dash Bryson, handled by Carlton, and Nortier, handled by Davidson, were cast off in an open cornfield. Both dogs went off at a good rate of speed, drawing the cornfield and a large field of sedge grass blank. They were then worked over into another sedge field, down a branch set with briers. At the edge of a thicket Dash made game and moved on. Nortier returned from a cast, came up the branch and pointed the bevy, Dash locating them about the same time. To order Carter flushed, shot and killed, Dash was unsteady to shot but stopped to order and to order retrieved. Moving on on scattered birds, in a ravine and branch, Nortier established two nice points on singles after being ordered out in the open, for which he got no credit. On the last point he was unsteady to wing. Ordered on, Nortier made an excusable flush down wind, both dogs being crowded by handlers. After drawing several fields blank, and being worked into a large open sedge field, Dash flushed three outlying birds of a bevy, and dropped to a point on the remainder. As Carlton went up the birds flushed wild, both dogs steady to wing. On after the scattered birds, dogs working close together and roading, two birds flushed wild, both dogs steady to wing. Before they were ordered on several more birds flushed. Sent on, Dash pointed in thicket. No birds. Moved on he established a nice point on a single. As the handler came up bird flushed wild, Dash steady. Running down edge of thicket Nortier pointed foot scent, discovered the bird was gone, roaded out into weeds and flushed, steady to wing. Just then another bird got up to Davidson's left, which he shot and killed. To order Nortier retrieved nicely. Ordered up at 12:03. Dash won. Down 2 hours 38 minutes. This was a very close heat, and was quite fast all the time, showing both dogs to be good stayers, Dash winning by his superior range, speed and style, though Nortier was not far behind him in either, showing himself to be a good dog.

RICHMOND AND FLAKE OF FLOCKFINDER.

At 12:30, Richmond, handled by D. E. Rose, and Flake of Flockfinder, handled by owner, were cast off in open sedge field to be hunted toward the lunch wagon. Soon after starting, Flake stopped to a flush of one of the scattered birds from the bevy that the other brace had been worked on, and while Richmond had been making a wide cast he stopped to the scent of some stink birds in grass. Flake coming up, backed for a moment, then broke her back, ran in and put them up. No more work was done before we reached the wagons and at 12:49 they were ordered up for lunch, for which the party were indebted to Mrs. Dr. Moebes. After lunch we drove about a mile, dogs cast off in large weed field which was drawn blank as was a swamp and some woods which the dogs were worked through. Working out into a field where the cover was very short, Richmond ran over two outlying birds of a large bevy while going at a great speed down wind, the Major at the same time hallooing to Flake to make her steady to wing, causing both dogs to come toward handlers, flushing the remainder of the bevy. Ordered on after scattered birds where they had been marked down in a fence row and in woods, Richmond wheeled to a point on a single in some briers; Rose flushed and shot, Richmond steady. Ordered on over the fence, Richmond picked up a single immediately after clearing the fence, Flake stopped to a back close up, broke her back before her handler got to her, ran in front of Richmond and pointed. Rose flushed, no shot, Richmond steady to wing, Flake a little unsteady. Sent on, Richmond soon established another point on a single in leaves, Flake not up to back, Rose flushed and shot; Richmond steady to wing and shot, remainder of covey flushing wild. Scattered birds were followed into a swamp, but the dogs were soon ordered out on account of water, and were worked out in open field for a fresh bevy. After drawing two wheat fields blank Flake pointed in sedge. As the Major went up two birds flushed, Flake broke, the Major shot and killed; Flake picked up the bird but would not retrieve. Ordered on in pines after scattered birds, Richmond going at great speed across wind, flushed a bird, stopped to wing when several more birds flushed wild. Ordered on, Richmond stopped to a point, but the bird flushed wild. Ordered on in pines, Flake pinned a single in good style; before her handler could get to her she moved her position and the bird flushed wild. Moving on, on bare ground, Richmond flushed a single down wind. Soon after this both false pointed and backed each other. After drawing several other large weed fields blank, Richmond, passing a plum thicket and catching scent, came back to the edge of the thicket and pointed. To order, Rose flushed, shot and killed. Flake broke shot and mouthed the bird, Richmond steady to shot. The judge threw the bird out and to order Richmond made a beautiful retrieve. Ordered up at 3:25, Richmond won. Richmond had the better range, speed and style. Flake is a very promising little bitch, but needs work. Down one hour and fifty-three minutes.

FANNIE WHITFIELD AND LADY SPOTTSWOOD.

At 3:30 Fannie Whitfield, handled by John Carlton, and Lady Spottswood, handled by owner, were cast off in open weed field to work on scattered birds of last bevy. Fannie flushed a single and was unsteady to wing, but soon established a point on one which flushed wild before her handler got to her. Ordered on across the hill near some briers Fannie pointed four birds and was well backed by Lady. To order Carlton flushed, both dogs unsteady to wing; ordered on down a thick ravine Lady pointed a single in good style; Fannie not up to back. To order the Major flushed, shot and missed, Lady broke shot. Moving on Lady established another point in thick weeds; as the Major came up the birds flushed wild. About this time Fannie, off to right, drew on and pointed when a single flushed wild, Fannie a little unsteady. Moving on around some brush Fannie established a point on single, as handler came up bird flushed wild and Fannie was a little that way herself. Moving on after another bevy Fannie made game at the corner of a cornfield, both dogs began roading; after going about 125yds. both pointed. Lady started and broke in followed by Fannie. Major shot and killed. Lady retrieved. Scattered birds were followed in wood, where Fannie soon pinned a single in good style. To order Carlton flushed and killed. Fannie broke shot and retrieved. While she was retrieving Lady pointed a single further down the hill for which she received no credit. Dogs were ordered up at 5:05. Fannie won. Down one hour thirty-five minutes.

Fannie had the advantage in range, style and speed. Both were sadly in need of work. This ended the work for the day and finished the first series with the following result:

First Series.

Dash Bryson beat Nortier.
Richmond beat Flake of Flockfinder.
Fannie Whitfield beat Lady Spottswood.

WEDNESDAY.

Second Series.

On Wednesday the party went five miles north of the town on the Bridgeforth Farm, where we found a large tract of open country.

RICHMOND AND DASH BRYSON.

At 10 o'clock Richmond and Dash Bryson were cast off in cornfield. Before starting the owner of Dash said if there was no objection he would put Dash in Mr. Davidson's hands for that heat. There being none Mr. D. took Dash in charge, Rose handling Richmond. Both dogs went off at great speed, and after drawing a cornfield and sedge blank, Richmond drew to a point on a nice bevy in cornfield. To order, Rose flushed, shot and killed. Richmond steady, and to order he made a nice retrieve. Dash not up to back but came rapidly in to report of gun, and Davidson found it rather hard to control him. At this time his owner asked consent to his putting him again in the hands of Carlton. Sent on after scattering birds in corn Dash pointed a single and was well backed by Richmond. To order, Carlton shot and killed, Dash unsteady and to order retrieved. Sent on Richmond made an excusable flush across wind and stopped to wing. Sent on, Richmond stopped to a point and the bird flushed wild, the dog being steady. Sent on to hunt for a fresh bevy, Richmond, at the edge of sedge grass, pointed a bevy. Dash, coming up from the opposite direction, stopped to a back. To order, Rose flushed. As the birds went directly over Dash, through courtesy to the other handler, Rose did not shoot. Sent on after scattered birds Richmond pointed a single on edge of branch. As Rose went up bird flushed wild. At 10:45 dogs were ordered up. Richmond won. Down forty-four minutes. In range and speed Dash had a slight advantage, but on point Richmond out-styled him and showed superior judgment. This ended the second series, Fannie Whitfield having a bye.

Tie for First Place.

RICHMOND AND FANNIE WHITFIELD.

After twenty minutes given Mr. Carlton to get Fannie up, at 11:30 Richmond and Fannie Whitfield were cast off to run for first money. After working some distance Richmond, while making a wide cast, made the typical point of the trials. Coming around on a clay bank he wheeled to a point on a covey in grass about twenty steps away. He stood with head high, neck slightly arched, tail a trifle elevated, and as motionless as a statue. In all our experience we have never seen a more taking picture. To order, Rose flushed, Richmond steady, Fannie not up to back. Sent on after scattered birds over fence in sedge grass both dogs pointed. To order, Carlton flushed, shot and killed. Fannie broke shot and to order retrieved. Richmond steady. Sent on Richmond made game and pointed. Fannie coming up forced him off point and the bird flushed out to one side. Sent on Richmond and Rose failed to find. After the dog was sent on one of the spectators kicked a bird out of thick grass just where the dog was pointing. After some other work around a sedge field, at 11:52 dogs were ordered up and the heat and first money were given to Richmond. Down forty-two minutes. In range, style and pace Richmond had decidedly the advantage. Fannie is a very industrious little bitch and if properly broken would make a good one.

Tie for Second Place.

FANNIE WHITFIELD AND DASH BRYSON.

After lunch Fannie Whitfield and Dash Bryson, the best two dogs beaten by Richmond, were put down to run for second money. At 1:07 they were cast off in a cornfield. Working toward some weeds, Fannie pointed a bevy and held them some time. Dash coming up down wind flushed an outlying bird and dropped to wing, the remainder flushing wild. Fannie steady. Following the birds over a fence, Dash pointed, went on and located a bird. Carlton flushed, but failed to shoot. Sent on, Dash pointed on foot scent. Fannie at same time began to road, Dash joining her. They roaded 100yds. across a cornfield, when Fannie pointed and Dash backed. To order, Carlton flushed, shot and killed. Both dogs unsteady. To order, Fannie retrieved. They were ordered up at 1:37. Down thirty minutes. Fannie was given the heat and second money. Dash had the range and speed; in style they were equal. Dash did not run up to his form in this heat, for while he had the advantage of the bitch in some respects, she outworked him on birds. The judge decided that Dash was entitled to third money under the rules, and it was so awarded. Following is the

SUMMARY.

First Series.

Dash Bryson beat Nortier.
Richmond beat Flake of Flockfinder.
Fannie Whitfield beat Lady Spottswood.

Second Series.

Richmond beat Dash Bryson.
Fannie Whitfield a bye.

Tie for First Place.

Richmond beat Fannie Whitfield, and won first prize, $75.

Tie for Second Place.

Fannie Whitfield beat Dash Bryson, and won second prize, $50.
Dash Bryson was declared winner of third prize, $25.

THE DERBY.

This Stake was commenced immediately after the conclusion of the All-Aged Stake. As Maj. Purcell preferred two judges Dr. Otto Moebes was agreed upon to act with

Mr. Waters, who had judged the All-Aged Stake. Ther were only five starters.

RUBY D. AND JOY OF PRINCE WILLIAM.

At 1:47 Middle Tennessee Kennels' black, white and tan English setter bitch Ruby D. (Sportsman—Gem), handled by D. E. Rose, and Maj. J. R. Purcell's lemon and white pointer bitch Joy of Prince William (Flockfinder—Ione), handled by owner, were cast off in a big field near where the All-Aged Stake was concluded. After drawing some cornfields and weeds blank, Joy pointed a sparrow and Ruby backed. Soon after, in some weeds, a bird was flushed by spectators, dogs were turned back and sent after it, when it was flushed by one of the handlers. Sent on over a hill at the edge of sedge, Joy pointed a bevy. Ruby returning from a cast to the right came up on the other side and also pointed. To order, Maj. Purcell put up the birds, shot and killed. Joy broke shot notwithstanding the Major's efforts to restrain her. Ruby dropped to shot. Birds went down a ravine in woods and were not followed. Sent on over a hill Joy pointed a hare and chased. Sent on Joy false pointed. Then a large tract of open country was drawn blank. A bevy was flushed and marked by spectators, and the dogs were worked toward them. Joy pointed and was well backed by Ruby. To order, Maj. Purcell flushed and shot. Joy broke shot, Ruby steady. Sent on after scattered birds Ruby pointed on foot scent, and her handler coming up flushed the bird behind her. Sent on Joy pointed a hare. Taken up at 3:43, to be put down again next morning.

DON'S DOT AND LADY SPOTTSWOOD.

At 4 o'clock Mr. John Gill's liver and white pointer bitch, Don's Dot, (Vandevort's Don—Cremore) handled by D. E. Rose, and Major Purcell's lemon and white pointer bitch, Lady Spottswood, (Flockfinder—Ione) handled by owner, were cast off near where the last brace were taken up. After drawing several fields blank Dot pointed a bevy in sedge. To order Rose flushed, shot and killed. Dot steady and to order retrieved. Lady not up to back. Sent down a ravine after scattered birds, handlers flushed a single. Crossing a branch both dogs stopped to a point, Dot nearest bird. Rose put it up, both dogs steady. Sent on Lady pointed a single in grass, Dot coming up from an opposite direction stopped to a back. To order Major Purcell flushed, shot and killed. Lady broke shot, Dot steady. Sent on into another field Lady pointed a bevy in edge of sedge, and was stylishly backed by Dot. To order the Major put them up, but did not shoot; both dogs steady. Sent after scattered birds Lady false pointed and Dot backed. A little further on Dot nailed a single, Lady backed to order. Rose flushed and shot; Dot steady, Lady unsteady. At 5:23 dogs were ordered up. Down one hour and twenty-three minutes. Dot wins. In speed and style of going they were equal; in style on point Dot had decidedly the advantage. Dot showed good training, the other showed a need of it.

FRIDAY.

RUBY D. AND JOY OF PRINCE WILLIAM.

At 9:55 Ruby D. and Joy of Prince William were cast off in a cornfield to finish their undecided heat. They were worked over a good deal of ground. In stubble both dogs began to draw and soon pointed, Joy standing to the right of birds, Ruby to left. Birds were flushed. Rose shot and killed; the bird fell just beyond Ruby and she dropped to shot. Joy broke shot. Sent after scattered birds in corn, Joy drew about and pointed and was backed by Ruby. No bird was found, and the Major claimed it was where some crows had flown from. As the birds were not well marked, the dogs were sent to hunt for a fresh bevy. After drawing a good deal of ground blank, Ruby pointed a bevy at edge of sedge. Joy, coming up, pointed the same birds. Rose flushed, shot and killed. Ruby dropped to shot, Joy unsteady. Ordered up at 10:55 and the heat given to Joy. Down, altogether, three hours and thirty-eight minutes. This was a very close heat. Ruby D. showed to be one of the best broken dogs in the trials, but was in no condition to run; was very soft. She had been tied up for three weeks, and had just arrived by express from Riceville, Tenn., where she had been bred to San Roy. This ended the first series, Flake of Flockfinder having a bye.

DON'S DOT AND FLAKE OF FLOCKFINDER.

At 11:06 Don's Dot and Major Purcell's lemon and white pointer bitch Flake of Flockfinder, handled by owner, were cast off in an orchard on the Nelson place and worked across a branch. Dot pointed in fine style a bevy that Flake had passed. Flake was called in and to order backed; birds were flushed but not shot at, dogs steady to wing. Sent on in corn Flake pinned a single in good style and Dot backed. To order, Major Purcell flushed and shot. Flake broke shot, Dot steady. After drawing a good deal of ground Flake pointed in corn and Dot backed a good piece off; the Major shot and killed, dropping his bird right at Dot's mouth. Dot picked it up at once and came in with it, Flake unsteady to shot. The scattered birds were followed. Flake false pointed. Sent on in sedge both dogs pointed about the same time. As her handler went up Flake jumped in and flushed. Dot was steady. Dogs ordered up at 11:50 and Dot given the heat. Down forty-four minutes. In pace and range they were equal; in style, especially on point, Dot had decidedly the advantage.

Tie for First Place.

DON'S DOT AND JOY OF PRINCE WILLIAM.

At 12:07, Don's Dot and Joy of Prince William were cast off in sedge, where the other brace was taken up to run for first money. Joy did not show the dash that she had in her former heat, and it was some time before her handler could get her to leave his heels. After drawing a good deal of ground blank, Dot pointed in edge of weeds and Joy came up and pointed near her. Rose went in to flush but not finding, both dogs began drawing. After going about thirty yards they again pointed. Rose flushed a large bevy, shot and killed. Dot dropped to shot. Joy broke and got entirely from under control of her handler. Sent on after scattered birds, Dot made an excusable flush down wind. About this time a very hard rain began to fall, and the dogs were ordered up, and Don's Dot was declared the winner. Down thirty minutes. In speed and style there was little difference, but as a bird dog Dot out-classed Joy in every respect.

Tie for Second Place.

JOY OF PRINCE WILLIAM AND FLAKE OF FLOCKFINDER.

At 1:30, after the rain was over, Joy of Prince William and Flake of Flockfinder, both owned and handled by Major Purcell, were cast off to run a short heat for second money. After drawing a sedge field blank, on a hill Joy pointed, and the dogs were ordered up and Joy given the heat, the judges deciding that she was much the better of the two.

The judges being of the opinion that Ruby D. was the best dog previously beaten by Joy of Prince William, gave her third money.

SUMMARY.

The first annual Derby of the Tennessee Sportsman's Association, open to all setter or pointer puppies whelped on or after Jan. 1, 1885. Purse $90; $50 to first $25, to second, and $15 to third. Closed with eleven nominations, five of which filled.

First Series.

Joy of Prince William beat Ruby D.
Don's Dot beat Lady Spottswood.
Flake of Flockfinder a bye.

Second Series.

Don's Dot beat Flake of Flockfinder.
Joy of Prince William a bye.

Tie for First Place.

Don's Dot beat Joy of Prince William and won first prize.

Tie for Second Place.

Joy of Prince William beat Flake of Flockfinder and won second prize.

Ruby D. won third prize.

THE NATIONAL FIELD TRIALS CLUB.

Editor Forest and Stream:

At the meeting of the executive committee of the National Field Trials Club, held at the Burnet House, this city, Feb. 21, for the purpose of investigating the charges against B. M. Stephenson and H. S. Bevan, for conspiring to defeat the dog Ben Hill at the trials of the club last December, action was as follows: The members of the committee present were Hon. Thomas A. Logan, chairman; General W. B. Shattuc, E. F. Stoddard, F. I. Stone and Colonel L. A. Harris. The investigation of the charges was the first business in order. Following is the text of the charge and specification:

"Charge—Unlawfully conspiring to defeat a dog in a field trial contest.

"Specification—That at the field trials of the National Field Trial Club, held at Grand Junction, Tenn., on the 16th day of December, 1886, in a heat wherein the dogs Ben Hill and Lillian were competing, the said B. M. Stephenson and H. S. Bevan unlawfully conspired together to pull and thereby defeat Ben Hill in the heat."

Letters were read from Messrs. Stephenson and Bevan. That from Mr. Stephenson was not satisfactory. Mr. Bevan stated that the explanation of Mr. Stephenson at the handlers' meeting at Grand Junction was correct. The investigation was then closed, and by unanimous vote Mr. Stephenson was declared guilty and expelled from the club and debarred from competing in any capacity at future meetings of the club. The case of Mr. Bevan was disposed of by proposing the following resolution:

"Resolved, That H. S. Bevan, by the unanimous vote of the executive committee of the National Field Trials Club, having been found guilty of misconduct at Grand Junction in the heat between Ben Hill and Lillian, is hereby debarred, from this date, from any participation whatever in any of the exhibitions or competitions of this Club, whether as owner, exhibitor, handler, or in any other capacity, from entering any dog or dogs therein, and that under no circumstances will any official recognition be extended to H. S. Bevan."

The committee on constitution and by-laws asked for an extension of time, which was granted.

After a discussion of the subject the following resolutions were adopted:

"Resolved, That in the opinion of the executive committee the National Field Trials Club should be dissolved for the reason that its efficiency has utterly failed, the original reasons for its organization have not been fully observed and from many other causes its usefulness is impaired if not wholly destroyed.

"Resolved, That a committee of three be appointed to take such measures as are provided by the constitution for the legal dissolution of the club and to report same to the executive committee.

Resolved, That, until the coming in of the report of the said committee, this club cease all active operations in the way of field trial exhibitions, etc.

Resolved, That when this meeting adjourns it adjourns subject to the call of the president for future action under these resolutions."

The committee appointed were Gen. W. B. Shattuc, Hon. T. A. Logan and E. F. Stoddard. The meeting then adjourned.

A meeting was at once convened for the purpose of organizing a new club. Gen. Shattuc called the meeting to order, and Mr. F. I. Stone, of Chattanooga, Tenn., was made temporary chairman, and Mr. C. W. Paris of Cincinnati, Ohio, was elected secretary. It was unanimously agreed that a new club be organized and the following were appointed a committee to draft constitution and by-laws: Gen. W. B. Shattuc, Hon. T. A. Logan and Col. J. W. Renfroe. This committee offered a report and submitted the following constitution and by-laws, which were adopted:

NAME.—This Association shall be known as the American Field Trial Club.

OBJECT.—The object of this club shall be to encourage the breeding of setters and pointers; to hold competitive trials wherein may be demonstrated by practical tests in the field the merits of individual dogs of such breeds; to make such trials elevating in tendency, instructive in method and refining in influence to encourage legitimate sport with the dog and gun, that thereby, as part thereof, the dog, the most intelligent of dumb animals, may be more highly appreciated, and finally, that gentlemen who favor these objects may be assured of honorable example and cordial fraternity.

CONSTITUTION.—The following shall be the constitution of the club:

ARTICLE 1. Officers.—The officers of this club shall be a President, First Vice-President, Second Vice-President, Third Vice-President, Secretary, Treasurer.

ART. 2. Board of Control.—There shall be a Board of Control of nine members.

ART. 3. Duties of the President.—It shall be the duty of the President to preside at all meetings of the club and of the Board of Control, to propose such matters for consideration as, in his judgment, are for the benefit of the club, to announce the business before the meeting in its proper order, to state and put all questions properly before the meeting; to preserve order and decorum and to decide on questions of order (subject to appeal) and to do all within his power to advance the interests of the club in every direction. The president shall appoint the judges and provide for other necessary service for the trials, with the approval of the Board of Control. * * * *

ARTS. 4 and 5 define duties of secretary and treasurer.

ART. 6. Board of Control.—The Board of Control shall have entire charge of the management of the club. Four members shall constitute a quorum and it will require at least four affirmative votes to adopt any measure. The board shall be elected by ballot at the annual meeting of the club and a majority of all the votes cast shall be necessary to a choice. At the first annual meeting there shall be elected a full board of nine members, three for a term of three years, three for a term of two years and three for a term of one year. At each subsequent annual meeting there shall be elected three members of the board to serve a term of three years next ensuing. The Board of Control may appoint a representative who shall act for them at field trials, in such matters as they designate.

Committee on Field Rules.—There shall be a committee of five of the Board of Control, whose duties it shall be to submit from time to time such changes in the field rules, for adoption by the board, as will be for the interest of all concerned. This committee shall be elected annually in the same manner as the officers of the Board of Control.

ART. 7 provides for annual election of officers, and Art. 8 for proxies.

ART. 9. Meetings.—The annual meetings of this club for the election of members of the Board of Control shall be held on the first Tuesday of January, at such hour and place as may be designated by the Board of Control through the secretary, who shall give written notice thereof to each member of the club at least fifteen days previous to said meeting, but it may be adjourned for cause, in which case officers shall serve until their successors are elected. Meetings of the Board of Control may be held at any time on five days' written notice from the president or any five members of the board. The Board of Control shall have power to remove by the affirmative vote of six members of the board any member of the board for any breach of the rules or conduct unbecoming a member, and shall have power to fill all vacancies.

ART. 10. Membership.—Applications for membership shall be made in writing and indorsed by two or more members of the club, and the applicant may be elected at any special or regular meeting of the Board of Control, by the unanimous vote of those present. To entitle any member to vote at the annual meeting, he shall have signed the constitution, and his initiation fee and all other indebtedness to the club shall have been paid in full. Those who are in arrears for dues 90 days from the annual meeting may be dropped from the list of members at the discretion of the Board of Control.

ART. 11. Expulsion.—Any member who shall act in a manner unbecoming a gentleman or disobey any of the rules of the club may be suspended or expelled from the club at any regular or special meeting of the Board of Control by five affirmative votes. The accused shall have at least a twenty days' notice of such meetings and copy of the charges against him.

ART. 12. Dues and Initiation Fees.—The initiation fee shall be $10, payable within thirty days of the date of the election of the member, and the annual dues shall be $10, payable on or before the annual meeting.

ART. 13. Resignations.—All resignations shall be in writing and addressed to the secretary, and may be accepted by a majority vote of the Board of Control, providing the member's dues and all indebtedness are fully paid.

ART. 14. Disqualification.—The Board of Control may bar a member or any other person from handling or entering dogs in any trials given under the auspices of this club for reasons satisfactory to a majority of the Board of Control, and no man barred by this or by any recognized club from making entries or handling, shall be permitted to enter or handle dogs in trials given by this club, and this rule shall extend to all dogs owned by such person but offered for entry in the name of another.

ART. 15. Expenditures.—No debts shall be contracted on account of the club without authority in writing of the Board of Control.

ART. 16. Quorum.—Five members present at any meeting of the club shall constitute a quorum for the transaction of business; in the event however of there being but five members present, any action taken must be by the unanimous vote of those present.

ART. 17. Amendments to Constitution.—This constitution may be amended by the affirmative vote of seven members of the Board of Control at any special or regular meeting, provided ten days notice in writing, together with a copy of the proposed amendment is given to each member of the board.

ART. 18. Rules, Regulations, Etc.—The Board of Control may adopt by-laws and pass, amend or repeal the same at any regular or special meeting and adopt special rules for the management of trials, etc., and regulations not conflicting with this constitution, provided that this does not authorize the Board to change the running rules, except at a proper time.

The charter members are: Gen. W. B. Shattuc, Hon. T. A. Logan, Col. J. W. Renfroe, F. I. Stone, B. P. Holliday, Hon. John S. Wise, Col. L. A. Harris, E. F. Stoddard, C. W. Paris. These also constitute the Board of Control.

Officers: President, W. B. Shattuc; First Vice-President, J. W. Renfroe; Second Vice-President, T. A. Logan; Third Vice-President, J. S. Wise; Secretary and Treasurer, C. W. Paris.

Committee on field trial rules, E. F. Stoddard, L. A. Harris, B. P. Holliday, F. I. Stone.

The running rules of the Eastern Field Trials Club were adopted, subject to a revision by the committee.

The first trials will be held next December, Messrs. Stone and Holliday to recommend to the Board of Control grounds for trials.

Entrance fee for the Derby, $10 to nominate and $15 additional to start.

Derby Stake to be $750, to be divided into three prizes, viz., $300, $250 and $200 respectively.

Entrance fee for the All-Aged Stake was fixed at $10 to nominate and $20 additional to start, prizes same as in Derby. Champion Stake entrance fee $50, prize $200. Three dogs required to start and run to a finish, and only winners of first prize in All-Aged Stake eligible to enter. Champion Stake to commence immediately after the running of the All-Aged Stake.

The meeting then adjourned. REPORTER.

CINCINNATI, Ohio.

AMERICAN SPANIEL CLUB.

AT a recent meeting of the committee it was deemed in advisable to take action on the proposed standards until after the spring shows of 1887, and it was so ordered. The subject of offering prizes to be competed for by members of the club at this spring's shows, was brought up and the following prizes and sweepstakes were decided upon:

FIELD SPANIELS.—For field spaniels, whelped in 1886, open to members only. To be decided at the spring show of the New Jersey Kennel Club. Entry fee, $3, with $20 added by the club to go to winner of first. Sweepstakes to be divided as follows: Forty per cent. to winner, 30 per cent. to breeder of winner, 20 per cent. to second and 10 per cent. to third. Entries close on March 10, with the secretary, at 17 Murray street, but all entries must be previously made in their regular classes at the Newark show (entries for which close on March 5.

COCKER SPANIELS.—For cocker spaniels, whelped in 1886, open to members only. To be decided at the spring show of the New England Kennel Club, Boston (April 5, 6, 7 and 8, 1887). Entry fee $3, with $20 added by the club to go to winner of first. Sweepstakes to be divided as follows: Forty per cent. to winner, 30 per cent. to breeder of winner, 20 per cent. to second and 10 per cent. to third. Entries close on March 10, with the secretary, at 17 Murray street. All entries to be made in their regular classes at the Boston show.

Special Prize.—For the best clumber spaniel, owned by a member of the club, exhibited at the New York show, $10. For the best spaniel (any breed) owned by a member of the club, exhibited at the Buffalo dog show, $10.

A. CLINTON WILMERDING, Sec'y.

17 MURRAY STREET, New York, Feb. 20.

THE NEWARK DOG SHOW.—*Editor Forest and Stream:* The entry books for the spring show of the New Jersey Kennel Club will remain open until March 8. They will close promptly on that date. Following is a list of the judges: K. E. Hopf, Arlington, N. J., St. Bernards; Chas. E Wallack, New York, mastiffs; Jacob Pentz, Brooklyn, N. Y., pointers and setters; S. R. Hemingway, New Haven, Conn., spaniels; A. S. Apgar, New York, and Martin Dennis, Yonkers, N. Y., collies; L. and W. Rutherfurd, New York, fox-terriers; Norman Elmore, Granby, Conn., beagles and basset hounds; J. F. Kirk, Toronto, Canada, Newfoundlands, Great Danes, deerhounds, greyhounds, foxhounds, pugs, dachshunde, bulldogs, bull-terriers, black and tan terriers, Irish terriers, Dandie Dinmonts, Bedlingtons, poodles and miscellaneous and selling class. Colin D. Anderson, New York, Skyes, Yorkshires, King Charles, Blenheim spaniels and toy dogs.—A. CLINTON WILMERDING, Secretary.

THE DENVER DOG SHOW.

Editor Forest and Stream:

The first dog show of the Denver Kennel Club was held here last week. Many fine dogs were on exhibition and I understand that the club are so well satisfied with the results that they will give a show each year. The judges were Mr. E. E. Pray, pointers and setters; Mr. C. G. Page, greyhounds; and Mr. E. F. Thomas the remaining classes. I send a list of awards; many of the stalls had no name of dog attached and consequently I can in some cases give only name of owner. In nearly all classes dogs and bitches competed.

AWARDS.

MASTIFFS.—1st, F. C. Graves's Max; 2d, H. R. Walker's Humbold.

ST. BERNARDS.—1st, F. C. Bair's —; 2d, F. McKinney's —.

NEWFOUNDLANDS.—1st, W. Baker's —.

GREYHOUNDS.—*Dogs:* 1st, E. N. Jenkin's Nebraska Jack; 2d, J. Winfield's Dude. *Bitches:* 1st, J. Winfield's Big Casino; 2d, J. Masconi's Lady Trump. *Puppies:* 1st and 2d, A. G. Lighthall's Gold Dust and Blue Wing. Very high com., C. F. Hoeckle's Fly and L. H. Gilmore's Nada.

DEERHOUNDS.—1st, J. Masconi's Denver Belle; 2d, E. N. Jenkins's Happy Jack.

BLOODHOUNDS.—1st, J. Manat's Joe.

POINTERS.—1st, H. M. Bostwick's Rebel. Com., R. A. Morrison's —.

ENGLISH SETTERS.—1st, A. H. Jones's Paul; 2d and high com., J. Arnaud's Prince Keys; 3d, W. Hawkins's Sport. Very high com., L. H. Gilmore's Don and F. Lyndhurst's Shevron. Com., W. Belfield's Dave.

IRISH SETTERS.—1st, T. White's —; 2d, R. W. Brown's Judy; 3d, J. R. Walsh's —. Very high com., J. Jones's Buff II., E. Farder's Biddy and W. H. Carter's —. High com., Mrs. D. J. Eziekiel's Sam and J. W. Coolidge's —. Com., W. H. Lawrence's Hunt.

GORDON SETTERS.—1st, G. P. Borden's Ben Hur; 2d, L. Appleman's Monk; 3d, J. Jones's Grouse.

FIELD SPANIELS.—1st, M. Krause's Obo K.; 2d, Slater's Cute.

COCKER SPANIELS.—*Dogs:* 1st, W. D. Todd's Jet II.; 2d, W. S. Downing's Dixey. *Bitches:* 1st and 3d, M. Krause's Gipsey and Josey; 2d, C. Barron's Gipsy.

COLLIES.—1st, H. Rathvon's Kit; 2d, Dr. A. G. Roger's Noche.

BULLDOGS.—1st, A. Park's Sullivan; 2d, O. Gardner's Dick.

BULL-TERRIERS.—1st, M. Rainey's Pat; 2d, P. Williams's Tough.

SCOTCH TERRIERS.—T. W. Bartel's Trix; 2d, L. Dingle's Rags.

SKYE TERRIERS.—1st, S. L. Bigelow's Hero; 2d, A. Carman's Dolly; 3d, Miss Annie Zips's Judy. Very high com., S. K. Bigelow's Rats.

ITALIAN GREYHOUNDS.—1st, C. W. Dunmore's —; 2d, M. Clements's —; 3d, Dr. B. W. Rogers's —.

PUGS.—*Dogs:* 1st, Mrs. A. M. Andrews's Lucky; 2d, Mrs. V. Weinier's Mingo. *Bitches:* 1st, Mrs. H. C. Farrar's Fannie; 2d, Mrs. E. J. Binford's Susie; 3d, E. L. Keehan's Fannie. *Puppies:* 1st, E. L. Keehan's Punch; 2d, Mrs. Onthank's Beauty.

MISCELLANEOUS.—1st, H. Altman's Hector; 2d, H. Dauphine's —. Very high com., L. H. Gilmore's Pelon. High com., L. Smith's Barney. Com., Miss Frounstine's Booze.

Several special prizes were awarded that went to winners in their respective classes. The prize for the best collection of sporting dogs was awarded to C. F. Hoeckel, and for the best collection of hounds to J. M. Norman. DENVER.

DENVER, Col., Feb. 18.

THE CLUMBER SPANIEL.—*Editor Forest and Stream:* In the Clumber spaniel standard adopted by the English Spaniel Club, in the description of the coat, there appears to be a grave error. It reads thus: "Coat.—Long, plentiful, soft and straight." Surely there must be some oversight or misprint in this! It is universally acknowledged that the coat of the Clumber spaniel should not be long except in feather; of course it is long in comparison with that of the fox-terrier, but it is considerably shorter than that of the other large breeds of spaniels. I quote the two leading authorities on the dog, Vero Shaw and "Stonehenge." The former writes in his "Illustrated Book of the Dog," as follows: "The coat should be silky, but quite free from any curl, which is a most objectionable feature in a Clumber spaniel's jacket. Though profuse the coat should not be too long, as it would interfere with a dog when at work in a covert. The latter, in "The Dogs of the British Islands," says: "The coat must be soft and silky, slightly wavy, and though abundant, by no means long except in feather." This, I take it, shows pretty conclusively that in the opinion of these eminent authorities, the coat of the Clumber spaniel should not be long. It stands to reason that a short coat, comparatively speaking, when at the same time as dense as that of the Clumber, should be better adapted to thick, thorny coverts, and at the same time to marsh, and consequently water, shooting, than a long one.—CLUMBER.

NOTES.—Mr. German Hopkins, well known in England as a breeder and exhibitor of fox-terriers, has recently arrived in this country and is to take charge of the kennel of Mr. August Belmont, Jr.....Mr. C. Fred. Crawford has returned to his old love and has re-purchased an interest in the Blackstone Kennel, and is now the owner of Foreman and Plantagenet. These two, with the recently imported Royal Albert, and some promising youngsters, will make a strong team for the spring shows....The New England Kennel Club announce that at their coming show a "lunch will be served in the dining-hall from 12 to 2 o'clock on Tuesday, the first day of the show, to which all exhibitors are cordially invited as guests of the club."....The Pacific K. C. has voted to purchase one or two good non-sporting dogs to be owned by the club and used for stud purposes. The breed particularly mentioned is St. Bernard. Members desiring to contribute to the fund should communicate with the secretary, Mr. James E. Watson, 516 Sacramento street, San Francisco, Cal. This is a step in the right direction and the example is one that other clubs throughout the country may follow with great benefit to themselves and the public.

THE PROVIDENCE DOG SHOW.—*Editor Forest and Stream:* The Rhode Island Kennel Club offers at its inaugural bench show, March 29 to April 1, special kennel prizes, each kennel to consist of four or more dogs shown by one exhibitor, as follows: For the best kennel of mastiffs, rough-coated St. Bernards, deerhounds, beagles, English setters, Irish setters, pointers, spaniels (field or cocker), collies and fox-terriers, $25 each. For the best kennel of Gordon setters and pugs, $15 each. For the best kennel of bull-terriers, to consist of three, shown by one exhibitor, Mr. E. S. Porter, New Haven, offers $25. The Royal Disinfectant, furnished by Brown Bros. & Co., Providence, R. I., will be used to deodorize the show. A. G. Spalding & Bros. will feed the dogs on "Challenge Food."—NATHANIEL SEABURY, Secretary (Providence, Feb. 28).

THE NEWARK SHOW.—*Editor Forest and Stream:* Everything points toward a large and successful show at Newark. The medals and diplomas offered are very handsome; the latter will accompany every award from that of champion down to commended. The neat, not to say ornamental, new benching of Spratts (used here for the first time) will without doubt attract many visitors. The attention of all puppies intending to visit this show to exhibit themselves is called to the fact that their menu will be particularly inviting, as it consists of broth, milk and puppy food. Certificates for returning the dogs free will be required by the Baltimore & Ohio and the American Express companies; other companies do not demand it. These certificates may be had of the secretary on application to him at the show.

THE BOSTON DOG SHOW.—The premium list of the New England Kennel Club's third annual dog show is ready for distribution. The prizes offered are liberal. The kennel prizes especially are well worth competing for, each kennel to consist of four or more owned by one exhibitor. The best kennel of mastiffs will receive two cash prizes, one of $50 and one of $25. The best kennel of St. Bernards will receive the same. Deerhounds, pointers, English setters, Irish setters, field or cocker spaniels, beagles, collies, bulldogs, bull-terriers, fox-terriers and King Charles spaniels each have kennel prizes of $25 each. The best stud dog, with two of his get, in many classes will receive the club stud dog medal. Many valuable special prizes are already offered, and the list is constantly increasing. Following is a list of the judges announced: Mastiffs, St. Bernards and pugs, James Mortimer, Babylon, L. I. Irish and Gordon setters, Wm. H. Pierce, Peekskill, N. Y. Pointers, English setters, greyhounds, deerhounds and foxhounds, John Davidson, Monroe, Mich. Spaniels, A. Clinton Wilmerding, New York. Collies, S. T. Mercier, England. Bulldogs, fox-terriers, Newfoundlands, dachshunde, basset hounds, Italian greyhounds and poodles, Ronald H. Barlow, Philadelphia, Pa. Bull-terriers, Thomas R. Varick, Manchester, N. H. Beagles, H. F. Schellhass, Brooklyn, N. Y. Remaining classes, Edward Lever, Philadelphia, Pa. Veterinarian, Dr. George Walton, Boston. Superintendent, John Read. Entries close March 19.

"OUR PRIZE DOGS."—Mr. Chas. H. Mason will devote the coming dog show season to the compilation of a book with the above title. Each dog winning a prize at Buffalo, Newark, Providence, Boston, Pittsburgh, Philadelphia, Hartford and New York will be accurately and fully described, giving age, owner, breeder, sire and dam, color and markings, with weight and height when necessary, as well as an impartial criticism of both the good and bad qualities of each animal. The work will be handsomely bound and profusely illustrated with photographs from life of not less than fifteen typical specimens of the more prominent breeds. Mr. Mason informs us that it is his intention to publish such a work each year, if the venture is sustained by the public. That the work will be heartily welcomed by exhibitors, breeders and buyers throughout the country there is not the slightest doubt. We know of no one so competent to compile such a work as Mr. Mason, and we have no doubt that "Our Prize Dogs" will win for its author both fame and shekels.

THE BUFFALO DOG SHOW.—The prospects for a good show at Buffalo next week are encouraging. There will be quite a number of dogs shown that have been recently imported, some of them having a world wide reputation. The owner of the celebrated greyhounds Balkir and Lancashire Witch informs us that they will be sent to Buffalo if in good form. Mr. Thayer will also show his new fox-terrier Raby Mixer. We have also heard whispers of a mastiff or two that will open the eyes of fanciers of the breed. Exhibitors should bear in mind that the entries close March 5.

DEATH OF GLENCHO.—Mr. Wm. H. Pierce has had the misfortune to lose by death his Irish setter dog champion Glencho. He died on Monday from pleuro-pneumonia. Glencho was well known to the readers of FOREST AND STREAM, having often been described in our reports of shows. He was a noted winner on the bench, and said to be a capital performer in the field. Mr. Pierce will find it hard to replace him.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Buck Noble and Count On Me. By O. D. Thees, New York city for one orange belton and one blue belton English setter dog whelped Nov. 5, 1886, by Buckellew (Druid—Ruby) out of Bessie Noble (Count Noble—Lady May).

Countess Flora K. By Ad J. Klofanda, Eau Claire, Wis., for liver and white ticked pointer bitch, whelped Oct. 1, 1886, by Clipper (Ponto—Meg Merrilies) out of Rosa (Snap Shot— ——).

Western Bang Bang. By Ad. J. Klofanda, Eau Claire, Wis., for lemon and white pointer dog, whelped Oct. 16, 1886, by Bang Bang (A.K.R. 394) out of Ferry (Tammany— ——).

Perseus and Pandora. By E. Eschenbach, New York city, for white, black and tan markings dog and white, black markings fox-terrier bitch, whelped Nov. 28, 1886, by Bacchanal (The Belgravian—Bedlamite) out of Hazel (Raby Tyrant—Fay II.).

Captain Bogardus. By Dr. W. F. Spring, West Winsted, Conn., for liver and white ticked pointer dog, whelped Aug. 25, 1886, by Captain Fred (Pete, Jr.—Woodbridge Nellie) out of Lady F. (A.K.R. 2744).

Wilkes. By J. H. Conklin, New York city, for white bull-terrier dog, whelped Nov. 15, 1886, by Saxon (A.K.R. 1703) out of Dr. Wauner's Nellie (Saxon—Zook).

Diana. By Swail & King, Belvidere, Ill., for red Irish setter bitch, whelped Sept. 28, 1886, by Prince (A.K.R. 1968) out of Meg Merrilies (A.K.R. 2181).

Donald III. By W. T. Payne, New York city, for liver and white pointer dog, whelped Jan. 14, 1887, by Lord Palmer (Donald II.—Lady Bang) out of Sweet Brier (A.K.R. 2748).

RANGE AND GALLERY.

REVOLVERS.—I am very glad to see that some one besides myself is interested in revolvers, and the able article written last week in FOREST AND STREAM coincides exactly with my own experience. Why is it that manufacturers of arms who provide a light, short-barreled revolver with rifle ammunition, do not carry out the same principle and provide cannon ammunition for their rifles? They seem to be under the impression that a pistol with a 2in. barrel, handle at an obtuse angle with line of recoil, and held with one hand, should be able to carry heavy balls with the same relative accuracy as a rifle having in turn light ammunition, held by two hands, and braced by the shoulder. This is, of course, wrong, and goes without saying, and still it is seen every day. I have had many pistols but have yet to find a good shooter. In the first place the average revolver is made on bad principles, and in consequence when fired the muzzle flies up and throws the ball up too. What is the reason? Simply this, that the horizontal line of recoil is met by the resistance of the handle at an obtuse angle, the handle is forced down into the hand, hence the muzzle naturally goes up. Now if the handle were placed at an acute angle the muzzle would go down and so to correct this fault the axis of the handle should be at right angle with the recoil. Colt's revolvers come as near to this as any. Now for weight. This, of course, should be arranged according to size of cartridge required. Say we take a .32-cal. S. & W. double action as an example (an elegant pistol in its way but too light). This pistol should have barrel double the thickness and so heavier (and for practice), 2in. or more longer, and the metal carried well out to muzzle so as to keep it steady, the cartridge to contain same amount of powder (or less), but ball shorter and very much lighter, reduced by one-half if possible. This pistol, with the right-angled handle, of fair size, made with the usual exactness of the S. & W. or Colt's, would be an arm of accuracy, and no doubt would fill the want where at present there is none such. I would like to see more written on this subject, as it may be the means of the turning out of a better revolver.—PISTOL.

ZETTLER DEFEATS NEW YORK.—New York, Feb. 24.—Return match between the New York Rifle Club and the Zettler Rifle Club at the Twelfth Regiment Armory; Creedmoor rules and targets, graduated to distance 156ft.:

WILMINGTON, Del., Feb. 22.—A team of the Wilmington Rifle Club went to Wyoming, Del., this morning to shoot the match which had been arranged with the rifle team of Company E, D. N. G., and not only brought home victory, but the recollection of one of the most pleasant trips ever taken. A dinner was served, and the shooting immediately followed, occupying all of the afternoon. Considering the stiff wind that was blowing there were very few wild shots. The following are the scores on standard American target out of individual possible 100 points and team possible 800:

Wilmington team, 200yds.		Wilmington team, 100yds.	
C Heinel, Sr	67	H B Seeds	83
J B. Bell	62	C Heinel, Sr	81
H B Seeds	55	J B Bell	77

H B Sterner	36	M A Jones	63
M A Jones	38—341	J T Moore	60—531
Allowance for mil. rifles	40	Allowance for mil. rifles	40
	381		571—952

The Wilmington Rifle Club now holds the cup subject to challenge from any team of riflemen, either military or citizen, in this State, on the same conditions as those by which it was won. It is expected that the Company E team will shoot a return match with the Wilmington club in this city in a short time.

OAKLAND, Md., Feb. 22.—Washington's Birthday was celebrated here by a target match, which was participated in by two militia companies from Cumberland, one from Frostburg and the Garrett Guards, of this place, composing the second battalion. The match was held to obtain a team which will take part in the great national contest at Washington, D. C., in May next. There will be eight marksmen only from this battallion to take part in the Washington contest, and those making the highest eight scores in the match to-day will be entered for the national match. The shooting was at a regular Creedmoor target, 200, 300, 500 and 600yds., standing at the first, kneeling at the second, and lying down with the head to or from the target at the third and fourth distances. The shooting took place under the most unfavorable circumstances, weather cold and wind blowing a steady gale, possible 25 at each range:

	200	300	500	600			200	300	500	600	
Wardwell	15	21	18	12	—66	Stoyer	20	21	17	11	—69
Gordon	12	14	9	6	—41	N C Browning	16	14	19	8	—57
Chisholm	19	16	16	17	—68	Hunt	20	14	3	8	—45
Jamison	14	19	15	15	—62	Workman	21	4	6	2	—23
Bartlett	13	18	5	4	—40	E A Browning	13	18	2	11	—44
Browning	17	20	16	18	—71	Hammersmith	17	13	12	..	—42
Painter	19	19	21	15	—74	Dawson	17	13	10	9	—49
Sweeney	18	15	..	2	—35						

The following having made the highest eight scores will enter for the national match: James Painter, Capt. Browning, Corp. Stoyer, Capt. Chisholm, Col. Wardwell, Lieut. Jamison, N. C. Browning and Private Hunt.

MALDEN, Feb. 22.—The Malden Rifles, Company L, Eighth Regiment, M.N.G., held a shoot at their range at "Bear's Den" today. The event of the day was the team match between seven men from the Malden Rifles and a team from Company E, First Regiment, of New Bedford, seven shots each man:

Malden Rifles.		Company E.	
Corp Cook	30	Priv Gill	29
Lieut Parker	30	Corp McBey	29
Serg McSorley	30	Lieut Morgan	28
Capt Benjamin	29	Priv Dahill	28

A driving snowstorm, poor light, and low scores.

SALEM, Feb. 21.—At the prize shoot of the Salem Independent Rifle Association held to-day there was a large attendance. Six prizes were offered in three classes. The weather was favorable and good scores were made. Great interest was taken in the militia match. The score: Creedmoor target, 200yds. off-hand, military rifles, 20 rounds, possible 200: W. H. Merritt 86, G. A. Lawrence 85, C. C. Redmond 84, S. R. Ayers 82, R. B. Dawson 79, W. M. Ward 74, C. G. Hinman 73.

Scores in the special match for prizes, 200yds., standard target, off-hand, military rifles, possible 200: First Class, first prize, W. G. Hussey, 142; second, G. A. Wilson, 134. Second Class, first, W. E. Bachelier, 109; second, W. M. Ward, 105. Third Class, first, A. N. Locke, 83; second, C. E. Ropes, 68.

In the shoot for the Challenge Association medals, standard, off-hand, 200yds. First Class, S. Ayers and W. G. Hussey tied on 93. In shoot off, Ayers 29, Hussey 22. Second Class, E. Ropes 85.

GARDNER, Mass., Feb. 25.—The deep snow has interfered with the regular meets of the Gardner Rifle Club at Hackmatack Range. The following are recent scores which have been made, shooting off-hand, distance 200yds. First meeting:

G F Ellsworth	84	86	—170
A C White	77	86	—163
W C Loveland	80	78	—158
G C Goodale	75	78	—153
G R Warfield	65	82	—147
C N Edgell	73	67	—140
H Prine	71	69	—140
C Crabtree	62	69	—131

D P Norris	10	6	6	5	4	10	8	9	2	5—66
H Preston	6	5	10	6	9	6	4	6	3	5—60

ST. LOUIS, Feb. 21.—The weekly shoot of the St. Louis Pistol Club took place at the Laclede gallery Wednesday evening and was largely attended. The members are improving rapidly, and as it is expected that the medal will be won on the average each member is doing his best to raise it, and at the last shoot 16 of the 19 members present raised their average. The average of the best 10 men at the last shoot was very good, the average being over 112. Messrs. Perrett and Sims tied on 115 in the last shoot. In shooting off the tie Perrett made 112, which won, and he will wear the medal for the week. Following are the scores made, possible 120: Perret 115, Sims 115, Field 114, Wells 113, Fodde 113, Thurber 111, Hillmeyer 111, Lard 111, Mohrstadt 110, McDowell 108, Bengel 108, Bauer 107, Clark 100, Jones 101, Wallace 101, Neuhaus 96, Hettel 91, Sieminskie 75, Schaaf 73.

CENTRAL VALLEY RIFLE AND ROD ASSOCIATION.—Central Valley, Orange county, N. Y., Feb. 28.—The following officers have been elected for the ensuing year: Dr. James F. Ferguson, President; H. L. Leonard, Vice-President; R. Ficken, Treasurer; A. B. Talcott, Secretary; W. B. Barclay, Assistant Secretary. The name was changed to Central Valley Rifle and Rod Association. We would be glad to confer with other associations in reference to friendly matches with rifle or rod. We have a range of 200, 500 and 500yds. over level ground, and a mere for casting.—WM. B. BARCLAY, Assistant Secretary.

NEWARK, N. J.—The latest combination is a shooting and singing club. The Rutgers Rifle and Glee Club was organized last week with the following officers: Eugene A. McCraith, President; John Hilderbrant, Vice-President; J. A. McArdle, Recording Secretary; T. J. Butler, Financial Secretary; W. H Smith, Treasurer; Frank Osmum, Sergeant-at-Arms.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

"FOREST AND STREAM" DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a $100 trophy to be competed for on Decoration Day, May 30, 1887.

The competition will be open to all gun clubs now (March 3) organized, teams to be of 5 men each. A club may enter more than one team. The match will be at artificial targets, particulars will be given in our next issue. The entrance fee will be $5 per team. All entrance moneys will go to a purse to be divided into prizes.

The prizes will be: First, the FOREST AND STREAM Decoration Day Trophy. Second, 50 per cent. of the entrance fees. Third, 30 per cent of the entrance fees. Fourth, the remaining 20 per cent. of the entrance.

Full details will be given next week.

NEW HAVEN GUN CLUB.

NEW HAVEN, Conn., Feb. 22.—Event 1, 5 American clay birds, 18yds., 3 angles:

MIDDLESEX TOURNAMENT.

DUNELLEN, N. J., Feb. 23.—The third day of the tournament of the Middlesex Gun Club opened with a good assemblage of shooters and rather disagreeable weather at first, but it came off better later in the day. Some exception was taken to our comments in last week's issue in regard to Hurlingham rules and the second barrel at the bird on the ground. Mr. Organ, one of the prominent sportsmen attending the tournament from the West, explained to your correspondent that it was at the request of the Humane Society of England that the second barrel was originally incorporated in the Hurlingham rules to save the suffering of the birds. Well, that is all right and praiseworthy. Shoot the suffering birds on the ground or anywhere if you can't gather them, but don't let it count the same as first barrel. Let it be a bird or no bird. No one in the field would put a second barrel into a quail with a broken wing, but he would gather it as soon as possible. Some of the birds shot to-day are perfectly useless for market or the pot, absolutely blown to pieces at point blank range on the ground, 15 or 20yds. distant from the shooter. Out on such sportsmanship! Let it be one barrel and one bird, and second barrel a bird, with such retrievers as Al's Duke, and good shots will be made and the birds will not be allowed to lie suffering.

The day opened with first sweep, 20 clay-pigeons changed to 10 clay-pigeons, $5 entrance and the birds, same handicap as days previous, Al Heritage referee, as he continued to be throughout the tournament on clay-pigeons:

Stice	1110111110	Stark	1110111110
Budd	0111001011	Davis	0011000111
Dickey	1011101110	Brewer	1110111111
Smith	0010101010	Wagner	1110110100

—8 —6 —7 —5 —6 —6

Brewer first, Stice (4 to Stark's 3) second, Dickey third.

Second sweep, 10 live birds; Ritch, referee; $10 entrance; tournament rules:

Stice (30yds.)	1011112201	Stark (29yds.)	0011122021
Budd (31)	2121111111	Dickey (30)	1211202221
Graham (29)	1112212121	Straitor (30)	1111112121
Brewer (31)	2111112212	G Davis (30)	1210121121
Klintz (31)	0121112122	James (30)	1111122100
Heft (31)	1212002210	W L Davis (30)	1121022212
Jones (31)	1111021121	Lever (30)	0121011221
Luther (30)	1111011200	Vandever (30)	1111220011
Eley (31)	1121211210	Wagner (30)	1011210122
Bob White (30)	1112110102	Hudson (30)	1212000111
Wadsworth (31)	1011222210	Complete (30)	0211101122
Gillespie (31)	1111022111	F Collins (30)	1111121011

—10 —9 —8 —8 —7 —6 —8 —8 —7 —7 —8 —9

Budd, Graham, Brewer, Straitor and Eley divided first; Jones, Gillespie, Dickey and G. Davis divided second on shoot off; Stice, Wadsworth, James and Lever divided third on shoot off; Stark, Vandever, Wagner and Hudson divided fourth on shoot off.

Third shoot, 5 pair live birds, $10 entrance, handicapped:

Budd	11 11 11 11 11—10	G Davis	10 10 10 10 01— 5
Stice	11 01 11 01 11— 8	Cannon	10 10 11 10 10— 6
Brewer	11 11 11 10 10— 8	Pilkington	10 11 01 10 00— 5
Wadsworth	01 11 11 10 11— 8	Straitor	10 10 01 10 00— 4
Gillespie	11 10 10 11 11— 8	Lever	11 11 11 11 11—10
Stark	11 10 11 11 11— 8	Dickey	10 00 10 10 10— 5
Eley	11 11 11 10 11— 9	Wagner	11 11 10 11 10— 8
Klenitz	11 11 01 11 11— 8	Vorhees	10 00 11 10 11— 6
Heft	11 11 10 11 11— 9	James	10 01 11 10 11— 7
Graham	11 11 11 10 11— 9	Jones	10 10 10 11 11— 7
Bob White	11 11 11 10 11— 9	Collins	10 10 10 11 11— 7

Budd and Lever divided first; Eley, Graham, Bob White and Heft, second; Stice and Brewer third, on shoot off; James, Jones and Collins fourth.

Fourth sweep, 10 pair clay-pigeons, 18yds., $5 entrance:

Budd	11 10 00 10 10 10 01 11 10 01—11
Stice	11 11 10 11 01 00 11 11 11 10—15
Stark	11 11 10 10 11 11 01 10 10 11—15
Wagner	10 10 10 10 11 11 10 01 11 11—14
Davis	11 11 01 11 11 00 11 01 11 01—15
Pilkington	10 10 11 01 10 10 10 01 00 00— 9
Dickey	10 11 11 11 10 10 01 11 11 11—16
Brewer	11 00 11 00 01 11 10 11 11 11—14

Dickey first; Stice, Stark and Davis second; Wagner and Brewer third.

Some fault was found, we observed, by some of the Western men with the Ligowsky clay-pigeon. They don't always break even when hard hit. We noticed ourself several times the saucer would be completely turned over in the air by the contact of the shot and yet not break, and it would be scored lost. But what will you get that is better? Mr. Kirkwood, the Ligowsky agent who assisted the committee in running the clay-pigeon part of the tournament, did all he could in an intelligent way to give satisfaction; the traps were certainly of the best and worked to perfection.

Fifth sweep on programme, miss and out, changed to 5 live birds each, $5 entrance:

Stice (30yds.)	10111	James (30yds.)	11111
Budd (30)	11111	Clark (30)	11110
Stark (29)	11110	Gillespie (31)	11111
Bob White (30)	10111	Williams (29)	01101
Vandever (30)	01111	Dickens (30)	11111
Eley (30)	11111	Smith (30)	11111
H White (30)	11111	Dickey (30)	11111
Graham (29)	10111	Davis (30)	11010

—4 —5 —4 —3 —4 —3 —4 —3 —4 —3 —4 —3

On shoot off, H. White, James, Smith and Dickens divided first; Stice, Bob White and Graham divided second; Williams and Davis divided third.

Feb. 24.—The fourth day opened with a high cold wind that increased in force during the day and sent the clay saucers boomingly, while the animated feather targets took decided advantage of boreal aid and got away lively. This will account for the difference in the scores of Eley, Stark, Brewer and others, that stood so high before. First sweep changed from 50 single clay to 25 single clay; entrance $10:

Stice	1101111111100101101101111—19
Budd	1110101111001011111111110—18
Gillespie	0100011100101101111101101—15
Stark	1101100101001111101101103—14
Wagner	0000010000000101001011110—7
Dickey	0000101000001011001010000—8
Brewer	1101100101111111111011110—18
Davis	1000130011111111130100001—13
Fox	0001010110101000000w
James	0101000101101110010110111—14

—19 —18 —15 —14 —7 —8 —18 —13 —11

Stice first money, Budd and Davis second, Gillespie third.

The second sweep, same day, was the great feature, and proved very interesting, at times exciting. Twenty live birds, $25 entrance and the birds. Neither Mr. Ritch nor myself kept this score, therefore we are unable to designate the first and second barrels; Hurlingham rules, both barrels counting as one. Eley came to grief and pulled down his average considerably. The wind didn't seem to bother Stice much, for he killed his birds so quick, within a yard of the trap, that the wind had no time to catch them. Kleinz's score under the circumstances was magnificent also.

Brewer	11111011010111011111111—17	Stark	11011101101111011111—16
Eley	01100111111001110001—12	Greeley	11011110111011011111—16
Stice	11111111111111111111—20	Lever	11111011010110111011—16
Budd	11111111111011101111—18	Kleinz	11111111111111111111—20
Graham	11111111111111111011—19	B White	01111111110110101w

Stice and Kleinz first, Graham second, Budd third, Brewer fourth.

The fifth and last day, Friday, Feb. 25, opened with a sweep at 10 live birds, $10 entrance, usual conditions as to handicap, etc.; considerable wind and very cold, Wm. Siegler, referee:

Stice	1111111111—10	Hedden	0021012100— 5
Budd	1221211110— 9	Dickens	2110211211— 9
Brewer	2121121121—10	Cannon	1011121210— 8
H White	1110221112— 9	Bob White	1111111022— 9
Wadsworth	1221212120— 9	Lever	1120112110— 9
S G Smith	2211222021— 9	James	1101212121— 9
Eley	1121001121— 8	Smith	1101012022— 7

On shoot-off Stice and Brewer divided first, Wadsworth and James second, Eley and Cannon third. Here is where luck and fortune comes in. Budd, White and Dickens, after making a good score, got hard driving birds and were shot out on their fourteenth birds; others earlier.

Second sweep of 20 single clay-pigeons, $5 entrance, usual conditions:

Stice	01111100011110111111—15	Campbell	00010101000 w.
Budd	11010001011111111010—13	Fox	01001011110111000111—13
James	11110111011110000111—15	W Siegler	11111101011011111100—16
Allen	01110100010110101111—12	Brewer	11101110110101111111—16
Hedden	10000101001101 w.		

Siegler and Brewer divided first, Stice and James second, Budd and Fox third.

Third sweep, 10 pair live birds, $10 entrance and the birds; and here is where the fun came in. Al Heritage refereed this match. Wm. Siegler, who refereed many of the other live bird sweeps, took his place with the shooters, and it paid him more money, besides the fun. A cold wind helped the birds considerably:

Stice (21)	01 11 11 11 01 10 01 11 10 10—14
Budd (21)	11 10 11 11 10 01 11 10 01 01—14
Brewer (22)	11 01 11 10 11 11 10 10 01 11—15
Eley (21)	11 01 00 11 00 10 11 11 11 11—14
Williams (20)	01 11 10 10 00 11 00 10 11 11—12
Cannon (20)	11 00 11 00 10 10 00 01 10 10— 9
H White (21)	10 11 21 11 11 11 01 11 11 10—17
W Siegler (21)	11 11 10 ∞ 10 11 10 11 01 11—14
Lever (21)	10 10 10 11 1o 01 11 01 11 11—14
Vorhees (21)	11 01 11 1o 11 10 11 10 10 00—13

o Dead out of bounds.

Shoot off ties for third money: Stice 1, Budd 4, Eley 2, Siegler 4, Lever 3. White first, Brewer second, Budd and Siegler divided third.

There was some delay in the arrival of live birds, so previous to the last sweep an impromptu was gotten up, $2 entrance at 10 clays, South Paw, referee:

Stice	1111110111—8	Fox	1010111110—7
Brewer	0111101110—7	Eley	1110100111—7
Budd	0111101111—8	James	0110111010—6
Allen	0011101010—5	S G Smith	1101110110—7

Ties divided.

It was drawing toward the close of the afternoon, and it was easily to be seen that the boys were getting tired. The committee, President Robinson, Quimby, Ritch, and in fact all had worked hard and unitringly for the five days to make this their first tournament, a success. That they have done more than that the high words of praise often spoken by the visitors, both from the East and the West, amply testified. It has been a success in more ways than one. It has brought together distinguished trigger men from a distance who have clasped hands and engaged in friendly strife at the traps. Not a disagreeable incident has taken place; not a rough or harsh note sounded; and financially the Middlesex Club may be proud of their committee's work. Some 2,500 live birds have been shot, many more of the earthen saucers are past repairing; and the club has a large commodious grand stand some 56x20ft., beneath which is an ample kitchen, dining-room, etc., the whole front length. This, at an expense of some $400, all of which will be paid for and a margin left for other incidentals or to bank. The Middlesex is a live club and they deserve their success. Trapshooting, both at the clays and live birds, is on the increase decidedly, we have noticed it for months in the number of new clubs springing up, numbers engaging in the breeding of pigeons, etc. This tournament will give another send off to the same. But where was the Jersey City Heights Club all this time? They have on their roll some of the best shots in the State, or the United States. They have beaten the Middlesex one match and tied them on another, and yet in their whole roll we counted but six of their members shooting at this tournament, and then only at one or two minor sweeps; and moreover of these six, four of them, Dickens, Conners, Jones and J. von Lengerke, are members of the Middlesex. The J. C. H. ought to be ashamed of themselves.

I remarked that the committee were getting tired and so were the shooters. A five days' shoot is too long. Quite a number left for home on Thursday evening, and all the rest felt relieved when the last sweep, a miss and out, was called about 5 P. M. A number of the crack shots were anxious to remain until the last competition was over, as there was considerable interest as to the final prizes of $50 for best average on both clay and live birds. The books are not made up yet therefore we cannot give the lucky ones. In the live birds it will lie between Stice, Eley, Budd and Brewer, we think. Clay pigeons, the same with a variation.

Last sweep, miss and out, and the meanest kind of sweep, a great deal depending on the luck of the shooter in his birds. A good shot may be flummoxed the first shot, and a mediocre shot last almost indefinitely. $5 entrance, usual handicap, $35 in the pool:

Stice	12112221—8	Brewer	11221212—8
Budd	11210 —4	Cannon	10 —2
Eley	11112111—8	Collins	210 —2
Williams	11210 —4		

Stice, Eley and Brewer divided, and thus ended the first tournament of the Middlesex Gun Club.

At the close of the second day's shoot Mr. Organ, of Chicago, asked the attention of the audience and said that he was prepared to make three matches to back W. C. Budd with Wm. Graham for from $250 to $1,000 a side, one to be shot at Dunellen, one at Erb's, Newark, and one at Chicago, and he then and there placed $300 ($100 for each match) in the hands of Justus von Lengerke. There were no takers, and probably will not be, although the money is still at Von Lengerke & Detmold's, 14 Murray street, New York city. But two matches were made between the friends of Mr. Graham and our Jersey boy Jack Brewer. One match to be shot on the grounds of the J. C. H. G. Club at Marion, N. J., on March 17, the second at Philadelphia, March 24. Both matches for $250 a side, 100 birds; Hurlingham rules. The money is up and it will be a close thing. JACOBSTAFF.

NEW JERSEY TRAP NOTES.—A gun club has been formed at Seabright with W. H. Cook as president, C. W. Osboru, secretary, and Capt. D. L. Longstreet, treasurer.... The Dover Gun Club organized recently with seventeen member. Postmaster G. C. Hinchman is president, and Mr. David Young is secretary and treasurer. The club has furnished itself with traps for clay pigeons and glass balls, and other accoutrements.... The West Newark Gun Club officers are: O. Horinch, president; C. Burgess, treasurer; A. Zade, secretary; G. Beisler, Wm. Dody, H. Habig, J. Adelman, J. Abdes, A. Assman, J. Lamb, L. Raber, C. Bonnet, H. Hilfert, Committee. Essex Gun Association's second monthly shoot was held on the 19th ult., on the grounds of the Southside Club, and that organization again won a victory. Five teams of five men each shot, and each man attempted to break 20 clay pigeons. The club scores were as follows: South Side 73, Nimrod 55, East Orange 46, Woodside 38, Mountain Side 38. The veteran, Sam Castles, shot with the Nimrods, and made the highest score.... W. Floyd Jones and Dr. Knapp, of the Westminster Kennel Club, shot at 100 pigeons each for $1,000, in the presence of 200 ladies and gentlemen who came on a special srain to witness the shooting. Dr. Knapp took the match by 6 birds, Knapp 83, Jones 77. Dr. Knapp was defeated in a similar match last week by Henry Livingstone.... The Fifteenth Avenue Gun Club had its first shoot on the 22d ult. at 20 glass balls, 25yds. rise. The breaking was as follows: J. Reiboldt 18, C. Wenzell 17, J. Jacquin 14, H. Blace 13, L. Schilling 10, J. Weber 11, C. Spahn 11, C. Meisei 14, P. Traudtfetter 9, E. Grobmann 12, H Maybush 10, M. Bauer 11 and Mr. Doerzbacher 8.... The West Newark Gun Club shot a match at glass balls and pigeons at 21yds. rise, on the 22d. Five live birds—C. A. Doty, O. Hornich, C. Burges and J. Ables, 5; J. Adelman, G. Deisler and W. Bonnett, 4; A. Assman and A. B. Wade, 3; L. Reiber, F. Hilford and H. Habig, 2, and J. Lamb 1; scores at 25 glass balls: C. A. Doty 23, J. Adelman 21, O. Hornich 20, A. Wade 19, G. Deisler, 18, W Bonnett 18, C. Burgess 16, F. Hilford 16, A. Assman 15, J. Lamb 13, H. Habig 9, L. Reiber 8, J. Ables 7.... The long deferred shoot between the Southside Gun Club and the Elizabeth Club will be shot March 4, at the Southside grounds. The match will be between teams of ten or fifteen men, each man shooting at 20 clay birds.

CHATHAM CENTER GUN CLUB.—Chatham Center, N. Y., Feb. 26.—Match at 10 Peoria blackbirds, 18yds., New Long Island rules:

M Powell	1100101100—5	G Bogardus	0010001000—2
J Goodrich	0101011000—4	C Minisee	1101100001—5
B Chichester	0001010010—3	Edward More	1110101101—7
J Williams	0101010111—6		

LOCKPORT, N. Y., Feb. 22.—Lockport Gun Club sweepstake shoot on the Fair Grounds. No. 1. Sweepstakes, 7 bats:

L Andrews	1111110—6	Margetts	1011111—6
W McCarthy	1101111—6	Barker	1100011—4
G H Moody	1111110—7	Greene	1001011—4
Jeff	1000000—1	Myers	1011111—6
E Clark	0011101—4	Moyer	1111111—7
Atwater	0100101—3	Brong	1110001—4
Barvey	1110000—3	Ward	1111101—6
Hurd	1111110—6	Welsher	1111101—6
Besser	1111011—6	Whitcomb	1001006—2
B Tolsma	1111111—7	Moody	1011111—6
Koch	1101101—5	Kellogg	1101110—5

G. Moody, Tolsma and Moyer divided first, Andrews and E. Moody divided second, Koch and Kellogg divided third, Barker won fourth.

Shoot No. 2, 10 bats, sweepstakes:

T S Clark	1010101111— 7	J Koch	1011101111— 7
I H Andrews	1111111111—10	A Welsher	0001100110— 4
E H Smith	0111111111— 8	A Besser Jr	1111111011— 9
B Tolsma	1111111111—10	E M Moody	1110111111— 9
Jeff	1001011000— 4	Geo Margetts	1111110011— 8
W M McCarthy	1110110010— 6	P G Myers	0111001001— 6
Geo Moody	0110111111— 8	W C Greene	1011111011— 8
Geo Barker	1101111111— 9	W H Case	1111101111— 9
B Reynolds	1011011011— 7		

Tolsma and Andrews first, Moody and Case second, W. C. Greene third, S. T. Clark fourth.

Shoot No. 3, 15 bats:

I H Andrews	111111111111111—15	B Tolsma	111100110000111— 9
T S Clark	100101011101111—11	Geo Margetts	110010111111110—11
W M McCarthy	111011000001101— 8	W H Case	111111111011110—13
O Besser, Jr	111101101011111—12	W C Greene	111111011100111—12
P G Myers	111101100100000— 8	E H Reynolds	101111110011111—12
C F Hurd	111101110111010—12	E M Moody	101111111111114—14
Geo Moody	111011011101011—11	D E Brong	101010010110111— 9
E H Smith	111111111111101—14	C A Ward	111011111110110—12
Harvey	101010101000011— 8	J Atwater	101101010001100— 6
Geo Barker	110100101110111—10	F J Moyer	101111001111111—12
J Koch	111111000111111—12		

I. H. Andrews first, E. M. Moody and E. H. Smith divided second, W. H. Case third, J. Koch fourth.

Shoot No. 4, 10 bats, sweepstakes.

T S Clark	1110101110— 7	Geo Barker	1111101010— 7
W M McCarthy	0110011111— 7	E H Kellogg	1101110111— 8
I H Andrews	1111111101— 9	O Besser, Jr	1111001111— 8
E H Smith	1011001110— 5	E M Moody	1111111111—10
Geo Margetts	1000111111— 7	W H Case	1111110011— 8
P G Myers	1001010101— 6		

E. M. Moody first, I. H. Andrews second, E. H. Kellogg third, T. S. Clark fourth. The great success of the shoot and the large attendance decided the sportsmen here to reorganize their club and put it on a paying basis. From out of town were I. H. Andrews, Spencerport; H. Besser, Buffalo; E. Smith and J. H. Jewett, La Salle; George R. Barker, Niagara Falls; B. Tolsma, J. Kellogg, Messrs. Koch, Clark Price and McArthur, Buffalo; C. H. Hurd, Medina; J. Margetts, Clifton, Ont. Andrews missed but two bats out of 48 during the entire shoot.

THE WORLD'S TRAP-SHOOTING CARNIVAL will be held on Wellington Gun Club grounds, Boston, May 30 and 31, June 1, 2, 3 and 4. On account of unavoidable delay in hearing from the British contributors, it will be impossible to get out the official programme before April 1. Special railroad rates will be arranged for shooters from west or south who signify their intention of being present to our secretary.—C. B. SANBORN, Secretary N. E. Shooting Tournament Association, 29 N. Market street, Boston.

OTTAWA, Feb. 19.—Simon Glover, of Carleton Place, in a contest to-day against W. L. Cameron of this city, for the Ligowsky clay-pigeon championship medal, won by a score of 22 to 21 out of 15 singles and 5 doubles.

WORCESTER, Mass., Feb. 23.—At the Coal Mine Brook range yesterday, in a 100 clay-pigeon match, William Dean 82, H. W. Webber 76.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE EXECUTIVE COMMITTEE MEETING.

THE following are the official minutes of the Executive Committee meeting on Feb. 12, as taken by the secretary *pro tem.*, Mr. Wm. Whitlock. They give the details of the business transacted so fully that no explanation is needed, but we would call special attention to the feeling which is evidently shared by all the committee, that the dues should be reduced to and maintained at $1 throughout all the divisions. The change from the small and compact organization of the A. C. A. as it has existed since its formation, confined mostly to Ontario, New York, New England, Pennsylvania and New Jersey, to a more complex body that shall be capable of indefinite extension, has been looked forward to with much apprehension by many old members, one of whom, ex-Com. Edwards, speaks in the following report. Now, that the crisis has really appeared, it looks, from the action of the Executive Committee as well as from the general feeling among canoeists, as if the change would be made with very little clashing or friction, and that in a year or two we may see half a dozen strong and self-sustaining divisions working harmoniously together. The revision of the constitution is now in the hands of a most able committee, but it is not enough to throw the work entirely on them. It is also in the hands of every member of the A. C. A., and it is his duty as well as privilege to aid the work by such comments and advice as may occur to him. Before any final action is taken the draft of the proposed revision will be made public in order that all canoeists may know fully what is proposed, and may commend or object freely. The report of the Executive Committee is as follows:

Minutes of the meeting of the Executive Committee of the American Canoe Association, held at No. 247 Fifth avenue, Feb. 12, 1887, in pursuance of the call of the Commodore, and to complete business left unfinished at the meeting of Nov. 13, 1886. There were present Messrs. R. J. Wilkin, E. H. Barney, George L. Parmele, W. B. Davidson, R. W. Gibson and W. Whitlock. The meeting was called to order by the Commodore, Mr. R. J. Wilkin, and on motion, Mr. Whitlock was elected Secretary *pro tem.* On motion, the meeting adjourned to the house of Mr. E. W. Brown (who was unable to go out), who thus became also present at the meeting. The minutes of the previous meeting (Nov. 13) were read, and, on motion to approve, were objected to and laid on the table. The Commodore made a report stating the object of the meeting as fully set forth in the call issued by him to the Executive Committee.

It was moved by Mr. Brown, seconded by Mr. Davidson, that the constitution be amended as follows: "At all meetings of the Executive Committee five persons shall constitute a quorum; and, when in the opinion of the Commodore, a special meeting is not necessary, all questions may be voted upon by letter to the Commodore. A member of the committee may appoint by letter any other member to vote for him in his absence at any meeting of the committee." Mr. Gibson moved an amendment that seven members shall constitute a quorum, and, further, that a member of the committee may appoint by letter any other member from his own division to vote for him in his absence. After discussion it was decided that this meeting could not amend the original motion, because of the constitutional clause requiring the approval of two-thirds of the whole committee. The amendment was thereupon withdrawn, and the original motion was unanimously carried, having been previously approved (by letter) by two-thirds of the whole committee.

It was moved by Mr. Davidson, seconded by Dr. Parmele, that the following resolution be adopted:

Resolved, That Article V. of the Constitution be amended so as to read as follows:

"Article V. The officers of this Association shall be a Commodore and Secretary-Treasurer, and for each Division a Vice-Commodore, a Rear-Commodore and a Purser. The Commodore and Secretary-Treasurer shall be elected by the Executive Committee at their meeting, or at some subsequent meeting of that Committee, and they shall hold office for one year from the date of the annual meeting of the Executive Committee, or until their successors are elected. In the event of one or more of the Division officers being chosen to fill these positions, the vacancies so caused shall be filled by the members of the Executive Committee from the same Division to which the officers vacating the positions belonged. The Vice and Rear Commodore and Pursers shall be elected by the members of their respective Divisions at the Division's meat, or at the General Annual Meet of the Association, and shall hold office for one year, or until their successors are elected. All officers shall be elected by ballot."

The above resolution, having been approved by two-thirds of the Committee, in person or by letter, was carried unanimously.

On motion, the name of Mr. William H. Carter, of Treuton, N. J., was then presented by Mr. Whitlock as a nominee for the office of Secretary-Treasurer of the Association for the ensuing year, and was seconded by Mr. R. W. Gibson. There were six votes cast for Secretary-Treasurer, all in favor of Mr. Carter, who was declared unanimously elected.

On motion, meeting then adjourned to 247 Fifth avenue, having first tendered a vote of thanks to Mr. Brown for the use of his rooms.

Mr. R. W. Gibson moved as follows: That the commodore appoint a committee of three to arrange a constitution embodying recent amendments and such others as they may find necessary. This was duly seconded and carried. The Commodore appointed as such committee Messrs. Gibson, Parmele and Brown.

Mr. Gibson then moved that the said committee be instructed to consider the following suggestions: 1. A payment of all debts by members to Division pursers, and the payment by them to the secretary-treasurer of proportionate parts for A. C. A. expenses. 2. The limiting of A. C. A. expenses to a minimum for the publication of Annual Book and of camp programme, and the payment of actual disbursements by officers and committees for preparations for the camp. The payment of secretary's expenses and disbursements, and for the hire or construction, when necessary, of a landing place, an official A. C. A. marquee, and proper sanitary camp arrangements. 3. That all other camp requisites, such as steamer, camp-fires, etc., be made self-supporting—remembering that it is the policy of the A. C. A. to return as soon as possible to the rate of subscription of one dollar. 4. The committee to consider the practicability of holding a meeting of the Executive Committee at the annual camp, to elect a commodore and to do general business; the new commodore not to assume office, however, till the annual meeting of the Executive Committee, as at present. 5. That the committee be instructed to give the fullest possible publicity to these suggestions. Mr. Gibson's motion was unanimously carried.

A letter was then read from Commodore Edwards, making application for a Northern Division. The letter read as follows: "Peterboro, Ont., Jan. 27. My Dear Commodore—I am instructed by the committee appointed at a meeting of northern A. C. A. men held at Grindstone Island in August last, to apply to the Executive Committee of the A. C. A. to set apart a Northern Division under the constitution, and I therefore beg that you will be good enough to bring the application before the Committee at its next meeting. The clubs chiefly interested in the movement are those of northern and western Ontario. At the same time we are anxious to preserve as far as possible, even in the Divisions to be formed, the thoroughly international character of the A. C. A. as originally instituted, and we therefore ask the Executive Committee—whose duty it is by the constitution to define the geographical limits of the Division—to include, if possible, such portions of the United States, or such clubs therein, as can from their position be most satisfactorily included in the new Division. We have not yet corresponded with such clubs as Rochester, Buffalo, Detroit, etc., and I therefore suggest that the Committee should at the present meeting recognize the status of the new Division, leaving it to a small sub-committee to set out its boundaries after full consideration. It is suggested that it cover all of Ontario west of Kingston. The name suggested is 'Northern Division' avoiding such terms as 'Canadian,' etc., which might indicate a national distinction. As you are aware, I am personally averse to divisions of the A. C. A. Still, they have been adopted, and, apparently, it is necessary to have them, and there has grown up a desire to have another meet at Stony Lake, to which all our local men could go. I do hope that the new division may bring strength rather than weakness to the A. C. A. It is only this hope that has induced me to have anything to do with the movement. With regard to a meet at Stony Lake, which is contemplated for the two weeks preceding the general A. C. A. meet, a very hearty invitation is extended to all members of the A. C. A. to be present. We count upon welcoming you in particular to a spot where you helped so thoroughly to make the first Canadian meet a success, and I trust that we shall see many old as well as new faces at Stony Lake from across the border. In spite of both our Governments we are determined that the A. C. A. shall be no party to the doctrine of non-intercourse, and that the fisheries of Stony Lake shall be free alike to the true canoeists of both countries. Very truly and heartily yours, E. B. EDWARDS, Chairman Committee."

It was moved by Mr. Whitlock that the committee now headed by Com. Edwards be authorized to form a Northern Division, composed of such clubs or members as may elect to join it, and that such committee be requested to forward the names of the officers of such division, and of the representatives elected in accordance with the A. C. A. constitution, to this committee, and that such officers and representatives will be recognized in future. Seconded by Mr. Barney and carried unanimously.

It was then moved by Mr. Whitlock, seconded by Dr. Parmele, that the committee on revision of the constitution be instructed to consider also the following suggestions: That representation be based as follows: For each recognized division three officers—vice-commodore, rear-commodore and purser—and if such division exceed one hundred members, then for each one hundred additional members they may be entitled to one member on the general committee. Carried unanimously.

At Com. Wilkin's suggestion, the committee on constitution were instructed to consider the following: "In the event of a vacancy by death or otherwise of the commodore of the Association, he shall be succeeded by the ranking senior officer of any division of the A. C. A."

It was moved by Mr. Gibson, seconded by Mr. Barney, that the purser of the new Northern Division is hereby authorized to collect fees and account to the general treasurer for $1 for each member, and that former members of that division be authorized to resume membership without new initiation fee, should they desire to do so. Carried unanimously.

Mr. Gibson also moved, seconded by Mr. Whitlock, that the American Canoe Association hereby extends a cordial invitation to the Western Canoe Association to unite at the ensuing meet of the A. C. A. as the Western Division of this Association, with such officers as they may select. Carried unanimously.

Mr. Gibson then moved, seconded by Dr. Parmele, that the Secretary be directed to communicate to the W. C. A. the resolution directing a committee to report upon the advisability of re-adopting the subscription of one dollar after the current year, and invite their opinion and assistance in the matter. Carried unanimously.

The officers of the Eastern Division, present, announced that they had decided on a meet at Haddam Island on Decoration Day, and that the date was approved by the Commodore.

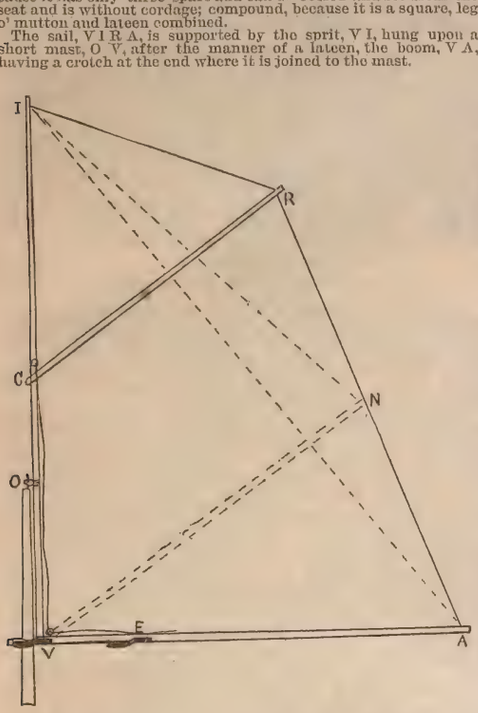
On motion by Mr. Whitlock, seconded by Mr. Barney, the Commodore was given power to call Committee meetings at any time.

The names of ladies proposed for honorary membership at the meeting of November 13, were then taken from the table, and Mrs. Harriman, also the next lady on the list, were elected to honorary membership.

On motion of Mr. Whitlock, the question of continuing the Secretary's allowance was fully discussed, and it was decided, for this year at least, to make no change. An appropriation at the rate of three hundred dollars ($900.00) per year was, therefore, voted to Mr. Carter for the ensuing year.

The meeting then adjourned, subject to the call of the Commodore. (Signed) WM. WHITLOCK, Secretary pro tem.

NEW YORK, Feb. 14, 1887.



QUAKER CITY C. C.—The Q. C. C. C. held their second camp fire on Feb. 4, at the residence of Mr. Jackson; a number of invited guests being present, among them Mr. Richard Binder, of the Keystone C. C. The subject for the evening was "Sails and Rigging," a chapter from "Canoe and Boat Building" being read and discussed, after which followed some good singing of canoe songs, and some fine piano playing by Messrs. Binder, Jackson and Leary. On the 14th a special meeting was called for the purpose of adopting a uniform. With this object in view the secretary borrowed a wire figure whose length and beam were something like 5½ft.x16in., this was dressed with a pair of knickerbockers, shirt and stockings and topped off with a red Tam o'Shanter, to aid in selecting a uniform. The uniform adopted consists of dark navy blue knickerbockers with broad fall fronts, shirts navy blue, regular navy cap, black-ribbed stockings, and slippers.—J. A. B.

ANOTHER CANOE SAIL.

Editor Forest and Stream:

I send herewith a plan of a simple compound sail, simple because it has only three spars and can be reefed and set from the seat and is without cordage; compound, because it is a square, leg o' mutton and lateen combined.

The sail, V I R A, is supported by the sprit, V I, hung upon a short mast, O V, after the manner of a lateen, the boom, V A, having a crotch at the end where it is joined to the mast.

The sail is further spread by a sprit, C R, supported by a cord rove through a ring at C, passing down through ring at V, and out on boom, where it is fastened.

The sail may be reefed by untying this cord, when the sprit falls and we have the leg o' mutton, V I A, the leach being supported by a cord from I to A sowed to the sail.

Or the sail may be reefed by lowering the boom to crotch E and tying in the reef points from V to N, and further, by the removal of the sprit. VIRA.

PHILADELPHIA, January, 1887.

INVENTION OF BATTEN AND REEF GEAR.

Editor Forest and Stream:

Your review of the "New Invention" for canoeists settles Mr. G.'s claim, sufficiently, but I can give an earlier instance of publication, at least in this country, than the review contains. The *Scientific American Supplement*, No. 133, dated July 20, 1878, describes with full page plans of a "new cat-rig," an essential feature of which is a reef batten with gear (practically same as shown on Dot's sail).

Batten is not in a pocket, but half of it on each side of and laced by grommet holes. The plans show it applied both to a yawl and a catboat, the latter being to a scale of about ½in. The design is given by R. B. Forbes, Milton, Mass., July, 1878. His letter contains this clause: "* * * just as a Chinaman reefs by lowering one bamboo," which clearly indicates the origin of his plan—"invention" I mean. The article being now before me its correctness can be relied upon.

The *Supplements* are always in print, so any one can readily verify this.

Between 1877 and '78 two friends and myself "evolved" the reef-batten for use on a proposed catamaran. I have now a sketch book of August, 1878, containing a plan of a sloop-rig with battens on both sails; some for reefing, others—from their location—only to keep sail flat (evidently we had much faith in lots of timber about them). As some knittles are shown, we clearly had not thought of gear. Battens are shown laced to sail. As we caught the catamaran fever by reading of the proa, it is quite likely that the batten idea was taken from pictures of junks or other craft with some such sail rig.

Certainly none of the trio knew until years after that others had applied (our scheme remained on paper) it to civilized craft. So I can see how Mr. G. may really believe his "invention" patentable. The grant is a sorry showing for the Patent office, however, in view of the easily proved fact of both actual use and publication in several countries, long prior to the application even. F. G. D.

GREENWICH, Conn., Feb. 21.

SPRINGFIELD C. C.—A meeting of the Springfield C. C. was held on Feb. 25, at which Mr. C. M. Shedd was elected Commodore in place of Com. Knappe, who declined the renomination for a fourth term. Messrs. F. D. Foote, F. A. Nickerson and E. C. Knappe were appointed a committee to arrange for a reduction of the dues. Eight active members are proposed, and eight gentlemen and twenty-five ladies were elected honorary members. A club supper will be given on March 10 to Mr. Barney in honor of his victories last summer. Two new club boats will be added, making five owned by the club for the use of members. A new club house will be built at Calla Shasta in addition to the one at Springfield. It will be 30×35ft., with a big fireplace in the center and bunks for members around the side.

THE CLASSIFICATION OF RACING YACHTS.

SINCE the discussion of the question of classification in the FOREST AND STREAM of Feb. 10, some action has been taken by one club and the matter is now under consideration in another; but as yet none of the clubs have attempted to deal with the matter except in so far as they are individually concerned, and no joint action, such as we suggested, has been undertaken. The Seawanhaka Corinthian Y. C. has reorganized its classes partly on the lines we indicated, but the improvement is of limited extent and by no means covers the whole field. The single-stick classes were arranged as follows: 25ft. and under 35ft., 35ft. and under 45ft., 45ft. and under 55ft., 55ft. and under 65ft., 65ft. and under 75ft., 75ft. and over. The change in the larger classes, 55ft. and over, will be noticed at once as a substantial improvement, but unfortunately the same cannot be said of the three lower classes. As we have previously shown, the intervals of 10ft. are too great with boats of 40ft. and under, and the result must be that the present boats near the lower limit of each class will not enter against boats of 7 to 9ft. greater length. As a rule to build to it is equally bad; as, while a man will change his design a little to accommodate it to a fixed class, he will not go into an entirely different size of boat to do so. For instance, if a man is ready to build a boat of about 38ft. to meet certain requirements and to cost a certain sum, he will not object to making her just under 40ft. to fit the class if it exists; but under the present division he must increase or decrease the size of his proposed craft considerably in order to fit the limits of 45ft. or 35ft. The result is easily seen, he chooses the size that suits his wants or pockets best regardless of the club's classes, and the regatta committee are called on to drum up entries from a lot of odd sizes.

Looking at the table previously given (Feb. 10) with a view to the effect of the present classes on entries, it seems plain that boats of 28 or 36ft. have no place in the smallest class, and that in the 55ft. class the long list of old boats of about 45ft. are practically excluded if Clara and Cinderella race this year. Thus it would seem that even as far as the club itself is concerned the division is faulty, and that it militates against the smaller boats, which must always be the main element of strength in a purely Corinthian club. Further than this, even if the classes should be suited to a large club which concerns itself but little with smaller sizes, as the New York Y. C., the division is still open to grave objection, as it is not a system that can be adopted by those clubs whose boats are from 50ft. downward, and so defeats the main end and object of any reform, the establishment of a uniform system of classes for all American yachting.

The action of the Seawanhaka C. Y. C. is specially important, as it is likely to be followed by the New York and probably other clubs, in which case the classes adopted by them may be regarded as fixed for an indefinite time. Considering this point all will realize the importance of such action as will be suitable to the smaller yachts and the clubs in which they are enrolled.

No attention has yet been given to the schooners, but matters with them are in as bad a state as with the single-stickers, though not so noticeable from the lessened importance of schooner racing. The classes in the various clubs before quoted are: New York—Class 1, 100ft. and over; Class 2, 80 and under 100ft.; Class 3, under 80ft. Seawanhaka—First class, over 85ft.; second class, 85 and under. Eastern—First class, 75 and over, second class, 50 and under 75ft.; third class, 30 and under 50ft. Atlantic—Class A, 72ft. and over; Class B, under 72ft. Larchmont—Class A, 75ft. and over; Class B, under 75ft. The principal schooner yachts of the fleet are as follows, many of them, however, doing little or no racing:

Ambassadress	120.05	100 feet and over.
Coronet	123.00	
Dauntless	116.07	
Dreadnaught	115.09	
Wanderer	106.03	
Resolute	105.00	
Fleetwing	104.09	
Palmer	104.00	
Mohican	100.09	
Republic	98.06	80 feet and under 100 feet.
Gitana	97.04	
Fortuna	96.00	
Madeleine	95.60	
Montauk	94.08	
Ruth	93.04	
Atalanta	86.07	
Sachem	86.00	
Miranda	85.00	
Grayling	84.04	65 feet and under 80 feet.
Phantom	84.04	
Foam	82.04	
Crusader	81.00	
Speranza	81.00	
Halcyon	79.03	
Estelle	78.05	
Clytie	78.03	
Comet	73.04	
Albatross	72.07	
Rebecca	70.03	
Clio	68.00	Under 65 feet.
Peerless	66.03	
Haze	62.09	
Triton	61.10	
Agnes	55.03	
Fearless	54.03	
Ray	50.00	
Leona	46.04	

How the yachts are divided at present by the various clubs is shown by the preceding list of classes. In the Seawanhaka, for example, the only division is at 85ft., with the result that schooner racing is so nearly extinct that the classes might as well be dropped and the money devoted to them given for prizes in the smaller classes of single-stickers. An entry of more than three schooners is unusual, and less rather than more is to be expected in the near future. The New York Y. C. fares better, as it brings out a separate keel class each year, and the Eastern has a respectable fleet of large schooners which race, but if schooner racing is worthy of retention as a desirable form of sport, then it is deserving of some systematic regulation and encouragement.

Following the same course with the list of schooners as we did before with the single-stick craft, the proper points of division would seem to be: under 65ft.; 65 and under 80ft.; 80 and under 100ft.; 100 and over. How this would affect the existing fleet is indicated in the table. There would be at most but one more class for each club, a matter of $75 to $100 per year more; while the prospects of the sport would be far better, both in the near and more distant future.

Yachting in America has seen three distinct and well marked stages of development; the first from the days when it took root, in the form of boat sailing about the Hudson River and gradually extended as yacht clubs were formed; the second from the time that the *America* set a famous victory, down to the day when the keel of the first modern cruiser was laid in America; the third, that through which it is now passing, a time of destruction, experiment, trial and rebuilding. To this latter will soon succeed, we believe, a far more prosperous stage than it has yet known; a period of healthy growth and development along the thousand miles of lake, river and sea coast. Now, before this period is upon them is the time for American yachtsmen to lay firmly and permanently the foundations of the future fleet, a work that is easy if taken in season, but that each year becomes more difficult. Before the keel of another yacht is laid the question we have discussed should be taken up and pushed to a satisfactory conclusion. We have presented a scheme of classification which we believe to be practicable and permanent, at least one that is available as a basis for criticism and improvement, it rests now with those who control the legislation of yachting to take it up and act upon it. This power lies with the clubs, which means that it is in the hands of a few men in each club who take an interest in such matters and who are able to influence in any proper direction the action of the club as a body. To them we commend the subject in the hope that they may realize fully its importance, and that any efforts in its behalf will be more than repaid by the added good which a short time will bring to national yachting.

Editor Forest and Stream:

I have read with care and pleasure your remarks upon the classification of yachts, and trust your efforts may result in a uniform classification being adopted by all the seaboard clubs, the reasons you advance for such being indisputable. We on Lake Ontario have a uniform classification, all clubs belonging to the Lake Yachting Association, our races of late years all being sailed under the rules as laid down by that body, which up to the present time have been quite satisfactory, but I think the time has arrived when a change could be made in this classification that would result in much good to the yachting interest in this section, and with that object in view I would suggest the dividing of the present Class I. into two classes, viz.: 50ft. corrected measurement and over, and 38ft. and under 50ft.—the present Classes II. and III. would remain unchanged except as to number of class.

As at present we find such yachts as the Verve, Cygnet, Ethel, and others, sailing against such large yachts as the Oriole, Aileen, Atalanta and Norah, where they are quite outclassed even with their time allowance.

Under the proposed classification we would have in Class I., 50ft. corrected measurement and over: Schooner Oriole (73), cutter Aileen (55), sloops Atlanta (64). Norah (57.6) and Ariadne (52.6); total, 7.

Class II., 38ft. corrected measurement and under 50ft.: Cutter Verve (50), sloops Cygnet (42), Ethel (40), Ella (35), Garfield, White Wings and keel sloop Condor (38.8); total, 7.

Class III., 25ft. corrected measurement and under 38ft.: Cutter Cricket (27), sloops Iolanthe (30.6), Katie Gray (28), Laura, Kingston (32), Laura (Oswego), Gracie (30), Fascination and the Ames boat (building); total, 8.

Class IV., under 25ft.: Too numerous to mention.

There are other yachts that I have not mentioned as they are seldom found among the racers, and in addition to all, if reports are true, we are to have added this season one new Class I. boat, two new Class II. boats, and two new Class III. boats, all racers, consequently there will be no lack of contestants in any class.

I trust the different yacht clubs belonging to the Association will thoroughly consider this matter and send their delegate to the next meeting (May) prepared to act for the change suggested.

ONTARIO.

[While the Lake system is to a great extent independent of the Atlantic system, it would of course be better if the same rules could be adopted by both, as it is likely for some time to come that yachts will continue to be purchased on the coast for lake use. There is no need for the full number of classes on Lake Ontario that are required about New York and Boston, but the fewer classes on the lakes may easily conform to the limits we have previously given. The classification by corrected length now in vogue is objectionable and should be altered in any case, as the waterline length is less liable to change. When sail area enters into classification a change of class is possible in some cases by a slight alteration of length of boom or height of topsail block, and this is undesirable. The clubs along the coast now class all boats by waterline, and the L. Y. R. A. will be safe in making this change also. We have added in most cases the waterline length to our correspondent's list above, and it will be seen that the classes can well be made: 25 and under 35ft. L.W.L.; 35 and under 55; 55ft. and over. Of course, in adopting this classification it would be necessary to admit existing boats into the classes in which they race at present; thus the Ariadne, 52ft. 6in., we believe, would be allowed in the class 55ft. and over. In view of future development, it would be best to adopt the full classification from the smallest size upward, leaving all but the three classes now in existence in abeyance until the growth of lake yachting shall cause them to be built up to. The need for a class between the present first and second classes will soon be apparent, as such a size of boat is a most desirable one, say about 45ft. Whatever is done must be done thoroughly and promptly, and we hope to see the entire subject taken up by the clubs of the Atlantic coast and the L. Y. R. A. invited to cooperate with them in the establishment of a uniform system. The yachtsmen of Lake Ontario have thus far shown a spirit far in advance of their salt-water neighbors in the subject of organization, and in this matter as in that of measurement and uniform sailing rules they will not be slow to follow in any movement for reform.]

THE SEAWANHAKA CORINTHIAN Y. C.

NOTWITHSTANDING the extended water front about New York, and the deep water courses in the Bay, and in Long Island Sound, the question of a suitable and permanent location is one that has overshadowed all others in every club about the city, and not one has as yet solved it in a satisfactory manner. The New York Y. C. has in time past sunk large sums in the efforts to establish a suitable station on the Staten Island shore, and at last has given up the attempt and fallen back on a club-house in the city. The Atlantic Y. C. has had for some years a foothold in a comparatively good location, after being driven from its old home in Gowanus Bay, but even now the presence of sewers near the anchorage, the neighborhood of a large chemical works, the refuse from which is said to have a destructive effect on copper, and the constant pollution of the waters of the Bay, which increases each year, threaten to drive the yachts away; while any basins, such as are absolutely necessary on the Bay Ridge shore, fill up rapidly owing to the set of the tide, and require constant dredging. Above the city the Knickerbocker Y. C. has had its quarters at Port Morris, a location that answered very well for the smaller yachts, but it is liable to be compelled to move at any time, at the orders of the owners of the property. Further on the Larchmont Y. C. has a location, in many respects most desirable, but the anchorage is by no means all that is desirable for a yachting station.

In common with the other clubs, the Seawanhaka Corinthian Y. C. has experienced the same trouble, being unable to obtain a suitable location except on short leases. The last location at Tompkinsville was by no means adequate to the club's needs, and since the division of last year it has passed from the club's possession. Last season an attempt was made to provide temporarily for the fleet by leasing the old basin, formerly occupied; but it was so shoal and in such bad repair that it was unused during the season.

The immediate necessity for some action that would give the club a permanent home has engaged the attention of its members for some time, and many plans have been proposed. Some time since a committee consisting of Commodore Candler, Mr. Chas. H. Leland and Mr. L. F. D'Oremieulx, was appointed, and this committee has considered carefully all the schemes brought to their notice, the results being given in a report that was submitted to the club at a meeting on Feb. 26. The report is most thorough and exhaustive, and deals with the subject of location near the city in a way that has never before been done. A lack of space prevents its reproduction entire, though the matter is one of general as well as club interest, but we give such extracts as will sufficiently outline the new scheme of the club.

Among the locations considered were the Jersey Beach, Horse Shoe, Gravesend Bay, the shores of Staten Island, and Bay Ridge, Pelham Bay, College Point, Larchmont, Whitestone, Greenwich, Cold Spring and Oyster Bay. Of these Bay Ridge, Whitestone and College Point were the only ones where water, land and quick transit could be obtained together, and the former, besides being now the home of one large club, is open to the objections given above. Speaking then of an out of town club-house the report reads:

"Your committee will not burden the club with the plentiful arguments adduced against each locality by the advocates of some rival plan. Suffice it to say, that upon the following grounds your committee opposes any plan involving a club-house beyond Hell Gate, as a permanent and definite location for the Seawanhaka Y. C.: To attract the attendance and use necessary to success, a fully equipped country club-house would be required, provided with a good restaurant and bar; with reading, sleeping, billiard rooms, and possibly the addition of certain supplies for yachts. The expenses of installation, and the inevitable expenses entailed upon a club restaurant; the necessity of constant direct supervision and control, coupled with the fact that such a plan places the club in direct comparison, if not competition, with a phenomenally successful out-of-town yacht club, were sufficient to condemn the scheme in the judgment of your committee. The success of the only two really successful clubs of this nature, the Larchmont and Country Clubs, although, perhaps, not due to local support to the extent generally supposed, is undoubtedly due to local nursing by resident members of the house committee, and by that indispensable set of men who have the time, opportunity, and inclination to make the club's concerns largely their business. In the case of the Larchmont, originality of plan and such local supervision, combined with an exceptional location, both as to actual situation and means of access, have secured success; while in our own case these features would certainly not exist in the same degree. The attractions to all classes of members of a club-house and anchorage on the Sound have been very fully detailed to your committee, and have been recognized and thoroughly appreciated by them; but the doubtful success of out-of-town clubs, the outlay required and the conditions deemed essential, have increased rather than diminished upon a more extended consideration of the subject." * * * * * * *

Having endeavored to place briefly before the club the considerations in regard to the questions of location and policy, as they presented themselves when under discussion, your committee would now submit for the examination and judgment of the club the plan which, in their opinion, offers for the future the widest range and the brightest promise.

Your committee, recognizing the necessity for immediate action, has been baffled by the expense and uncertainty of the plans previously discussed; it has sought for a scheme which would present, in its originality, attractiveness and freedom from injurious competition, and, moreover, harmonize with the character and develop the powers inherent in our body. After most careful consideration and consultation, it has reached the conclusion that in the words of the second article of our constitution, of more extended range than its framers could have imagined, is contained in embryo the policy of our future growth: "To become proficient in all matters pertaining to seamanship."

That these words are not merely a sounding phrase, and that in

the practical application and systematic development of the idea expressed, is contained the study of subjects of most extended and absorbing interest, will be patent to each in proportion as such subjects have already claimed his attention.

Our position as a yacht club may fairly be attributed to such proficiency in seamanship as was at our command. By us the theoretical side has been treated with conspicuous ability, and in practice the Corinthian principle has been carried beyond the point aimed at in institutions of a like nature. We have been, on board our vessels, not mere passengers, but, to the best of our ability, and in the best sense, seamen; the endless questions and reasons of practice and precedent have secured our ready attention; the ship, big or little, has ever appealed to our sympathy, not as something inert and material, but rather instinct with life; our example has stood a vigorous and successful protest against the effeminate yachting of the past; in a word, we have been true votaries of our chosen sport; such are the real reasons for the past and present position which we have attained.

No subject has offered a more rapid and interesting development than that of yachting; from the stone ballasted vessels of half a century ago to the elaborate and beautiful creations of the science of to-day. All the wonderful changes in the perfecting of the vessel have not superseded the importance of handling, steering and judgment; the value of the personal equation in yacht racing, far from sinking in prominence, has risen with the perfection of the means supplied. Many questions of vital interest in marine architecture will be solved only as problems in the construction of racing vessels, and many experiments as to strength and weight in spars, rigging and construction, are forbidden by economic considerations in other fields. On a higher range, the subject of the relations of resistance and power is treated from a standpoint of almost purely scientific experiment. Interpreted from this point of view, yacht racing assumes its true and proper value.

The whole subject of present and national interest of our coast defenses must, in the light of modern experience, be regarded, not upon purely theoretical grounds but from the point of view which would belong to men of liberal education who had made the subject of seamanship in its broadest sense their study. The expenditures upon navies and defenses are frequently in an inverse ratio to the definite and practical knowledge possessed, and in our present ignorance no detail is too insignificant to assume an unexpected importance. Proficiency in seamanship among amateurs deserves, as a rarer knowledge, at least such recognition as is bestowed on voluntary military training.

As to the material means and the plan in detail: Your committee proposes that as a permanent headquarters and location for the club, a house or rooms be secured in the city. The advantages of such headquarters are apparent, specially to those who have experienced the difficulty of meeting to transact and arrange the present business of the club. For the regular committees and for the meetings incidental to the arrangements connected with the club races, the convenience would be very great. But most important, undoubtedly, will be the means and opportunity thus afforded for the encouragement and development of the social element among such a membership as our own, and your committee believes that the possibilities in this direction would contribute largely to the success of a club-house established in the city.

As a yachting center, in the best sense of the term, the club-house should, in view of our keen and appreciative interest in all yachting matters, prove a success in the hands of a club held together so well by the ties of this common interest. A means would be secured for the proper display of the large and interesting collection of the lines of prize winners in the past races of the club, now practically inaccessible and useless. As a place for regular meetings the possession of a home for the club would, by inducing a larger and more regular attendance, prove of direct and practical benefit.

Your committee further proposes to increase as far as possible the number of meetings to be held during the year, according to the interest and attendance shown, and to provide for a regular series of lectures to cover a definite class of subjects, according to a prearranged scheme. For the preparation of such a scheme of lectures the appointment of a regular committee is recommended. Their duties should be to formulate a plan for the course of entertainment and instruction to be carried out during the year; to secure experts as lecturers, capable of properly presenting the proposed subjects before such a club as our own; and to prepare and arrange such intelligent discussion as the nature of the subject may permit among the members of the club. Merely as a suggestion of what ground may be covered by such a series of lectures and discussions, the following list is submitted:

1. Yacht Designing and Construction.—Theory, method and practice of draughting the lines of yachts; instruments and practical hints. The elements of designs, and the calculation for their determination. Relation, functions and importance of these elements. Stability; its exact and approximate determination; form and ballasting. Sparring and sail plans. Rigging and iron work. Sails and sail-making. Constructions: centre-board yachts, modern and former types; keel yachts; wood, iron, steel composite; and double skin construction. Types of yachts. History and development of yachts and yachting. Laws of resistance of fluids; form and surface of vessels. Cruising yachts; seagoing qualities.

2. Navigation.—Along-shore and off-shore navigation. Dead reckoning. Nautical astronomy. Instruments; construction, theory, and uses. Chronometers: construction, tests, history and uses. Mariner's compass: theory, various forms, variation, dip, deviation and correction. Charts: construction and theory, United States coast survey—instruments, methods and work. Harbors and channels. Natural formation and artificial aids. New York harbor. Aids to navigation. Lighthouses and lights. Ocean courses. Marine geography and ocean currents. Trade winds and the law of storms.

3. Vessels Other than Yachts.—Seamanship of large vessels: handling rigs. Vessels of war: types, development and history. Construction and armament. Question of armored and unarmored. Speed in modern warfare and means of attainment. Modern naval tactics and discipline; sham battles and manœuvres. Fishing vessels: foreign and native types and their development. Life boats and life saving appliances.

4. Coast Defenses.—Ordnance, forts and torpedoes, Torpedo boats and submarine navigation. Modern inventions in guns and projectiles.

The scheme, as outlined above, was adopted. A library embracing the standard works of reference, the leading periodicals and full sets of charts, will form a conspicuous feature, and the collections of models will at once be commenced. Of this collection the report speaks as follows:

"The possession of a collection of models by a club has been proved to be an endless source of interest to members, and of attraction and inducement to outsiders. Models are, in fact, of the nature of works of reference, and a study of them will constantly suggest new points for examination and comparison. Each model should represent a noted or typical yacht. The collection would then soon contain practically types of all such vessels as a naval architect would consider worthy of study. It is proposed to request from the owners of such yachts, tracings of their lines, and to have made from these, at the club's expense, plain models. It is recommended that every prize winner be obliged to deposit a model, in place of lines, with the club."

Of course such a scheme will entail a considerable extra outlay, especially as it is proposed to push the racing interests of the club and keep pace with the increased activity in the racing world, and to no extent to lose sight of the end in furthering the means thereto. In order to raise the sum required to start the scheme on a successful basis, some $6,000 to $7,000, as estimated, it is proposed to issue bonds bearing 5 per cent. interest, in amounts of $25.00, and nearly the whole amount of these bonds have already been taken. Further than this, it is expected that an increased income will be needed to carry on the club-house, and to meet this it is proposed to raise the annual dues to $25.00 in place of $15.00, after Jan. 1, 1888, and the initiation fee from $25.00 to $50.00, after Sept. 1, 1887. Notice was also given of a proposed amendment, limiting the membership of the club to 500.

Since its organization the Seawanhaka Corinthian Y. C. has been foremost in every movement for the promotion of yachting, in all the various fields of designing, building, racing and seamanship, and in the latter in particular its members have deservedly taken the first place. The present step, though a radical one, is only in accordance with the policy of the club, and the names of its leaders are a sufficient guarantee that it will be as successful as the many previous efforts of the club in behalf of a higher standard for American yachting and yachtsmen.

THE OCEAN RACE.

THE Coronet has been on the screw dock and eight tons of lead have been cast in her keel. The low tides have prevented Coronet from going off the screw dock up to Wednesday and the start will probably be postponed to next week. The Dauntless was down the Bay on Feb. 27 and met with wind enough to carry away her jib.

A CRUISE OF THE TEMPUS, 1885.

PART SECOND.

DURING a severe sou'wester last summer the Tempus was off the same locality, but fifteen miles further out at sea. During the night her tender broke adrift in the violence of the gale and was lost. It had been a supposition that the tide and wind would set the boat up this river, and one of the plans of the voyage was to learn something of the derelict. During the winter we heard that a fishermen living on Bear Island had picked her up. So when we found ourselves abreast of the island at 2 o'clock a visit was made to it.

The only habitation was a small hovel, and when its door was entered, a sight was revealed that was interesting, at least to the visitors. The low room was perhaps ten feet square. It had originally been lathed and plastered, but now more lath than plaster were mementoes of a former grandeur. A few of the commonest wooden chairs, worn and rickety, a table against the wall, a more than used up stove and a flour barrel were the furniture. In one corner sat an old crone, sooty short pipe in mouth, clicking her needles over a long blue stocking. A younger woman whose apparel was certainly not of this spring's importation, was making a seine net out of white twine. A baby disputed with several hens and a dog for the rights of the floor. The whole made a tout ensemble resembling some of the interiors of the old Dutch painters. Shy, curt answers were given to our inquiries, but the boat was unheard of. So, disappointed we departed, carrying away only the lasting memory of a poor fisherman's cot.

New Meadows River runs nearly north from the sea, a wide, deep estuary, lined with islands and coves and bold wooded shores. Half way up we met a fisherman with his two sails, running free. How grandly those dories are handled. The clumsy, fishy boat responded sentiently to our hail and ran under our lee. A well-built, middle-aged man, burned red by exposure, and a fisherman by every token that sight or smell could give, came aboard. We had found the needle in the haymow. His father-in-law had picked up the boat the second morning after her loss, as she was grinding her tender cedar sides against the White Bull, way outside, and was now at his house on the mainland. If she would float he would bring her off to us when we returned the next day. By and by to cast off, leaving us to come to anchor at Foster's Point, ten miles from the ocean, at 3 o'clock.

Our anchorage for the night differed from yesterday's and exemplifies the endless variety found in the way of studying geography. We lay at the junction of four water courses. Northward was the main river, the two outlets of Broad Cove and of Mill Cove. Below to the south a cluster of islets. Three islands face us in the side of the channel. From every point of the yacht the scenery was superb. Oceanward the dark spruces and evergreens of the rocky coast; landward, cultivated fields and grassy swards vary the picture, with here and there a white farmhouse or more pretentious residence.

"Now came still evening on, and twilight gray
Had in her sober livery all things clad."

For some time subtle odors had floated over the yacht suggestive of the time when men turn from the world without to that more closely united with the life within. Through the companionway glimpses could be caught of a white table cloth and chairs arranged, as if for a purpose, about it. Such hints are too broad to need further explanation, and nature has, for the time, no further attractions. The menu, as transcribed from the log, was as follows:

Baked mutton—sliced lemons and olives.
Boiled potatoes with jackets on.
"Shall I skin yer a purtater, dearie?"
"No, thank ye, darlin', got one skun."
Eggs, fried (but not swimming) in grease, and—after use of deep sea lead they are found to be—apricots.
Dessert, a little of everything, pastry, fruit, nuts, especially "chestnuts."
(The helm is put up and reef shook out of the main brace).
Coffee, "which makes the politician wise, and see through all things with his half shut eyes."

Then comes the satiety resultant from living and dining well; with all restraints slackened about throat and abdomen, and in such postures in berth or standing room as comfort dictates, the evening passes away. The voices swell in the gale of debate upon such trivial topics as conchology, pathology, sociology and even theology, until every threadbare sail of argument is rent into tatters. The mighty incense of "sublime tobacco, which from east to west, cheers the tar's labor," rises to propitiate old Neptune and his divine spouse Amphitrite, through whose domain we have traveled twenty-five miles to-day. At last the Tempus swings to her anchor, silent and alone in the river.

"The cock's shrill clarion" echoed over the water about 5 o'clock, and Memorial Day began as perfect as the most exacting could wish. No mirror was smoother or reflected more sharply than the crystal upon which we floated; not a breath of air disturbed the water, and the cloudless sky was filled already with the horses of the sun. Pending breakfast, a row was taken up the river. All the world here is in its best dress, and welcomes the strangers with most seductive grace. Again and again the oars hang idly and the tide carried us along, while we enjoy the beauty of the morning. The foliage is especially noticeable. Every shade of green, from the yellow leaf of the willow to the almost black "spills" of the firs, was contrasted and harmonized. Sounds from shore and the yacht, our voices, the splash of a fishing gull above us, echoed from hill and forest until we counted four distinct reduplications. How appropriate the lines: "Sweet fields beyond the swelling floods, stand dressed in living green!" Down through the transparent water we could see fish darting hither and yon in the tangles of the seaweed. Fantasies of dreamland grow apace as we float along. How rude the awakening to find, on our return to the yacht, the crew polishing "up the handle of the big front door," and the other brass fittings, so dear to the heart of the yacht builder.

At 11 o'clock we started homeward, with the usual southerly wind, warm and fresh. Down through the reaches of the river, by Winnegance Bay, just below the mainland of West Bath, with all canvas drawing, and foam well up on the lee rail, we rush along until we round into the entrance of the Basin.

The "Coast Pilot" says: "Immediately opposite to the southern point of Sheep Island, a narrow and deep passage passes from the river between two high and steep bluffs, into a perfectly land-locked cove called the Basin. In this passage there is no less than 18ft. at mean low water, and it is entirely unobstructed. In the Basin you may lie at anchor in from 3 to 7 fathoms, soft bottom, completely sheltered from all winds of whatever strength. Vessels passing up the river will not be able to see the entrance to the Basin, but will see the masts of vessels at anchor there as soon as they are abreast of Basin Point."

The dry details of this description can give but a hint of the beautiful landscape we found, rising like the sides of a bowl from the placid water. The humble cots of the fishermen nestle near the entrance, as if, "the world forgetting by the world forgot." Once visited, the Basin invites a return to its haven, whenever the voyager passes its portals.

Out again into the river, we cross it and anchor in Cundiz Harbor, on the eastern shore of Sebascodegan Island. This was the rendezvous where our fisherman friend of yesterday was to bring us the wrecked gig. We found only "promises made but never kept," and therefore enter a personal equation in the problem. The Captain takes a crew and starts himself on a search expedition, leaving the yacht to pick him up afterward in the river. Recrossing the channel, at the mouth of the passage between Bear Island and the mainland, an ancient mariner is met rowing a dory, laden down to the water's edge with bunches of shingles. "Oh! 'bout that boat? Hearn of her when Bijah brung her in last summer. Guess he's to hum, but he's turrible used up with rheumatiz. Howsomever, his boy will give her to ye, and ye'll find the haouse furder down the gut, 'breast of the clam shells." Like the play of boyhood we were getting "hotter." The gut is like so many of the other deep channels of this coast, cut out between shore and island by the swift tides. Landward it is edged with a thin sprinkle of fishermen's houses, almost enough to be dignified with a name. "Breast of the clam shells" we found a typical fisherman's home. Shells, dories and nets and lobster pots were its surrounding, relieved by a crazy barn, a wood-pile and a clump of spruces. A young fellow was digging in freshly plowed ground by the side. His was the regular uniform, flannel shirt, with sleeves rolled high, pantaloons hoisted high with red galluses, a rubber boot protected the left foot, but the other languished in a more democratic shoe. His rumination of the everlasting cud suddenly stopped as the stranger bore swiftly down upon him. "Where's the boat your father picked up last July?" The abruptness of the question and peremptory tone gave no time for equivocation. "Down in that house, but the door's locked and father's gone away with the key. Guess you can look at it through the winder though, if you wanter."

We stayed not to make reply but hurried over to the said house which had once been the ancestral dwelling. The supposed locked door was found ajar, and inside was the boat. Though scarred and wounded by her night's wrestle for life against rock and surf, her personality was unquestionable. Oars, rowlocks, backboard and flooring were absent, and several planks in the side had been crushed through, but for all that she was worth saving. While the Captain was examining her the guide vanished to hasten back with a lady, youthful but not gaudy. She was evidently the finer animal of the two, and it was a comical sight to see her nudge the side of her mate, too shy or scared to utter the remonstrances she wanted made against such "flat burglary." A few moments of these mute appeals against aggression, when, evidently, their feelings being too many for them, they passed out the doorway and, as far as the strangers were concerned, into the hereafter, her arm lovingly and protectingly around him. "Now what shall we do? Here's our boat and 'Bijah is entitled to salvage, but where is he? 'Spose we see if we can lift her," was the reply. Strength was equal to the demand, and from the hut to the water, down the steep bank and over the shells, it was carried successfully. "They'll have fleet steeds that will follow," or words to that effect, stimulated the crew to quick rowing, and soon the yacht had upon its deck rescued and rescuers. Many a hearty laugh rang out from rocks and waves that afternoon as the story was told to an appreciative audience. Shall memory ever forget the man, all tattered and torn, in the tender arms of the maiden all forlorn, or his attitude as, without a glance at the departing ravishers, he bent over his shovel in the "tater patch,"

"So faint, so spiritless,
So dull, so dead in look, so woe-begone."

At the close of this eventful day the Tempus anchored in Harpswell Harbor. A light shower in the afternoon had enlivened the monotonous long rolls around Jaquish, but now, with anchor down, all care is thrown away. In this safe and protected harbor, but one thought is uppermost, and is only forgotten when naught but the wreck of the supper-table remains. The cup of pleasure has been brimful to-day, but what shall be on the morrow we know not, for the barometer is falling rapidly.

The words spoken on the Tempus that Sabbath morning were, "Is it quarter of seven or twenty-five minutes of nine, by that clock?" Despite a general unstableness of sleeping apartment, the usual late Sunday morning nap had been indulged in, proving that shore habits follow one even on shipboard. A glance from the deck at once explained the cause of the unusual motion of the yacht. A hard easterly storm was upon us, rain pouring down, and gusts of wind carried spray in clouds to leeward. Outside the harbor heavy seas rolled up the Sound, and though we were partially protected from them, still the cable was being put to a tremendous strain. A second anchor was lowered at once and plenty of scope given to both, when we rode more safely, if not more quietly. It was out of the question to think of going further in such weather, and we therefore settled down to cabin-life as complacently as possible. Breakfast was prolonged till an unheard of hour, and the cook found plenty of assistants. During the day books and conversation were helps to wile away the hours or long-drawn suspirations from some berth betokened that one of the Seven Sleepers had visited modern times.

Outside on deck the full power of the northeaster was appreciated, but under the defenses of rubber coats and boots the storm battle was enjoyable. Away over toward Bailey's Island could be seen the restless masts of three coasters, storm-bound like ourselves, but a gust of rain would come and blot out everything seaward. Astern the surf thundered on the shingle of the beach, or broke high over an old wreck upon it. A very little of such scenery suffices to give the grandeur of a storm at sea.

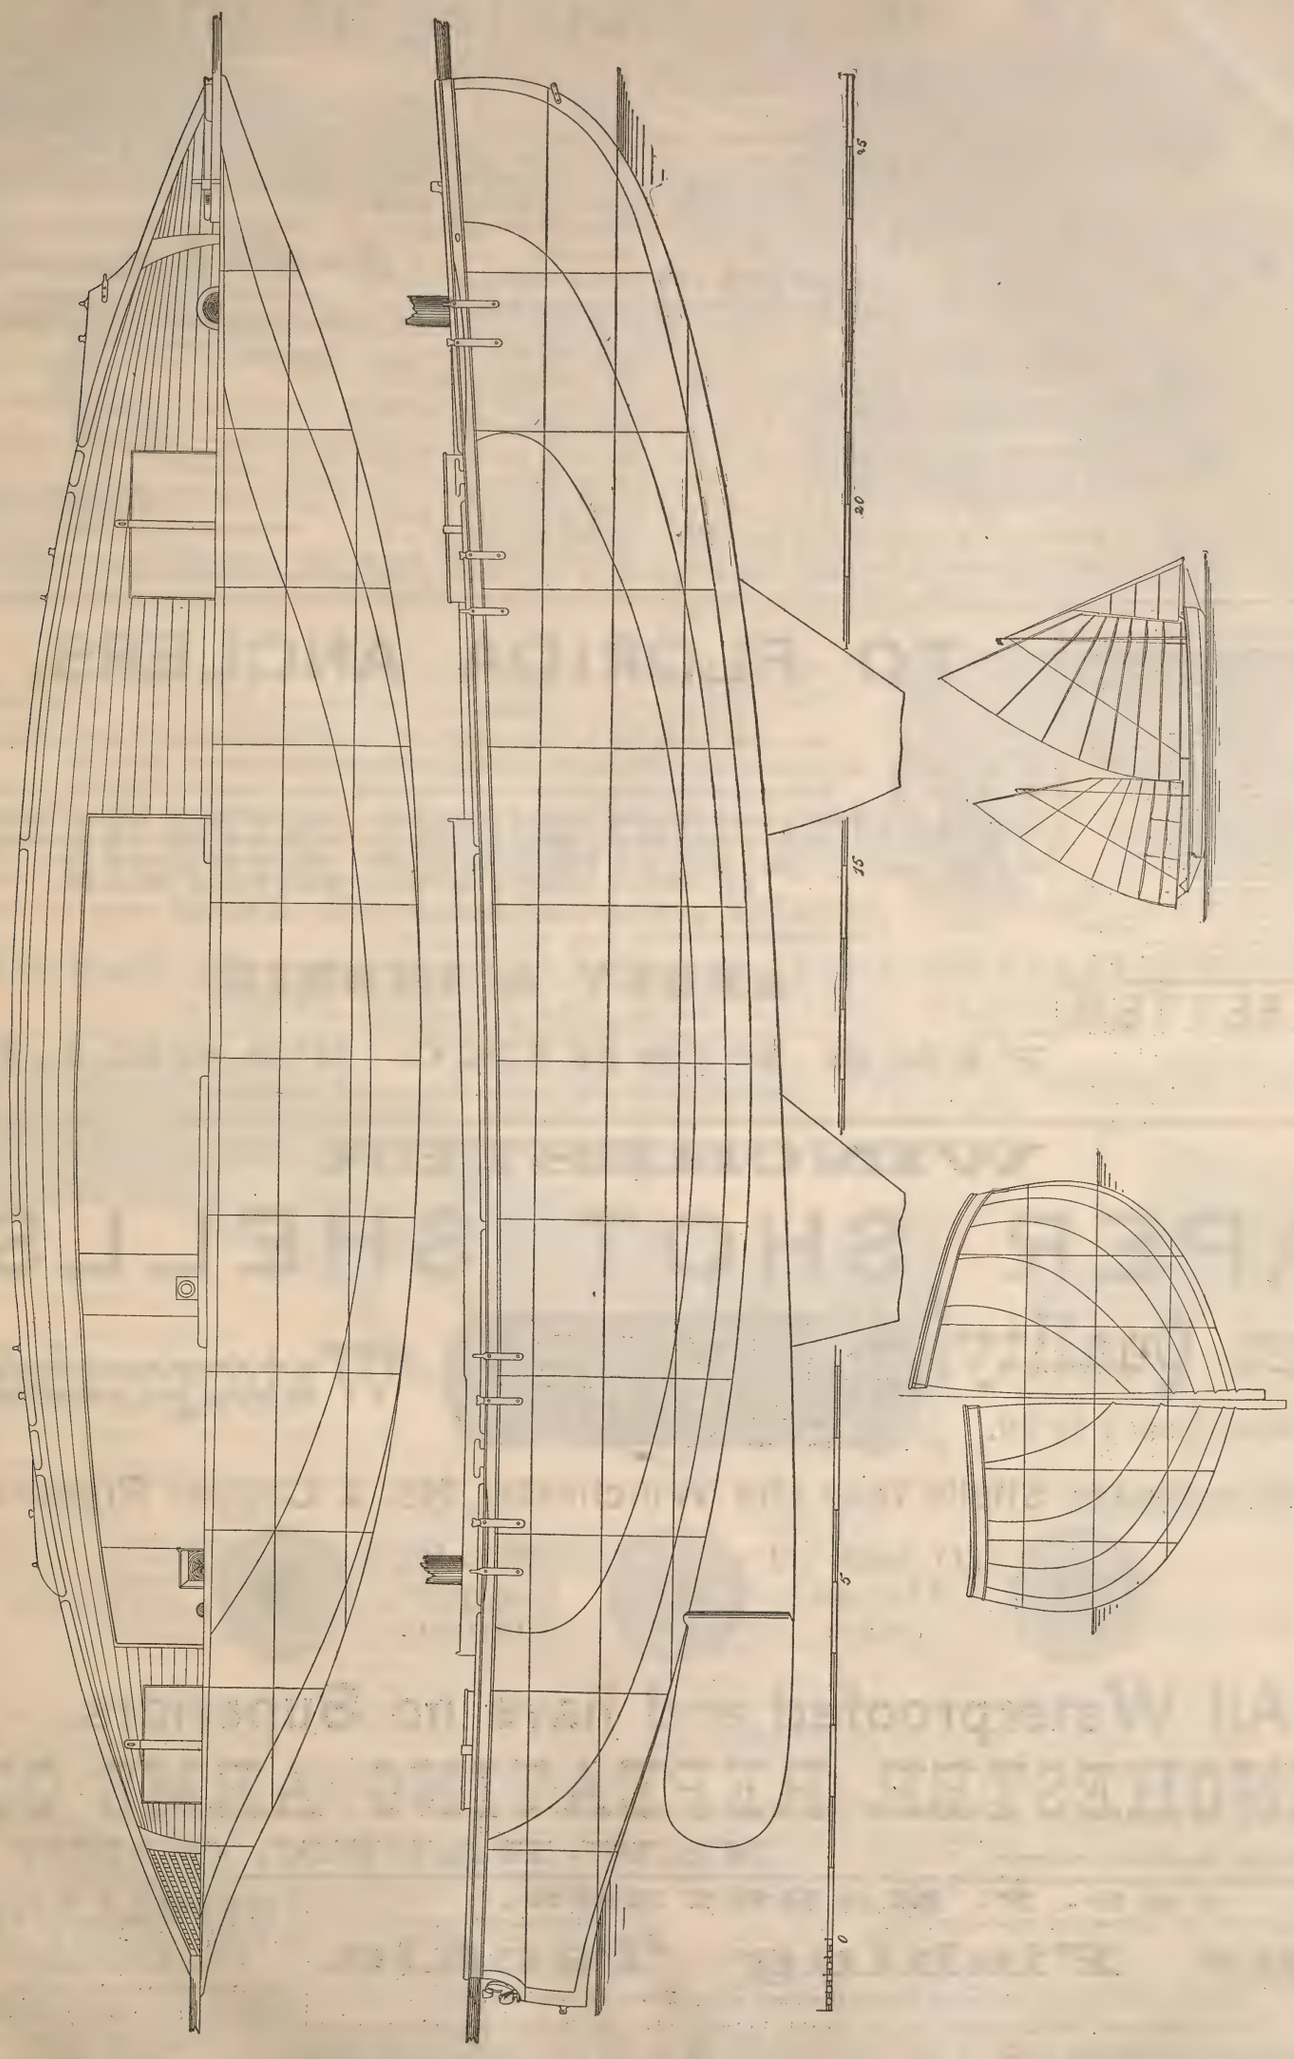
In the afternoon the perils of landing through the breakers were braved, and one or two of the houses visited that are scattered along the crest of the Neck. At one place a plea of starvation was entered as an excuse for getting a fresh supper of pastry. An anxious looking matron appeared at the doorway with three children, all of a size, round-eyed and open-mouthed, hanging to her skirts. Inside a glimpse was caught of the husband, in reverend Sunday clothes, and professional in a ring of whiskers, that were probably oakum, under the nether jaw. Unfortunately the larder was empty, and excused by the statement that they "had went to a funeral yesterday," a concatenation which is indeed a proper sequence of funerals according to country custom.

At length the day is ended. In the shelter of the cosy cabin we forget the constant pitching and reeling, "nor heed the rain that howls along the sky." The *tune divine* of the gale is sung to ears fast losing their hold upon temporal things, and then darkness and its perils are unknown.

During Sunday night the wind had shifted to the north and the storm blown itself out. Despite the lowering sky orders were given to get under way, and the pawl of the windlass clanked slowly as the cable came inboard. Round Harpswell Point every rock was white with the spume of the surf. On the horizon Half Way Rock Light stood a black pillar against a leaden sky. We take the inside route home, for the outside is altogether too rough for pleasure sailing. However, as the sun rises the wind falls, until, abreast of Great Chebeag, we have a veritable "ash flurricane," additionless for hours. At last on our planing whistle comes the breeze, and we speed along through Diamond Island Roads, and all too soon are at our moorings and the cruise is ended.

Four days of unalloyed recreation have passed without a mishap to vessel or crew. A few of the delightsome places of this corner of the Atlantic have been visited, and the check of the purser to balance the yacht's account is amusingly small. Our trip has been uneventful for hair-breadth escape or heroic service; and yet, perhaps, is none the less memorable because pleasant, healthful, and economical.

STANLEY P. WARREN.



THE HEATHEN CHINEE.

WE have frequently pointed out the many advantages which the canoe type of boat possesses in the way of strong and inexpensive construction and speed with small power and a moderate displacement and draft, and the accompanying design shows how the same features may be combined in a larger craft than is associated commonly with the term canoe, and that may fairly be considered a yacht. Like her smaller prototype, the Heathen Chinee has the two ends alike, a moderate displacement, beam and draft, easy lines, small immersed surface and a moderate and easily handled sail-area with little weight or bulk of gear aloft.

The Heathen Chinee was designed by Landseer MacKenzie, Esq., of London, England, in 1877, and was built during the following winter by J. Macwhirter, at Erith, on the Thames. Being a somewhat unique production and unlike any of the conventional boats of the locality, her advent was received with many gloomy prognostications of failure; which, however, were not destined to be realized. When first launched she was practically an open boat and with only scrap iron for ballast, but she was remarkably stiff. Since then, in the nine seasons that she has raced and cruised, many alterations have been made that have greatly improved her.

In the original design the areas of the vertical sections were regulated by a cylindroid of displacement according to the methods of Mr. J. W. Griffiths; but before the boat was begun the investigations and conclusions of Mr. Colin Archer were made public, and the lines were slightly altered to conform to the new "wave form" theory. In 1880 she was lengthened 1ft. aft and trimmed 3in. by the stern, thus destroying the exact accordance with the theoretical wave form; but at the same time her ballast and sail plans were both improved, so that no loss was apparent in her subsequent performance. In 1884 her single centerboard was replaced by two, as shown, the total area being the same as before. The result was that she was not quite as quick in stays, even when the after board was tended, but she was much improved in weatherliness, the gain being easily noticeable on a long leg; in fact her ability to windward is one of her main features. The object of the change was to give more room in the cockpit and also to make her steadier on her helm, as her rudder was too small. The two boards were placed, of course, with reference to the masts and other surroundings, and in designing a similar boat their position could probably be improved, so as to make her quicker in stays. A subsequent enlargement to the size shown cured entirely the difficulty in the steering. At the time the board was changed Sowt. of lead was added to the keel, and the inside ballast, all lead by this time, was recast to fit as close to the skin as possible. Thus ballasted, and with her light spars, she could carry full sail when the ordinary small cutter was glad to stow topsail; and for light weather her sail area might be 50ft. larger.

In the nine seasons that she has raced on the Thames she has met boats of all classes and has scored a number of victories. She has met the usual type of cutter with success on more than one occasion, one of the most interesting of these races being with a narrow 3-tonner 1ft. greater length on L. W. L. and about 40 per cent. more displacement. The race was sailed over a 12-mile course, in a steady topsail breeze, there was no time allowance and the Chinee won by 10m. She was once fairly beaten by a 20ft. L. W. L. boat, a centerboarder with two immense Chinese lugs; but at the same time she has won the Muriel challenge cup, a perpetual challenge cup of the Corinthian Y. C. for open and half-decked boats, for two consecutive years from the same boat;

HEATHEN CHINEE."—Designed by Landseer MacKenzie, Esq., 1877.

as well as the gold medal of the same club. The dimensions of the Heathen Chinee are:

Length over all	27ft.
Length L. W. L.	25ft.
Beam, extreme	6ft.
Draft	2ft. 8in.
Draft, with board	5ft. 3in.
Displacement, long tons	3
Ballast, lead inside, long tons	1
Ballast, lead inside keel, long tons	2-5
Ballast, total, long tons	1 2-5
Midship section, area square feet	8.4
Centerboards, total area, square feet	10
Sails, total area, square feet	500
Midship section from fore end, L. W. L.	12ft. 9in.
C. B. from fore end, L. W. L.	12ft. 6in.
C. L. R. from fore end, L. W. L.	13ft.

The success of the boat is no doubt largely due to her rig, as it possesses several advantages that fit it specially for a boat of limited stability, especially for river racing and variable winds. A comparatively large area is carried with very light spars and almost no gear, the weight aloft on the mainmast being due to but three single blocks, in place of the crosstrees, masthead ironwork and topmast of the small cutter or sloop. The shrouds and backstays, with their weight and windage, are replaced by one shroud on each side, set up with a tackle. The battened sails are fitted, as we have before described for canoes, with a reefing gear that hauls in one or two reefs or casts them out again while the crew of the cutter would be preparing to reef, so that the Chinee is almost always under a proper press of sail, instead of having just too much or too little and not daring to stop for a reef or to shake out. In steady winds and open water this would not be so important, but in a narrow river or on confined waters it is of the greatest advantage. Every boat sailor knows that the easier and quicker a sail can be reduced, the more he can afford to carry in light winds. No light or balloon sails are used.

In regard to the battened lugs Mr. MacKenzie speaks as follows: "The Chinese lug is a wonderfully effective sail; when properly set it presents a parchment-like surface, nor is there that perpetual flicker going on along the sail which so tends to kill a light air. On the contrary the wind comes solidly on to the sail and the propulsive effect is proportionately increased. There is much greater ease in handling the boat; with sails so balanced jibing is deprived of half its terrors; and for racing over a circular course a spinaker is more trouble than it is worth." The battens are of bamboo, from 1 to 1¼in. diameter. The jib shown was added in 1884 when her mizen was increased without a corresponding change in the mainsail, and a sail plan might easily be devised in which only the two lugs would be used, the jib and its attendant gear being dispensed with.

The Heathen Chinee is beautifully built, her topsides being of bright wood, while the upper streak is of teak with two gold stripes and one of blue. Above is a rail of American elm with scuppers as shown, kept as white as possible. In a recess in the stern is a handsomely carved figure of the redoubtable Ah Sin himself, holding up the famous ace. The boat, both in hull and rig, contains many features that are worthy of a careful study, and though a novelty, there is much to commend her to those who desire a safe and convenient boat of moderate draft.

MAYFLOWER AND ARROW.

It is reported from Boston that Gen. Paine has decided to send Mayflower across the Atlantic to accept the challenge thrown down by Mr. Tankerville Chamberlayne last year in behalf of the cutter Arrow, holder of the Queen's Cup of 1852. Mr. Burgess will have entire charge of Mayflower and her owner may not visit England. The plan, as reported, is to sail early in June and to enter any other races that may be open.

CAPTAIN SMITH AND POCAHONTAS.

THE beautiful and sentimental story of the rescue of Captain Smith by Pocahontas two centuries ago faded into insignificance, beside the no less sentimental rescue of Pocahontas by Captain Smith in these days of stern realities and hard facts and particularly in such an unromantic locality as Wall street. The history of this modern Pocahontas is well known, a sloop of the old type, thoroughly "representative," built by Mr. David Kirby in 1881 to the order of Messrs. Waller, Smith and Oelrichs, then flag officers of the New York Y.C., to meet the Atalanta, the challenger for the America's Cup. The fact that she failed is equally well known; why or through whose fault need not now be discussed. Her builder had, and still has implicit faith in her as the fastest yacht of her class ever afloat, but while many alterations were made contrary to his wishes and without consulting him, the general opinion was that Pocahontas was proved to be inferior to her rivals in the trial races. Whether or no Pocahontas was fairly tried (and Mr. Kirby still claims that she was not) and whether she was faster or slower than Gracie, Mischief and the rest, is a matter of ancient history; but even were she as good as her fellows in 1881, there are very few who do not recognize the fact that the best of these boats have had their day and that there is absolutely no place for them beside the newer additions to the class. How Pocahontas has laid neglected among the wharves for six years need not be recounted, she has now been purchased by ex-Com. Smith, who will refit her at Mumm's yard and put her in the races of the season with Bedouin, Shamrock and Titania; with a result that may easily be foreshadowed. Who will say that romance and sentiment cannot flourish beneath the shadow of the Stock Exchange and that faith, strong and mighty, cannot survive the lack of confidence which a long familiarity with the devious ways of Wall street is commonly supposed to engender?

SAIL COVERS FOR YACHTS.—Use strong good calico; when the cover is made wash out with boiling water all the finish or dressing, dry thoroughly, saturate with petroleum oil, ring out and allow to dry in air. When quite dry paint with whitelead, colored to taste, mixed with raw linseed oil and turpentine, three thin coats. I have a cover five years old as good as the first day, and as soft as could be desired and that never sticks. Waterproofs for boating made the same way are a luxury.—*Arthur Hill Coates, in London Field.*

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs,

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have devcloped to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

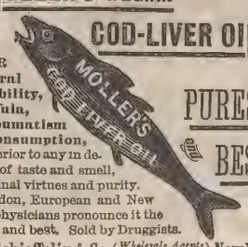
This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is



Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

THE MAINE COMMISSIONER CHARGES.

CHARGES have been preferred against the Maine Commissioners of Fisheries and Game. From the Boston *Herald's* report, it appears that the prime instigator of this movement is George M. Harmon, some time Adjutant-General of the State of Connecticut. The *Herald's* summary of the circumstances which have prompted Harmon to this action throws a flood of light on that individual's motives and the motives of the Jack Darlings who are helping him. It appears that one Sabbath morning in June Harmon and his guide Thrasher, pursued a deer swimming in Rangeley Lake Overtaking it, Thrasher, in true Adirondack style, belabored the creature with his oar, and, having stunned it, at Harmon's command cut its throat. Thereupon Harmon on behalf of Thrasher, paid a $40 fine to Warden Huntoon. This, in the opinion of George M. Harmon, sometime Adjutant-General of Connecticut, should then and there have settled the matter. The Maine officials thought differently. They held that both parties to the misdemeanor should be punished, the oar-butcher Thrasher and his accomplice Harmon as well; and the latter's fine was collected. In a futile attempt to impose further penalties for the Sunday law violation the Commissioners may have displayed an excess of zeal, but it should be remembered that the case was an aggravated one; the deer was killed in the spring, in close season, on the Sabbath, and in a manner abhorrent to sportsmen.

The movement against the Commissioners is instigated and sustained by non-residents, Harmon and others who, having violated the Maine game laws, have been duly punished; by residents, water-butchers like the notorious Darling and his tribe; in the Legislature by Talbot, from East Machias, who got into his seat by promising the poachers of his district that he would fight the Commissioners' appropriation; and in short, by all who are enemies of game and fish protection and would gladly see the laws and the Commission abolished.

Unscrupulous men—selfish and cruel in the extreme—have long desired to see these laws repealed. The hotel and summer travel interest has done its best to repeal them, or to so alter and amend them that they would be of no effect as against their business. This hotel and travel interest in one section alone, that of north Franklin county, has caused the Commissioners more trouble than all the rest of the State, with one exception, that of the upper Machias region, the section where even murder and arson have been rampant. Year after year these interests have gone to the Legislature with this or that scheme for letting in the "gentlemen sportsmen" who desire to kill wet does in June, or dog-hunt deer in autumn, but each time the better judgment of a good majority of the Legislature has triumphed, and the laws have been strengthened at each session. In the meantime the palms of these hotel-keepers, stage-drivers and managers of infant railroads have itched for the thousands that were out of their reach so long as the game laws were in the ascendency. This winter, more than ever, that hotel and travel interest has been determined that the game and fish laws of Maine should succumb to the desires of the vacationist and tourist, and the people of north Franklin have gone to the biennial session of the Legislature with the determination that the stringency of the laws that directly interfered with their interests must be broken. They have united with them the element in the eastern part of the State that has been guilty of burning the buildings of game officers who have tried to enforce the laws, and worse yet, the very spirit that shot down two game wardens only a few months ago, for attempting to take away dogs found in use for hunting deer. But this winter these enemies of wholesale game and fish protection have failed worse than ever. They have failed in every particular. The dog hunters have been sat down on with a will that has killed their courage. The Phillips hotel keeper with his proposition to allow "gentlemen sportsmen" to bring their trophies out of the State has been given "leave to withdraw." In fact not one crumb of comfort can these gentlemen poachers and hotel keepers get; and now out of pure revenge they have turned upon the unoffending Commissioners, and propose to impeach them for doing their duty faithfully.

The cause of justice cries out against such action. Every true sportsman in the country asks that Messrs. Stillwell and Stanley be retained in the position where they have done such noble work. The charges against them cannot be sustained, except through fraud and a bitter hatred—just such a hatred as thieves and hoodlums always manifest toward constables and the officers of the law. If there is a shadow of honor left in sportsmen who live in or resort to Maine, let them turn and cry halt in this persecution of these two men, who have staked their all and served out the best of their years that the fish and game of Maine might be perpetuated. Their success has already been the wonder of the rest of the world. Shall their usefulness be cut off now, when success has just begun to dawn?

NO MONEY FOR THE PARK.

AS was expected, Senator Vest's bill to protect the National Park failed to pass the House of Representatives. So, for the present, all hope of having a form of government for the Park may be laid aside, and the reservation for another year will be under the care of the troops.

The session which has just closed has not been altogether one of doubt and despair to the friends of the Park. One distinct gain has been had in the defeat of the Cinnabar and Clark's Fork Railroad. This measure, notwithstanding its strong backing, and the moral support of favorable reports by committees of both Houses, received a crushing defeat in the House of Representatives. In this contest issue was joined not so much on the question as to whether this particular road should have a right of way, as on the general question of the advisability of permitting any railways in the Park. The vote on this measure indicated very clearly the temper of the people's Representatives on this subject. The vote by which the Vest bill passed the Senate is also an encouraging feature of the session's work, and there is little doubt that if the measure had been brought before them in time the House would have passed the bill by a large majority.

We announced several weeks ago that the Sundry Civil Service Bill had been amended in the Senate so as to provide the sum of $40,000 for the care and management of the Park. The members of the House Conference Committee were Messrs. Randall, Forney and Ryan, three men who are decidedly hostile to the Park. When these men went into conference, there was no hope for the measure, for it was impossible to convince them, and the time was too short to make a fight over the matter in the Senate. The House conferees certainly did not represent the feeling of any considerable portion of the body from which they came. Randall is an obstructionist and a cheeseparer, and Ryan has a soul devoted to corn and hogs, and is unable to see importance or beauty in anything except these products of the State which he represents. However, they ruled the appropriations with a strong hand and succeeded in killing the amendment providing for the Park. These three men are responsible for that. They oppose the interests of the Park, and thus bid defiance to the widespread better sentiment of the House, which, as shown by the vote on the railroad scheme, is emphatically that the Park shall be preserved for the purposes for which it was originally set aside in 1872, namely, the benefit and enjoyment of the citizens of this country.

SNAP SHOTS.

ELSEWHERE we print a statement of reasons on which is based the proposed restoration of July woodcock shooting in New York. The considerations urged are (1) that the birds are then sufficiently mature, (2) that the birds bred here go southward in July not to return, and therefore, if killed at all, must be taken in July; (3) that if sportsmen do not then take them lawfully, pot-hunters will bag them unlawfully; (4) that July is not too hot for the shooting. In respect to these given reasons for the change it is enough to say that sportsmen who have had the most experience in woodcock shooting and have enjoyed the best opportunities to learn facts and form intelligent opinions, are practically agreed that a large proportion of the birds are not sufficiently mature for anybody but the pot-hunter in July; and that birds bred in our swamps do no not go south in July not to return, but that if not killed in July they will be found in the vicinity in October. The suggestion that July shooting must be legalized because pot-hunters now break the law has in it not enough of reason to justify any serious discussion; and the final consideration of the pleasure or lack of pleasure in July shooting has no essential force one way or the other. To legalize July woodcock shooting would be a serious error.

This is a great and glorious country, so great and so glorious that there is room in it for all classes of fox-hunters, and abundant opportunity for each class to hunt its own foxes in its own way. Last week we printed an account of the Massachusetts way; this week there is an account of the Virginia way. Which is the correct style? Perhaps the Massachusetts style in Massachusetts and the Virginia style in Virginia. At all events, there is room for both and half a dozen more.

The Maine legislative committees on fish and game are deserving of all credit for their sensible treatment of certain bills. They have summarily squelched Jack Darling's bill to permit deer hounding, and the bill to permit salmon netting in the Penobscot above tide water. There must be among these committeemen some who appreciate, as they should be appreciated, the wisdom and sound public policy of the State's fish and game laws now on the statute books.

The May deer hunting clause has been abandoned in the New York game law bill submitted at Albany by the New York city and other societies. The July woodcock shooting clause is retained, together with the repeal in part of song bird protection and of the game protector law. The proposed seasons are noted in our game columns.

The AUDUBON SOCIETY now numbers more than 23,000 members. The membership is growing at a rapid rate. The March number of the *Audubon Magazine* more than fulfills the promise of its initial issue.

THE RESPONSIBILITY OF DOG OWNERS.

Charlestown, N. H.—*Editor Forest and Stream:* A large dog, wearing a spiked collar with needle points, has attacked one or two smaller dogs in town, and seriously injured one of them with the spikes. Is it legal for dogs to wear such collars, and is there any redress for the injury?—S.

A DOG is now recognized as property, and the liability of the owner of an animal for injuries caused by it is determined by the same principles, whether the injuries are inflicted upon the property or person of another.

Every one is supposed to know the fierce and dangerous disposition of wild animals. A person therefore keeps them at his peril, and is responsible for whatever damage they may do, however tame they may have become, and however unexpected the act which caused the injury.

With domestic animals it is different. The owner of such animals is liable for injuries done by them, only after he has notice that they have some vicious habit or propensity. If it be made to appear that such an animal is vicious and accustomed to do harm and that the owner has been notified of the fact, a duty is imposed upon him to keep the animal secure, and he is responsible for the mischief done in consequence of his failure to observe that duty. One who keeps a dog accustomed to bite men or sheep is liable for injuries caused by such acts, if he have notice of the dog's vice. Notice of a single act of mischief is sufficient evidence of his knowledge of the animal's mischievous disposition, but the person injured must prove that the owner of the animal had such knowledge before he can hold him liable.

A few illustrations will show how courts have applied this rule.

While a mule and a horse were feeding together in a shed, the mule kicked and seriously injured the horse. In an action to recover damages the owner of the horse offered to prove that the hostler employed to feed the mule knew the animal's bad character. This was not allowed, the court holding that the owner himself must be shown to have such knowledge, and that it would be unreasonable to charge him with whatever knowledge of the mule's viciousness any person might have who was charged with the least duty in respect to it.

A brewer kept at his brewery a Siberian bloodhound so savage that it would attack any one, not excepting its master. The dog was shut up during the day and at night was let out into a yard. One morning the dog was left in the yard later than usual and an employee at the brewery, while walking through the yard, was attacked and severely bitten by the dog. When he sued for damages, the brewer set up as defense that the injured man could not recover because he had been guilty of contributory negligence in going into the yard where he knew the dog was sometimes allowed. The Court of Appeals sustained a judgment against the brewer, holding that, while in a certain sense an action against the owner for an injury by a vicious dog or other animal is based upon negligence, such negligence consists not in the manner of keeping or confining the animal or the care exercised in respect to confining him, but in the fact that he is ferocious and that the owner knows it; and proof that he is of a savage and ferocious nature is equivalent to express notice. The negligence consists in keeping such an animal. As negligence in the ordinary sense is not the ground of liability, so contributory negligence in its ordinary meaning is not a defense. The owner cannot be relieved from liability by any act of the person injured, unless it be one from which it can be affirmed that he caused the injury himself, with a full knowledge of its probable consequences.

One Gates left his mare, which he knew to have the habit of suddenly pulling back upon her halter, at a hotel without giving any notice of this habit. While the hostler was hitching the mare she pulled back, and his finger, being caught in the rope, was torn off at the second joint. An action was brought and the Court said: "If a man has a horse or other animal that is given to kicking and biting, it is his duty to take such measures as will prevent it from injuring either persons or property, and if he cannot use it in his business and prevent the animal from indulging in its habit, he must cease to use it where the person or property of others is exposed. But domestic animals acquire many habits, indulgence in which may or may not be dangerous to others, depending on the circumstances in which the habit is indulged in. * * * It seems to me that the vicious habits or propensities which the owner of an animal must (when known to him) guard against, are such as are directly dangerous, such as kicking and biting in horses, and hooking in horned animals and biting in dogs. These habits or propensities may be indulged in at any moment and are inevitably dangerous. If the habit is such as, by possibility, may be dangerous if indulged in, adequate measures to prevent its indulgence must be adopted. But when the chances are so exceedingly small that careful and prudent persons would not resort to measures of protection against their occurrence, yet injury does happen, the owner is not liable, although no measures of prevention are taken."

A lad, eight years old, was playing in a street in New York, when a dog ran between his legs, knocking him down, and then turned and bit him. The boy sought redress through his guardian. It was shown that the dog was unmuzzled, and that a city ordinance required all dogs to be muzzled. On the trial, the judge held that *scienter*, or knowledge by the owner of the dog's character, was the gist of the action; and that, as this had not been proved, the boy could not recover. The court added: "A dog of good character will not bite. Whether he goes upon the street, in conformity to or in violation of the ordinance in question, he is alike harmless. But if a vicious dog with biting tendencies goes upon the street, he may, whether muzzled or not, knock people down and otherwise injure them. A compliance with the ordinance would not protect from liability the owner of such an animal, who, knowing his vicious habits, permitted him to go at large upon the highway. He would be liable to the party injured, and the ordinance would afford no defense to the action."

The most amiable dogs, like the most amiable men, may become involved in quarrels, and it is not an unusual thing to have the battles fought over again in court. For example, in one case the defendant's dog, while properly muzzled and walking at his master's side, was attacked by the plaintiff's dog. The latter was driven away, but returned and renewed the attack. The defendant then seized the plaintiff's dog by the leg, and swinging him in the air, dashed out his brains against the curb. The law which applied to this case was thus expressed by the New York Court of Common Pleas: "The owner of an animal may lawfully kill a dog if such killing is necessary to save the animal from death or from serious injury. The killing cannot be done to avenge an attack that has ceased, and can only be justified when done to avert impending danger of death or serious injury to the animal. If two dogs are fighting and cannot otherwise be separated, the dog that made the attack may lawfully be killed. To constitute a justification it must appear, however, that the killing was necessary and that the dog that was killed was the aggressor. * * * If, however, it is proved that a dog is accustomed to bite mankind, that it was upon the highway unmuzzled and in a condition to do injury to human beings, the killing of it is lawful."

In another action the plaintiff owned a small dog, the defendant a large one. While following the defendant along the street the large dog entered the yard of the plaintiff and seized and killed the small dog. The Supreme Court of New York was appealed to with the following result: "It must be noticed in the outset that the action is not for trespass on the plaintiff's close, aggravated by the mischief done thereon, but is simply for the damage sustained by the death of the dog. The case, therefore, seems to fall within rule three of Moak's Underhill on Torts, 'No person is legally responsible for any act or omission not attributable to active or passive volition on his part.' In other language, no person is responsible for an involuntary injury. If, while following its owner along a highway, a dog discovers game and follows it, the owner is not liable. By the common law the owner of a dog that worried and killed sheep was not responsible for the damage done, and it required a statute in our State to create such liability. The reason of this rule was that the killing and worrying of sheep could not be anticipated or expected to result from a dog running at large. That rules applies here. The defendant could not know or believe that her dog would kill or injure the dog of this plaintiff simply because she permitted her dog to follow her along the street."

We have defined the principles of the common law, and the cases cited show their application to certain states of fact. These principles maintain generally in this country, except so far as they have been modified by statutes in some of the States.

New Hampshire, whence our correspondent writes, has greatly limited dog liberty. The general laws provide that no person shall be liable for killing any dog which shall be found not having around its neck "a collar of brass, tin or leather, with the name of the owner carved or engraved thereon." This provision bears heavily on the dog, and it is followed by one nearly as burdensome to the owner: "Any person to whom, or whose property any damage may be occasioned by a dog, not owned or kept by said person, shall be entitled to recover of the person who owns or keeps, or has said dog in his possession, all damages which may be so occasioned, except in cases where the same have been occasioned to the party suffering such damage while engaged in the commission of a trespass or other tort."

It will be observed that, by this provision, it matters not whether the owner knows of his dog's vicious habits. He is liable for all damage done by the dog to persons or property, unless the person injured was engaged in committing a trespass or other tort.

Under these statutes the question arose whether a man having set his dog upon a neighbor's cows which were trespassing on his ground, was liable for having caused the death of one of the cows. The cow fell in jumping over a fence while attempting to escape, and died from the injuries received. The court said that if the dog, of his own accord, had attacked the cows while they were trespassing, his master would not have been liable, because the trespass of the cattle would have been the trespass of their owner, within the meaning of the statute. But the owner of the dog having set him upon the cows, a different question arose. He could only use such means in driving the cattle from his grounds as were necessary and reasonable; and it was for the jury to decide whether the means used in this case were reasonable and necessary. If they were, the owner would be liable, otherwise not.

In another case the plaintiff had been bitten while attempting to remove a dog which was barking at a hole in his pasture. On the trial the plaintiff maintained that under this statute the person injured could recover, although guilty of negligence which contributed to his injury, but the Court ruled that the statute was to be construed with reference to the established rule of law, that a party cannot recover for injuries resulting from his own negligence; and that the exception in the statute, that persons trespassing or committing a tort when injured cannot recover, merely imposes the condition upon the injured party's right of recovery, that it must appear that he was not a trespasser when the injury was received. The doctrine of contributory negligence is applicable to cases under the statute as at common law.

We know of no way to prevent a dog from wearing a spiked collar. The New Hampshire statute defines the collar that a dog must wear if he values his life. No matter how many spikes the collar may have, or how effective it may be, in his contests with other dogs, it will avail him nothing against the humblest citizen, if it is not of the fashion prescribed by law.

Presumably the collar of which our correspondent writes was designed to protect the wearer from other dogs. If dogs attack him they are alone responsible for the injuries they receive from the collar. If, on the other hand, he attacks them, the statute holds his master responsible for all the damage done, whether caused by the dog's teeth or his spiked collar.

The New Hampshire statute also allows any town to make by-laws for licensing, regulating or restraining dogs, and our correspondent may find that, in addition to the ample remedies we have mentioned, there are others among the local provisions of his town. ON THE FLORIDA WEST COAST.—III.

THE next morning it blew a gale from E. N. E., giving us a starboard stretch up along the coast. After tying in a double reef, we felt our way out from among the oyster bars, and on getting an offing of about a mile, we trimmed flat and let her go, when go she did, up on the easterly end of a long bar, carrying away the jaws of the gaff, which, slipping off the mast, parted the throat halliards, making a complete wreck of us. Then to add to the general misery it commenced to rain as it only can in Florida, the sea breaking over us continually. We did not like it, but a philosophical turn of mind was very necessary, as we had to wait for the tide. The Artist was pre-eminently a philosopher; he sketched our misery. After clearing the bar we stood up for Cape Romano with the wind more on our beam; we made good headway and reached the cape at sunset, making a safe harbor behind the cape key, one of the group of keys which form the cape. Here the fishing is very fine, with an abundance of ducks, snipe, flamingoes, pelicans, etc. We caught in the day's run seven kingfish and Spanish mackerel with the trolling line. The mosquitoes humming on top and the drumfish tuning up under us, kept us from oversleeping ourselves.

We cruised around among the keys for several hours the next day, and standing out of Malco Inlet kept up along the coast, passing Caximbas Key and Bay. The key can be well located by an immense shell mound surmounted by two houses. In the evening we made Estero Bay, where we encountered immense shoals of large fish running out under our keel as we passed in. With higher land on either side this is the very paradise for the sportsman. In fact there are numerous rivers between Charlotte Harbor and Cape Sable, not small creeks, but rivers that you can sail up for two days with a good full sail breeze over your quarter; bordered for miles by an impenetrable jungle, again by higher clear land, and again by broad prairies, abounding with all kinds of game, and reptiles, too, with perfect solitude and weeks of beautiful weather. The thermometer ranges from 65° to 80°. A jolly crew and a good boat under you complete the happiness of a genuine cruiser. Again there is the whole gulf to the westward, in which, as soon as your keel touches the salt water, you can with a certainty throw over your trolling lines and strike fish that will make you wish before you get them in that they had not "caught on," and after you get them in the cockpit you will get up on the seat to mop your brow and save your shins.

Leaving Estero Bay, several miles north from where we entered, we bore north for Caloosahatchee River. Passing between Point Ybel on Sanybel Island and the mainland, we soon rounded up at Punta Rassa, and there greeted friend Shultz as the first white man we had seen in three weeks. He gave us a royal good welcome, and with his homelike comforts and interesting family we

passed many pleasant hours. Here we received our mail and extra provisions, previously shipped from New York. Then we stood up the river, bound for the great Lake Okeechobee, to investigate the drainage and reclamation of that paradise to be (as per circular), the greatest sugar plantation of the world. Our first landing was at Fort Meyer; no fort in sight, no bristling guns; it was safe to land. We found a pleasant little hamlet of about one hundred residents, with nothing visible to live on. Soil poor, land flat and sandy. Cattle interest engages the leading citizens; but such cattle; well, I saw them loading a schooner with them, and if the critters didn't move around to suit, why, they just grabbed them by the tail and fired them around. Pine needles, wire grass and anything generally off of white sand, backed up by drouth in winter, are not conducive to anything more than bones and hide, although the swamp angels that drove them said they were a good lot. They were in transit for Cuba for food. A Western man would smile.

We left Meyers behind, running before a thirty-five-mile breeze, passing several sorry-looking settlements. At one we purchased some yams, the tops of which had frozen dead on the first day of January. We ran up the river until the overhanging trees and snags prevented further progress. Then jumping in the dinghy, with hammocks and other traps, I rowed up to Fort Thompson. There swinging my hammock in a half-dead live oak, with a mosquito netting to help keep off the multitude, I tried to sleep. Perhaps I did. The next day I rowed up through the great rapids, inquiring of a lame native where the great dredge was working. He pointed eastward through the never ending swamp. I could see the smoke-stack, and by keeping in the channel dug by the dredge I could reach it. I inquired what his occupation might be. "Oh, he was out of meat and was running down hogs." A Florida hog can only be brought to terms by a greyhound, and how this man was proceeding I did not learn. His call on meat must have been very uncertain. He borrowed my tobacco; and I passed up stream. Poling, rowing and overboard pushing through three miles of mush brought me to the broken-down and inactive dredge. It did not look formidable. It was afloat, however. Everything floats up there; in fact the principal occupation of the dredge seemed to be the clearing a swath through the big saw grass. How they could calculate on draining such an immense country through a ditch into the already overflowing river, through a perfectly flat country, is one of the mysteries of the "scheme"—I won't call it by any plainer name. On my return to the Bessie, drifting and pulling by turns down the sluggish Caloosahatchee, I passed a number of clearings abandoned by nature, the occupants having been starved out. Occasionally up the numerous branches some distance from the main stream are small sugar plantations, where the cane thrives well on the rich hammocks or dry swamps; but it is as good as death to the occupant, especially if he is from the North. Fever is the great enemy. The river is alive with 'gators, with a few turkeys as well as the usual river shooting, although the occasional 'gator hunter and prospector makes the game shyer than we had previously found it. Using my gun as I passed down the river I succeeded in bagging quite an interesting "collection." It became more interesting as I neared the sloop, for my larder had run very low, so low, that I had to do without my dinner. Reaching the sloop at sunset, I found a good supper awaiting me. Then I remembered the lame fellow who was out of meat and had borrowed my tobacco; how I pitied him. On sailing down the river we called on Dr. Andre, who had a sugar plantation of three acres on a strip of a little higher land than usual along the river. Not a very extensive outlook for a family. One description serves for them all.

We took a knockdown from a back flaw off of the palmettoes close to the bank, which set everything afloat, including both of our trunks, and we shipped about half-full of water. The cook having our main sheet foul, instead of clearing away and letting run, was looking for a soft spot to land. Although a duck could not beat him swimming, he was badly rattled. He did not hear the last of it for some time, and ever after he kept his weather eye open. We spent the rest of the day in drying clothes. The next day we reached Punta Rassa, and once more we were hospitably entertained by our friends, Mr. and Mrs. Shultz.

Our next programme was for a hunt on Pine Island. Passing several small islands with cocoanut trees, showing settlers had taken possession, we stopped at Joslyn's Key. Joslyn is the Pirate of Charlotte Harbor, a genuine Robinson Crusoe. One peculiarity of this key is a row of four little huts occupied alternately by old Joslyn; as each house becomes infested by fleas he moves into the next. He invited us to dine with him. Hospitality is his great point. The menu consisted of black bread, blacker coffee with long sweetening and baked yams. The water for the coffee was so filled with wigglers that it was a moving mass. We "passed," having dined a short time before. This key has three shell mounds, 30ft. high and 75ft. wide at the base, composed principally of conch and hard clam shells. On the mounds were planted limes, lemons, bananas and vegetables. The decomposed shells furnish the soil, but, as usual, the drouthy winters cause a stunted growth. The Artist amused himself by sketching the place, making another of the interesting mementoes of South Florida life and scenery.

Our hunt on Pine Island was not very successful. We saw several deer about the size of sheep a long distance off. Getting down under cover at a water hole I soon killed enough birds that flew in to drink to satisfy our appetites. The surface of Pine Island is flat and poor, and the surrounding water very shoal. Our next run was to Boca Grande Inlet, to Charlotte Harbor, main channel, carrying 16ft. of water in from the Gulf. It is an excellent place to fish. We ran into a little cove on the northeast end of La Costa Island, occupied by fishermen, a perfect harbor for small yachts. The inhabitants are a mixed breed of Spanish and very hospitable. From the number and condition of their large nets and boats I should consider them very successful. They live in the usual palmetto hut. The location is beautifully situated for a winter hotel, breakers roaring on the beach, deep water in the channel, a beautiful little harbor, and good fishing and hunting are around and among the hundreds of islands in the large bay. Some of the islands are high; and after seeing so many swamps and low islands, the high timbered elevations are a decided treat to the eye. We left for little Gasparilla Pass, running along inside of Gasparilla Island, passing another fishing station; and from the masthead the breakers could be easily seen over the island, while on our side the water was smooth and the breeze fresh from the southwest. This kept the breakers running high, so that when we reached the little pass we found it closed and we had to return to the Big Gasparilla Pass, across which we found a double row of heavy breakers, into which we came nearly drifting stern first, as the water runs through like a mill race. We had lowered away and dropped anchor, without noticing that the tide was running out and that our anchor was not holding us. Doubtful of the holding ground, we made sail again and none too soon. Under the heavy southwest wind we just managed to get out of the gut, and right glad were we when, at a safe distance, we again came to anchor. Landing in the dinghy we here, as on several previous occasions, fired the dried grass and palmetto, on the windward side of the key, then took positions to watch for game, which generally consisted of snakes, coons, deer, and wildcats. Before the heavy breeze the fire rapidly enveloped the whole surface, driving out one cat, several coons, and a lot of snakes, all of them taking to water and making for the nearest key. The cat, the two coons and a number of snakes we stopped with buckshot. After catching our usual fish supper we gathered shells along the breakers. The shells were thrown up by the heavy sea in wind rows 2ft. deep. We took a number of clams and conchs in the inlet.

The next morning the wind having hauled to northeast, we took a run over to the mouth of the pass to see the condition of things outside. The breakers still broke across the pass, but in much reduced size from yesterday; and after a lengthy parley we concluded that we would run them. With a good breeze over our starboard quarter we entered the pass; no backing out now; with the rush of the tide bearing us on and all the wind we could beg to we headed for the breakers. The first one filled our cockpit and put us down by the stern. The next two we climbed and were through all safe. With a piping breeze we kept up along the beach just outside of the breakers bound for Big Sarasota Pass. Near Casey's Key we found an English bark head on the beach, lumber laden, Mobile to Liverpool. The crew had deserted her a few hours before, but she was not deserted then; the Crackers swarmed over her fighting for the spoils. They seemed to have "been there" before. Not liking the looks of us, especially when we took a position on the poop and our artist began sketching the busy scene, and a great many of them being known by our cook, they went over the side in a hurry. They took us for Government officers and left most of the spoils behind. We helped ourselves to what we cared for, and tying in a reef kept on along the beach. We might have run into Casey's Pass, but the wind being fair we concluded not to. Reaching Sarasota Pass at 3 P. M. and dropping anchor just inside. We made ready to spend the night right there. There was a heavy sea in the bay to windward. We found an excursion party on the beach, who had come across the bay in the morning from the mainland. They were wind bound, not venturing to return in their small boat. Under promise of a big feast they induced us to take them all on board of the Bessie to sail over to their camp, where we were entertained with the best in the house. They were very comfortably located for the winter in two small houses, under the leadership of W. Barrett and family, of Lincoln, Ill. They lacked a good sail boat to make the pleasure of their stay complete. Sarasota Bay and vicinity is very pleasant, but it does not begin to compare with the surroundings of Charlotte Harbor for the hunter, fisherman or cruiser.

Our next run was to Palma Sola, on the southerly side of the entrance to Manatee River. With a good breeze behind us we ran the eighteen miles in three hours, and after dodging the many bars and shoals, arrived off the well-known Warner wharf. We were very hospitably entertained by Mr. Warner, who is the great mogul of the town, owning and running the large store, post-office, saw-mill, cattle docks, ice house and the first northern built comfortable house that we have seen on our cruise. He has built since then a comfortable hotel. He also owns a fine steam launch, into which, being short of hands, he enticed us for a run up the Manatee. Your correspondent took the wheel under orders from Capt. Warner, who ran the engine; the Artist stationed himself plumb up into her eyes. When the captain and engineer pulled her open and let her go, he gave the common "Steady, there, for Rocky Bluff!" "Steady it is, but where is the bluff?" "Why, you landlubber, right ahead." Well, we made it. It was just two feet high, and again it was steady ahead for Sandy Bluff. We reached it and found it about three feet high above the general level. It was the old story—a hundred dollars worth of air and fifty cents worth of land to the acre. Big in expectations, these people in South Florida. Malaria in the air, white sand for soil and exaggerated ideas complete the list. Warner's is well located, high and healthy, which means white sandy soil. It is the highest land we have seen, a general elevation of about thirty feet, being along the south bank of the Manatee for only a few miles.

After cruising up the Manatee, passing several "towns," each a would-be metropolis, we shaped our course for Tampa, distant 40 miles. With a steady and increasing southerly wind we bowled along. With the wind nearly aft we found Tampa Bay quite capable of kicking up a very lively sea, which compelled us to hoist our lowered peak or be pooped by the combers. We made the town at sunset. The tide was low, and as usual with strangers we soon got into disgrace by running on a mud bank. We thought we had sounded over about the whole end of the bay, so at length we gave it up, dropped anchor, and, being ravenous, set to at the mess. We found the channel a very narrow shoal one close to the left bank of the entrance to Hellsboro River, an island lying off across the mouth. Steamers lighten their loads three miles down the bay. We were awakened in the morning by the reveille from the Government parade grounds and encampment. The orange trees in every yard were in full bloom, and had a little fruit. The place shows some signs of slow growth, with the promise of more from an expected railroad. The streets are wide and the sand deep. After receiving our mail and laying in a fresh supply of necessaries, with a fair wind from the N.E. we made Mullet Key, and anchored under its lee near Egmont Key Light; and visited the light and the adjoining island. From this anchorage to our next, John's Pass, we had a race with a small schooner. Running inside of Pine Island we came to anchor in the Pass, in company with a smart looking sloop from Cedar Keys, bound to Charlotte Harbor, cruising, with Capt. Bixby and Van Zant, both jolly good fellows. The Pass has sixteen feet of water in it and a good harbor. We left our new made friends in their handsome sloop going in opposite directions, they south and we north.

Our next move was for Clear Water Harbor, still keeping on the inside of the keys. We very rapidly worked into shallow water, with one man aloft astride of the gaff to look for the narrow channel, it was exciting work, as the wind was fair and blowing a scupper breeze, some channels ending on a shoal, others running together. We made the narrows and ran on a bank at low tide. It was none of your gentle bumps, but a bump that sent the main boom skyward for the top of the mast. In such style we found the bottom, and waited for the tide to rise, passing the time in sticking fish with the grains, and killing whatever came in reach of our shotguns. We were demoralized. A sailor aground is worse than a sailor on horseback. He is an excited and reckless individual, especially if he has to wait long for the tide. On the incoming tide we ran through the narrows, passing some nice orange groves loaded with fine fruit, the best we had seen, showing evidences of good soil and cultivation, and situated on high bluffs along Clear Water Harbor. We made fast to the long dock and went ashore to visit the village of about a dozen houses. The principal one is occupied by Captain Dwight as a boarding house; this is well located, commanding a fine view of the bay, gulf and outlying islands, making it a very attractive place for the Northern tourist to pass the winter in; they have excellent water, and the best oranges I have eaten in Florida; they have also steamer communication with Cedar Keys. The limestone formation is the southern limit and the beginning of the excellent soil, running in a northeasterly direction up through Hernando county, which is one of the best and highest orange belts in the State, extending up through Brooksville and Lake Charley Apopka.

With a good sailing breeze from the southeast we ran up for Anclote River, keeping inside of St. Joseph's, Hog, South and North Anclote keys, finding plenty of narrow, crooked, deep channels. We made the river at noon, and at high water laid a straight course over all the numerous oyster bars and banks, which was fortunate enough for us, for on our return we found them too numerous to count. We dropped anchor at a place called Salt Springs. It was supposed to be bottomless, but we struck mud at 20ft. Here we bought some potatoes of a settler. He liked the country, with the exception of too much fever and mosquitoes—enough to raise almost anybody's objections. We met a land prospector who had just arrived. He was one of the most demoralized men I ever saw. He came in on an ox-cart, having paid $5 for a ride of eight miles. The first mile over the palmetto roots was enough; he walked the rest of the way. He wanted to get back to civilization with us aboard the Bessie. I can see him yet as we left him standing on the bank mopping the sweat off of his bald head with a big red bandanna, the picture of despair. We told him we would report him alive on our arrival at Cedar Keys. His dream of affluence had been very rudely dispelled.

In running out of the river bound north for Pithlochascotee River we had no end of trouble in working through the many narrow crooked channels, with a stiff breeze from the north, and when we headed up the coast it reminded us of ducking weather in the vicinity of New York. It made us hunt up our overcoats for the first time on the cruise. We ran into the river at high flood, grounded on a bank, waited as usual for the tide to float us off, and while so waiting visited a nice little concrete cottage abandoned by the owner. The cook captured a sitting hen; which, by the way, was no evidence of recent vacating, for a Florida hen will sit with all the patience of a native waiting for his first crop of oranges, although I think a genuine native can give a hen odds and beat her.

Our next run was for St. Martin's Keys. With the wind blowing a norther and dead ahead, we picked our way up the coast. Channels were numerous, and rocks more so, the coast low and flat, water very shoal. We anchored inside St. Martin's Keys and lay aground all night. The weather reminded us that we were gradually working north. The sailing was not as pleasant as it had been, on account of the dangerous rocks extending at least three miles off shore. At daybreak Captain Locker, of the sloop Wave, ran up on our weather quarter and challenged us for a race to Cedar Keys, where he was bound. To set up the peak halliards and haul in the dinghy, shoving her up to windward, was only the work of a few moments. An increasing wind and sea caused us to pile all our dunnage and extra weight into the little dinghy to windward; and this did excellent work, for in three hours the Wave was under our lee and astern, but not alarmingly so, for it took a full day's hard sailing and straining every nerve from sunrise until sunset to beat her one mile. We anchored in company, surrounded by reefs, fifteen miles southeast of Cedar Keys, to which place we proceeded in the morning.

This ended the cruise of the Bessie, whose log showed seven hundred miles sailed, with fair wind nine days out of ten, and only five stormy days in the entire run; thermometer only twice below 60°. We hauled the Bessie out, after stripping off her rigging, and covered her over, expecting to return the next season. I left her in charge of a gentleman, however, who sold her, and from whom on my arrival at the North I received a check. V. H.

NESSMUK'S WOODCRAFT.—The extraordinary popularity of Nessmuk's little book must be very gratifying to the author. It is a high compliment to the matter of the book and to the style in which that matter has been put in shape. Of course no one can spend half a century in the woods without accumulating a vast fund of knowledge, which would be very useful to those with less experience, but there are very few who can set forth this knowledge attractively, as has been done in "Woodcraft," for which, at all seasons of the year, there is a steady demand. We predict for the forthcoming poems, which will be issued next week, an almost equal popularity. The subscription orders have already far exceeded what was expected, and by the time the book is put on the market, and has been noticed in the papers, it seems probable that the edition will be quite exhausted.

SNIPE SHOOTING ON HORN ISLAND.

HORN ISLAND raises its sandy head fifteen miles off the southeastern coast of Mississippi, amid the blue waters of the Gulf of Mexico.

The party consisted of four: S., professor in one of our Southern universities; M., an inveterate seeker after gamy fish; Narcisse, whose swarthy complexion and long, coarse, straight black hair showed the mingling of races, and last, but not least (for he carried the eatables), your humble servant, we marched in single file over the rickety wharf to where our little sloop is made fast. Presently the words "Shove her off" come from Narcisse, who is stationed at the helm, and away we bound, leaving a long silvery wake as we glide over the sea, while the soft rippling of the water cut by the sharp bow sounds like sweetest music. Dimmer and yet dimmer become the red bluffs and giant oaks, till they blend in one dark line upon the horizon. Upon the first break of day great flocks of pelicans, lazily flapping their wings, leave their roosting places and fly to their favorite fishing grounds. Now and then the fin of a shark affords a floating target for his marksmanship.

If the breeze only keeps good! but, as we near the island it grows fainter and fainter, until at last not the merest catspaw ruffles the surface, and only the sullen boom, boom of the surf seaward disturbs the quiet. And thus we lie idly, the sails flapping listlessly, as we are rolled by the swell, while the sharp, glinting rays of the sun pour down upon us with relentless fury, "a painted ship upon a painted ocean." "Blow breeze, blow," prays Narcisse to his patron saint, while M., his face pale as the fluttering sail overhead, is heard to mutter something about not coming out there to feed the fishes.

Whether in answer to Narcisse's invocation, or to M,'s nausea, old Boreas relents, the breeze once more fills our sails, and soon the welcome grating of the keel upon the sand, tells us that we have reached our destination. After holding a pow-wow, it is decided that M. and I shall try for the snipe, while S. and Narcisse troll for Spanish mackerel. Tramp, tramp, swish, swish, up to our ankles in the marsh mud, we go, following the wily snipe over the boggy ground until the growing darkness bids us hold a truce. Although the birds are somewhat wild, upon comparing notes we find that thirty-three victims, from the little sandpiper to the stately curlew, have rewarded our shots.

Darkness is already upon us as we linger along the marshy borders of a lagoon and listen to the myriad voices of the night. The soft beams of the moon take wierd and fantastic shapes, as they play upon the dark surface of the pool. How plaintive sounds the cry of the whip-poor-will floating to us upon the balmy night air; and how harsh the cry of a heron flying swiftly overhead. Then all is quiet save the musical hum of the mosquitoes. Now the splash of a giant fish in the phosphorescent water, sending up showers of fire-like spray, startles the ear. But hark! there is the deep bellow of an alligator. Meanwhile an owl, in mournful numbers, is croaking forth his tale. At length we are joined by the fishers, who come dragging a shark five feet long, the sole trophy of their day's sport.

Once more we board our sloop, the strong sea breeze bends the mast and the cordage creaks while, as we near the old wharf, the waves ripple a soft accompaniment to Narcisse's Creole ditty. K. E. G.

New Orleans, La.

SOME WOODS CHARACTERS.—I.

THE strange, irregular, abnormal growths to be seen only in the primeval forests have their counterpart in the eccentricities of the guides, trapper sand camp scullions who frequent these regions of the country. Some are so peculiar as to baffle all attempts at classification. Among this number was old Abbott, as he was familiarly called, who abandoned a good farm to wander aimlessly through the woods. He was not a trapper; at least he brought no peltries to market. He did not hunt, for he often traveled without a gun, and few were the fish that ever came to his net or hook. He built no cabins, but often burned those built by other people—not maliciously, but from his improvident use of fire, sometimes building it in the very center of the structure. Like Gladstone he had a great passion for felling trees. The very choicest pine and cedar trees were his peculiar delight. But when once cut down he had no further use for them and there they were left to rot, as if their one crime had been that they had grown to be more beautiful and stately than their fellows.

There was another, of whom I shall speak more at length, because he possessed traits somewhat in common with the rest of humanity, though flavored with an originality all their own. Peter Newton in early life had been a sailor, and few Feejee Islanders, I imagine, had been subjected to more tattooing. Anchors, crosses, banners and even schooners under full sail were plentifully pricked into the veins parts of his body.

For some reason best known to himself he had become a habitant of the forest. He was skilled in fishing and trapping, and an authority in woodcraft, and his advice and assistance were often called into play by sportsmen. Like all men of his class, he was more or less recluse, and this, with his peculiar mental furnishing, made him a philosopher and humorist along original lines of thought and expression.

"I have no book larnin, and I don't want none. I tell you what, the book larnt people git all their knowledge second hand. I study from nater. Nater tells no lies. Nater is never misleadin'. I heerd somebody say once that the light of nater was a dim light, whereas it is always a bright light. Nater deals with facts, original facts, inexhaustible facts, and no mistake. Nater aint cruel, nuther. The fact on't is, a creeter that is to be eaten up gits jest as much satisfaction in being devoured as the devourer gits in devourin' of him. There's the snake, for instance. Mos' people hates snakes, and yit he is always careful to charm his victims afore he swollows em."

"But, Peter, doesn't the poor rabbit run as long as his legs will hold out before he gives in to the fox? And does not the trout fight hard before he suffers himself to come to the net?"

"Of course they does. But once let that trout git away and it makes him the hero of the hull school, and he is prouder on't than of anything else in all his life! But if he don't git away, why he would be disappinted if you didn't take him in at the end of the struggle. No, sir, nater ain't cruel. It is only when things git civilized and artificial that they git cruel. 'Do animiles talk?' Of course they does. The deucidest funniest thing happened here last season, when I was in the woods all alone, you ever heed tell on."

Now Peter liked to be coaxed, and so after considerable urging, he went on as follows:

"Of course you fellers that git all your larnin out of books, and who believe nothing 'cept what you can explain, won't believe a word on't, but it is jest as true as I'm sittin' on this ere stump, and don't you forgit it!"

"Well, as I was a sayin, I was here all alone, and one day sez I to myself, I b'lieve I'll go and pick me a pail of rosbris. Rosbris was tarnal thick in the openin' in the woods—it was along in August, so I took my pail and started off. Everything was going along monotonous like—I never did like pickin berries—till I'd got the pail eenamost full, when I heered something coming through the bushes, and afore I'd had time to more than turn round out popped a big sleek black bear. He'd bin a berryin' too, and having got my wind jist came around to see who I might be. Well, as I hadn't no gun, and as he kept a cummin' I concluded it were best for me to git out o' there, but before doing so—knowing the fondness of the creeter for berries, and besides bein' aware of his great bump of curiosity—I set down the pail before takin' up the line of retreat. Not hearin' of him comin' arter me, I turned around when I'd got up a little hill, and sure enough his nose was down in the berries, and a short job he was making of them, I can tell you. It wan't long afore he'd got the last of them, but not bein' in the habit of eating from a pail the sweet juice that lined the tin had stuck to his cheeks, and so when he riz up to go, the pail riz up too, as putty a muzzle as you ever seed in your life. Now everybody knows how handy a bear is with his paw, and as he didn't like sich an ornament for his face and havin' no furder use for the pail, he riz his paw and gave it a slap, but as bad luck would have it the paw accidentally hit the bail a tunk and sent it back over his ears and so held the thing on tighter than ever! I never laughed so in all my life for sich a performance I'd never seen the likes of in all my mortal days. First one paw would come up and then the other; then he'd whack it agin a tree, and then he'd plow a furrer in the ground; but there the thing stuck tighter than ever. He was in for a new experience and no mistake.

"'Why didn't I go back to camp and git my gun and finish him?' Why it beat all the circuses you ever thought of, and do you suppose I'll spoil sech a show for a little bear meat and a summer pelt! Well, all of a sudden, while I was watchin' the performance, off he bolted like chain-shot. Now, bein' a little curious to know how he came out of the scrape, I took the trail and follered him up arter a little. I found his home not far off on the mountains yender. If you don't believe it I can show you his very den. It seems bruin had a wife and several small chillun dependent upon him for support, and when they seed him comin' in sich a plight they howled a dreadful howl. The old woman tried her best to pull off the pail, but to no purpose, so finally she made him hold his nose in the hot embers of her kitchen fire till he'd melted off the bottom of the pail, and afore I'd knowed it the whole thing had been shoved back over his ears, and so he was tricked out with a tin collar. But it was a curious sort of a collar for a bear to wear, for it read:

Fifteen Pounds of Leaf Lard.

Warranted Strictly Pure.

"But bruin's trouble had only just commenced. He, like all other folks, had an enemy, and enemies is allus waitin' for something to turn up to put us in their power. So this particular enemy actually had him arrested for sailing around under false colors. In vain his lawyer put in the plea that the wearin' of the collar was an unintentional act, a thing that couldn't be helped. The lawyer on the other side claimed it was a clear case of fraud and misrepresentation, and agin the statute book for a bear to call himself fifteen pounds of leaf lard, when there was nothing inside his pelt corresponding to it but bear's ile! And so they took him to prison, a great deep cavern with a big boulder to the mouth on't.

"But the strangest part of the story remains to be told, for as true as I'm sittin' on this 'ere stump, notwithstandin' all the guards they put over him, and the security of the prison, and the big boulder and all that, the very next day he was out ag'in, and nobody, not even the high sheriff of the hull region, dare lay a claw on him."

"How was that, Peter? Please explain the mystery," came from all the listeners.

"Why, that's easy enough," said Peter, with a wink in his eye. "He'd got bail, and they couldn't tech him no more!" C. H. Gleason.

THE NOMENCLATURE OF COLORS.*

EVERY ONE who has begun by himself to study ornithology has found at the very outset that he was confronted by a serious obstacle. Books on birds are plenty enough, and the descriptions of their habits and modes of life are simple and easily understood because they are couched in every day language, to which we are all accustomed. When it comes to a description of the bird's physical characteristics, however, it is quite different. Here technical language is employed, and the novice is at once confronted with terms which are wholly unfamiliar to him and whose meaning cannot be discovered by the most diligent search through the dictionary.

To the man who is familiar with the terminology of ornithology or with scientific methods, such difficulties as these may seem slight, but they are not so. On the contrary they are very real and very discouraging, and unless the beginner has some one to apply to for assistance who is better versed in science than himself, they may even be insuperable. Those who have faced and conquered such barriers to their progress, and the many younger students, will warmly welcome Mr. Ridgway's new book as a most valuable aid to them. Here is plainly set forth and often illustrated by plate and diagram, the meaning of many a technical term that has heretofore daunted the beginner. It is a happy smoothing out and leveling of the rough and hilly road that most of us have had to surmount by hard toil, with only experience for our guide.

One of the greatest desiderata to naturalists who are not artists as well, is some means of exactly defining the precise shade or tint of color which he may wish to designate, and it is especially to the clearing up of such difficulties as this that the present work is devoted. It contains, however, much more than this.

The work, after an introduction, is divided into two parts. Part I. treats of the nomenclature of colors, and to this subject are given a Preface, Principles of Color and General Remarks, Colors Required by the Zoological or Botanical Artist, Comparative Vocabulary of Colors, and a Bibliography.

Part II., entitled Ornithologists' Compendium, contains a Glossary of Technical Terms used in Descriptive Ornithology, a Table for Converting Millimeters into English Inches and Decimals, and a table for Converting English Inches and Decimals into Millimeters.

The work is illustrated with seventeen plates, of which the first ten show colors and an infinite variety of shades; plates XI.–XIII. are devoted to various points of external anatomy; XIV. and XV. illustrate various color markings, XVI. shows in outline various egg contours, and XVII. is a Comparative Scale of Measurement Standards.

This work, as will be seen from the contents, is curiously full of information; no page of it can be scanned without finding something of interest, and very often something which will be new to the veteran ornithologist, or if not new, at least put in some new form which makes it striking. The work is, what might be expected from Mr. Ridgway's pen, a credit to the author and to the museum with which he is connected.

It will have a place in the library of every working ornithologist.

*A | nomenclature of colors | for naturalists | and | compendium of useful knowledge | for ornithologists. | By Robert Ridgway, | Curator, Department of Birds, United States National Museum. | With ten colored plates and seven plates | of outline illustrations. | Boston; | Little, Brown & Co, | 1886.

IS THE SHRIKE A MIMIC?

TWICE I have been struck with the vocal powers of *Lanius borealis*. On Wednesday of this week the morning was lovely here, and the bluebirds and English sparrows, with occasionally a song sparrow and a nuthatch, seemed to vie with each other in making the day pleasant. As I was listening for them, a new note came upon my ear. I thought I had heard it before, and then again it was so mixed and confused that I must confess I became mixed too. Now it was a poor imitation of the bluebirds that I heard in the distance, now it seemed like the constant twitter of a few English sparrows that were displaying themselves in a barnyard near by, and now it reminded me of the quiet prattle of the bluejay when nesting. What can it be? thought I. This is a new experience: am I to discover a *rara avis* when we have so many distinguished ornithologists? But the question was soon settled. I had only to ascend a rise in the road, where I could look over the fence and the low growth that grew by it, when off to my left I saw a Northern shrike (*Lanius borealis*) perched upon the top of a button-ball tree. He was looking in the direction of the bluebirds and calling very much as they do at times, almost incessantly. I listened for a long time and watched him carefully. There could be no mistake. He was calling and gabbling and warbling and singing. I had never heard one make such sounds before.

The first time I heard a shrike make any attempt at song was some years since, at about this same season of the year, in the early part of March. Then it was a very bright and pleasant afternoon. I had just passed a swamp where some goldfinches were calling to each other from among the alder bushes, and a few song sparrows were attempting to get up a concert before the sun went down. On my right was a fine piece of meadow with here and there a chestnut or hickory tree left standing. From one of these came the music. It was a warble interspersed with the most pleasing calls of the redpoll or the goldfinch. A sweeter music of its kind I do not think I ever heard. The ruby-crowned kinglet's is the only one I can compare it to. But this time the voice was low and sweet and prolonged, whereas on Wednesday it was louder, more abrupt and broken, and lacking in those fine touches that I listened to the first time.

The question that arose in my mind was, has this bird the power of mocking or imitating or calling other birds to him? Does his form enable him to deceive too, and is he a siren as well as a shrike?

I would thank any of the readers of Forest and Stream if they would tell me what their observations have led them to conclude. I never remember of seeing as many shrikes in this neighborhood as are around this winter. A. H. G.

Scarborough, N. Y., Feb. 25.

Where Do Meadow Larks Winter?—In your last number L. says that "it is a little surprising that L. H. A. should ask if meadow larks winter as far north as Boston, inasmuch as a stroll through the borders of any salt marsh there would answer the question in the affirmative." I have never had the pleasure of taking a stroll through those marshes, but I have never seen the meadow lark in winter in either New York or New Jersey, but I have seen them in large numbers in Georgia, both on the main land and on the Sea Islands, and last winter, while deer hunting on one of the islands, about forty miles south of Savannah, the old cotton fields were alive with meadow larks. If a few do remain in the north, as an occasional woodcock may, the great majority migrate with the woodcock to the south, and well to the south at that.—Flavian.

Hawk and Locomotive.—Last Thursday afternoon as train No. 315 on the Loug Branch Railroad was nearing a station called Bayway on the Elizabeth, N. J., meadows, the locomotive struck and killed a large hawk of the red-tail species which was flying across the track. It is not an uncommon thing for swallows to be killed on the Newark meadows in the same way during their fall migrations. Hawks have been very numerous in New Jersey this winter.—J. L. K. (Perth Amboy, N. J., March 5).

A ROBIN WINTERING AT SYRACUSE.—Syracuse, N. Y., March 6.—Mr. F. B. Klock, who lives in the eastern part of the city, tells me of a robin which has spent the winter in the city—at least the months of December, January and the most of February, for some days have passed since the red-breasted warbler was last seen. It has frequented an English ivy vine on Mr. Klock's grounds, seemingly preferring the dried berries to other food which was offered it. The bird was seen on one of the coldest days of January and observed for some time. Mr. Klock, who is fond of nature and nature's gifts—an accomplished gentleman sportsman—has watched the bird with much of both curiosity and interest. Is this robin a lunatic that it should have preferred the icy North to the sunny South during the winter? Why did it remain here?—DACI.

"GAME" IN MARKET.—New York City.—*Editor Forest and Stream:* Have we in New York a society for the protection of game? In front of many of the meat markets may be seen almost any day numbers of birds that are not used for food, but are supposed to be protected by law. On Sixth avenue, between Fifty-third and Fifty-fourth streets, I saw to-day, hanging in front of one market, three large gulls, one falcon, two sparrow hawks, one owl, one crow, a porcupine, and a large owl alive, in a box not much larger than itself. I have often seen a number of great red-headed woodpeckers, yellow hammers and smaller woodpeckers, and various other birds, often of beautiful plumage.—XX.

CHIPMUNK'S BURROW.—West Stockbridge, Mass., March 3.—The notes lately published in your paper about chipmunks and their burrows remind me of one of my grandfather's stories, which was this: A lot of loafers around a barroom fire agreed to treat if any one of them asked a question that he could not answer. A. commenced by inquiring why a chipmunk left no dirt around his hole when he dug it; and as no one could answer replied when called upon, that the chipmunk commenced at the other end of his hole to dig. Then B. inquired how he got there, and as B. could not answer his own question, he treated the boys amid a roar of laughter.—T. S. H.

ROBINS AND CHINA BERRIES.—North Middletown, Ky.—In reply to Edward Jack and your note thereto in your issue of Feb. 17, in regard to robins eating china berries and becoming intoxicated, let me say a word in defense of the birds. From my own observation during a number of years I do not believe the birds are intoxicated, but by the swelling of the berries in the crop they become choked and fall to the ground. Out of the thousands of robins that feed on the berries during the day comparatively few are disabled so as to be caught. I wrote a short article on this subject which was published in your paper in 1877, I think.—ISSAQUENA.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase and presentation.—One ashy opossum (*Didelphys cinereus*), one black-striped wallaby (*Halmaturus dorsalis*), one Barbary ape (*Macacus innuus*), five macaque monkeys (*Macacus cynomolgus*), one common seal (*Phoca vitulina*), one sparrow hawk (*Falco sparverius*), one bluejay (*Cyanurus cristatus*), two tree sparrows (*Spizella monticola*), one red-tailed buzzard (*Buteo borealis*), one red-shouldered buzzard (*Buteo lineatus*), and one barred owl (*Syrnium nebulosum*). Born in the garden—One Indian buffalo and one hybrid monkey) Rhesus and Macaque).

Game Bag and Gun.

A DAY AT GOOSE POND.

IN November, while camped on the shore of the famous Goose Pond, I had a few days' fine sport after ducks. About 4 o'clock A. M. I was aroused by a poke in the ribs by Mose, who said, "Git out of this and chuck up." With this gentle hint I arose and prepared breakfast in a short time and rolled Mose and A. out of bed. A. went out of the shanty, and on coming in reported a northwest wind. "That's business," says Mose, "we'll have some fun to-day."

Breakfast over, we went down to the boats, turned them over, got in and shoved off just as the eastern sky began to get a little light. Five minutes' run brought us to our stand. We took a place on the east side of a small island and built hides about two rods apart, Mose on my right and A. on the left. We put the decoys a few yards in front of us, arranged the quills around our boats and waited for the flight. A few minutes passed, when a lone "broady" comes in over the decoys and turns to the right, but is neatly shut up by Mose's gaspipe, as A. calls the little side snap English gun. "She is a close shooter," Mose remarked. "Yes," says A., "her former owner sent her over to the Kewanee pipe factory and had her choked." At this point of the debate a flock of twenty mallards came in over the decoys, and just as they hung their red feet down to light, we gave them six barrels. Four came down with a splash, while the rest strained their wings to get to a safer height. Mose and A. claimed two apiece, while I felt sure I had killed with the first barrel. The white breasts of three of them lay upturned in the water. Ducks in this position always scare incomers, so I poled out and took them in. Next a spiketail drake came over pretty high up, but when A.'s 10-bore spoke he let go all holds and nearly fell into my boat. In a short time three spoonbills came in. Mose killed two with his first barrel and then we shot a load apiece at the remaining one, which flew two or three hundred yards and fell in the tall rushes. Then a flock of mallards came over up well out of reach, but Mose sounded his call vigorously and they took two or three circles and sailed in. We paid our compliments to them and five came down, two of them with broken wings. One started for the rushes but was halted by a load of 4s sent by the gas pipe. Starting after the other, which kept diving among the decoys, I ran up to the spot where he had gone down last and raised my paddle to flatten him. When he came up I struck at him and missed. Next time he arose I drew back to strike, but he seeing the descending paddle dove again, when I stayed the blow to be ready for him on his reappearance. "Balk," said A. (a ball player of no mean pretentions). The wily greenhead thought he would take his base any way, for he made a long dive and came up about thirty yards away. I picked up my Parker and stopped him. The flight ceased a couple of hours, and then somebody routed them out of St. Peter's marsh, and such a flight of small ducks. We shot till our guns were fairly hot, when the birds stopped flying. On picking up the killed, about a dozen, we calculated that one or two of us had made a good many goose eggs. The flight was mostly of teal, with a few bullet ducks and sawbills. It was well on toward noon when we quit the marsh and went to lunch. On our arrival at the shanty we found long John W. of N., an ardent duck hunter and a good fellow generally.

After lunch we went out again, Mose taking John in his boat. The sky became overcast and black ragged clouds came up from the northwest and the wind increased to a gale, twisting the rushes and churning the water into foam. The decoys, though close to the leeward of the island, were nearly all overturned. The air was full of ducks. They hugged the crest of the waves in flying in, and when we rose to shoot the wind carried them out of gun shot in a twinkling. The second barrel was useless and their feathers fit so close that the first barrel was not always effective. The killed floated against the east shore. The water being so rough that we could not pick them all up till morning, when it was calm. We started in before dark, well pleased with the day's shoot. The little boat that carried double required skillful handling to prevent a capsize, but we finally reached our grounds right side up. WALTERS.

SHEFFIELD, Ill.

NOTES FROM WORCESTER.

WORCESTER, Mass., March 3.—The annual meeting of the Worcester Sportsmen's Club was held in Temperance Hall, Monday evening, Feb. 28, with a very fair attendance. The secretary's report was very satisfactory and furnished abundant evidence of faithful work on the part of that officer. The report of the treasurer showed the financial condition to be excellent, with a net gain to the treasury of over $200, the present surplus being $297. The officers for the ensuing year are: President, Maj. L. G. White; First Vice-President, A. B. F. Kinney; Second Vice-President, M. D. Gilman; Secretary, E. F. Swan; Treasurer, Alba Houghton; Executive Committee, G. J. Rugg, Webster Thayer, W. L. Davis and E. S. Knowles. The club has been in existence thirteen years, and has without doubt spent more money in the enforcement of the game laws and feeding of quail in severe winters than any club in the State outside of Boston. There has nearly always been a handsome surplus in the treasury and never an assessment in the club's history. When the new club house was built, they found after it was completed and furnished that more money had been expended than was expected, the treasury empty and still a few unpaid bills. As soon as this became known some $300 were raised by subscription, and the club was again on a solid basis. At the annual meeting the retiring secretary, Mr. Corren Doane, was presented with a fine grade Spencer repeating shotgun in appreciation of his services the past year, Maj. White making the presentation in a very neat speech. Mr. Doane was completely surprised, but made a very graceful acknowledgment.

The fox hunting season of the Worcester Fur Company closed Monday night, after the usual duration of five months, beginning Oct. 1, 1886. The closing day was cold and windy, with a hard snow crust, and nobody ventured out. The season, taken as a whole, has been about up to the average in point of number of foxes killed. The first half the weather was exceedingly good, but since Jan. 1 there have hardly been a dozen good days for the sport, nearly every snow storm winding up with rain which formed a hard crust.

Of the thirty or more active members in the company nineteen have succeeded in capturing one or more foxes, and of the total number, forty-one, there is not one of rare color. This is something very unusual. Nearly every year some member having killed a cross gray, and within five years two pure black foxes have been killed, one by Alvin Fisher, who sold it to the Boston Natural History Society. The other, killed by J. H. Locke, is now the property of A. B. F. Kinney, who makes a standing offer of $100 for one that will match it. Uncle Nathan Harrington, president of the company, took the contract to kill five, but fell just one short of it; a remarkably good score, however, for a man seventy-two years old, and which is beaten by no member save John M. White, Messrs. Bates, Slocum and French being the only members who equal it. It should be said, however, in justice to Mr. Slocum, that he has been laid up with rheumatism nearly half the season. He ranks as one of the most successful fox hunters in the State. In years when the last half of the season has been exceptionally unfavorable an effort has several times been made to extend the open season one or two weeks, but Uncle Nathan has always "sat down" heavily upon all such schemes, arguing that it would only work mischief, and the movers have never been able to carry their point. There will be no effort in that direction this year, and if any member should yield to temptation and kill a fox before the first of next October—a thing which is not likely to occur—he would be summarily read out of the company.

It is a matter of surprise that foxes are plentiful around Worcester, yet the oldest members declare that they have never known them more numerous than the past season, and it is a fact that during the last two months a track could be found on almost any good morning within ten minutes' walk of the terminus of the horse railroad at Adams Square, scarcely two miles from the city hall. The following summary of the season's hunting may be interesting: Nathan S. Harrington 4, John M. White and A. B. F. Kinney 9, John A. Slocum 4, J. H. Locke 2, Geo. T. Bates 4, Samuel Thayer 2, Andrew Thayer 1, John T. Perry 1, R. D. Perry 1, Chas. Knight 1, Fred Weatherhead 2, Tyler Newton 1, L. E. Divoll 1, Horace Adams 1, Wm. L. Davis 1, Leonard Rand 1, Milton Rand 1, Martin M. French 4. Total, 41. E. SPRAGUE KNOWLES.

In a Worcester exchange we find this: "Mr. Elisha Knowles knows a good thing when he sees it, but it was not expected that he would recognize the surprise present at his store on Pleasant street when he entered at 7 o'clock last evening, for his friends who were there before him had contrived to shut off the gas. Elisha was at the store a few minutes before 7 o'clock, but was called out by Mr. Eugene F. Swan to discuss matters connected with the Sportsman's Club. While he was out his friends assembled, among whom were Messrs. Balcom, Allie Perry, W. S. Perry, Henry Mitchell, C. R. B. Claflin, Ed. Whitaker, R. D. Perry, S. Foreman, Corren Doane, Nathan Harrington, A. B. F. Kinney, L. D. Hubbard, D. S. Jackson and M. D. Gilman. At 7 o'clock Mr. Knowles returned accompanied by Mr. Swan, and finding the gas out concluded something was wrong with the meter. The whole thing was explained to him a few minutes later, when some one touched a match to the gas, and Mr. A. B. F. Kinney called the storekeeper's attention to five cushioned arm-chairs, which, in behalf of the sportsmen of Worcester, he presented to Mr. Knowles in token of their esteem and friendship. To say that Elisha was surprised and gratified, expresses his acknowledgment of the gift, which he made in a few words gracefully and appropriately spoken."

A MINNESOTA GAME REGION.

FIR, Marshall county, Minn.—I have noticed an absence of reports from this little northern corner of Minnesota, a hunter's paradise; and although of a selfish nature, I am at all times willing to let brother sportsmen share my enjoyment, especially when there is so much. Shooting begins in April on geese on their northward flight, though many gray geese hatch in this Roseau Muskeag. For about four weeks we have all the sport one may desire, first on gray goose and brant, then on the snow goose or wavy; which destroys hundreds of acres of newly sown grain previous to taking flight about May 18 or 20 for its floating hatching ground in Hudson's Bay. The plains at this same season are covered with curlew and golden plover, to say nothing of yellow-legs, snipe, rail birds and other small fry which are shot in the East, but are left entirely unmolested here. This spring hunting from stands is very pretty sport, particularly if one is able to call the different varieties of geese and thoroughly understands their habits. From the time the wavys leave all is peace until the much-longed-for prairie chicken and duck shooting begins. Then the country for miles is alive with game, thanks to the game laws which are fairly well observed. By the time this sport is becoming monotonous, back come the geese in thousands. I have seen them rise from a little lake of 200 acres near my house, when one could hear nothing else for their noise. The flock was variously estimated at from 5,000 to 10,000, and there they stayed till it froze up, going to the grain fields morning and evening.

The geese having gone we turn our attention to the heavy game. Moose, unprotected, may be killed at any time, and as there are a considerable number ranging from here to the Lake of the Woods, it is no uncommon thing to get them. I myself fell in with four in the latter part of September, a bull and three cows, but alas! my rifle hung in the house three miles away. Words would fail me to describe my feelings as I watched that monarch making love that warm evening. I was unseen by them and in nice shot.

A number of black bear have been killed along the two rivers by settlers, but as they den up about the time they get prime it is only luck if one finds a good hide.

Elk are in large numbers and several have been killed about twenty miles further east. I saw nine, before the season came in, at different times around here, but have not been able, owing to sickness, to follow them to their winter quarters as they always band together about the first snow and go east. Deer are thick; I've killed eleven near home. How many species of small deer have we? There are the blacktail and whitetail, but there are many different heads, some with long whitish ears and head, others short, chubby and dark; some with a little round small horn, as big as a deer with a great cradle on his head. I have certainly killed four different shaped heads.

This country is easily accessible, and the great Roseau Muskeag, the breeding ground and grand natural preserves for all species of game is not likely to be dry enough for the Indians to burn again during the next twenty-five years, so we may hope for a continuance of sport till the march of civilization drains all this country and drives the game to the more distant forests of the north.

I have not alluded to fish, knowing nothing of them, except that a few Indians catch four or five different kinds by sleigh loads, selling them at five cents each.

I. F.

ABOUT PENETRATION.

AUGUSTA, Ga., March 2.—*Editor Forest and Stream:* "Von W.," in your issue of Feb. 24, in commenting on my test for penetration, says he is at a loss to imagine what results I expected to get. Well, I got exactly the result expected, and that is, that a multiplication of wads in a shell, with a corresponding reduction in the quantity of powder, would not give as good penetration as a lesser number of wads and more powder.

In my article of Feb. 2 I did not enter into a discussion of the merits of the test I made, but simply gave it for what it was worth. The reason for my making the test was on account of a good deal of argument about here on the penetration of powder closely confined in a shell with many wads. Some contended that this confinement would enable the shooter to load lighter charges, etc. Some men have put as much as 2 felt wads and 10 to 12 card wads on powder, and loading about 2¼ drams, claiming this gives better penetration than the ordinary way of 3 to 3¼ drams and 2 wads. The claim was, the closer the powder was confined the more powerful the explosion. I did not hold to this idea, hence made the experiment for self-gratification, and having done so, gave it to your paper.

I trust "Von W." has gotten out of the snow sufficiently to make the experiments he desires, and will give your readers the benefit thereof. I and others will be interested in them. While he is at it, I would suggest that he also test the strength of the various makes or brands of powder. The best powder in our market is Hazard's Eagle Ducking and Orange Ducking. I use either, but prefer the former, because I think it cleaner. I am anxious to get a powder with little smoke, strong and clean. It is said that the Quick Shot is of this quality, but it is not in our market. J. M. W.

WRITES A MONTANA HUNTER: "I think FOREST AND STREAM is the boss paper, and I will subscribe just as soon as I can ship my furs and get the price."

THE MAINE COMMISSIONER CHARGES.

AN investigation by the Governor and Council has been ordered on the formal charges preferred against E. M. Stillwell of Bangor and Henry O. Stanley of Dixfield, the Maine Fish and Game Commissioners. The movement against the Commissioners originated in Franklin county.

The following from the Boston *Herald* gives the side of the element which is inimical to game protection and has undertaken this move to abolish game protection.

The officials are charged, first, with an improper and unjust enforcement of the fish and game laws; second, with maliciously prosecuting Gen. George M. Harmon of New Haven, Conn., whom they know to be innocent; third, with having used funds, provided by the State for the propagation of fish and game, improperly and to defray their own private expenses; fourth, with having, through prejudice, failed to properly protect or propagate fish in the great Rangeley Lake region; fifth, that not only have they failed to properly protect or propagate fish in that region, but that they have taken spawn from those lakes and sold it outside the State; sixth, that they have taken fish from spawning beds, and, after removing from them their spawn, have marketed the fish; seventh, that one Commissioner improperly and unlawfully attempted to influence a witness in a fish and game case.

This very brief summary is sufficient to outline the case brought against the Commissioners. Fremont E. Timberlake of Phillips, county attorney of Franklin county, and Spear and Clason of Gardiner are the attorneys engaged to present the evidence to the Governor and Council at the investigation. In addition to the evidence they will present an immense petition of citizens of Northern Franklin, asking for the removal of Commissioner Stillwell. The petition is headed by Hon. N. B. Beal, president of the Sandy River Railroad, and contains the names of a great number of the most prominent citizens, among them Hon. John R. Tootaker of Rangeley county, Commissioner of Franklin county; Maj. E. J. Gilkey of Strong, member of the State Board of Agriculture for Franklin county; Henry P. Dill of Phillips, ex-United States Consul to Guelph, Can.; Hon. Isaiah Chick of Madrid, ex-county commissioner, and Hon. Jeremiah W. Porter of Strong. In addition to this, similar petitions are being prepared in many other sections of Maine. As stated above, this movement originated in Franklin county, but no sooner was it publicly known to have started than from all sections of Maine came aid and encouragement, and evidence which, the prosecutors claim, will sustain the charges. The prelude to this investigation by the Governor and Council begins in Farmington next Tuesday in a trial before the Supreme Judicial Court now in session there, in which case Gen. Harmon of Connecticut brings suit against Game Warden Huntoon of Rangeley and the Fish Commissioners to secure $40 claimed to have been illegally received by them for the killing of a deer.

The case is a noteworthy one, and attracts widespread attention and interest in Maine. The suit is one of quite a series of suits out of which, primarily, the whole movement against the Commissioners grows. A statement of its salient point may not be unimportant. Gen. George M. Harmon of New Haven, Conn., is one of a party of gentlemen who own the noted Lake Point Cottage in the Rangeley Lake region. This party, widely known as the Tuttle party, has done more to develop that sporting region, perhaps, than any other out of Maine influence. Its members are men of high reputation and standing, and are law-abiding citizens. On Sunday morning, June 15, 1884, Gen. Harmon was sitting on the veranda of the Mountain View House, Rangeley Lake, in company with fifteeen or twenty other gentlemen, when a deer was noticed swimming in the lake, which stretches up almost to the very doors of the hotel. Although the month of June is close time, and in addition to June every Sunday in the year, yet the temptation was too great, and immediately a large part of the gentlemen present took their boats and started in pursuit of the deer. Gen. Harmon was rowed by an expert oarsman, hunter and guide, George Thrasher, of Rangeley, and thus was able first to overtake the deer. It was their purpose, as well as the purpose of all the gentlemen, so it is claimed, simply to capture the deer alive, but, intoxicated with the delight of the chase, Thrasher raised his oar and dealt the animal a stunning blow. Seeing that the deer was crippled, stunned and wounded, Gen. Harmon directed Thrasher to cut its throat, which he did. The General at once forwarded $40 to Game Warden George D. Huntoon of Rangeley, with the statement that it was to pay the fine for killing a deer. Huntoon came out at once to Lake Point Cottage, and the General states that he fully explained to him the circumstances, and said that he was willing to do whatever might be necessary to satisfy the law. Huntoon had him arraigned before Trial Justice James W. Butterfield of Phillips, and in answer to the usual interrogatory the General replied that he did not kill the deer, but that he was settling for the guide, and, if necessary, he pleaded guilty. Game Warden Huntoon reported the case immediately to his superior officers, and they directed the prosecution of Harmon for having killed the deer on Sunday, that, too, being close time. This prosecution utterly failed, the court ruling that the law had been fully satisfied in the prosecution for the month of June, which includes every day in the month, Sundays not excepted. Thrasher was then prosecuted for killing the same deer, and, as he was really the party that did kill the animal, was easily convicted. The State thus received pay twice for the same animal. Now, Gen. Harmon sues to recover $40, and this is the case to be tried in Farmington next week. Last year Gen. Harmon brought suit against the officials for maliciously prosecuting him. The case was tried in Bangor, and Gen. Harmon won. Feeling that he has been ill-treated by the Commissioners, Gen. Harmon signs these charges that have been filed with the Secretary of State. The movement is making much excitement and deep feeling in Franklin county.

The principal topic of interest in fish and game circles this week is the proposed impeachment of the Fish and Game Commissioners of Maine. The Commissioners are charged with an "improper and unjust enforcement," etc. The facts of the matter are that it has been impossible to properly enforce the laws in northern Franklin county, from the fact that the hotel and summer travel interest has given the Commissioners all the trouble possible. Commissioner Stillwell himself, on one occasion, stopping at a hotel at Phillips, on Sunday morning saw the proprietor set off, in one of his teams, a hunting party, armed to the teeth, though it was in mid-summer and close time on every class of game. Mr. Stillwell objected and made an enemy of that hotel keeper.

They are charged with "maliciously prosecuting Gen. Harmon, when they knew him to be innocent." That is an old story. They knew he had been an accomplice in the killing of a deer in the month of June on a Sabbath morning. They have long known him to be a rich man with the determination to hunt and fish to his own liking, and they proposed to make him pay roundly for the offense he had committed. For this Mr. Harmon has taken upon himself the business of prosecuting the innocent commissioners. Mr. Harmon is not a citizen of the State, but the people of north Franklin bow to his dollars. Some peculiar facts will come up in the hearing concerning this man's connection with the deer case and the persecution of the Commissioners since. A third count is "having used funds provided by the State," etc. Nobody ever heard before that the State had appropriated any funds beyond the meanest pittance.

Fourth—with "having through prejudice, failed to properly protect and propagate fish in the great Rangeley Lake region." Great! Great! Oh how great! Phillips and Rangeley, you should be rocked in the cradle of the State. Your little railroads and giant hotels should be patronized by all the earth. Your guides and landlords who have been in the habit of approaching the stranger in that region with the whispered announcement that he could kill deer in close time, "and damn the Commissioners," have not been to blame for some little feeling on the part of the game officers that they had few friends with you, have they?

Fifth and sixth—that "they have taken fish and that they have taken spawn." So they have, but never contrary to law. All there is to the law is very plain upon that question, and the acts of the Commission will bear investigation.

Seventh—that "one of the Commissioners has undertaken to influence a witness," etc. This is a grave charge. If it is sustained, it might have been sustained against mild old Izaak Walton himself. There are not two truer men walking the earth to-day. I say this from years of acquaintance with one of them and from a thorough acquaintance of the family of the other.

The Bangor *Maine Industrial Journal*, long recognized by the Commissioners as their worst enemy in the press of Maine, assures us that "This movement did not originate among the 'poachers,' as the names attached to the petition show." "Did not originate among the poachers," oh no? But are they not all stockholders in those railroads, the very existence of which depends upon the patronage of sportsmen? How many of them are hotel keepers and stage and steamboat owners? Now County Attorney Timberlake, did you not arrange for the hearing before the Governor and Council to come off on the same day that the case of Harmon vs. Stillwell was to be tried at Farmington? Was there no other day on the calendar but the 8th of March, the day set down for that trial? Did it not look as though you could be more likely to beat Mr. Stillwell if you could have him on trial at two places at once? But the good Governor of the State has proved too much for you, and on learning the circumstances, has put off the hearing to a day not yet established. Perhaps it may never come. It surely would never come if the Governor, with the full knowledge of the great struggle those Commissioners have been through, the good they have done, had it in his power to stave it off forever. Lawyer Timberlake, our regards to you. You have undertaken a big job. If you win, you will have done your State an incalculable damage. Present our compliments to all the host of poachers that come up from Boston every year with the desire to kill moose and deer in close time. Remember us to those rascals who stopped at one of the celebrated camps in your region and killed a wet doe the last days of June, 1886, and then there followed the bleating of two little fawns, heard plainly at that camp, but growing fainter and fainter night after night till they ceased altogether. Just mention us to that lawless "vacationist" who killed a deer up in your region last August, and then made his brags of it in the Boston *Sunday Times* with the casual remark that the fish and game laws were exceedingly unpopular in all north Franklin county. Commend us to those polite hotel keepers in your region who have been in the habit of serving "mountain mutton" on their tables in June and July. Then, last of all, as a particular favor, will you be kind enough to mention us to Jack Darling, with all his host of signers he brings from other parts of the State to that petition. And just ask him how he succeeds with his notice, "No wardens wanted here!" SPECIAL.

Editor Forest and Stream: In response to your request to forward any bills affecting the game laws likely to be passed by the Maine Legislature, now in session, I can say that no changes of much importance will be likely to be made, as none have been reported by the fisheries and game committee, with the exception of a bill now on its passage, which provides that the open season for moose, deer and caribou shall begin one month earlier and close one month earlier, and prohibits the killing at any time of any female moose, but leaving the present law in full force in all other respects so far as the deer are concerned. Parties in Portland and some other places, who have imported quail and liberated quite a number last year and will add to the number this coming spring, proposing to care for them during deep snows, desire to have the close time extended to Oct. 1 instead of Sept. 1, as previously, and a bill is now pending to that effect. A vigorous drive has been made at the anti-dogging and non-transportation clauses of the law, but this is meeting with almost no favor at all. The efficient working of the present law has made for it hosts of friends, and the present legislative body being remarkably level-headed, attempts of the lawless elements to effect changes to suit themselves have been met precisely as they should be. Our game and fish are increasing, on the whole; the deer notably, and remarkably so, which of itself is a knock-down argument in favor of the laws as they stand. In the fishery laws, all close time on black bass in waters where they have been more than five years have been repealed. We people are not much in love with them. While all are willing to admit their value in many places, they are a fish so predatory in their nature and so destructive to small fry, that there is much fear that they may get into waters now frequented by trout, and that would be a tremendous evil. A very great interest in the State of Maine, that of the lobster, has received very exhaustive attention from the committee, who have prepared a bill of great scope and very carefully drawn, very sharply defined, and a step in advance badly needed. These measures are all that has been offered thus far relating to the general laws. Much legislation on matters fishy of a purely local nature has been enacted, but it is a general feeling that the Maine laws are very good, and had better be left alone.

NOR' EAST.

AUGUSTA, Me., March 3.

THE GEORGIA LAW.

THE Augusta, Ga., Gun Club have provided for free distribution the full text of the game law for Richmond county, which they send out with these remarks:

"The object of this statute is the protection of the game, and it is hoped you will lend us your valuable aid in making the provisions of the law known and respected.

"The act prohibits the trapping of partridges, wild turkey, summer ducks, doves, woodcock, or any game bird, at any season of the year. Any person finding such trap is legally authorized to destroy it instanter.

"The act also prohibits the hunting of wild turkeys or partridges from April 1 to October 15; or of summer ducks or doves from April 1 to August 15; or of woodcock from January 1 to August 15, in each year. Any person buying or selling, or offering to sell, or having in his possession any of these birds within the above prohibited periods, is liable to the penalties of the statute. We may here remark that it is no defence that the birds were killed outside of Richmond county. The bare possession of them in that county within the prohibited periods constitutes the offense.

"It is also made an offense to destroy the nest of any partridge, wild turkey, summer duck, dove, or woodcock, or to rob the same of its eggs or young; and any person buying or selling, or offering to sell, or having in his possession the eggs or young of said birds at any season of the year, is liable to prosecution.

"The law further provides that the possession of any partridge, wild turkey, summer duck, dove or woodcock, full fledged and alive, during the hunting season, shall be *prima facie* proof that such possession was obtained by trapping, and subjects the person having them in possession to prosecution.

"For any violation of the act the penalty is a fine of not less than twenty dollars ($20) nor more than one hundred ($100), or imprisonment not to exceed one month, or by both fine and imprisonment in the discretion of the court. It is made the duty of the sheriff, deputy sheriffs and constables of the county, and of all county and municipal police in the county, to report forthwith all violations of this act coming to their knowledge to the Solicitor General of the Circuit or to the Solicitor of Richmond City Court. The prosecutor is entitled to one-half the fine, and if the defendant be insolvent, is entitled to an order for the amount on the Game Law Fund in the County Treasury.

"It is earnestly hoped that all persons interested in the enforcement of the act will promptly report all violations thereof to the officers of the law just mentioned, or to any officer or member of the gun club. The names of the officers of the gun club will be found at the head of this circular, and any communication addressed them on this subject will be kept strictly confidential. All that is necessary to state is the name of the offender, date and nature of the offense, and the names of the witnesses. Communications may also be addressed to Hon. Boykin Wright, Solicitor General; C. Henry Cohen, Esq., Solicitor City Court; Col. Wilberforce Daniel, Sheriff; Henry F. Campbell, Jr., A. M. Prather and Calvin C. Seago, Deputy Sheriffs; E. B. Purcell, County Police; Capt. Joseph A. Twiggs, Chief of Police, and Lieutenants Geo. B. Hood and Wm. Desmond, all at Augusta, Ga., or any county constable."

The officers of the Augusta Gun Club are: J. J. Dicks, President; Wm. H. Harison, Jr., Vice-President; John H. Meyer, Secretary and Treasurer; D. Sancken, Ordnance Officer; Salem Dutcher, Counsel. This law publication is a very sensible piece of work on their part, and one which may well be imitated by other clubs.

CHEAT MOUNTAIN ASSOCIATION.

CHARLESTON, West Virginia, Feb. 28.—*Editor Forest and Stream:* Mr. A. H. Winchester, of Chattanooga, Tenn., has just made a gift to Mr. William S. Edwards, of West Virginia, and his friends, who have organized themselves under the name of The Sportsmen's Association of Cheat Mountain, of the exclusive hunting and fishing rights, for the term of fifty years, over one of the most remarkable forest regions of the South, the great plateau and valley of the Shavers Fork of Cheat River in Randolph county, West Virginia. The tract comprises some sixty or seventy thousand acres of mountain, plateau and valley covered with unbroken forest, stretching for some forty miles along the river. There are no clearings within the tract, except where stood the old fort where General Wilder's forces held Lee and Jackson at bay throughout the war. And it all lies at an altitude of between 3,000 and 4,000ft. above the sea.

The Association as organized is made up of Pittsburgh, Ohio, and West Virginia gentlemen. The Association is of limited membership. A commodious club house and accommodations for the club members will at once be built upon the premises, gamekeepers employed to protect the abundant game already upon the estate and such further game as may from time to time be added.

The Association is to be congratulated on now possessing, through the liberality of Mr. Winchester, the greatest hunting park east of the Yellowstone.

The officers are: President, Howard Hartley. Vice-Presidents, D. McK. Lloyd, W. C. Shiras and R. G. Wood, of Pittsburgh; A. H. Winchester and W. S. Edwards, of West Virginia. Secretary, Authar Kennedy. Treasurer, D. P. Corwin. Directors—H. C. Bughman, C. A. Carpenter, Thos. M. King, David McCargo, C. C. Scaife, Theodore Sproul and C. A. Painter. WM S. EDWARDS.

CANOE AND CAMP COOKERY.—The days of outdoor rambles, for canoe trips and camping excursions, are approaching. The campers and canoeists who have not yet read Seneca's little book should provide themselves with it in good time.

BEARS, DOGS AND CUBS.

HERNANDO, Miss.—In your issue of Feb. 17 "Bruin" says he never knew a bear to kill a dog, and does not believe one could do it. He either does not know what he is talking about or northern bears are very different from southern ones. A few years ago Mr. Sam Williams, a noted bear hunter of this county, lost seven dogs, all killed by one bear, and he did not get the bear either. This was caused by a negro, who saw the dogs where they bayed the bear and urged them on. Only last winter I knew personally of two fine bear dogs being killed by a bear, Mr. Waldran, a deputy sheriff of this county, killing him afterward. Six dogs were in the chase, two were killed and another badly wounded. I could cite numerous other instances, but think this enough. Any southern bear hunter will tell you that when a bear gets a "square lick" at a dog he is done for, as he will fairly disembowel him. T. C. R.

I wish to make the inquiry of the numerous bear hunters who contribute to your columns, if any of them ever killed, or saw killed, after having been run by dogs, a female bear that was *enceinte*—that is, had unborn young. ISSAQUENA.

Editor Forest and Stream:

In the FOREST AND STREAM for Dec. 23, "Mark West" asks for information on explosive bullets and their effect when used on large and dangerous game. Having had quite a little experience in the line of bear killing with different kinds of ammunition, I will give him a few of my ideas on the subject. I have used explosive bullets and have seen them used to some extent, but so far I have not seen any great execution done with them. Several instances I remember of explosive bullets fired at bears, when they exploded in the muscles of the neck and head, and never reached the bones, and did not seem to bother the creatures much. I suppose if you could get bullets to explode in the right place they would do great work. But then, if you can get solid balls in the right place, bears both large and small are easily enough killed. My preference of bullets for large game is a solid ball slightly hardened, with enough powder behind it to send it crashing through flesh, muscles and bones, and either to go through the animal or batter itself up into twice its natural caliber. I have used a Ballard .40-85-370 for several years, and to my notion it is as effective ammunition as a man need ask for. The greatest trouble we have in killing bears here is to find gentle ones that will stand fire. I suppose that what makes them so wild is that we hunt them a great deal for the bounty the Territory pays for killing them. Though I have killed and helped to kill some forty odd bears in the last two years, I have yet to see the first one show anything like a dangerous fight. CHARLIE MENGES.

MONTANA.

ONTARIO NOTES.

BELLEVILLE, Ont., Feb. 28.—With some amusement and no little disgust, I read in a recent issue of an Ottawa newspaper the following: Messrs. G. B. Moore, A. J. Angus and J. F. Inglee killed near the Schyan River, near Pembroke, three or four days ago, the largest moose ever seen in the Upper Ottawa district. Mr. Moore is the local agent for Messrs. Bronson & Co.'s lumber firm at Schyan, forty miles from Pembroke, and Mr. Angus, the book-keeper. Some of the men at the shanties having reported that an enormous moose had been in the woods near Black River, Moore and Angus started out to find him. They got on his trail and followed him. The snow in the woods was very deep, with a crust on the surface, and the moose had difficulty in getting along fast, cutting and bruising his legs. Moore and Angus eventually overtook him on a high hill, and near the edge of the steepest side he stopped and showed fight. Angus fired, and the ball, striking on the frontal bone near the eye, glanced off without having much effect except to render the huge beast desperate. He charged his assailants. Moore's gun missed fire and the beast reached him. Moore had an axe, but before he could do any damage with it the beast knocked it out of his hand. Both men had to dodge it round trees, the deep snow helping them, getting in an occasional blow with clubs, and things were looking serious when another factor appeared upon the scene. Mr. F. J. Inglee, jobber for Bronson & Co., who had been tracking the moose for two days, came up, and getting a broadside chance at the moose, put a bullet into him, and on Inglee turning to run he tripped on his snowshoes and fell over the steep brow of the hill and down the almost perpendicular descent of 150ft. or so, the snow alone saving him from severe bruises. The moose stood on the brink of the precipice shaking for a moment, and then dropped dead in his tracks. Inglee's shot had passed through his lungs. Brought to Schyan, the dressed carcass was found to weigh 900lbs. The skin weighed 113. The residents of the district agree that it was the largest animal they had known to be killed there."

It seems to me, and I think every sportsman among your readers, that there is not quite so much honor or glory in slaying a moose under the circumstances above narrated as the "heroes" of the exploit seem to imagine. It never occurred to Messrs. Moore, Angus and Inglee that they had violated the law in killing a moose in Ontario in February, otherwise their boastings would have been made in private. As the law stands, however, moose and other deer are protected between Dec. 15 and Oct. 15, and the parties concerned in the killing this "forest giant" are liable to fines of not less than $10 nor more than $50 each and costs, which ought to be exacted.

It is reported that the slaughter of red deer in the Province of Ontario, and of caribou in the Province of Quebec, has during this winter been very great. The snow which fell in January had a crust upon it during the greater part of that month sufficiently strong to carry a man on snowshoes, but through which the sharp hoofs of the deer broke. All through "the back townships" of Ontario this was taken advantage of by scores of hunters, and in many districts so deep was the snow through which the deer had to plunge that it was possible to run them down and kill them with an axe. The depth of the snow, by preventing the deer from getting at their usual food, drove them into the vicinity of the lumbermen's shanties and the outlying settlements for food, and quite a number were actually killed in barnyards. This wholesale slaughter has resulted in a plethora of venison in all the markets, and the price realized for it toward the end of the season was so low that it hardly compensated the hunter for the price of his powder and shot. The same condition of things has prevailed in the caribou country. The game laws, as they at present exist, do not allow of a stop being put to this useless slaughter. What is needed is a law preventing the killing of deer and caribou during the months of December and January, as well as February and March. As a result of this year's slaughter the deer have been exterminated, it is believed, in several districts in Ontario.

The following lamentable result of criminal carelessness in the handling of firearms is reported by telegraph from the same district of Ontario:

"James Cherry, cook, Nipissing district, accidentally shot himself on Tuesday, Feb. 22, and died a few hours afterward. He was hunting with a repeating rifle, and had shot a squirrel. The squirrel, wounded, fell among some fallen branches. Cherry swung the handle which loaded the repeater, and poked at the squirrel with the butt of the weapon, forgetting that it was loaded and cocked. As he worked among the debris the rifle was discharged and the ball entered his left breast near the shoulder and passed out obliquely. He managed to get to the shanty, and explained the accident to his comrades. About 5 o'clock in the evening he expired." R. S. B.

GUNNER, DIPPER, HAWK AND CROWS.—Bay Ridge, Md., Feb. 28.—I noted in your issue of Jan. 27 the report of the West Chester Microscopical Society on the food of hawks and owls. Here is a strange hawk incident which happened in my experience. A few days ago while shooting over decoys I shot a dipper through the head and he began circling upward at a lively rate. I stood watching, expecting every moment to see him fall to the water dead, but you may imagine my surprise to see a large red-tailed hawk give chase, and after folding the duck carefully in his large wings, I suppose to get a firm hold with his talons, sail leisurely to the opposite shore. I followed in my boat, but he saw me coming and flew to a large cedar. By this time a half dozen crows joined the chase and for a while it was doubtful who would get the duck. I followed the hawk from tree to tree for at least a quarter of a mile, but not until he had received part of a charge of No. 4s (though not enough to kill him) could he be persuaded to drop it; and when I picked the duck up it was still alive, with an ugly gash on the head, which must have been made by the hawk's beak. I was very sorry not to kill the hawk, as he would have been a beauty to mount.—H. C.

TORONTO, Ont., March 5.—The act passed by the Ontario Legislature prohibiting spring shooting will be felt by us for the first time during the coming season. Hitherto all ducks not known as mallards, gray, black, wood or teal were not protected until May 1. Now, however, all are under the same law. Nobody objects to this, with the exception of some pot-hunters about the Bay of Quinte and Presque Ile. Some of these say they are going to shoot those species known as sawbills, coots, etc., claiming that they are not ducks. These species are not worth much for food, being "fishy," so if they confined their operations to such game there would be no harm done. The trouble is that the others would suffer if they came in the way, and it would be very hard to convict transgressors. If there is no excuse for having a gun out at this season there will be little trouble. It is to be hoped the game protection societies will see that the meaning of the law is enforced and will not let the decision of a country magistrate settle the matter if it happens to be adverse to the interests of legitimate sportsmen.—TEST.

MASSACHUSETTS ASSOCIATION.—A goodly number of lovers of rod and gun assembled around the hospitable tables of the Tremont House last Thursday evening and partook of the good cheer afforded, more than fifty members of the Massachusetts Fish and Game Protective Association attending its regular monthly meeting. Supper being finished, President E. A. Samuels called the meeting to order, and in a few words congratulated the association on its success in enforcing the laws, and the recent decisions of the Supreme Court in its favor in regard to the lobster cases. The committee appointed to solicit funds for the purpose of enforcing the fish and game laws reported that about $400 had been paid to the treasurer of the association, and that if more money were needed it would be immediately subscribed. Attention was called to the recent death of George D. Oxnard, for many years a member and staunch supporter of the association, and a committee was appointed to prepare appropriate resolutions. Seven new members were elected, and applications received from fifteen more.

INTRODUCTION OF BLACKCOCK INTO NEWFOUNDLAND.—A most interesting experiment is now being tried in Newfoundland by the introduction of blackcock into the island. Mr. Robert Langrishe-Mare, of St. John's, a sportsman who has had considerable experience in caribou and other shooting on the island, has received from Scotland a number of black game. The first shipment arrived in Newfoundland on Oct. 21, and the second on Dec. 3, something like twenty brace, three birds only dying on the voyage across. On arrival they were at once conveyed by Mr. Langrishe-Mare to suitable places, and set free by him, when they immediately went off on the wing, and seemed quite strong. Since then the birds are doing well, and when last seen on the 1st inst., appear to have become quite at home in their new quarters. The Newfoundland Parliament has passed a law protecting the new arrivals for five years.—*London Field.*

VERMONT.—Post Mills, March 1.—This has been a winter of snow, fences and walls are now all covered with the mantle of white. How fares the game? Only last night I saw a number of grouse budding upon a neighboring apple tree and acting as if they felt perfectly secure in this quiet valley, where the game and fish laws are well respected. My gun is resting quietly in its case, but is not forgotten, as a look at its burnished and glistening barrels will show that it has good care. My little cocker spaniel has grown fat and lazy and lies quietly sleeping on the rug before the fire, but rouse her and whisper in her ear the magic word "partridge," and presto, with one bound she is upon her feet, ears raised, and tail wagging at the rate of 500 wags a minute.—OMPOMPANOOSUC.

THE DOCTRINE OF CHANCE.—This is rather neatly put by FOREST AND STREAM: "A Combination Sure to Work.—One law-breaking fool with a bullet in a rifle, and another law-breaking fool with a leg to put the bullet into. Send them out deer hunting on Long Island on Sunday, and the chances are ten to one that the bullet will find its way into the leg. It happened so last Sunday. Leroy Hill, a hotel keeper of Ronkonkoma, had a rifle, Michael Downey supplied the leg. They were hunting deer. Downey hid behind a tree; Hill saw him, took him for a deer, smashed one of his legs and lodged another bullet in his side. We extend to these two Sunday deer hunters the spmpathy due those who encounter misfortune while in the commission of a double misdemeanor." But the odd thing is that if a deer instead of Downey had been behind that tree the chances are about 66 to 1 that Hill would have missed!—*London Illustrated Sporting and Dramatic News.*

BISMARCK GUN CLUB.—Bismarck, Dak., Feb. 25.—At the annual meeting of the Bismarck Gun Club, held tonight, the following offiers were elected: W. H. Williamson, President; H. V. Wetherby, Vice-President; W. Aug. Fonda, Secretary and Treasurer. Range committee: Edmund R. Otis, C. B. Little, D. A. Tyler. Finance committee: O. H. Holt, J. George Rapelje, H. H. Day. The club resolved to appropriate sufficient money to stock the brush of this county with quail and partridge, and also to procure wild rice seed. The board of directors is making arrangements for a tournament next fall, and we expect to be able to welcome visiting sportsmen with a good old time. The club took decided action on the bill for the preservation of the National Park, and ordered a copy of their resolutions forwarded to the Committee on Public Lands, and a copy to our delegate in Congress.—W. A. F.

WILD TURKEYS IN GEORGIA.—Bainbridge, Ga., Feb. 29.—A wild turkey weighing when dressed 22lbs. was killed on Spring Creek, twelve miles from this place, a few days since. Two others were subsequently shot near the same place. Within a week a flock of three splendid fowls flew up in front of a train of railway cars a few miles from Bainbridge. When driving through the woods about ten miles south of Blakely the writer caught sight of one as it was rushing ostrich-like through the oak forest. It did not seem possible to me that any bird could have attained such speed by means of its feet alone. Southwestern Georgia will still afford fair sport in the matter of wild turkeys to him who will take sufficient time and exercise and due patience in hunting them. He may also happen on an occasional deer. Quail are abundant.—EDWARD JACK.

THE ALASKA EXPEDITION.—We are advised that arrangements are maturing for a proposed excursion party to set out for Alaska in May. Some twenty individuals have signified their intention of joining the party, the complement of which will be thirty. Mr. J. E. Palmer, No. 115 Greenwich avenue, New York, the projector of the excursion, has succeeded in making arrangements for a suitable vessel, the steam schooner Leo, rated as a staunch vessel. The estimated expense per member is placed at $500, a total of $15,000, to be expended as follows: Railroad tickets from New York to Tacoma and return, at $180 each, $5,400; special sleeping and parlor car, $700; Leo, ninety days at $60 per day, $5,400—$11,500, leaving $3,500 for board, hire of cook, porter, etc. Mr. Palmer will soon have ready a circular giving full information.

BLACK-GAME have been introduced into Newfoundland, and promise to thrive there and add to the available shooting resources of the island. Baron Von Seidlitz, of Pommern, Prussia, writes to the FOREST AND STREAM that he is desirous of attempting to import into his covers our American ruffed grouse. The bird would, no doubt, prove a most desirable acquisition to the sportsmen of Prussia, could its transportation be accomplished. Mr. J. B. Battelle has dispelled the old notion that ruffed grouse cannot be kept for any time in confinement: but it may be put down as extremely doubtful that pairs could be safely taken across the ocean.

A NEW EXPLOSIVE.—Still another explosive has now been introduced, this time by a Russian, who claims that the penetrative powor of the new substance he has discovered is ten times greater than that of gunpowder when used for cartridges. The ingredients composing the "silotvaar," as it is called, are not yet known, the inventor keeping his explosive a secret. No smoke or heat is emitted, it is said, and the discharge is not accompanied by any report. It is also asserted that this explosive may be used in a motor for the generation of power, and the inventor even claims superiority over steam and gas engines.—*Industries.*

HIGH POINT, N. C., Feb. 28.—*Editor Forest and Stream:* The quail have wintered well and we are having some of the best shooting that we have had this season. The birds are strong and I think they can fly about as fast again as they did last fall, but the shooting is now more in the open and some good bags are made. There are enough, however, to give us all the sport we wish, and if the breeding season is favorable we shall have more next season than we have had for many years.—POINT.

FLATBUSH, Ulster County, N. Y., Feb. 28.—Grouse have wintered well in this section notwithstanding a severe winter, noted for its many falls of snow and icy crusts. I put up ten different birds the other day (eight being in one flock) in an hour's walk. Two or three bud every evening in an apple tree within 20yds. of my house. Grouse were quite plenty last fall.—HOWARD BURHANS.

A 20-BORE PATTERN.—My gun is a 20-bore, 7½lbs., 30in barrels, and I shot 40yds. at a 30in. circle, with 3drs. of Dupont's powder and 1oz. No 8 shot, and put in circle 331 shot. I would like to hear from "Syntax;" can you not draw him out on the details of his experimenting with a 20-bore?—C. P. F.

DEER IN SULLIVAN COUNTY, N. Y., are occasionally seen and now and then one is killed. A large buck was seen in the vicinity of Monticello a week or two ago.

VERMONT.—West Charleston, March 2.—The reports are that the deer butcher has been making fearful havoc in some sections of the State. Fifteen were butchered in one yard containing twenty-four. The crust-hunter has an opportunity to slaughter owing to the great depth of snow and the sharp crust, the snow being from three to four feet in depth in the woods.—E. O. L.

THE NEW YORK LAW.

THE provisions of the proposed New York game bill were summarized in our issue of Feb. 24. In a printed copy of the bill sent to us by Mr. Roosevelt the May open deer season has been omitted. The following comparisons will show the proposed alterations. The first lines in each instance give present dates, the lines below proposed dates. The dates are inclusive:

NEW YORK OPEN SEASONS.

	May be Killed.	*May be Sold.*
Deer	Aug. 15—Oct. 31*	Aug. 15—Oct. 31
	Aug. 15—Oct. 31	Nov. 15—Dec. 15
		Aug. 15—Feb. 28
Rabbits	Nov. 1—Jan. 31	Aug. 1—Feb. 1
	Nov. 1—Dec. 31	Nov. 1—Feb. 15
Squirrels	Aug. 1—Jan. 31	Aug. 1—Jan. 31
	Nov. 1—Dec. 31	Nov. 1—Feb. 15
Wildfowl	Sept. 1—April 30	Sept. 1—April 30
	Sept. 1—Feb. 28†	Sept. 1—Feb. 28
Quail	Nov. 1—Dec. 31	Nov. 1—Jan. 31
	Nov. 1—Dec. 31	Nov. 1—Feb. 15
Woodcock	Aug. 1—Dec. 31	Aug. 1—Dec. 31
	July and Oct. 1—Dec. 31	July and Oct. 1—Dec. 31
Grouse	Sept. 1—Dec. 31	Sept. 1—Jan. 1
	Nov. 1—Dec. 31‡	Nov. 1—Feb. 15
Bay Snipe	July 11—Dec. 31	July 11—Dec. 31
	July 1—Dec. 31**	July 1—Dec. 31††

*By present and proposed law deer hounding allowed Sept. 1—Oct. 4. †By proposed law brant are not protected. ‡Ruffed grouse season in Adirondack counties, Sept. 1—Dec. 31. **Wilson snipe not protected. ††Western snipe may be sold at any time. Proposed season for robin and meadow lark, Nov. 1—Dec. 31.

Editor Forest and Stream:

The only serious difference of opinion among sportsmen consists in determining whether it is wise and right to shoot woodcock in summer. Personally I have advocated the shooting, and now desire to give as succinctly as possible my reasons. Let us look at the arguments against it and I will give these as fairly as I can, for no one can be more in favor of protecting game than myself. My efforts for twenty years past certainly show that, and when others feel like questioning my purposes they had better see first whether they have done as much.

A few persons, very few, will contend that the birds are not then fully grown. While they are not quite as large as the fall birds, most sportsmen will admit that they are as large as summer birds ever will be and are entirely mature. In the course of killing thousands, perhaps tens of thousands of them, I have never met with more than a dozen cases of broods after July 1, and then often the birds were of fair size for the table although not entirely full grown. I found more cases of undersized quail in November twenty to one. No legislation can cover every possible condition of events or individual discrepancies, and it should not be attempted. Others may think that by not shooting these birds in summer we shall save them for the fall and so increase their number. But this is a mistake for two reasons. Firstly the birds that spend the summer with us in our swamps go south after moulting in August, and never return to the places where they were hatched. The birds which we find in the autumn are rarely in the summer swamps, being found more generally on hillsides and on quail ground, and come from further north on their migration southward. So all we do by saving the summer birds is to supply New Jersey with what Canada does not with equal self-denial furnish to us.

But the fact is, secondly, that we do not save them at all, but simply give them to the poachers. Woodcock are the most liable of all our game to be shot out of season. They lie in the deepest undergrowth and in the wettest mudholes, where the poacher, out of sight, can crawl around and do his work. Nor like the quail are they found in bevies, but only a random shot tells of the foe, so that it is impossible to follow him if any enthusiast would engage in that unpleasant operation. When I was a boy, and in the course of my day's sport was saluted with the unwelcome cry of "get off my land," I simply used to wade directly from the sound through the deepest part of the mud, and never yet was followed for any distance. The farmer gave out at some point, it might be his ankles or it might be his hips, but there was always a limit. The poacher only has to pursue the same method to get rid of interference and the constable. Let any one who has doubt about this universal destruction, investigate so far as to go into the swamps where he knew there were broods hatched, and see if they have not disappeared by the middle of July. The law would simply give as it has given for years, all the summer shooting to those who disobey, and deprive of it all those who obey the game law.

Then it is said that summer shooting is too hot. Now is not this after all the true and only reason why some people favor the enactment of a restriction? Too hot! Why it is the very time of the year to shoot. Hot in the depth of the cool swamp with the spring water up to your knees! Call that hot? It is no hotter than it ought to be. But suppose it is hot, are we to make a law for the protection of sportsmen from heat or for the protection of birds from destruction? The former should be called a "coddling bill" for the assistance of weak-backed dudes. Suppose others were to say that December is too cold, and would not allow any one to kill quail during that month. If we are to consider heat and cold it would be better to fix the law not by the seasons but by the thermometer, and forbid all shooting when the temperature ranges over 70° or under 30°. Shooting is defensible only on the ground of its giving pleasure and health; mere killing is not an ennobling operation. Where is there greater delight than in summer woodcock shooting to those who have the stamina to follow it, and ought not we to encourage that stamina? No man will ever have the gout or rheumatism if he does sufficient summer woodcock shooting to get himself into those magnificent flowing perspirations it implies. It is worth all the hot baths that ever were invented, and is far more agreeable, indeed it is ten Russian and Turkish baths rolled into one.

One further objection is offered, which is that it will be made an excuse for shooting partridges and quail. As to quail, they are not found in the same localities ordinarily, but if people want excuses for wrong-doing they can produce them, and the man who will kill birds out of season will do it as readily without the pretense of woodcock shooting as with. Unless we can enact a law that no man shall be seen carrying a gun in summer, which is manifestly absurd as well as unconstitutional, we cannot prevent his shooting, and the only way to make him stop killing illegal game is to convict him for it. And I will take this occasion to suggest whether it is not about time that the rural districts set to work protecting their own game by punishing shooting out of season, instead of waiting for the New York society to stop the sale of unseasonable game, and so incidentally stop the killing. For our part here we think it is. I wish to say that while before the passage of laws interfering with summer shooting, I yearly killed hundreds of these birds, since their enactment I have hardly killed any, it being both vain and unwise to go after them during the month of August, when they are moulting, and during which alone it has been permissible to pursue them. That is just the month of the year, after the hatching season, when I should leave them alone. ROBERT BARNWELL ROOSEVELT.

Editor Forest and Stream:

If there is to be a change made in the present law for hunting deer let the month of October be excluded from the open season and the month of November added. No still-hunter wishes to hunt deer in October upon a bed of dry leaves, when his only chance of securing a shot is on the run, necessitating the wounding and loss of two for every one secured. Of course the limited number of three during the month can be secured, but at what a sacrifice. If protection really is the object sought, why not take a month when it can be accomplished without waste? It is a well known fact, that for every three deer the hunter bags upon dry leaves and sticks in October there is caused a loss of several more that are shot and escape. Substitute the month of November, when the hunter can track upon snow. Then if he only wounds the animal it can be traced up and a vital shot given, so that not one in a dozen ever escape to feed the ravens and pine marten. Thus the limited number is secured without waste. Secondly the temperature is such that all can be kept, shipped home and used to even the last pound. I also fail to see the consistency of making it lawful for the sportsman to kill three deer and unlawful for him to ship but one of the three home. If he lives in the vicinity and can furnish his own conveyance to take the game home he is justified in doing so. But if he happens to live at a distance and is obliged to ship by express or railroad, the law prohibits the act of moving more than one of the number. Two-thirds of the non-resident's booty must be left in the woods, given away or disposed of. Just where this protective power to the game comes in is a mystery to many, as much so as to cipher out how it would protect the deer to legalize the slaughter through May by jacking.

CHAUTAUQUA County, N. Y. CAP LOCK.

The following petition, signed by about 125 residents of Chatham, Philmont and Hillsdale was presented to the Board of Supervisors at a recent meeting: "*To the Board of Supervisors of Columbia County:* GENTLEMEN—We, the undersigned residents of Columbia county, do hereby request that the game law be amended, making it unlawful to export game from this county for the market. Whereas, There is a class of so-called sportsmen who make a living during the open season out of the proceeds of the game that they send to market, and Whereas, That if the present condition of affairs is permitted to continue it is a question of a few years only when the partridge, the most valuable of game birds in this section, will be completely exterminated. This is the only way that market shooting can be stopped. It has been tried in Dutchess and other counties, and to a great extent accomplished the desired result. As it lies solely in your power to make the amendment, we appeal to you, gentlemen, in the interest of all true sportsmen and for the protection of the game, hoping you will give this petition all due consideration."

An additional petition, signed by a number of Hudson people in relation to the same subject, was also presented. After some discussion the committee on laws was directed to prepare and present to the board a resolution in relation to the matter. After a short recess the committee reported a law making it unlawful to trap or kill wild game in the county for exportation, under a penalty of $5 for the first offense and $10 for each offense thereafter.

The Utica Fish and Game Protective Association Directors at a recent meeting denounced the proposed amendments to the Fish and Game Laws. The following expresses the sense of the association, and it was adopted:

"Resolved, That the Utica Fish and Game Protective Association is opposed to the sale of venison later than December 15, as is now provided.

"That we are firmly opposed to the killing of any game during the months of July and August, either woodcock or squirrel or any other.

"That the season for killing all kinds of game (except deer) or game birds should commence at the same time, September 1, of each year and end not later than November 15 or December 1, with not to exceed fifteen days beyond the killing season for the selling.

"That it is the experience of this association that all game laws will be violated so long as game can be lawfully sold or held in possession.

"That it is unwise and impracticable to have the seasons for either fish or game different in different sections of the State, because our experience shows that if one section is open to lawful sale, in the other section laws will be violated to supply sales in the open section.

"That the open season for trout fishing should be shortened, by not allowing the season to open before May 1 or April 15 in any part of the State, and it should not close later than September 1.

"That the killing of robins and meadow larks should be prohibited at all times; and finally,

"That the game laws as they are, are practically ample in everything except that the provision as to sale of trout under 6in. long should be restored, the section as to game birds re-enacted and spring shooting prohibited, and that any attempt to rewrite the game laws will result in more harm than good to the best interests of protection."

Col. I. J. Gray, the President, and J. D. Collins, the Secretary, were appointed a committee to oppose the Roosevelt bill in Albany.

A CARIBOU HUNT.

O'ER frozen ground and drifted snow
I travelled with old Indian Joe.

The night was coming on apace,
The snow was driving in my face.

Deep in Earth's spotless winding-sheet
We sank our weary snow-shoed feet.

A great forest lay before us,
Sibilant winds shrieked in chorus.

Tall and gaunt, the trees were bending
'Neath the blasts the Pole was sending;

Stout trunks as with pain were groaning,
O'er our heads an owl was moaning.

Our packs we threw from tired shoulders,
And slept by tall granite boulders,

That warded off the tempest's ire,
While brightly burnt the hot camp-fire.

We rose as the day was peeping,
O'er the hills red darts were leaping.

We cleaned our guns and ready made
To travel through the leafless glade.

We reached a stream where oft in June
Our reels had sung their merry tune.

Then o'er its winding icy bed
In all haste toward the lake we sped;

And saw a sign to hunters sweet—
Cloven tracks of caribou feet.

Now fast along the snow-bound waste
We hurried on in breathless haste;

And soon we reached the lake from whence
The stream leaves on its journey hence.

A sudden glance, said Joe "Here's luck!
Yonder stands the caribou buck."

Four does with their monarch walk,
Now we're in for a lordly stalk!

On each bank of the frozen sheet
We hurried on our snow-shoed feet.

I took the left and Joe the right,
As on we ran with all our might.

Oft through the trees I had a sight
Of the many-pronged, antlered knight.

I reached beyond him and his flock
And hid myself behind a rock.

Along the narrow lake he came,
By his side stood a favored dame.

His arched neck was proudly bent
As through the snow he slowly went.

My heart beat loud as he came near;
I felt a strange voluptuous fear;

I pulled the trigger; there was a flash—
A lofty leap, a headlong dash;

On his knees fell the wounded hart;
Trusty had proved my leaden dart;

Then blindly rushed away the does,
In mortal terror of their foes;

The snow was deep and oft they sank
While making for the other bank;

I saw them near the other shore;
Then loudly pealed a rifle's roar,

The favored hind fell on the snow;
With smoking gun stood Indian Joe.

And now I see upon my wall
The pronged antlers, broad and tall.

Oft again I see in my dreams
The leafless woods and frozen streams. G. V. S.

Camp-Fire Flickerings.

"That reminds me."

205.

A MONTREAL gentleman, lately deceased, used to tell a good story of his first attempt at duck shooting on the St. Clair Flats preserve. It was as follows: "I got up before daybreak, dressed, and went down to the landing, where I found my Indian waiting for me in the punt. It was deuced cold and nasty. I got in and we started for the pond I had drawn. As we were going through a narrow channel we suddenly came upon an immense flock of what I took to be ducks. I slipped in a couple of cartridges, and was just pulling the trigger, when the Indian yelled: "Don' shoot! don' shoot!" "Why the devil won't I shoot?" "Mudducks" (mudhens), he answered. Well, we went a little further till we came to a pond black with ducks. I was just going to let them have it, when the Indian again yelled, "Don' shoot! don' shoot!" "Why in thunder won't I shoot?" I asked. "Ducks go out to lake." (If the ducks are fired at on being flushed they will not come back, but if left alone will fly in in ones or twos all day.) I was getting pretty riled at being interrupted so often, and when in a short time we came upon a nice little flock of mallards and black ducks I was bound to let them have it, so gave them right and left before the Indian could speak. When he did, all he could groan was, "Woodducks! woodducks!" And sure enough I had smashed $20 worth of decoys. F. M.

BAD WEATHER BUT BIG FISH.

IN September I was at Mount Kineo, accompanied by an old friend, an ardent and successful fisherman. By telegraphing ahead we secured two excellent guides who advised camping out on Roach Pond, where, they said, good fishing was to be had with but few competitors. All arrangements being made, we started on Monday morning in a small steamer, which we had engaged to take us down to Lily Bay, from which point we had to carry over to Roach Pond, teams having been engaged beforehand for that purpose. The road was good until we reached the woods, when it became something awful; wading stockings might have been of considerable service. The glimpses of the woods on either side were delightful, a carpet of brilliantly green moss prevailing in most places, with here and there a tree leveled in some heavy gale lying prostrate, its roots firmly matted with clay and stones standing up like a wall. After a weary drag through mud and mire, varied by an occasional jolting ride on the teams, we emerged from the woods and saw below us the "pond," a lake of some six miles in length, with the neat buildings of Roach Farm at its outlet, backed by the two fine isolated Spencer Mountains, each about 4,000 feet high. After dinner at the farm the canoes were got into the water, and we paddled up the lake toward our camping ground, stopping off the mouth of a small brook to take a fish for supper. Chub were rather abundant, but we got trout enough for one meal.

Our camp was pitched on the west side of the lake, in a spot which would have been more sheltered if it had not been visited some time before by a lady who wished to have an uninterrupted view from her tent door, and so caused some cutting down of trees, which gave the easterly winds a clear sweep at us when they prevailed, as they did during most of our time. Here we staid all the week, having uncommonly bad weather. Only on two days could we get on to the lake, the rest of the time it blew a gale right on our shore, so that we could not launch a canoe, nor could we have gone far had we gone afloat, the sea running too high, and the birch, with all its weatherly qualities, being a poor craft to work to windward in when it blows hard. However, the first day proving fine, we went up the south inlet and took some eight or ten good fish of about 2lbs. each. On another day we took about the same number, and apparently could have made a big catch, as the fish rose freely, but we could only fish for our own frying pan, there being no way of disposing of what we could not consume. The wind had risen when we returned to the lake, and we had hard work to paddle back to the camp, where we found a visiting card pinned to the canvas of our tent, a piece of birch bark with the names of Mr. and Mrs. ——, Cleveland, O., written on it. We returned the call and found them ready to start homeward, bad as the weather was. Our only other neighbor was camping on the other side of the lake some two miles away. Time hung heavy on our hands; we shot at a mark, built a dock, read novels, talked, grumbled of course, and somehow or other got through the weary day. We had any amount of fine scenery to look at, the Spencers being in full view on the other side of the lake, and in the windy, cloudy weather, changing their aspect constantly in the most picturesque manner. Just opposite, forty miles away, Katahdin, the highest mountain in Maine, afforded a beautiful study of aerial color for an artist. As we were only fishermen, the scenery did not make up for our enforced idleness. The keen, cold air gave us capital appetites, and we thoroughly enjoyed the food so skillfully prepared for us. Every morning after our hasty toilet by the lakeside, when we were comfortably seated at our tent door, in front of the cheerful fire, came the inquiry: "How would flapjacks strike you fellows?" and the answer went back that they would strike us in the right spot. The bill of fare generally embraced trout from the larder at the lake side, where our catch was laid out on one of the many great trunks piled in confusion along the shore, the flotsam and the jetsam of the spring freshets of other days; in fact, we had trout cooked in every way possible under the circumstances, fried, broiled, baked and in chowder. Occasionally the tinned corned beef gave us a savory hash; tea accompanied every meal and was uniformly excellent, and last, but not least, we had fresh bread now and then; yes, fresh bread! made of self-raising flour and skillfully prepared in a little Dutch oven, despite the gusts

of wind and the powdered wood ashes they sent flying. The hardships of camping out have nothing to do with your daily bread; they come in after dark, which comes only too early in the month of September. One of our guides was a born joker, and kept us laughing after supper with his yarns about life in the army, for he had been among the stalwart men that Maine sent down to take a hand in the war. But sleep came to us pretty early in the evening, and although we lay down "all standing," or nearly so, with four or five folds of blanket over us, backed, in my case, by an ulster and a rubber coat, even this would not do, and the morning watch was very cold, our guides sleeping so soundly that the fire was never replenished. They always expressed great surprise at our discomfort: "Was you fellows cold with all them blankets? Why! me and Jack had only one blanket over us, and we was sweating all the time."

Another great inconvenience in this kind of life is the confusion always reigning among your personal effects. The rubber sack, generally used as a valise, keeps everything dry enough but in great disorder, anything you want is sure to be at the bottom, and the wrong thing generally comes to hand first.

We set out to return on foot, one of the guides piloting us while the other remained at the camp. The guide went ahead, through and over everything, his axe playing about as easily as a foil in the hand of a skillful fencer, now slashing off a stubborn branch, and anon snipping away light twigs that seemed to offer no resistance to its keen edge. After half an hour he found an old logging camp, two or three great buildings of big logs, now deserted, with saplings and vines beginning to shut them in and overrun them. One of the striking things about those woods is the absence of life. I do not refer to large game, for that has been driven further back, but, with the exception of a partridge that I saw and an owl that I heard, a few disreputable looking shelldrakes on the lake, and the inevitable loon, the neighborhood of our camp seemed abandoned by every living creature. From the old camp we followed the tote road until, after a long march, we came in sight of Roach Farm, still a long way off, when our guide left us and returned to camp. In the evening our guides came down with the canoes and impedimenta, and next morning we followed the teams back to Moosehead Lake, to try our luck at the east outlet, where fishing does not depend so much upon the condition of the wind.

The sail across the lake, here at its broadest, with two or three large islands to break the straight line, occupied two or three hours. At the hotel at the outlet we secured a room, although the place was rather crowded, and we managed to maintain ourselves despite an attempt to introduce another lodger to occupy the lounge, a proposal which we treated with the contempt it merited. I went down stream on foot with my guide and whipped a large pool industriously until near dark, without a rise. I began to think my innings would result in "a duck's egg," but I bethought myself that in all the fishing stories I had read, it was about the correct thing to try a white fly as dark was coming on. I found a very scraggy white hackle in my book which did the business very quickly, for it was taken almost at once by a three-pounder, with which we went joyfully homeward. My friend had got one of the same size at the dam. Next day at the same pool and one below it, I got three fine fish, 2lbs., 3lbs. and 3¾lbs., plenty of small trout turned up and were put back. During our stay here the gates of the dam were closed most of the time and there was to be seen occasionally in front of the gates a crowd of large fish waiting for their opening to go down the river to spawn. On the other side of the lake we had found fish going up Roach River into the inlets of Roach Pond for the same purpose; here they were going down stream. No accounting for taste. The dam was occupied a good deal by persevering fishermen whose object was trout, taken in every way possible; the toothsome worm and the alluring grasshopper were tried with very indifferent success, the fish being intent on something more important than feeding. Some of the fishermen went down the river in canoes, some went on foot, but few of them brought back many fish. One of the pedestrians, returning empty-handed, was condoled with on his bad luck; on the contrary, he had had capital sport and had left his fish at various places down the river; doubtless he intended to send a cart to collect them.

Wednesday morning I tried the big pool again, but without success, even when I put the canoe into it to reach the opposite side, which was far beyond my reach from the bank. Finding it no use we put the canoe into the lake and paddled along the front of the dam. Very soon a big trout rolled over on the surface, but refused to respond to my efforts on his behalf. We drew up cautiously alongside the boom at the furthest gate and I cast toward the gate where there was a swirl caused by a knothole close to the surface. Soon the tail fly, a small grizzly-king, was quietly taken and I at once stepped on the boom, the guide following with the landing-net. The fish did not pull very hard and we thought him a little fellow, but in one of his turns he passed near the boom and we saw him distinctly, a very large fish, followed closely by another as big as himself. We are never content. I caught myself wishing that the first had taken one of the upper flies so that his partner could have had a chance at the tail fly. The guide kept the landing-net swinging about well down in the water, to keep the fish from running under the boom, and this made him stay out in the clear water and fight fairly. In about 15 minutes he was in the landing-net and we guessed his weight to be 5lbs., but the scales afterward made him only 4lbs. 2oz., the biggest fish taken at the outlet for a considerable time. This fish with the three caught on the previous day, which had been kept alive, I had packed in a box with moss; my friend had the same number packed, and the weather being cool we were able to exhibit them in excellent order to admiring friends at home on the Friday evening afterward.

Thus ended a pleasant trip of a fortnight's duration, during which we had only five days on which we could fish; but one must take the weather as it come. Of two things we were pretty well convinced during our stay in Maine; first, that it is a mistake to use the large flies that are so generally cast at Moosehead, our fish having been taken with very small or medium sized flies, and not with what our guides contemptuously called "chickens." Second, that the end of September, although perhaps the best time to get big fish, is not the best time for sport, the fish being full of spawn and languid. The State of Maine very properly pays great attention to the enforcement of its game laws and may be supposed to fully understand its own interests, but I for one should be well pleased to see the season closed a fortnight earlier. C. H.

BROOKLYN, New York.

LAKE TROUT.

Editor Forest and Stream:

Permit me to add my mite to the store of knowledge about lake trout.

They do take the fly occasionally in Lake Superior, and in deep water, too. But this is not common in my experience or observation. A silver minnow (revolving) I have found most successful. These trout vary in appearance, as do brook trout, presumably from the circumstances of their habitat. The flesh is from a deep salmon red to a yellowish white, and I have seen some nearly as white-fleshed as the whitefish. This variation of color in flesh is, however, hardly greater than that in the brook trout.

My observation of the siscowet is confined to specimens taken in gill-nets. I have never seen one taken with fly or spoon. Nor have I seen specimens enough to venture the statement with confidence that they are never red-fleshed. But I have never seen a red-fleshed one. The flesh has been, in those I have seen and eaten, mainly of a cream or yellowish white color, without any pink tinge. I have found it a very sweet fish, but excessively fat and oily. I never saw a specimen weighing over 6 or 7lbs.

The lake trout, when the flesh is a deep salmon color, or red, is one of the best table fishes of fresh water. (The best is the whitefish, beyond all comparison, when properly cooked, fresh killed.) Broiled with pork or bacon strips before a camp-fire, it surpasses the brook trout in any form—at least to my taste and that of every one I have camped with.

Mr. Thompson's "Fishing Trip to St. Ignace Island" (in "Fishing with the Fly") gives ten local names of the three varieties of trout in Lake Superior. We presume he only gives a part, however, as he speaks from one local authority only. But when he says the "red trout" is taken only in the vicinity of St. Ignace Island he is greatly mistaken. As red-fleshed a lake trout as I ever saw I took off the Quebec Mines a few miles from the Agawa River. I saw one deep colored one weighing 17lbs. taken with a 2½in. silver minnow below the falls at Island Portage, on the Nepigon. I noticed on that occasion, also, that the party, half-breed guides included, ate no brook trout as long as the "laker" lasted. From my limited experience and observation I have not felt it safe to generalize, but my impression is that the lake trout of deep water is darker fleshed than that of shallow water. I saw several hundred pounds of lake trout at one time taken by some Indians in the shallow waters of Agawa Bay, and they were quite light in color. But this would hardly justify the conclusion.

Trolling for lake trout with a stiff rod or still-fishing for him with bait, is a sport not to be despised, even if it is not as good as fly-fishing for brook trout in the same waters. But the fisherman who hooks a seven or eight pounder, and uses rod and reel, has a good fight on his hands. I have been told that the finest lake trout fishing in the world is about the lighthouse twenty-five miles east of Keweenaw Point. H.

ON THE RIDEAU CANAL.

SOME time ago FOREST AND STREAM suggested that sportsmen readers should make their brothers of the rod and gun acquainted through its columns, with such new fields of sport as they might discover. This sunk deep into the minds of three of us who were on the look-out for "fresh woods and pastures new," and although the region through which they hunted is not entirely unknown to fame, one of them thought that he would record their experience for the benefit of fellow sportsmen.

On Tuesday, Sept. 7, a party of three, whom let us call by their Christian names Charles, Frank and Louis, left the Thousand Islands of the St. Lawrence River on a shooting and fishing excursion, their destination being the Rideau Canal. This so-called canal consists of several lakes lying between Ottawa and Kingston and connected by locks. The lakes vary in size from an ordinary pond to a sheet of water twenty odd miles in length. The distance between the two cities named above is said to be one hundred and twenty-six miles. This Rideau Canal is a great resort for fishermen all through the summer and part of the fall, and during the latter season for gunners.

Charles and Frank left Alexandria Bay, the Thousand Islands, at an early hour in the steam launch Spry, chartered for the trip. At Clayton, twelve miles further up the river, Louis joined them. A two hours' run brought the party to Kingston, where they took on their pilot, obtained a clearance for Ottawa, after a hard struggle with pig-headed Canadian custom house officials, and entered the canal.

The first locks reached were at Kingston Mills. The stream ends at the base of two hills, between which the Spry was locked up into a small lake, the name of which, if it has one, the writer is ignorant of. This body of water, like all the others on this route, is submerged woodland. The flooding of such a considerable surface is effected by the damming of the stream between the hills and by the flatness of the surrounding land. These lakes are almost entirely filled up with stumps of trees, trough which channels are cut for traffic. The good hunting grounds were not reached by the Spry on her first day out because of the long delay at Kingston caused by her Majesty's bulldogs. At Washburn, sixteen miles distant, she was laid up against the bank for the night. The party took a moonlight walk among the few scattered houses of the settlement, and then retired to dream of coming slaughter.

The Spry left Wasbburn at half-past six on Wednesday morning, proceeding to Sand Lake, where she arrived about noon. Charlie, Frank and Louis promptly hauled out their rods, and while dinner was preparing captured eight fine bass. After dinner shooting was in order. Charlie, Frank and Louis each took boat and oarsman and started to patrol the large shallow bay filled with stumps, and just opposite the island where they were tied up. Woodducks and black ducks were plentiful, but as neither the party nor the guides knew anything about the place, they had to content themselves with six birds. This ill fortune pursued the trio in their shooting throughout the trip. The fishing, however, proved exceptionally fine. At Mud Lake, thirty miles or more from Kingston, two hours and a half yielded us thirty-four bass, all weighing from 1½lbs. to 2lbs. and all exceedingly gamy. There are said to be very large fellows in more remote corners of the lake, but as we had at this place even worse luck in shooting than at Sand Lake, we didn't wait to try for them.

We arrived at Ottawa on September 16, stopping two days at Tay River, where we shot six ducks. The bag for our eight days on the Spry was seventeen ducks, nine snipe and fifty-four bass. We only fished on three different days, and not more than six hours in the aggregate. We caught several pickerel, perch and small fish, which were returned to the water as soon as taken.

We met three other parties bound on similar excursions, two fishing parties and one of hunters. The former reported good luck, one of them having taken seventy-two fish in one day; and judging from the avidity with which the bass and pickerel seized minnows and frogs, this is not surprising. A person well acquainted with the locality could have very good sport with the gun, even as early as September; but the real duck shooting does not begin till a little later in the fall, when the cold drives the birds from their northern feeding grounds; then very good bags are made over decoys.

The country about the Rideau is, for the most part, almost uninhabited. One can feel that he really is in the wilderness. Camping is necessary, and the sportsman can add the pleasures of camp life to those of rod and gun. A steam launch can be obtained at Kingston, Clayton, or Alexandria Bay, the latter is the best place; or the hunter can hire a rowboat only and for a trifle will be towed by any of the tugs plying these waters. A steamer runs between Kingston and Smith's Falls (sixty-five miles distant) twice a week, but the pleasure seeker should bring all he needs with him, good accommodations being few and far between.

Let the sportsman engaging the services of any oarsman or yachtsman at Alexandria Bay, Clayton, Kingston or intermediate points (all towns on the St. Lawrence that I am well acquainted with), make a written agreement with said oarsman or yachtsman, or he will rue it, as we did. For a good oarsman and fisherman, who will work for you and not talk too much (a rare thing among Thousand Islands boatmen), we can heartily recommend Stephen Simmons, of Alexandria Bay.

We hope that through our efforts brother sportsmen may find a way of spending as pleasant a week as we did on the Rideau. C. F. AND L.

THE FLY-CASTING TOURNAMENT.

IN our issue of Jan. 13, we gave a list of the proposed rules which the association recommended at a meeting on Jan. 8. They were not adopted, but were merely provisional, subject to the action of the Committee on Rules. This committee met on March 1, and we give the result of their labors, noting only the changes made in the list as published before.

Rules 1, 2, 3, 4 and 5 proposed at the meeting of Jan. 8, were passed without change.

Rule 6. The word "must" was substituted for will, making same read: "Persons entering these contests will draw lots to determine the order in which they will cast, and must be ready to cast when called upon by the judges."

Rules 2 and 9. No change made.

Rule 10. Strikes out the paragraphs "With a straight line. And so that the fly or flies shall be upon the water before any portion of the reel line touches its surface. Touching the mark with either of the three flies used will be considered a hit, and that of the three flies which falls nearest the mark shall determine the distance of that cast from the mark."

Inserts the word "stretcher" in the paragraph relating to accuracy, which now reads; "He shall be adjudged to be the superior in accuracy who, on an average of all his casts, places his stretcher-fly nearest the mark."

Rules 11 to 13 are not changed.

Rule 14 (Salmon Casting) is changed to read: "The foregoing rules shall govern. Rods may be used with both hands and not be limited to length, except in class made for shorter rods, and only one fly shall be required. Delicacy and accuracy casts to be made at a mark 70ft. distant from the contestants."

Rule 15 (Black Bass Minnow Casting) changed to read: "All general rules which do not conflict with the following special rules shall govern. No rod shall be more than 10ft. in length Any reel may be used, but all casts must be made from the reel. Lines shall not be of less caliber than No. 6 (letter H) braided silk, nor No. 1 sea grass, or corresponding sizes of other materials, and be of uniform thickness throughout. The weight of the sinker shall not be over ½oz., the same to be furnished by the contestants. In casting but a single hand shall be used. Each contestant will be allowed five casts for distance, the average of them to count, and five casts for style and accuracy, the latter points to be ascertained by casts made at a stake or mark 60ft. distant from the caster, and the judges to give points in accordance with the nearness with which the said sinker approaches the said stake or mark. Style or form to be determined by the ease and grace of the caster."

Rule 16 (Heavy Bass Casting). Rods shall not exceed 9ft. in length, and may be used with both hands. Any rest may be used, but the line shall be of linen not less caliber than the trade No. 9, with twelve threads throughout its entire length. The casts shall be made from the reel with sinkers weighing 2½oz. (these will be furnished by the committee.) Each contestant will be allowed five casts, his casts shall be measured, added and divided by five, and the result shall constitute the score. No allowance will be made to any contestant for the overrunning or breaking of his line.

Rule 17 (Light Bass Casting). Same rules as in heavy bass, except that the sinkers shall be of 1½oz. (furnished by the committee).

VERMONT.—Post Mills, March 3.—My rods and reels must now be taken from their resting place, rod varnished, reels cleaned and oiled, and everything made right for the early trout fishing. Our rivers and small streams have been full of water this winter and we hope the trout have grown fat and large. We are now looking forward for the time to come when we can wet a line in the mountain streams.—OMPOMPANOOSUC.

AN ALASKAN SEA SERPENT.

AN ALASKAN SEA SERPENT.

THE existence of veritable sea serpents—or, more correctly, ophidions—is no longer disputed or doubted. It has been ascertained through observation of navigators and scientists, covering a long period of years, that their distribution is as wide as the salt ocean, and that they exist in all its subdivisions, boreal as well as tropical. Characteristic analogues are also found in some inland fresh-water bodies. These sea serpents, so regarded, are manifestly not of one scientific type, but vary in form, structure, appearance and habits, like representative species of other fauna, terrestrial or marine. Some are diminutive and others immense. Some inhabit near the shore, and others range the profoundest depths of oceans. Some are harmless, others rapacious. Some feed on one thing, and some on another. Some are sombre and sluggish, and others resplendent and alert. In the ocean there are paradoxical coördinates of terrestrial creatures which are of such complex, ambiguous or composite structure as to render it difficult to class them or determine whether they be fish, flesh, fowl or reptile. Presumably sea serpents are not all snakes, nor yet all fish. That specimens of their more common forms are not found in museums and collections is due not so much to their rarity or difficulty of capture, as to the fact that collectors have not visited those localities which they have been found to frequent. Indeed, their habitat has been as vague and uncertain hitherto as that of the octopus previous to 1874. By the same token, there are hosts of objects, mysterious and unrecognized at the present day, which were well known to the Ancients (though not identified), and are found to be commonplace enough now in remote and unfrequented parts of the globe, to which scientific investigation has only recently been extended. And thus it has come to pass, not so much by inquiry as by chance, that we have happened upon the haunts of some varieties of the sea serpent, previously declared to be a myth. Thus the enlightenment of the new world is reflected from the old, and the adage proved again, that there is nothing new under the sun.

Away out in Alaska, eleven hundred and ten nautical miles due west of Sitka, in the Aleutian Archipelago, is the volcanic island of Unalashka, famed not more for its mountainous beauty than for being the most populous area or subdivision in the North Pacific, containing once no less than twenty-four thriving villages. Its chief settlement, Illinlink, is even now the commercial center of all that region, comprising several hundred civilized inhabitants living in comfort and thrift. The settlement and its environs are graphically described by Mr. Henry W. Elliott in the following language:

"The panorama of land and water here in summer is an exceedingly attractive one. Here, strung along for half a mile just back of a curved and pebbly beach, is an irregular row of frame single-story cottages, a large Greek church and a fine parsonage, three or four big wooden warehouses with a wharf running well into the harbor, two or more trading stores, one of them quite imposing in its size, and fifty or sixty baraboras (native houses). They are placed upon a narrow spit of alluvium that divides the sea from the waters of a small creek which runs just back of the village right under the hills that abruptly rise there, to rise again further inland to higher peaks in turn. A rich, dark vivid green covers and clothes the mountain slopes, the valleys and the hills, even to the loftiest summits, where only a light patch of glistening snow is now and then seen, relieved thereon by the grayish-brown rocky shingles. These hills and mountains, rising on every hand above us from the landlocked shore of Captain's Harbor, bear no timber whatsoever, but the mantle of circumpolar sphagnum, interspersed with grasses and an ample flora, makes amends for that deficiency and hides their nakedness completely. In their narrow defiles and over the bottom land patches, grass grows with tropical luxuriance, waist high, with small clumps of stunted willow bushes clinging to the banks of little water courses and rivulets. Especially gratifying is the landscape, thus adorned, to the senses of any ship-worn traveler, who literally feasts his eyes upon it."

All sides of this enchanting Unalashka Island are deeply indented by bays and fiords. Reefs and rocks, sunken and awash, extend seaward in a southerly direction to long distances, churned incessantly by the heavy billows which break upon them; but around the northern and eastern margins more good harbors are claimed than for all the other islands of the Aleutian Archipelago put together. Into these sheltered channels and inlets, as well as in the raceways of the outlying reefs, fish in great variety resort—cod, herring, halibut, salmon, trout, and many other edible kinds, feeding upon the surf-washings and the scourings of the ocean bottoms which are carried in by the winds and tides. And stranger forms of marine life are there in extraordinary presentation, weird, uncouth and rapacious; some hideous with tentacles, claws, and spines, and serried teeth, and others charged with batteries-electrical—creatures devilish in temper and base in motive, who lurk among the weeds and algæ which cling to the rocks, or forage stealthily among the rafts of kelp drifting with the tide. In such an uncanny range as this one variety of the sea-serpent makes his home and thrives, holding his own against all comers. In haunts like this he takes on fat and grows apace. I do not know that he ever attains to the magnitude of those pelagic rangers which are sometimes encountered in the high seas, or indeed, that he aspires to, but he often measures a dozen feet in length, which is a big enough snake to convince the most incredulous.

Prototypes of the creature shown in the accompanying imperfect cut exist in considerable numbers. Their customary range is off shore among the sunken reefs where the rock cod resort, which is their favorite food; but they are occasionally caught entangled in the ropy seaweeds which fringe the landwash, in which dilemma the natives do not hesitate to wade in behind them and drive them up on shore, stunning them with clubs. In this way the specimen before us was caught. He measured 6ft. long and 10in. thick. The capture was made on June 15, 1886, and a drawing was executed while the creature was still squirming, by S. Rapinsky, a creole missionary teacher at Illinlink, but unfortunately the serpent itself was not preserved. As shown in the portrait, he seemed a most extraordinary mongrel, manifestly much more of a fish than an eel appears to be, or even a cutlass fish (*Trichinurus lepturus*), for he has visible gills and opercles, fine scales, two spinous fins on his back and the caudal of a true fish. He has also an immense pair of pectorals for balancing himself, and a full complement of fins to promote locomotion, to say nothing of an abnormal third dorsal which is adipose! Also, he has long, sharp teeth, for holding his prey, and a well dentated vomer for mastication. Nevertheless, the *tout ensemble* is altogether suggestive of snakes. Whether he is less a snake than those more formidable monsters which navigators encounter on the broad ocean, or those which summer saunterers discover in Seneca Lake or the Hudson River, a capture of the latter alone can determine. In color he was most beautiful, the entire length of his sides being iridescent with purple and golden reflections, while crimson and yellow splashes crossed the lateral line at regular intervals from head to tail.

There can be no doubt that this specimen was a true fish with an elongated body. The tendency to regard everything vermiform or sinuous as a snake, and everything serpentine as a reptile, has invested certain mysterious denizens of the deep with snake-like attributes; but whether they are more serpent than fish, or more reptilian that the undulating specimens of Unalashka, is what scientists would be delighted to discover. As we find analogues in nature all creation through, it is reasonable to infer that there are true serpents in the sea as well as on the land, and that there are fish as well with serpent forms. Whether this great ophidian of the ancient and modern mariner be fish or reptile, he is, doubtless, predatory, and therefore to be feared and avoided. Inasmuch as we, instinctively, associate serpents with evil, we should, perhaps, prefer to regard him as a fish, and therefore of a kindlier nature, yet we do not forget that a creature much less scaly inflicted ineffable and lasting misery on man.

For the sketch which I am able to give I am indebted to the Rev. Sheldon Jackson, U. S. General Agent of Education, Alaska, who first called my attention to it, saying that he intended to present it to the Smithsonian Institution.

CHARLES HALLOCK.

MENHADEN AND FOOD FISHES.

JOSEPH CHURCH & CO.,
Manufacturers of
Menhaden Oil, Guano and Fertilizers.
TIVERTON, R. I., March 4, 1887.

Editor Forest and Stream:

In your issue of March 3 you quote in full from report of Rhode Island Commissioners of Inland Fisheries, which is notable for its hostility to the menhaden fishing interests of this State.

The report was brought to our attention as soon as published, and we took measures to have the Commissioners indicted for libel, but learned they could not be reached in that way.

Every word they say in regard to the menhaden fishery is false, and we invite one or all of the Commissioners to go out on our steamers and learn that fact for themselves. We have before made the statement in FOREST AND STREAM and we now reiterate it, that we do not in our regular menhaden fishing catch food fish enough to supply our factory and fishing help.

DANIEL T. CHURCH.

SALMON IN THE ST. CROIX.—There are many old fishermen on the St. Croix who believe that salmon run in the river every month in the year. Last month this belief was confirmed in some of them by the finding of a fine specimen of a salmon near one of the wharves at St. Stephens. While it seems hardly possible that the fish run all the year round, these accidental captures tend to confirm the belief in those who already entertain it.

THE RAINBOW TROUT.

Salmo Irideus.

BY W. OLDHAM CHAMBERS, F.L.S.

[From the Journal of the National Fisheulture Association.]

THIS valuable variety of trout is indigenous to the waters of California, and earns its appellation from the gorgeousness of its coloration, comprising all the tints of the rainbow. Its nose is obtuse, its gill covers red, while along the body is a red band. The color of the back is a brown; fins are of an orange-pink color. The head and back are marked with small black spots of irregular shape, which extend to the adipose, dorsal and caudal fins. It is a deep, thick-set fish, but, at the same time, the formation is well proportioned, and in this respect it is superior to the *Salvelinus fontinalis*. The dorsal fin is small and the pectoral fin two-thirds the length of the head. The posterior edge of the operculum, or gill cover, is rounded in form, and the lower edge of the interoperculum and suboperculum forms a straight oblique line. The tail or caudal fin is more forked than with the *S. fontinalis* and common trout. The teeth are well defined, and are placed in nine lines across the mouth, namely, one on the vomer, two on the palatine bones, two on the superior maxillary bones, two lines of incurved teeth on the tongue, and two on the lower jaw. The lateral line runs in a plane slightly above the upper portion of the eye. The fin rays are: Dorsal 13, pectoral 14, ventral 9, anal 9, caudal 20. The eye is one-fifth the length of the head, and placed 1¼ its own diameter from point of nose. The length of head, as compared to length of body, head and tail, including caudal rays, is 1 to 5½. The fish now before me is 11in. long, 7in. girth, weight 1¼lbs. and 20 months old.

We have a fair number of these fish, weighing three-quarters of a pound, at the establishment of the National Fisheulture Association, which are nearly two years old, and were obtained from ova forwarded by the American Government. They were incubated at South Kensington, and the fry, when hatched, were transferred to their present location; but owing to the lateness of the season at which the ova was received, some difficulty was occasioned in rearing them, but on being well established in suitable ponds, they grew rapidly, insomuch that at the end of eighteen months they far outstripped in size the *Salvelinus fontinalis*, which besides being a fast growing fish, emerges from the ova three months earlier than the *Salmo irideus*. After the two years experience I have had of the latter, I unhesitatingly pronounce them to be superior to our own species in hardiness and rapidity of growth. The attempts made to acclimatize them to English waters, so far as restricted areas are concerned, have proved successful, and they seemed to become thoroughly naturalized therein immediately on their introduction, proving thereby that the condition of the water, climate and food are well adapted to their wants. In New York the efforts made to plant them have failed to a great extent. It is thought that they leave the waters in which they are placed and descend to the sea, but it is more likely that they are destroyed by other fish, for the following reason: The rainbow trout is a very late spawner, and arrives upon the scene at a critical time, as all fish are then feeding ravenously, and in this way the young fish are cut off in the outset of their existence. The rainbow trout is not plentiful, even in its native haunts at California, which may be accounted for by the disadvantages it labors under during its alevin stage. This drawback to the advancement of the propagation of this promising fish would not, I think, be experienced in England, I am justified in expressing this opinion, owing to confirmatory evidence being forthcoming at Delaford, where the fish furnish signs of yielding their ova toward the middle of January. If so, the date of spawning would be about the same time as other species of trout; thus the fear of cannibalism, experienced in the United States, need not be entertained, as the fry would be able to protect themselves in the same way as their baby cousins.

It is not surprising to find that the rainbow trout should show signs of generating so much earlier in this country than abroad, especially at Delaford, where the water is softer than that in California. Late spawners are generally those that inhabit water of a low temperature, but if such fish are transferred to warmer climes they alter their nature accordingly. This is precisely the case with the rainbow trout, which have evidently changed their habits and adapted themselves to the altered condition under which they are now placed.

The facts already adduced regarding this fish can only be applied to them under a semi-artificial state, as hitherto they have, to a great extent, been confined in close quarters. A few were turned into the River Colne and were caught by me in the same locality a year afterward. This experiment, I hope, will be extended shortly if they can be raised in sufficiently large numbers to allow of its being done, which I have no doubt about, as the United States Fish Commission, through Prof. Baird, are willing to forward further consignments of ova. These, in addition to the stock reproduced by the fish in the possession of

the Association, will enable us to plant a considerable quantity in public waters.

It is asserted that the rainbow trout is migratory in its habits. As far as I can see at present the reverse is the case. I believe it is not identical in this respect with the *Salvelinus fontinalis*, whose wandering propensities have earned it the rebuke of all men; neither are its requirements the same, the location of the one being uncongenial to the other. Migratory, or non-migratory, the rainbow trout would make its mark in inclosed waters, or for ornamental purposes. Regarded from a sporting point of view it would prove an acquisition, as I have on many occasions observed its rising to a fly. I believe it is not considered a game fish in its native waters, and here again it appears to have altered its nature. There is no doubt about it that the gameness of fish is governed by the condition of the water which they inhabit; therefore, from an angler's point of view, the interchange of species with foreign countries is a great boom, as proved by the case just cited. But, on the other hand, too much care cannot be exercised in acclimatizing doubtful fish, or we shall admit enemies into the camp, and thus weaken our efforts to repopulate depleted districts. No fear need be entertained on this score in regard to the rainbow trout, which is more delicate in its appetite than other varieties of Salmonidæ, and therefore is not prone to the same temptations to cannibalistic attacks upon its congeners.

ANGLING DAYS ON LAKE CHAMPLAIN.

FOR some time I have been hoping some correspondent would give us some account of the black bass fishing in Lake George and Lake Champlain, but in vain. I make an annual pilgrimage to these beautiful waters, but encounter few anglers, comparatively. However, I have had many a good day's sport there, and an account of some of the trips might catch the eye of some one who has had the good fortune to visit these lakes.

It was about 4 P. M. one day last August, and a scorcher, too, that a friend met me on the arrival of the Central Vermont train at the little "dog-in-the-manger" village of Vergennes, and without giving me time to shed my coat of sand and cinders, accumulated during an eight hours' ride, piloted me down to the creek where his canoe containing our fishing effects lay. At the house of a friend we did the "transformation act," and emerged in flannel shirts, helmets, leggings, etc., went aboard and paddled down to Fort Carson, where a light breeze coaxed us into relinquishing the ash for sails.

What a delightful sail we had that evening up to Thompson's Point, where we spent the night. Early the next morning we were off for Split Rock to try our hands at pike fishing, but it was late in the season and 9 A. M. found us with but six. We were on the point of pulling up the sink and quitting when, Great Scott! Have I hooked on to Split Rock? Something fastened on to my line and dropped about a foot. Didn't feel a bit like a bite, but I pulled in that 60 feet of braided linen lively, and landed such a pike as we used to take off McNeill's Point before the days of Cedar Beach and the Jolly Club. He would weigh 80lbs. if an ounce, but he was the last pike in the lake; and we eat our breakfast as we run across into Barton's Bay and troll around into Cedar Beach, the Jolly Club's camp. After dinner we put our canoe aboard the ferry, and "Uncle Judd" takes us over to Essex. The wind has increased to quite a blow, and how it brings back that day years ago when "Uncle Levi" Blair sailed us from Essex to Thompson's Point in a fifty miles an hour blizzard. We all had our coats and boots off ready to swim that day, and "Uncle Levi's" weather-beaten face was whiter than his hair. But he "wasn't a bit scart," and landed us safely.

Before sun up we are afloat again and troll along the shore to Willesboro Point, where we take out our fly tackle for the first time. Willesboro Bay yields us but 4 fish, and we put off for the Four Brothers, where we camped for the night. Daylight finds us "up and at 'em," and our morning catch shows 13 that average about 2lbs. In the afternoon we try them again, and add five to our creel.

The next day we spent in Burlington and saw one of those peculiar looking yachts of "Adirondack" Murray's, a sharpie. Late in the afternoon we started for Hog Island and had an opportunity of noticing her peculiar sailing qualities, for the way she drew away from us would have worried a bronze image, and we don't count ourselves slow either. The next three days brought varying success, but we took fifteen out of Holme's Bay, though part of them were small. Our catch for the trip was fifty-six, and we did not visit the northern part of the lake where the best bass fishing is, nor did we fish Shelburne Bay where there is good bass fishing on and around Collamer's Reef because—well, because this was our first attempt at fly-fishing and we fought shy of localities where we were acquainted. However, it won't be our last, for we are thoroughly converted to the light rod and fly (thanks to FOREST AND STREAM's influence); and if some of your readers would kindly give us a few practical instructions on how to manage a fly-rod we could hope to show a better result next year. At any rate no more worms and cane poles for us. Won't some reader of FOREST AND STREAM who has fished these waters give us a few points on rods, flies, etc., and lend a helping hand to a couple of poor mortals who are trying to educate themselves up to an artistic enjoyment of angling.

Mr. Rowland E. Robinson's sketch in this week's issue is as true to Vermont turkey shoots as to nature. I have known many an "Antoine," and have now in my possession one of those old rifles of Varneys, than which nothing was supposed to be better, and I have a young brother that is pretty clever with the old muzzleloader even now. SWIRL.

BURLINGTON, Vt.

SILKWORMS AND DANDELIONS.—Dublin, Ireland, Feb. 26.—*Editor Forest and Stream:* When the discussion upon silkworms took place in FOREST AND STREAM last year, I noticed that a very excellent and easily obtainable article of food was not mentioned—viz., the common dandelion, which, I think, is now plentiful in America. While at school I, in common with many other boys, kept silkworms. There being no mulberry trees within reach, we fed them entirely upon the leaves of dandelions, which kept them in perfect health. They grew to a large size and spun a quantityof fine strong silk.—J. J. M.

SIX-INCH TROUT.—White Lake Corners, Oneida Co., N. Y.—With regard to the six-inch clause, my experience satisfies me that it would be just as consistent to pass a law forbidding a trout less than 6in. long taking your bait. Nine-tenths of all trout taken are caught through the upper jaw, and, big or little, if put back into the water, are sure to die. Moreover, I know of dozens of brooks which run through open fields and timber lands, which are alive with brook trout; and these fish never attain to the length of more than from four 4in. to 6in. in length, and never will if left alone for twenty years. I believe the open season should be uniform throughout the United States. When the snow water has all run off, whether the first of March, April or May, is the time, and the best, too, of the whole season to go fishing. Altitude here 1,600 feet above tide. South of the Mohawk, or Central R.R., about the same. Why, then, should the season open earlier for them than for us?—H.

Fishculture.

LOBSTER PROTECTION.

A BILL has been reported by the Maine Senate which is designed to secure more stringent protection for lobsters. It provides for an absolute close time on lobsters between Aug. 1 and Sept. 15, with a penalty to violators of $50 for the first offense and $1 for every lobster caught. During close time all traps and nets must be removed from the water; if not, they will be forfeited and the owner fined $25, with an additional fine of $5 a day as long as the traps remain. No lobsters are allowed to be canned or preserved between July 1 and April 15 under heavy penalties. This provision will not prevent dealers from packing a surplus stock. It is made unlawful to buy, sell or expose for sale any lobster in spawn or with eggs attached, or any lobster less than 10½in. in length, measured from the bone of the nose to the end of the bone of the middle flipper of the tail. The possession of a mutilated uncooked lobster is made prima facie evidence that it is not of the required length. Lobster cars, nets and traps must have the owner's name marked on them. When short lobsters are found in any barrel or box in transit, the whole are forfeited, unless the owner pays the fine on the short ones. For the benefit of the canners, the law is not to go into effect until July 1 of the present year, after the canning season is over.

The full text of the decision of the Massachusetts Supreme Court in the short lobster suits, appealed, is as follows:

COMMONWEALTH OF MASSACHUSETTS.—Boston, Feb. 26, 1887.—I certify the annexed to be a true copy of the opinion of the Supreme Judicial Court in the case of Commonwealth vs. William A. Barber, decided on the 23d day of February, 1887.—JOHN LATHROP, Reporter of Decisions.

COMMONWEALTH VS. WILLIAM A. BARBER.

Suffolk S.S. Devens, J.—The case at bar is that of a complaint under Pub. St. c. 91 Sec. 84, as amended by St. 1884 c. 212 Sec. 1. The section originally providing a penalty upon one for having in his possession "with intent to sell, either directly or indirectly," a lobster of less than a prescribed size was amended by striking out the words "with intent, etc." As thus altered it would read as follows: "Sec. 84.—Whoever sells or offers to sell or has in possession a lobster less than ten and one-half inches in length, measuring from one extreme of the body extended to the other, exclusive of claws or feelers, shall forfeit five dollers for every such lobster; and in all prosecutions under this section the possession of any lobster not of the required length shall be *prima facie* evidence to convict."

The contention of the defendant is that no prosecution can be maintained upon propositions which can be read *uno flatu*, declaring that possession shall cause a penalty to be incurred and that possession shall be *prima facie* evidence to convict; that these two propositions become law at the same instant of time, and that there is no resource except to declare the whole section as unmeaning and incapable of enforcement.

It may be that it was deemed by the Legislature that this section might be construed as applying only to lobsters of the prohibited size taken within this State, and that it was intended that the defendant should, by the *prima facie* evidence afforded by possession, be compelled to offer evidence that it was taken without the State, in order to maintain a defense. If, as the reason for the existence of the latter claim, as to the effect of possession, in connection with that by which the possession is exposed to a penalty, would be readily intelligible in view of the restricted character of the legislation as thus applicable only to lobsters taken within the Commonwealth and not elsewhere. Such a construction was, in fact, given to similar law; Statute of 1879 c. 209, sec. 15, enacted for the preservation of woodcock and other specified birds, and imposing a penalty for the having one in possession during a certain prescribed period, the law being held to be intended only for the protection and preservation of birds bred within the Commonwealth—Commonwealth v. Hall, 120 Mass., 410.

We do not, however, find it necessary to discuss this question as if we assume in favor of defendant's contention that the possession which is visited by the section with a penalty, is applicable whether the lobsters be taken within or without the State; the section appears susceptible of an intelligible interpretation entirely in accordance with well settled rules of construction. These are set forth in the earlier clause, three offenses, "selling," "offering for sale" and "having in possession." To the two first of these the latter clause is certainly applicable, and to the third it is not. The intent of the legislation is to make possession *prima facie* evidence of the offense, when the offense consists in something more than possession. Artificial force is often thus given by special provisions of statutes to particular facts when offered in evidence. Commonwealth *v.* Williams 1 Gray 1, Holmes *v.* Hunt 122 Mass. 505. But where the offense consists in possession, the latter clause has no application to it, and the offense must be proved in the ordinary way. Although in terms the clause applies to all prosecutions under the section "when the context shows that this cannot be followed literally without reaching an obscurity, it is reasonable to hold that such was not the intent of the legislation, and that such an interpretation should be rejected." Commonwealth *v.* Kimball 24 Pick. 366. If possible all parts of a statute should be viewed in connection with the whole, and made to harmonize so as to give a sensible effect to each. The different portions of a sentence or sentences are to be referred respectively to the other portions, or sentences to which we can see they relate, even if strict grammatical construction should demand otherwise. The maxim of construction, *redundar singular singulis*, is well established, and if the latter clause be construed "*respective et distributive*," it will be found that it relates to the two first offenses described in the section, and not to the third. Coffin *v.* Hussey 12 Pick. 291. Commonwealth *v.* Jordan 18 Pick. 228.

Nor even if the latter clause must of necessity be applied to the offense of having in possession should we be prepared to hold that the statute was in this regard incapable of enforcement, and that there should be no prosecution for this offense. While the clause as applied to it would be superfluous and absurd, it would not be more than this. The government would still have upon it the burden of proving its case of possession beyond reasonable doubt, and the defendant could not claim that such proof, if made, was mere *prima facie* evidence.

Exceptions overruled.

FISHCULTURE IN ENGLAND.

THE first number of the *Journal* of the National Fishculture Association, dated Jan. 15, 1887, has been issued. It will be a quarterly publication, published on the second Saturday in January, April, July and October. It is a well printed octavo of 32 pages, containing articles of great interest to fishculturists, and is edited by J. W. Willis Bund, M. A., F. L. S. In the introduction we are told that while containing original matter, it will differ from journals of other societies in not being a report of what the National Fishculture Association does, so much as a record of what has been done, no matter by whom; and the object of the *Journal* will be to collect information on all subjects relating to fishculture, and to publish original articles thereon.

The contents of the first number are as follows: Introduction. The British Salmonidæ, by F. Day, C. I. E., F. L. S., etc. The Influence of Weather on the Migration of Fish, by J. W. Willis Bund. The Food of the Salmonidæ at Sea, by W. Anderson Smith. The Rainbow Trout (*Salmo iridcus*), by W. Oldham Chambers, F. L. S. Extension of Annual Close Time. The National Fishculture Association. The New Fisheries Department. Summary or Current Information on Fishculture and Fisheries. Notices of books and list of Parliamentary papers published in the year 1886 up to October, with the prices.

The *Journal* is issued free to the members of the Association, but extra numbers are placed on sale, the price of which to non-members is 2s. 6d. The article on the British Salmonidæ, by Dr. Francis Day, probably the best informed man in England on this subject, is an exceedingly valuable contribution to ichthyology, and from this and from some other papers we shall make copious quotations at various times. In the Summary of Current Information on Fishculture and the Fisheries, we note a summary of an article on the Michigan grayling by Mr. Herschel Whitaker, read before the American Fisheries Society; several pages of quotations from the *Fish Trades Gazette* and the *Board of Trade Journal* on the commercial fisheries; extracts from Messrs. Mather and Ryder on oyster culture in America; remarks on the salmon disease which has been raging during November and December in the Forfarshire Esk and the South Esk; Mr. Mather's article on smelt hatching read before the Fisheries Society; Mr. J. P. Cunningham on the mode of attachment of smelt eggs, read before the Zoological Society of London; an account by Dr. D. Barfurth on the reproductive relations of the trout, especially in regard to sterility and degeneration; notes by Max von dem Borne on the temperature of water for fish breeding, from the fourth circular of Deutscher Fischerei Verein, containing the observations of Mr. Frank Clark, of the United States station at Northville, Mich.; the produce of the Canadian fisheries for 1884 from the Bulletin of the U. S. Fish Commission; the use of boracic acid in preserving fish; the growth of eels in closed tanks, from the Bulletin of the U. S. F. C., and food of the sea trout, by Mr. Jamieson, of Aberdeen.

The curious fact is that English fishculturists, as a rule, prefer the rainbow trout to the *fontinalis*, because the *fontinalis* will not stay in the streams while the rainbow does, according to that excellent authority, W. Oldham Chambers, Esq., secretary of the association. This is curious because the reverse is the case in this country. In another column we give the paper by Mr. Chambers in full.

GERMAN CARP.—We have received the following from the U. S. Fish Commission: *Editor Forest and Stream:* The following note will be of interest in view of the confusion that exists in the minds of many as to what is properly known as the German carp. The typical form of the species is what is known as full scale carp. From this, fishculturists, availing themselves of the tendency of all animals to break under domestication, and by exercising care in selection, have produced two well defined varieties, viz., the mirror and the leather carp. In the mirror or spiegel carp the scales are much larger and more irregular than in the full scale, and portions of the skin are without scale covering. In the extreme form of variation, viz., the leather carp, the scales have entirely disappeared. Between the scale, the mirror and the leather carp, there are an infinite number of intermediate forms approximating more nearly to one or the other of these distinct varieties. Neither the mirror nor leather varieties can be maintained pure except by careful selection in breeding. It will be found that the progeny of either the mirror or leather will present all the intermediate forms from scale to leather. From each generation it will be necessary to select those individuals for succession of breeders which represent more nearly the form or variety which it is desired to perpetuate.

THE U. S. COMMISSION.—The work at the different hatcheries is greater than ever this season. The station at Woods Holl has distributed fully 25,000,000 codfish in Vineyard Sound and other waters. It is estimated that the total production the past season at this station will exceed 100,000,000 codfish. The management here is having quite good success with the celebrated English sole. At the Virginia station over 100,000 California trout eggs have been obtained, 50 per cent. of which will be distributed in lots to the different State Commissioners. At the Michigan station over 120,000,000 whitefish eggs were collected last fall, part of which were sent to the several State Commissioners for hatching purposes, and the balance deposited in the great lakes. At Cold Spring Harbor over 4,000,000 tomcods have been turned out. In Maine the crop of salmon eggs has been large.

POT LUCK FROM EXCHANGES.

Bass has named his dog "Wellington," because of the animal's proficiency in rending a bone apart.—*Boston Transcript.*

Zion's Herald thinks that the *Audubon Magazine* papers are written with good taste and in keeping with the objects of the Society.

One of the living curiosities in a Chicago dime museum is an ex-merchant who run business seven years ago without advertising. The usual period is only two.—*Detroit Free Press.*

A HUMAN HEDON.—Dover, N. H., Feb. 9.—On a wager, last night, George K. Weeks ate 42 eels, each measuring from 13 to 19in. in length, in 30 minutes, as fast as they were cooked, eating nothing but salt with them. He thinks he can eat 50 of the same size in half an hour.

De bigger dat you see de smoke
De less de fire will be,
And de leastest kind of possum
Climbs the biggest kind o' tree.

FIXTURES.

DOG SHOWS.

March 8 to 11.—Second Annual Dog Show at Buffalo, N. Y. Geo. H. Chadeayne, Secretary, No. 6 Brown's Building, Buffalo, N. Y. Entries close Feb. 28.

March 22 to 25, 1887.—Spring Show of the New Jersey Kennel Club, Newark, N. J. A. C. Wilmerding, Secretary, 17 Murray street, New York.

March 29 to April 1, 1887.—Inaugural Dog Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence. Entries close March 15.

April 5 to 8, 1887.—Third Annual Dog Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass. Entries close March 19.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 19 to 22.—Fourth Annual Dog Show of the Philadelphia Kennel Club. E. Comfort, President.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

FIELD TRIALS.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4697.**

THE AMERICAN KENNEL CLUB.

FOLLOWING is the draft reported by the committee on constitution and by-laws of The American Kennel Club to be acted upon at the next meeting of the club:

CONSTITUTION.

ARTICLE I.

The name of this association shall be "The American Kennel Club."

ARTICLE II.

The object of this association shall be the protection of the mutual interests of its members and the adoption and enforcement of such rules as shall tend to uniformity and the proper conduct of bench shows and field trials.

ARTICLE III.

All regularly organized clubs or associations in the United States or British American Provinces which have held bench shows or field trials or are formed for the purpose of holding bench shows or field trials, or for the improvement of any breed of dogs, shall be eligible to membership.

ARTICLE IV.

Sec. 1. The regular annual meeting of this association shall be held on the second Tuesday in January, at such time and place as may be decided by the executive committee.

Sec. 2. Each member of the association shall have the right to be represented by two delegates duly authorized and their appointment certified to by the club secretary, but no member shall cast more than one vote.

ARTICLE V.

Sec. 1. The management of this association shall be intrusted to an executive committee of nine members, who shall hold office for one year, or until their successors are elected. All vacancies shall be filled by the executive committee.

Sec. 2. Each member of the executive committee shall at the time of his election be a regular member in good standing of a club, one of the members of this association, and shall serve without compensation.

Sec. 3. The executive committee shall elect from its members a president and vice-president.

Sec. 4. The executive committee shall appoint a secretary and treasurer, who shall, under the direction and supervision of the executive committee, perform the duties pertaining to the office.

Sec. 5. The executive committee shall be elected by a mail vote of all the members of this association, each club shall be entitled to vote for the nine members to constitute the executive committee.

Sec. 6. The secretary shall be required to give six weeks notice of the election of the executive committee to the clubs, members of this association, each of whom shall forward its vote certified to by the club secretary on or before Dec. 1, in a sealed envelope indorsed "committee vote." The secretary of this association shall on December 10 and not before, open these envelopes and at once notify the members receiving the majority of the votes so cast, of their election. The executive committee so elected shall immediately after the annual meeting of the association on the second Tuesday in January assemble and organize as provided by the constitution.

Sec. 7. Regular meetings of the executive committee shall be held on the second Tuesday in January and such dates in April, July and October as may be designated by the president, ten days notice of which shall be given to members.

Sec. 8. The president may call a special meeting of the executive committee at such time as he may deem expedient and he shall upon the written request of three members call a special meeting.

Sec. 9. At any regular or special meeting of the executive committee five members shall constitute a quorum.

ARTICLE VI.

The president shall preside at all meetings of this association and of the executive committee. He shall have power to call a special meeting of the association at any time, and must do so on the written request of five members.

The vice-president shall, in the absence of the president, preside at all the meetings of this association and perform the duties pertaining to that office.

ARTICLE VII.

The secretary-treasurer shall keep records of all meetings of the association and the executive committee, make all calls for such meetings, take charge of and keep a roll of membership and of all papers belonging to the association, and shall collect all moneys belonging to the association and dispense same under the direction of the executive committee, and do any other business proper to his office, or as directed by the executive committee.

ARTICLE VIII.

Application for membership shall be made to the secretary of this association, accompanied by a copy of the applicant's constitution and by-laws, and an election shall be held at the next meeting of the executive committee, provided said application shall have been filed with the secretary at least twenty (20) days previous to said election. It shall require two-thirds of members voting to elect.

ARTICLE IX.

The executive committee shall have power by a two-thirds vote to suspend for a stated period, or to expel any club whose membership it may deem prejudicial to the welfare of the association.

ARTICLE X.

Sec. 1. The annual dues shall be $10, payable on or before Dec. 1, failure to pay said dues shall forfeit all right to vote for executive committee.

Sec. 2. The executive committee shall have right to make one assessment during the year not to exceed $10.

ARTICLE XI.

The constitution may be revised or amended at any meeting of the association, by two-thirds vote, but no such amendment shall be considered unless the same shall have been submitted to the members of the association at least two weeks prior to such meeting.

BY-LAWS.

Sec. 1. The following order of business shall be observed at the meetings of the association:

1. Roll call.
2. Reading minutes of previous meeting.
3. Secretary's report.
4. Treasurer's report.
5. Report of executive committee.
6. General business.
7. Adjournment.

Sec. 2. The following order of business shall be observed at the meetings of the executive committee of this association:

1. Roll call.
2. Reading minutes of previous meeting.
3. Secretary's report.
4. Treasurer's report.
5. Report os standing committees.
6. Report of special committees.
7. Unfinished business.
8. Election of officers.
9. New business.
10. Adjournment.

Sec. 3. In the event of an appeal from an order of suspension imposed by a show committee, it must be heard and decided at the next regular or special meeting of the executive committee, and any person who is proved to the satisfaction of the committee to have been guilty of any fraudulent or discreditable conduct in connection with dogs, dog shows or field trials, may be declared incapable of competing for or winning a prize at any show held under the rules of this association for such period as the executive committee may decide. The secretary shall give the parties in interest ten days notice of the date of meeting at which their case will be decided.

All complaints of disputes between members of this association shall be decided by those members of the executive committee as are in no way connected with the clubs interested.

Sec. 4. These by-laws may be altered, amended or suspended at any meeting of the executive committee by two-thirds vote of the members present.

RULES.

1. The word dog where used in these rules includes both sexes.

9. A dog whether entered for competition or exhibition must be the *bona fide* property of the exhibitor on the day of closing the entries. The entry must clearly identify the dog to be exhibited, by name, and if known its date of birth, name of its sire and dam, and the name of its breeder; should any of these particulars be unknown to the exhibitor it must be so stated on the entry blank and inserted in the catalogue.

3. If the name of a dog which has won a prize has been changed, the old name must be given on the entry blank and inserted in the catalogue, together with a list of all prizes won by the dog, until such time as it wins a prize under its new name.

4. If a dog has been entered without being clearly identified, as directed in Rules 2 and 3, it shall be disqualified and forfeit any prize which may have been awarded to it.

5. The breeder of a dog is the person owning or leasing the bitch at the time of her being bred.

6. A puppy is eligible for competition in the open class as well as the puppy class, but a separate entry must be made for each class.

7. The authorities of any show may reserve to themselves the right to declining any entries they may see fit, or of removing any dog on account of disease, vice or other cause.

8. A castrated dog or spayed bitch shall be disqualified and forfeit any prize which may have been awarded to it.

9. Total blindness, deafness or lameness shall absolutely disqualify. If the judges or veterinary surgeon is satisfied that the deafness or lameness is temporary, the dog shall be allowed to compete.

10. A dog suffering from mange or any contagious disease shall be disqualified, and forfeit any prize which may have been awarded to it, and shall be removed at once from the show room. The regularly appointed veterinary surgeon shall alone decide as to mange or contagious disease, and his decision must be given in writing.

11. A judge may disqualify a dog which in his opinion has been improperly tampered with, subject to the decision of the veterinary surgeon, should the judges' disqualification not be sustained the class must be immediately rejudged.

12. Full discretionary power is given to the judge of each class to withhold any or all prizes for want of merit. The judges' decision will be final in all cases affecting the merits of the dog, and appeals can only be entertained where misrepresentation or breach of the rules is discovered.

13. Should an appointed judge be unable to fulfil his engagement, the committee shall have the right to fill the vacancy in such manner as they see fit, provided, however, that all the separate classes of any breed of dogs must be given, the same judge or judges acting in conjunction.

14. In any class where there is a limit of weight, the person in charge of a dog entered in such a class may claim the right on entering the show to have his dog weighed, and the weight of the dog shall be registered. Should no such claim be made, the dog can be weighed at any time, either before or after the judging, as the committee may decide.

15. A dog to compete in a champion class must have won three first prizes, exclusive of puppy classes, at shows recognized by the American Kennel Club, a list of which must be appended to these rules, and published in the premium list and catalogue of each show, provided that such first prizes have been won in classes confined to one breed, irrespective of any division by weight.

16. That after , 1887, all shows held under American Kennel Club rules at which cash prizes amounting to at least $500 are offered for competition, exclusive of any special prizes, shall be recognized for the purpose of qualifying for the champion classes.

17. In estimating the number of prizes a dog has won with reference to whether it should compete in a champion class or not, the number of prizes won shall be calculated up to 12 P. M. of the day preceding the closing of the entries for the show, provided, however, that the entries for a show shall not close at a date earlier than ten full days ahead of the first day of the show.

18. In entering a dog in a champion class it is necessary to specify on the entry blank a sufficient number of first prize winnings to entitle him to compete in such a class, and this record must be given in the catalogue.

19. No dog can be withdrawn from competition for any prize for which he may be eligible, and of which public notice has been given prior to the closing of the entries, except on account of accident received during transit to or after delivery at the show.

20. No special prizes can be accepted or offered by a show committee after the regular judging has commenced.

21. The age of a dog shall be calculated up to and inclusive of the day preceding the show. A dog whelped April 30 shall not be eligible on May 1 of the following year to compete in a class of dogs under 12 months of age.

22. Exhibitors may state on their entries the price at which they are prepared to sell their dogs, which must be inserted in the catalogue, and if an offer is made to purchase any dog at that price a sale must take place. Sales can only be effected through the secretary or the regularly appointed sale clerk of the show, no sale will take place until 4 P. M. of the second day of the show, when, if there is more than one applicant for any dog, it shall be sold to the highest bidder, and any surplus over the entered price be divided between the exhibitor and the show committee. A commission may be charged on all sales, but not to exceed 5 per cent.

23. An objection to a dog may be made by any person, but must be in writing, and be lodged with the secretary within fourteen days of the last day of the show. A deposit of $5 must be lodged with the objection, except in the case of those lodged by the American Kennel Club.

The committee shall at once meet and decide upon any objection during the show, and from their decision an appeal may at once be taken to any member or members of the executive committee of the American Kennel Club who may be available, provided any such member is not on the show committee; if the second decision supports the show committee in over-ruling the objection, the deposit of $5 is thereby forfeited to the show committee. Should appeal be desired to the full executive committee of the American Kennel Club, it must be sent to the secretary with a deposit of $10, and should the previous decision or decisions be sustained, the $10 is thereby forfeited to the American Kennel Club. If the appeal is allowed, the previous forfeit of $5 must be returned to the appellant. If the objection is lodged subsequent to the show, it must be decided by the committee within twenty days from its receipt, due notice of the date and place of meeting having been given to all persons interested. From the decision of the show committee appeal may be taken to the executive committee of the American Kennel Club in the manner already provided for.

24. No person under sentence of disqualification by the American Kennel Club shall be allowed to exhibit or take a prize at any show held under these rules.

25. Any person who has been guilty of misconduct of any kind in connection with dogs, dog shows or field trials, may be disqualified by the committee of any show. Notice of such disqualification must be forwarded within twenty-four hours to the secretary of the American Kennel Club under a penalty of $10. The secretary of the American Kennel Club shall at once notify the president, or in his absence the vice-president, who shall investigate the case, and if he sees fit suspend the penalty until the next meeting of the executive committee, when the committee must either remove the penalty or impose a penalty of disqualification for such a period as they may decide upon.

The disqualification of an owner shall apply to all dogs connected with the perpetration of a fraudulent act.

26. Entries made in the name of a kennel must be accompanied by the name of the actual proprietor or proprietors, except in the case of kennel names already registered with the secretary of the American Kennel Club. Each partner in a kennel will be deemed culpable in the case of fraud perpetrated in the name of the kennel.

27. The secretary of every show must forward to the secretary of the American Kennel Club a copy of the premium list of the proposed show, which must contain a list of officials under whose management the show is to be held. Each of these officials other than such as may be paid employes for the occasion, will be held personally responsible for the payment of all prizes offered at the show within a period not longer than sixty days from the last day of the show. Any failure to pay each and every premium will entail a penalty of disqualification upon the officials so held personally responsible, until such payments are made good.

28. The holder of the identification ticket shall be recognized as the agent of the owner in the latter's absence.

29. The secretary of any show held under these rules shall be required, under a penalty of $10, to forward to the secretary of the American Kennel Club an early proof of the catalogue, together with an investigation fee of $5, in order to enable him to lodge such objections as he may be instructed to do by the executive committee.

30. Show committees may adopt such regulations to govern their show as they deem fit, provided they do not conflict with any of the foregoing rules.

DOG REASONING.

Editor Forest and Stream:

In your issue of Feb. 24, I noticed several extracts taken from different papers, the subject matter referring to either instinct or reasoning in dogs.

They recalled a case that I have repeatedly seen and have watched every morning (Sundays excepted) when I had the good fortune to take a particular train.

The facts are these:

On the Erie Railway, between Ridgewood and Hohokus, on the east side of the track about midway between the stations, there are five houses, the rear of each facing the track, and I should judge 300ft. distant.

A clear view can be obtained of open ground after crossing the bridge at Hohokus, so that a dog can be seen until the train passes the house nearest to Ridgewood.

The occupant of the second house from Ridgewood owns a red Irish setter named Jack. Every morning when the Orange county express passes the house, a brakeman named Myers throws a paper off the train, and in every instance Jack is waiting for it, or he can be seen running up the hill to get it.

I have watched Jack repeatedly, and have never seen any one around when Jack made his appearance. I have seen him cut across the neighbor's lots to get to the place in time to meet the train, have seen him lying down waiting for the train, and in every instance when I took that particular train Jack was always on hand.

I have taken the Goschen way train, running forty-five minutes earlier, and the Ulster county express, one hour and twenty-five minutes later, and while I have seen Jack around repeatedly, he pays no more attention to these trains than if they were not running.

Now, Mr. Editor, what can you call it, instinct or reasoning? How does the dog pick out that particular train, even though it be late? Does he know the whistle of the locomotive (they are not all tuned to the same pitch) or does he recognize the locomotive, cars, or size of the train? Who can answer?

OBSERVER.

MR. GEORGE R. KREHL AND HIS FRIENDS

Editor Forest and Stream:

I have seen no remarks for or against me in your columns, so venture to ask the favor of some space for a few plain and truthful words. I am not to blame that my affairs have been brought to the attention of American kennel men. I should very willingly never see my name in print again. For a long time I was covered with the abuse of the man whose friend I used to be, the editor of the *Kennel Review*, Mr. H. W. Carter, whose unfortunate fate is no doubt known to your readers. The charge he brought against me of poisoning his dogs, had it emanated from any other person, would have been a terrible one, but coming whence it did, members of the English Kennel Club only smiled or sorrowfully shook their heads. Friends of mine on your side took it in a serious light and wrote kind words of protest, but I have held silence until now that my attention has been drawn to an extension of the charge against a man who is unlikely to see it or unable to reply. Mr. Carter, under pressure, reduced his charge to this, that I was "an accessory after the fact," which means, I understand, that after his dogs were poisoned I knew of it. I did not know what this could refer to until I saw a letter in your contemporary, *Turf, Field* and *Farm*. The writer of it says:

"Mr. Carter had a fellow working for him, who got involved in peccadilloes with two or more housemaids at once, and Mr. Carter, very wisely, fired him. This fellow lived very near Mr. Carter's kennels, and after his discharge by Mr. Carter was employed by Mr. Krehl and subsequently to his employment by Mr. Krehl poison was found in Mr. Carter's kennels, and there seemed no doubt that this fellow put it there, and he is still in Mr. Krehl's employ at last accounts. Now mark the stour kicked up about this. Mr. Carter is correct; an employee that Mr. Krehl still retains in his employ put the poison there. 'Porcupine' is right; there is no evidence that Mr. Krehl had any share in the placing of the poison there, as vindictiveness on the part of the employee would seem a sufficient incentive, but why don't one or the other come out with it and let the whole affair be judged at its true value?"

The name of "the fellow" is Alfred Goodenough, who was formerly my kennel man. He left me and afterward entered Mr. Carter's service. The charge about the housemaids I know nothing of, but it strikes me as monstrously incredible, because while Goodenough was with Mr. Carter he was married from his master's house. Mr. Carter at the time wrote to press me to "come down to the wedding of my old servant." I did not go. After the ceremony Mr. Carter took Goodenough, his wife and her bridesmaid for a drive in Eastwell Park. I mention this to show that Goodenough was provided with moral incentive and to show the kind relations existing at that time between master and man. When Goodenough left Mr. Carter's service he called on me to account for his leaving (he went with a character from me), but as it appeared to include complaints I refused to hear him. Goodenough is at present kennelman to Mr. L. Oppenheim, who owns a famous kennel of smooth St. Bernards. The charge against him is foolish, and I have shown that he was only once in my employ, which was before he went to Mr. Carter, and never since.

In the same journal I find my name again. The paragraph is called "Pleasantries of Kennel Journalism." It gives a reply that is false to a question put by "Porcupine" in the *Sporting Life* to Mr. Hugh Dalziel. The query was: "Did not a certain gentleman he has been attacking in a very violent manner of late, attend to his work on the *Bazaar* while he (Mr. Dalziel) was in America last year, and let the salary remain for the traveler to receive on his return?" An honest, manly, straightforward answer to that question would have been "Yes, Krehl did." But this is what your contemporary was instructed to say for the defense:

"We are informed that Mr. Krehl did not keep Dalziel's position on *The Bazaar* open for him while he (Dalziel) was over here. Dalziel's official, salaried position on the paper named, was taken during his visit to this country by a distinguished veterinary surgeon, whose name we will not give at present. Mr. Krehl had nothing to do with it. However, in addition to his regular work on the *Bazaar*, Dalziel used to supply a column, more or less, of *on dits*, a kind of melange like the Whispers of Fancy in the *Stock-Keeper*, and he asked Mr. Krehl, in common with several others, to see that the paper got something of this sort every week. This Mr. Krehl kindly did, but, we understand, the editor of the *Scottish Fancier* contributed the larger part of this column. So Mr. Krehl didn't keep the position for Dalziel. Again, it was not on personal grounds, *i. e.*, Dalziel's tippling, that he and Mr. Krehl fell out. The real cause of it was that Dalziel had agreed with the *Stock-Keeper* to edit the canine dictionary that ran a few numbers in the paper, and he claimed that Mr. Krehl had violated the terms of the agreement. In addition to this, it seems Dalziel wrote Mr. Krehl plainly, that the allegations of the famous "Anonymous Document," that the English Collie Club was run in the interest of a ring, that they manipulated the judging so as to always show dogs under judges that they knew would put them first, etc., were too true, and urged Mr. Krehl to guide the club in wiser courses."

Let me tell you the simple facts. Before Mr. Dalziel's departure to fulfil his judging engagements in America, I was on terms of great intimacy with him. A few days before he sailed he came to me, saying he had a favor to ask, which was to do his work on the *Bazaar* while he was away. He said very little would be required, just something to keep the column open. He feared the consequences of its being dropped while he was away, it was a very regular part of his income. He plainly put it to me as a trustful friend, so one not likely to oust him from his place. I understood I was to keep the berth warm for him, and felt a pleasure in being in receipt of his confidence. The work I had to do and the style I was to copy, did not require the exercise of any thought or intelligence, it was mere hard labor like stone breaking. I am a very busy man, but I complied for the sake of friendship. Mr. Dalziel mentioned that his daughter would also assist. I noticed that other copy than that I had contributed appeared and attributed it to Miss Dalziel. When Mr. Dalziel returned suddenly and unexpectedly from America he came straight to me, saying he felt it his duty to pay me his first visit, to express his thanks, etc., and he very fairly said when he got his check he would pay me for what I had done. I replied I had done it as an act of friendship and declined his offer, which was well meant. Your contemporary's remark, therefore, that I "had nothing to do with it" is misleading. I was astonished to read that another gentleman had been asked the same favor as myself, and I am also sorry, because when it is read with what I have related above, it represents Mr. Dalziel in a deceitful character, for had he had the candor to tell me of this, I should have refused his insincere request. The account given in your contemporary of the reason of Mr. Dalziel's split with the *Stock-Keeper* is false, absurdly false! The complaint was against the editor of the paper for delaying to make out the agreement between the *Stock-Keeper* and us (Mr. Dalziel and me). I have Mr. Dalziel's letters to prove this. Why, I was to be his collaborator in the "Kennel Dictionary," his interests and mine were identical and I did all I could to hurry on the agreement. The real cause of the split was quite different, but I have no desire to wash Mr. Dalziel's dirty linen under the nose of the American kennel world. I have never quarrelled with him, but his quarrel with me is due to the meanest feeling in human nature. Mr. Dalziel believes I am the kennel editor of the *Stock-Keeper*, and he knows that he is not. Ray on the Creation says: "Envy is a repining at the prosperity or good of another, or anger and displeasure at any good of another which we want, or any advantage an other hath above us."

It is with unfeigned reluctance that I come to the last paragraph in this extract. Mr. Dalziel's character I fear has already suffered in the estimation of your countrymen, and I hesitate to add a particle to his humiliation; but this description of his opinion of the anonymous collie document is so willfully, shockingly false that on behalf of the members of the Collie Club and the committee to which I belong, I am compelled to avow that the statement now made is an absolute fabrication. If he had held the views described I should have immediately dispensed with his acquaintance, but he did not; he agreed with me and other respectable people that the circular was a vile and cowardly libel. I dare Mr. Dalziel to dispute this and I dare him to give me permission to produce the proof which all who see your paper and know Mr. Dalziel shall judge of.

GEORGE R. KREHL.

LONDON, England.

A VIRGINIA FOX HUNT.

ST. VALENTINE'S was the first day of the February term of the County Court of Louisa, Virginia. On that day an arrangement was made for a meet at Woodville, the residence of Mr. Harris, situated in Goochland county, near the Louisa line, on the Wednesday following, at daybreak. At dawn a select party of the Goochland County Hunt Club, including the secretary, Mr. P. G. Miller, and several invited friends, were in readiness with the club dogs, and the horn of the sheriff of Goochland and the commissioners of the revenue, Messrs. Trice and Parrish, also members of the club, was heard approaching the rendezvous with another pack, while Col. Winston and H. J. Wale, Esq., two prominent citizens of Louisa, were coming to join us from another direction.

As we were about to mount we heard one of the sheriff's dogs strike nearly a mile away. The sheriff frantically called and blew his horn in the endeavor to get his dogs off, but in vain. Other dogs joined in, and finally all of the club dogs became uncontrollable and scampered away. Gradually we heard the notes of our best and most reliable dogs as they joined in. Then we cheered and mounted our horses and made ready to follow as soon as it could be determined what direction they would take, for it was apparent that there was no false trail; but reynard was up, and the chase had begun.

The day was surpassingly lovely—one of those charming days which come at rare intervals in this part of the "Sunny South" at this season. Not a cloud was to be seen. A gentle breeze from the south was just sufficient to lift the mists which hung in the serene and balmy atmosphere, upon which were borne those sweet rural sounds of early morning so frequently the subjects of prose and poetry.

We listened to the dogs and could hear the distinctive notes of each, their tones now swelling into a resounding chorus, then dying away over the distant hills and forests until they were miles away from where we were. But our horses as well as our dogs were in admirable trim. We saw that the pack had taken the western branch of Lickinghole Creek, in a northwest direction, and being thoroughly acquainted with every foot of ground in that vicinity Harris and I put our horses at full speed and followed without stopping for fences or ditches until our companions were far behind. Though it was a gray fox he kept straight ahead. He seemed to have had a long start of his pursuers, but the uproar behind him was so great that he never stopped to double. On, on he went. But he left his scent suspended in the atmosphere. The dogs never faltered, but ran with heads erect. We could distinguish the shrill cry of Mr. Wale's Billy Mahone, and the deep bass of John and Ned, a trio of noble appearance, "unmatched for courage, breath and speed," and the voices of Music, Wise and Rover, and a score of others all chimed in.

For a long time the fox ran straight on, but getting into a dense wood he turned at right angles to the east, coming directly toward us. They passed us in full cry, Wise in the lead, closely followed by more than a score of as fine foxhounds as ever gladdened a hunter's heart. As they swept by with lightning rapidity we gave them a cheer, and turning followed them at our utmost speed. Reynard, now sorely distressed, managed to dodge around the corners where several fences met, and seizing an opportunity darted away unseen among a flock of sheep, and then sped on his way again, aiming for a swamp about two miles away. But the ruse failed him. One or two experienced dogs swept around the flock of sheep, and quickly taking up the trail were instantly joined by the entire pack. Poor reynard had no other opportunity to double. Nearer and nearer came the whirlwind of sounds behind him, urging him to one more supreme effort to gain sufficient distance and time to enable him to practice those wiles which erst had saved his life. He gained the swamp, but delusive was his hope. His yelling pursuers swarmed so closely at his back that he had to dash madly through and straight on over the open field where he was quickly overtaken and killed.

Harris and I were up at the death, but our friends had been left so far behind that they but faintly heard our horn, which announced the end of the chase. When they joined us, we determined, as it was still early, to endeavor to start another fox, and one was got up at no great distance. He broke cover near Col. Winston, who was riding a mule. The cry of the dogs and cheers of the huntsmen stirred the Colonel's blood, and vainly did he endeavor by voice, spur and whip to awaken any interest on the part of the mule. A gentleman in the narrow path behind urged him to move forward, otherwise they would be left. His reply was: "Don't mind me, sir, ride over me. When I am reduced to the necessity of riding a mule fox hunting, do not hesitate to ride over me."

This fox, though a gray like the first, ran for several miles in roads, and was caught within an hour from the time it was started. I was riding a blooded filly I prized highly, and finding that I was riding her too hard I drew her in, and suffered the fox, the dogs and the hunters to leave me behind, and did not get up until the chase was over.

The Sheriff, like most good sportsmen, has an amiable weakness for his own dogs, fully illustrated by the following anecdote, related after the hunt by the secretary:

The latter saw the hounds turn back, on one occasion, and come up a valley toward him. He paused until fox and hounds had swept by. He then observed the sheriff galloping after them and exclaiming to himself, "Dang it all, Music is in the lead, Music is in the lead!" And, hat in hand, he passed on, all unconscious of the secretary's presence. The last chase ended near the hospitable residence of Col. Winston, who invited all to his house, where they partook of a splendid dinner and rehearsed the scenes of the day.

Thus ended one of the red-letter days of my life. A day which opened balmy and bright and with all the soft loveliness of spring; and which, having fullfilled all that it promised with bounteous hand, closed in cloudless beauty.

M.

NORTHSIDE, Va.

The interest taken this winter in fox hunting has created a spirited rivalry in Calvert county, Md., between sportsmen, respectively, of the lower and upper districts. Quite an exciting chase occurred in the vicinity of Chaneyville a short time ago, and the Baltimore *Sun* gives this account of the return test chase for the championship of the county for the best fox dog, which was run a few days ago in the central portion of the county: "It was decided that the rendezvous should be at Prince Frederick, and gentlemen who arranged to enter dogs for the hunt took rooms at the Prince Frederick Hotel, where they were entertained during the intervals of the chase by Mr. W. H. Dowell. It was quite late during the first day before a fox was started, and it was thought that the day would be a blank, when Looper, a fine specimen of the southern Maryland fox dog, started from some undergrowth a large gray fox, which came out of the woods in full sight of the pack, having a start of about 75yds. Poldo, an upper district dog, took the lead slightly, and the other dogs bunched. The dogs were closing up the gap rapidly when the fox entered some undergrowth again and performed a feat to aid his escape seldom witnessed. A large pine tree leaned near a bank at a convenient angle for ascent, and being closely pressed, the fox ran up the trunk of the tree a sufficient distance from the ground to escape temporarily the hounds, which were running so rapidly that they overran the trail. The fox immediately doubled and evaded the pack. In a few minutes they were back on the track and captured the fox after nightfall. The chase is described by one of the sportsmen as being one of the most exciting that he had ever witnessed. The start, however, was made too late to follow up, but one person, who chanced on the course taken by the fox, happened at the finish. The second day's hunt was engaged in by gentlemen from all the neighboring sections. The meet was made at Prince Frederick, and the start in what is known as Bowen's Neck. The dogs scattered, and a double chase was the result of the morning. Later in the day the pack again combined and the chase extended several miles along the river farms southward, and then struck across the country to a point about five miles below where the meet had occurred. The fox was "holed" near a church in the second district of the county. A large crowd assembled to discuss the respective merits of the dogs engaged in the chase. The honors, however, were so well contested by the hounds of both sections of the county that no definite conclusion could be arrived at except that the work of several of the hounds on the second day was almost faultless. Those who had entered dogs in the chase were: T. I. Grahame, L. L. Chaney, W. Z. Howard, Malcolm Grahame, Jas. B. Duke, Alex. Duke, W. H. Dowell, W. A. Parran, Thomas Stimmel, Abram Bowell, and many others. A return hunt in an open section of the country is now being arranged, when the hunters will be the guests of sportsmen of Chaneyville."

HARE DOGS.

IN your issue of Feb. 10, a correspondent asks for information about hare dogs. Hare hunting has always been my favorite sport, and I have tried a great many different kinds of dogs.

It is true that the ordinary foxhounds of New England and Canada care little about hares and appear to lack the necessary nose. The long-eared, slick-coated black and tan dogs from Virginia and Pennsylvania are better, but are rather tender for this climate. The English foxhound will run hare in good shape as long as no foxes come in the way, and will stand any amount of hardship; and a cross of either breed on native stock will produce some good hare dogs if broken especially for that purpose. I am now breeding a medium-sized black and tan hound of mixed English, Virginian and native blood that seldom lose a hare and will hunt them in preference to a fox; but we do the most of our hunting here in October and November, and for these months I prefer the English beagle. A good many sports think them too slow, but for me there is no better sport than to sit on a log on a fine day and listen to three or four of the merry little fellows as they double back and forth, and you are pretty sure of a shot sooner or later, as a hare is never in a hurry to leave the neighborhood when pursued by slow dogs. Of course, anything under the standard is too small to run on snow, but it is no trouble to breed them larger.

If your correspondent wants to breed a medium sized reliable rabbit dog let him try the English harrier, they have good nose and splendid voice and hare hunting is their trade. As to the difficulty in following a hare, I think it depends mainly upon the weather. Even a damp, muddy day in the fall or a calm one with a little snow falling in winter, and I have several dogs that will stay with a hare till the bell rings. But take a cold, frosty morning, or bright sunny day with high wind and they won't make much headway. There is not much difference in scent between northern and southern hares. Dogs brought here from Virginia act a little awkward at first, but work all right in a few days. BRUSH.

CANADA.

The most suitable kind of hare dog for all weather is a beagle with a dash of harrier in him; a hound from 15 to 18in. Such a dog, from my experience, will not refuse to hunt in pretty deep snow, while the little beagle is only fit for head ground or light tracking snows. With snow 10 or 12in. deep a beagle will soon come to heel and follow the path you make. CANADA.

In your issue of Feb. 17 I noticed an account of a rabbit hunt with beagles, by W. S. Clark, of Linden, Mass. He says that the beagles take hold and hunt well when they are 6mos. old. I would like to ask Mr. Clark if his beagles give tongue or bark on rabbit scent at 6mos. of age; if they do they beat mine. I have two beagles 8mos. old, and have had them out several times and they are from good hunting stock, but they give no tongue as yet, and I think 6mos. is very early, is it not, for beagles to hunt well? His puppies are very early hunters or mine are very late; which is it? If a dog does not bark how are you going to tell, when he is out of sight, whether he is hunting or not? I have hunted rabbits for twelve or fifteen years and have yet to see the puppy that will hunt well at 6mos. of age, or a dog that is smart enough to catch a rabbit if he is not wounded. E. F. F.

CANTON, Mass.

FOX-TERRIER STUD DOG STAKES.

NEW YORK, March 4.—*Editor Forest and Stream:* The entries to the Stud Dog Stakes of 1888, which is to be judged at the spring show of the Westminster Kennel Club of 1888, under the same conditions as the inaugural stake, which is to be judged at the specialty show of the American Fox-Terrier Club, to be held next autumn.—AUGUST BELMONT, JR., President A. F. T. C.

STUD DOG STAKES (Renewal).

AUGUST BELMONT, JR.—Lucifer as in Præsenti (Splinter—Kohinoor), Bacchanal (The Belgravian—Bedlamite), Resolute (Result—Diadem), Mephisto (Hempstead Joe or Bacchannal—Marguerite), Regent Vox (Tackler—Sandy Vic).

FRED HOEY.— Valet (Venetian — Vinaigrette), Venetian (Corinthian—Little Sweetheart), Luke (Mixture—Lyra).

L. & W. RUTHERFURD.—Splauger (Dickon—Sutton Veda), Warren Jim (Diamond Joe—Diana), Spider (Splauger—Diana).

EDWARD KELLY.—Earl Leycester (Spice—Dame), Shovel (Spider—Roseleaf).

JOHN E. THAYER.—Raby Mixer (Raby Mixture—Richmond Olive), Mixture (Spice—Fairy III.), Raby Jack (Mixture—Shame) Belgrave Primrose (Belgrave Jerry—Wasp).

ATLANTA SHOW.—Augusta, Ga., March 3.—*Editor Forest and Stream:* In your paper of Feb. 17 are published the awards at the Atlanta (Ga.) dog show. There is a misprint in the name of Mr. E. H. P. Scott's collie dog, the winner of first prize. It is printed Burns but should be Burrus. —W.

THE BUFFALO DOG SHOW.

[Special to Forest and Stream.]

BUFFALO, N. Y., March 8.—*Editor Forest and Stream:* The show opened this morning under most favorable circumstances. The number of entries is almost double that of last year, and the exhibition is held in a very large building, splendidly adapted for the purpose. The printer was behindhand with the catalogues, and the express companies caused delay by not delivering several of the dogs, notably Messrs. Thayer and Belmont's, but otherwise all is running smooth. Mr. Davidson managed to get through his work before supper time, as did also Mr. Krueger.

The quality of the exhibits far exceeded my expectations, Raby Mixer, Mr. Thayer's recent purchase, and Bacchanal, an old favorite of mine, are among other good ones I shall have to pass on in the morning. Spaniels are a hot class, and twenty-three Gordons shows the breed is still alive in this district. Mainspring is here for exhibition only. His workmanlike appearance at once attracts the attention of pointer men. Mr. Davidson informs me that his classes are above the average in quality and numbers. I send you the awards up to 7 o'clock this evening.

AWARDS.

ENGLISH SETTERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, T. G. Davey's Knight of Snowden; 2d, E. V. Hale's Pride of Dixie. Reserve, I. Weighell's Prince Hardy. Very high com., T. G. Davey's Canada. High com., F.M. Shelby's Ted's Bangs. Com., T. S. Coburn's Noble Phillip. *Bitches:* 1st, A. A. Francis' Mydora; 2d, T. G. Davey's Lassie. Reserve, C. H. Mason's Lady M. Very high com., Chautauqua Kennels' Marcella. High com., Wilson & Tinning's Carrie Roy and B. F. Lewis's Mollie. Com., G. W. Waite's Moonstone. *Puppies:* 1st, A. A. Francis' Lone Star; 2d, Chautauqua Kennels' Chautauqua Belle. Reserve and very high com., D O'Shea's Nettie and Sport. High com., A. W. Bell's Jack. Com., Chautauqua Kennels' Cloudy.

IRISH SETTERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, I. H. Roberts' Bruce; 2d, F. J. Farley's Rosnie. Reserve, B. F. Lewis' Banker. *Bitches:* 1st, I. H. Roberts' Jessie; 2d and reserve, F. J. Farley's Miss Nellie Husted and Miss Laura Towers. *Puppies:* 1st, F. J. Farley's Phœnix; 2d, G. F. Grover's Fanny.

GORDON SETTERS.—*Dogs:* 1st, Edward Maher's Royal Duke; 2d, J. L. Campbell's Jack. Reserve, T. S. Clark's Dan Gordon. Very high com., P. D. Hart's Nanki-Poo. High com., C. R. Wilson's Glenu. Com., W. J. Weed's Duke. *Bitches:* 1st, J. Campbell's Nora; 2d, W. E. Rothermel's Rose. Reserve, D. O'Shea's Belle. Very high com., P. D. Hart's Gyp II. High com., G. S. Metcalf's Josephine. Com., T. S. Clark's Beauty Gordon and Associated Fanciers' Clara. *Puppies:* 1st, J. O. Armour's Royal Duke II. Reserve, P. D. Hart's Turk. Very high com., F. S. Talcott's Flora. High com. and com., C. A. Shader's Duke and Ruby.

POINTERS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, Clifton Kennels' Pommery Sec; 2d, Jacob Koch's Jeff. Reserve, F. W. White's Don Quixote. Very high com., L. D. Rumsey's Don. High com., R. Hill's Rodg. Com., F. A. Schwartz's Sport. *Bitches:* 1st and 2d, Clifton Kennels' Queen Bow and Dress. Reserve, I. Weighell's Bell. Very high com., F. A. Schwartz's Nelly. High com., Associated Fanciers' Beulah. Com., G. Stauber's Fanny. *Puppies:* 1st, Clifton Kennels' Pommery Sec; 2d, I. Weighell's Bell II. Very high com., Brock & Weiner's Venus.

IRISH WATER SPANIELS.—1st, Hornell Spaniel Club's Captain Muldoon.

FIELD SPANIELS.—CHAMPION—No entries—OPEN—1st, A. C. Wilmerding's Newton Abbott; 2d, Dr. J. S. Niven's Darkey. Very high com., A. Laidlaw's Woodstock Nora; high com., T. E. Curtis's Zeo; com., A. A. Francis's Beau.

COCKER SPANIELS.—CHAMPION—Hornell Spaniel Club's Hornell Silk.—OPEN—BLACK OR LIVER—*Dogs:* 1st, C. M. Nelles' Brant; 2d, Am. Cocker Kennels' Doc. Very high com., A. Laidlaw's Woodstock and C. Nelles' Obo, Jr. High com., C. C. Thompson's Master Shina. *Bitches:* 1st, Dr. J. S. Niven's Busy; 2d, T. E. Curtis's Lady of the Lake. Reserve, C. M. Nelles's Juno W. Very high com., A. Laidlaw's Belle. High com., American Cocker Kennel's Queen Obo and C. M. Nelles' Frou Frou. ANY OTHER COLOR—1st, A. Laidlaw's Royal; 2d, F. E. Curtis's Sport, Jr. Very high com. and high com., A. Laidlaw's Roxy and Robin. *Puppies:* 1st and 2d, A. Laidlaw's Royal and Woodstock Nora. Very high com., C. M. Nelles's Frou Frou. High com., American Cocker Kennels' Lucy.

FOXHOUNDS.—1st, D. O'Shea's Ranger; 2d, J. Hammon's Bugle. Very high com., H. Grieb's Bluster. High com., J. Kennedy's Banjo. Com., E.F. Shafer's Flora. *American:* 1st and 2d, W. C. Crandall's Victory and Trailer. Com., J. L. Wyckoff's Toot.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Chieftain. *Bitch:* J. E. Thayer's Wanda.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Highland Laddie and Bras. *Bitches:* 1st and 2d, J. E. Thayer's Ramona and Thora. *Puppies:* 1st, J. E. Thayer's Brazen.

GREYHOUNDS.—*Dogs:* 1st, Terra Cotta Kennels' Memnon; equal 2d, J. Kennedy's Misterton and J. Muldoon's Spring. *Bitches:* 1st, H. W. Huntington's Hawthorne Belle; 2d, G. Stanton's Juno. High com., C. S. Wixom's Harmony.

BEAGLES.—CHAMPION—D. O'Shea's Rattler.—OPEN—*Dogs:* 1st, D. O'Shea's Tomboy; 2d, Mrs. M. Wasser's Ginger. Very high com., J. Anderson's Doc. *Bitches:* 1st, D. O'Shea's Actress II.; 2d, C. C. Ruppel's Queen II. Very high com., J. Anderson's Sing. *Puppies:* 1st, D. O'Shea's Tramp; 2d, C. Ruppel's Butler. Very high com., F. M. Shelley's Speculation.

DACHSHUNDE.—1st, C. Kloche's Lina L.; 2d, R. Schwarz's Fripon. Very high com., Associated Fanciers' Flash. High com., C. Kloche's Feldman.

ST. BERNARDS.—ROUGH-COATED.—CHAMPION—Hospice Kennels' Otho.—OPEN—*Dogs:* 1st and 2d, Hospice Kennels' Eiger and Alvier. Very high com., Mrs. J. H. Shifferen's Barry. High com., G. L. Williams' Reginald and T. H. Newberry's Julian. *Bitches:* 1st, very high com. and high com., Associated Fanciers' Norah, Sheba and Mona; 2d and very high com., Hospice Kennels' La Duchesse and Jeanne d'Arc. High com., Alta Kennels' Clio and Lady Alpha.

MASTIFFS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, Wacouta Kennels' Nap; 2d, H. J. Behrend's Ashmont Hero. *Bitches:* 1st, Wacouat Kennels' Rose; 2d, Lavina A. Avery' Bos's Gretchen. *Puppies:* 1st, Farbush and Metcalfe's Junior.

WESTERN FIELD TRIALS ASSOCIATION.

THE third annual field trials of the Western Field Trials Association will begin Nov. 7, at some suitable location in western Missouri or eastern Kansas. The stakes will be as follows:

DERBY.—Open to pointers and setters whelped on or after Jan. 1, 1886. Purse, $500, with $250 to first, $150 to second and $100 to third. Fee, $10, with $15 additional to start. Entries close May 1. Final declaration to be made before 9 o'clock A. M. Nov. 7.

ALL-AGED STAKE.—Open to pointers and setters that have not won first prizes in All-Aged Stakes of previous years. Purse, $500, with $250 to first, $150 to second and $100 to third. Fee, $10, with $15 additional to start. Entries close Oct. 8. Final declaration to be made before 10:30 o'clock P. M., Nov. 7. The winner of this cup will also receive a cup, value $100, or cash, as preferred. The secretary is R. C. Van Horn, Kansas City, Mo.

THE MICHIGAN KENNEL CLUB.

Editor Forest and Stream:

At a meeting this evening of the sportsmen of this vicinity it was decided to form a club for the purpose of breeding and improvement of dogs and holding bench shows. Following is a list of the officers: President, Dr. Donald Maclean; Vice-President, W. F. Jarvis; Treasurer, Truman H. Newberry; Secretary, Chas. Weil; Executive Committee, the officers of the club and Dr. M. V. B. Saunders. It was decided to hold a bench show May 24 to 27. We have already a guarantee fund of $2,500, and propose to have as good a show as any. Our application for admittance to the A. K. C. has been sent in. Premium lists and entry blanks will be sent to any address on application.—CHAS. WEIL, Secretary, Newberry & McMillan Building.

DETROIT, March 6.

CURRENT NOTES.—Mr. Jas. Lindsay has sold his collies to the Chestnut Hill Kennel of Philadelphia, and in future his kennel interests will be merged in those of this kennel. ....Mr. Victor M. Haldeman is now located at Milford, Del., on an extensive fruit farm. He writes that he has 3,000 peach trees, 20 acres of strawberries, and the same in blackberries and raspberries. Besides dogs he breeds pedigreed pigs, cattle and poultry....Mr. E. H. Moore, Melrose, Mass., has recently purchased in England two mastiff bitches, one of them a puppy. They will arrive in a few days and are expected to sweep the deck at the coming shows....Mr. H. C. Glover has sold his well-known Gordon setter bitch Nora. ....Mr. John E. Thayer will probably exhibit a larger number of dogs at Providence than has ever been shown by one kennel in this country....There appears to be considerable dissatisfaction among many of the prominent exhibitors at the course some of the bench show committees have taken in their selection of judges. Those who have the appointment of judges should have learned by this time that third-rate judges mean third-rate dogs, and few even of them....Mr. John E. Thayer has sold champion Argus....There was a dog show in connection with the South Florida Fair last month. Over thirty dogs were present. This was the first dog show held in Florida....The Philadelphia dog show will be held in the old rink, corner of Twenty-third and Chestnut streets....The celebrated mastiff Crown Prince is dead....We have received the catalogue of the Hempstead Farm Co., which gives a list of collies owned by them and the prizes they have won. There are nearly 100 firsts and champion prizes recorded that have been won in England and this country by these dogs, as well as a large number of valuable cups and special prizes.

THE BOSTON DOG SHOW.—*Editor Forest and Stream* As might have been expected, the large amount of money offered by the club has had its effect in a great rush the past week to enter dogs, far exceeding that of previous years, and the liberal offer to kennels brings to the front all the noted kennels of the country. One of the largest kennels who have entered the past week is the Graphic Kennel. Another kennel that has been entered is that of Mr. J. W. Newman's Boston kennel of bull-terriers. The amount of prizes at this show is the largest ever offered in the world, and is constantly being added to by many friends of the club. Some of the largest additions mentioned is one from the American Collie Club of a cash prize of $20 for the best collie dog or bitch in the show owned by a member of the American Collie Club. There will be a valuable silver cup for the best brindle greyhound, and specials for the best English, Irish and Gordon setter puppy, foxhound, beagle and cocker spaniel puppy, and for the best brace of English greyhounds. The management of the show have also made two classes for Ulmer or Great Dane dogs with a prize of $10 for first, $5 for second and a medal for third, for dogs, and the same for bitches. This has been found necessary from the large number of requests from owners of this breed.—BENCH SHOW COMMITTEE.

DEATH OF NOREEN.—Dr. Jarvis writes us that he has had the misfortune to lose by death his well known Irish setter bitch champion Noreen. She died Feb. 26. Noreen (A.K.R. 297) was whelped June 18, 1879. She was bred by Mr. J. J. Giltrap, Dublin, Ireland, and was imported by Dr. Jarvis about six years ago. She was by champion Garryowen and out of Capt. A. A. Knox's Cora (Ranger—Dot.) Noreen was well known to the readers of FOREST AND STREAM, as she was a noted winner on the bench. Her best record, however, is the list of prize winners to be found among her progeny. Elcho, Jr., Glencho, Bruce and Noreen II., all of one litter, form a wonderful quartette of winners. She was also the dam of Burke, Hyperion, Larry Thorne, Roland, Faun, Irene, Jessie, Lady Elcho T. and Noreen IV., all winners, some of them of many prizes. This is a record that Dr. Jarvis may well be proud of.

PITTSBURGH DOG SHOW.—The thirteenth annual dog show of the Western Pennsylvania Poultry Society will be held at Pittsburgh, April 12 to 15. The prize in the champion classes is a gold medal. In the open classes, pointers, English, Irish and black and tan setters are divided by sex with $20 and $10, and silver medal, with $10 and silver medal to puppies. Mastiffs, St. Bernards, foxhounds, and pugs $10 and $5 and silver medal. Spaniels, fox-terriers, beagles, collies and bulldogs $10 and $5; other classes $10 and silver medal. Puppies will be allowed to be taken home on the second day of the show. The judges announced were Major J. M. Taylor, Cleveland, Ohio, pointers and setters; A. C. Krueger, Wrightsville, Pa., beagles and foxhounds; Harry L. Goodman, Auburn Junction, Ill., all other classes. What special qualification Mr. Goodman possesses for judging any one of the many important classes assigned him we are unable to say.

HARTFORD DOG SHOW.—Hartford, Conn., March 7.—*Editor Forest and Stream:* Our premium list will be ready for mailing about the 15th instant. We shall make a class for Great Danes, and we shall be pleased to hear from the water spaniel breeders regarding classes for their spaniels. We shall offer champion cups in the champion classes, and $10 and $5 cash prizes in the open classes. Also kennel prizes for mastiffs, St. Bernards, pointers, English and Irish setters, beagles, fox-terriers and cocker spaniels.—A. C. COLLINS, Secretary.

CHESTNUT HILL KENNELS.—March 1.—*Editor Forest and Stream:* Messrs. Mitchell Harrison and Chas. T. Thompson, of Chestnut Hill, Philadelphia, having engaged my services, my patrons will please take notice that from March 1, 1887, all kennel business transacted by me will be in connection with the Chestnut Hill Kennels. These kennels own some of the best winning strains of England and America. My patrons will find a larger and better selection with them than with me heretofore.—JAMES LINDSAY.

ROCKINGHAM.—The well-known English setter dog Rockingham has strayed or been stolen from his handler at Tappan, N. J. A liberal reward will be paid for information that will lead to his recovery by his owner, Mr. F. Windholz, 525 Sixth avenue, New York.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

A. J. K., Eau Claire.—Could anything be done for comparatively a young dog that is commencing to be deaf from being shot over a good deal? Ans. We are inclined to doubt the cause of deafness. If you are right, however, and the dog is young, he may recover. You had better satisfy yourself that there is no accumulation of wax or inflammation in the ear.

JORBISH, Glenns Ferry, Idaho.—I cut the tail of my Airedale terrier pup about two weeks ago, but instead of healing up, the wound seems to keep in an unhealthy state and smells badly. The pup is eight weeks old. Should the tail have been cut when the pup was in the nest? What can I do to cure it? Ans. Wash the wound with castile or carbolic soap morning and evening, and dress it with balsam of Peru ointment and iodoform, 20 grains to the ounce. Keep the wound protected. Other query answered elswhere.

BREECHLOADER, City.—A Newfoundland dog 2½yrs. old has a constant running from the eyes. I have washed them every morning and evening for the past three weeks, but they seem to be no better; every time I go to him there is a great clot of inflammation in the corner of the eyes. Ans. Drop a little sulphate of zinc solution, two grains to the ounce of water, into the eyes night and morning after washing with warm water. Keep the bowels in order with syrup of buckthorn in teaspoonful doses.

W. S. S., Lake Linden.—My Newfoundland pup, three months old, seems in perfect health and spirit except a continuous running of clear watery fluid from the corners of the eyes. I find, on examination, that there is a black skin that seems to adhere to the eyes (when they are turned up) from the corner nearly up to the sight. The eyes are bright and the pup seems to see all right. Ans. Drop a little solution of zinc sulphate, two grains to the ounce, in the eyes night and morning. Keep the bowels in order with a half teaspoonful of syrup of buckthorn every two or three days.

A. B. S., Suitland.—A fine young foxhound, 18 months old, had the distemper six months ago, and the disease left him with a slight twitching in his foreleg and shoulder. Will it prevent him from becoming a good dog, and can he ever stand hard running? I have a good pack and do not want to bother with him if he will not be of any use. Outside of this blemish he is as fine a young dog as ever I saw. Ans. Give the dog a pill of the citrate of iron and strychnine, 3 grains each, three times daily; also, give 8 drops of Fowler's solution of arsenic in his food at night. Keep the bowels in good shape. He can be cured.

JORBISH, Idaho.—My Airedale terriers have been troubled with lice for some time. I read your article on that subject and got some tincture of quassia, but do not know the exact proportions. The directions on the bottle said, "use externally as a lotion." I put ½oz. liquid to one quart of water; is that right? Also what effect has it used internaly, as the same directions said use one-half to one teaspoonful internally, but does not say whether with water or not. The pup (six weeks old) this morning vomited some of his mother's milk, and with it came two worms. The bitch is also affected slightly above the root of the tail with some small scabby places which appear itchy. I applied some carbolic acid diluted with water, and she ceased to bite them. Please prescribe. Ans. You can apply the quassia as it comes in the bottle, also given internally same way. Carbolic soap or carbolic acid solution 1 in 40 will kill the lice. Ten grains of areca nut or ten drops of oil of wormseed, preceded and followed by a purge, and given while fasting, will kill and carry off the worms. The oil may be given on sugar and the powdered areca nut in a piece of lard. The ointment of the balsam of Peru will cure the scabby places.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Greenfield Kennel. By A. C. Pickhardt and C. S. Bradley, Greenfield Hill, Conn.

Tell Kennels. By C. A. Parker, Worcester, Mass., for his kennel of pointers.

Pete. By Peter McGill, Brooklyn, N. Y., for lemon and white pointer dog, whelped Oct. 16, 1886, by Bang Bang out of Perry.

Belmont. By C. L. Hopkins, Norwich, Conn., for orange belton English setter dog, whelped Nov. 5, 1886, by Buckellew (A.K.R. 30) out of Bessie Noble (Count Noble—Lady May).

Fleur de Lis. By Duke Rhœbe Kennels, Flatbush, L. I., for orange and white English setter bitch, whelped Jan. 11, 1887, by Buckellew (A.K.R. 30) out of Princess Helen (Thunder—Bessie).

NAMES CHANGED.

Little Fraud to Belle Gladstone. By Geo. C. Sterling, New York city, for English setter bitch, age not given, by Rex Gladstone out of Little Fraud.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Rue—Mainspring. Bayard Thayer's (Boston, Mass.) pointer bitch Rue (A.K.R. 401) to F. Perkins's Mainspring, March 2.

Pearl Belton—Prince. W. C. Augur's (New Haven, Conn.) English setter bitch Pearl Belton (A.K.R. 4568) to T. G. Bennett's Prince (Emperor Fred—Lill), Feb. 1.

Lady May—Royal Albert. H. Pape's (Hoboken, N. J.) English setter bitch Lady May (A.K.R. 1371) to C. F. Crawford's Royal Albert (Sir Allister—Novelty), March 2.

Moxy—Silk. J. A. Huston's (Brownsville, Pa.) cocker spaniel bitch Moxy (Kino—Sis) to Hornell Spaniel Club's Silk (A.K.R. 1397), Jan. 13.

Flora—Jock. Hornell Spaniel Club's (Hornellsville, N. Y.) cocker spaniel bitch Flora (Hornell Bub—Jenny) to their Jock (A.K.R. 1877), Jan. 3.

Gyp—Mack. J. Carroll's (Arkport, N. Y.) spaniel bitch Gyp (Black Charlie—Gros Grain) to Hornell Spaniel Club's Mack (Dan—Josie P.), Jan. 17.

Silk's Pearl—Dandy. E. A. Higgins's (Cohocton, N. Y.) cocker spaniel bitch Silk's Pearl (Silk—Sunshine) to Hornell Spaniel Club's Dandy (A.K.R. 65), Jan. 12.

Lady Babcock—Jock. John Cumming's (Columbus, O.) cocker spaniel bitch Lady Babcock to Hornell Spaniel Club's Jock (A.K.R. 1877), Jan. 7.

Vanity Fair—Hornell Dandy. Hornell Spaniel Club's (Hornellsville, N. Y.) cocker spaniel bitch Vanity Fair (Jock, A.K.R. 1877—Anna) to their Hornell Dandy (A.K.R. 65), Jan. 1.

Black Pearl—Hornell Silk. J. A. Nickerson's (Boston, Mass.) spaniel bitch Black Pearl (Obo II.—Critic) to Hornell Spaniel Club's Hornell Silk (A.K.R. 1397), December, 1886.

Venus—Hornell Mikado. Geo. H. Metcalfe's (Buffalo, N. Y.) cocker spaniel bitch Venus to Hornell Spaniel Club's Hornell Mikado (A.K.R. 4467), Jan. 1.

Hornell Meg—Mikado. Hornell Spaniel Club's (Hornellsville, N. Y.) cocker spaniel bitch Hornell Meg (Bub—Jenny) to their Mikado (A.K.R. 4467), Jan. 15, and Dandy (A.K.R. 65), Jan. 20.

Nellie—Doc. G. M. Shaw's (Trenton, N. J.) cocker spaniel bitch Nellie (Success—Rachael) to American Cocker Kennels' Doc (A.K.R. 3795), Feb. 14.

Suzette—Newton Abbott. W. T. Payne's (New York city) cocker spaniel bitch Suzette (Sport—Suwance) to A. C. Wilmerding's Newton Abbott (A.K.R. 3374), Feb. 24.

Nellie Bly—Young Royal Prince. Warren H. Beede's (Lynn, Mass.) bull-terrier bitch Nellie Bly to J. W. Newman's Young Royal Prince (Young Royal—Scarlet II), Jan. 13.

Pansy—Royal Diamond. J. W. Newman's (Boston, Mass.) bull-terrier bitch Pansy to J. W. Newman's Royal Diamond (Hornet II.—Lulu), Feb. 13.

Princess Louise—Young Royal Prince. W. C. Hook's (Charlestown, Mass.) bull-terrier bitch Princess Louise (Jeff—Susie) to J. W. Newman's Young Royal Prince (Young Royal—Scarlet II.), Feb. 23.

Young Baroness—Young Royal Prince. J. W. Newman's (Boston, Mass.) bull-terrier bitch Young Baroness (Baron—Lurline) to his Young Royal Prince (Young Royal—Scarlet II.), Feb. 25.

Scarlet Princess—Royal Diamond.—J. W. Newman's (Boston, Mass.) bull-terrier bitch Scarlet Princess (Young Royal—Scarlet II.) to his Royal Diamond (Hornet II.—Lulu), Feb. 27.

Lill—Royal Diamond. Chas. Cook's (Centerville, Conn.) bull-terrier bitch Lill to J. W. Newman's Royal Diamond (Hornet II.—Lulu), March 1, 2 and 4.

Lotta—Laurian. Forest City Kennels' (Portland, Me.) smooth St. Bernard bitch Lotta (A.K.R. 935) to their Laurian (A.K.R. 4074), Feb. 3.

Dolly—Sam. Forest City Kennels' (Portland, Me.) pug bitch Dolly (A.K.R. 170) to their Sam (A.K.R. 4064), Dec. 7.

Sibyl—Major. Forest City Kennels' (Portland, Me.) rough St. Bernard bitch Sibyl (A.K.R. 797) to Geo. Milliken's Major (A.K.R. 4070), Dec. 17.

Judy II.—Treasure. Detroit Kennel Club's (Detroit, Mich.) pug bitch Judy II. (Moore's Puggy—Moore's Judy) to J. Engelhart's Treasure (A.K.R. 472), Feb. 22.

Sal. G. W. Amory's (Boston, Mass.) pointer bitch Sal (Dick—Ruby), Feb. 26, five (two dogs), by his Bob (Bang—Princess Kate).

Juno. Forest City Kennels' (Portland, Me.) pug bitch Juno (A. K.R. 400), Nov. 12, seven (two dogs), by their Sam (A.K.R. 4064).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Madge II. Lemon and white Clumber spaniel bitch, whelped Aug. 11, 1886, by Johnny out of Madge, by F. H. D. Viette, Ottawa, Ont., to W. V. Helfrich, Ogden, Utah.

Lyra. St. Bernard bitch, by Alp II. (A.K.R. 705) out of Brenner (A.K.R. 706), by Chequasset Kennels, Lancaster, Mass., to Charles Wills, Newburyport, Mass.

Lad of Maine, Bean of Maine and Belle of Maine. Two black and white and ticked dogs and one bitch, whelped June 10, 1886, by Graphic (A.K.R. 2411) out of Zitta (A.K.R. 1358), by H. F. Farnham, Portland, Me., to Fred F. Harris, same place.

Belle of Maine. Black and white and ticked pointer bitch, whelped June 10, 1886, by Graphic (A.K.R. 2411) out of Zitta (A.K. R. 1358), by Fred F. Harris, Portland, Me., to Geo. W. Lovell, Middleboro, Mass.

Blondie—Jipsey whelp. Golden fawn greyhound bitch, whelped Aug. 30, 1886, by Detroit Kennel Club, Detroit, Mich., to L. Bertram Cady, New York city.

Sir Anthony. Liver and white and ticked pointer dog, whelped Nov. 18, 1885, by Graphic (A.K.R. 2411) out of Zitta (A.K.R. 1358), by F. F. Harris, Portland, Me., to Geo. W. Lovell, Middleboro, Mass.

Marquis. White and orange St. Bernard dog, whelped Sept. 20, 1886, by Merchant Prince out of Nun, by Essex Kennels, Andover, Mass., to J. B. Stacy, Pulaski, Tenn.

Apollinaris. White and orange St. Bernard bitch, whelped July 16, 1886, by Apollo out of Brunhilda, by Essex Kennels, Andover, Mass., to J. B. Stacy, Pulaski, Tenn.

Norfolk. Orange tawny and white St. Bernard dog, whelped July 4, 1886, by Essex (A.K.R. 931) out of Daphne II. (A.K.R. 489), by Essex Kennels, Andover, Mass., to Elwyn W. Lovejoy, Lowell, Mass.

Bang Bang—Ferry whelp. Lemon and white pointer dog, whelped Oct. 16, 1886, by J. F. Rivers, Bridgeport, Conn., to P. McGill, Brooklyn, N. Y.

Black Knight. Black cocker spaniel dog (A.K.R. 3493), by P. Cullen, Salmon Falls, N. H., to J. P. Willey, same place.

Juno. Black, white and tan beagle bitch, whelped May 4, 1886, by Lee out of Fight, by Pottinger Dorsey, New Market, Md., to F. McKie Thayer, Colorado Springs, Col.

Mars. Black, white and tan beagle dog, whelped April 3, 1886, by Lee out of Venus, by Pottinger Dorsey, New Market, Md., to F. McKie Thayer, Colorado Springs, Col.

May Belle II. Black, white and tan beagle bitch, whelped July 4, 1884, by Lee out of May Belle, by Pottinger Dorsey, New Market, Md., to A. H. Wakefield, Providence, R. I.

Boy. Black, white and tan beagle dog, whelped Sept. 14, 1884, by Lee out of Diana, by Pottinger Dorsey, New Market, Md., to A. H. Wakefield, Providence, R. I.

Essex. White and orange St. Bernard dog, whelped Jan. 20, 1884 (A.K.R. 931), by Essex Kennels, Andover, Mass., to Mrs. E. W. Hoyt, Lowell, Mass.

Foreman's Ned, Foreman's Nat, Foreman's Nan and Foreman's Nell. Two black, white and tan English setter dogs and two bitches, whelped Nov. 5, 1886, by Foreman out of Nellie II., by C. Fred Crawford, Pawtucket, R. I., one each to Ben A. Gage, same place, Charles Sprague, New York city, E. L. Sylvester, South Attleboro, Mass. and S. A. Lockwood, Saylesville, R. I.

Nellie Druid. Black and white English setter bitch, age not given, by Druid out of Lola, by Duke Rhoebe Kennels, Flatbush, L. I., to American Field Kennels, Beatrice, Neb.

WOODFORDS, Me., March 5.—*Editor Forest and Stream:* I note sale in this weeks of red Irish setter bitch Colleen Bawn, whelped May 20, 1886. It should be whelped Nov. 20, 1885. I may have made a mistake.—HARRY A. FLETCHER.

IMPORTATIONS.

Balkis. Black and white greyhound dog, whelped March, 1882 (Clyto—Primrose), by H. W. Huntington, Brooklyn, N. Y., from Wm. Graham, Newtownbreda, Belfast, Ireland.

Lancashire Witch. Fawn greyhound bitch, whelped January, 1881 Dresden China—Colleen Bawn), by H. W. Huntington, Brooklyn, N. Y., from Wm. Graham, Newtownbreda, Belfast, Ireland.

PRESENTATIONS.

Mickey Free. Red Irish setter dog, whelped Nov. 19, 1886, by Mac (A.K.R. 257) out of Duchess of Erin, by Floyd Vail, Jersey City, N. J., to Dr. S. Wellman Clark, same place.

Johnny III. Lemon and white Clumber spaniel dog, whelped Aug. 28, 1886, by Johnny out of Jess, by Jos. Hickson, Montreal, Quebec, to Dr. Langmaid, Boston, Mass.

Sensation's Rose. Liver and white pointer bitch, whelped Feb. 9, 1886, by Sam out of Fan, by C. E. Gilchrist, Charlestown, Mass., to J. Bardwell, Chicago, Ill.

FIXTURES.

March 10.—Hiram Furth, of Erie, Pa., against R. E. Sheldon, of Cleveland, O., at Erie, Pa.

March 16.—Fitchburg, Mass., Climax Badge Tournament. A. W. Baker, Jr., Secretary.

REVOLVER SHOOTING.

Editor Forest and Stream:

As a lover of target practice with the revolver I should like to state the result of my search for a satisfactory weapon and ammunition, in hope that it may perhaps benefit some one, and also that if the subject is agitated enough it may lead some maker to adjust the ammunition and weapon for accurate work with as much care as is used with rifles. I have owned revolvers, of most of the better class of makers, of all calibers from .22 to .44; and the principal object to all can be summed up, in my opinion, as too much lead, and therefore so much recoil as to render accurate work for a number of shots impossible. Of course this can be overcome by increasing the weight of the revolver, but if entirely corrected in this way it would, I think, render it clumsy.

As the result of my search I now have a 7-shot Merwin, Hulbert & Co. revolver, .32-cal., 5½in. barrel, weight 1lb. 4oz.; in general size it is almost identical with S. & W.'s .38-cal. I think that it would be improved by a larger stock and an increase of weight to 1lb. 10oz. This revolver takes a special cartridge containing 13gr. of powder and 90gr. of lead, the .32cal. S. & W. (9-85) cartridge can also be used in the same cylinder, but it is better to have a cylinder chambered for that cartridge alone. With the 13-90 cartridge there is too much recoil, with the S. & W. cartridge the proper adjustment is never what it should be. But it can be improved greatly, and I think as near the right adjustment reached as is possible with any revolver now on the market by using a round ball. This reduces the weight of the bullet to 50grs., and the recoil is light even with 16grs. of powder, and of course less with 9grs.

Lessening the recoil by reducing the weight of the bullet has a great advantage over reducing the amount of powder, as by the former method we increase the velocity, while by the latter it is decreased so that the bullet has a very perceptible drop even at very short range. As to the effect of increasing the accuracy I find in my case that, taking strings of 25 shots each, the round ball will uniformly give better results by from 30 to 40 per cent. While it is undoubtedly a nuisance to most men to have to load their own cartridges, still I think that taking into account the increased possibilities in the use of the revolver it more than pays for the extra trouble of so doing in order to be able to use a round ball.

ROUND BALL.

The competition for first place in the record of revolver shooting at Conlin's Gallery, Broadway and 31st street, this city, is sharp and close, and the leading men are doing some fine work with six-shooters. All the matches are shot at 12yds. range with S. & W., varying from .32 to .44cal. The targets used are: Massachusetts 1 3-16in. bullseye, centre 9-16in., counting 12; Standard decimal, 1¼in. bullseye, ½in. center, counting 10; French target, 1⅛in. bullseye, ⅜in. carton, counting 7. The scores up to date are as follows:

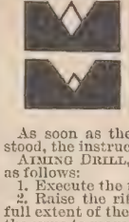
Massachusetts target, 6 shots, possible 72:

Capt Ira A Paine	71	A M Hamilton	67
George Bird	70	Chas F Jones	66
J T B Collins	70	Maynard Bixby	64
D A Davis	69	P J Lauritzeu	64
Pierre Lorillard, Jr	68	L H Livingston	63
Frank H Lord	68	J B Miller	61
Alfred Brennan	67	G L Garrigues	61

French target, 6 shots, possible 42:

George Bird	39	W B Young (at the word)	36
J T B Collins	33	Pierre Lorillard, Jr	36
Frank H Lord	38	W C Southwick	36
A M Hamilton	37	A P Kelly	36
J B Miller	37	H W Wickham (at word)	35
D A Davis	37	C F Jones	35
S T Crosby	37	M Bixby	33

Standard decimals target, 6 shots, possible 60.



J T B Collins	58	A P Kelly	49
W M Chase	56	C F Jones	49
George Bird	55	C E Blydenburgh	49
Pierre Lorillard, Jr	52	Capt T H Swift	48
A M Hamilton	53	W S Bigelow	47
H B Blydenburgh	53	F Schuchardt	45
J B Miller	49	G L Garrigues	45

MILITARY RIFLE DRILL.

GEN. ROBBINS, General Inspector of Rifle Practice for the State of New York, has prepared a set of instructions for the guidance of the guard. In them he manages to compress a good deal of good advice. He says:

To obtain uniformity, insure steadiness, and accustom the men to the aiming position, the following is prescribed as an exercise for that purpose:

SIGHTING DRILL.—1. A sandbag for each squad (one 12lb. or two 6lb. bags), will be placed on a rest, which may be a table, a tripod or a stack of arms, placed so that a bag will be about 4½ft. from the ground. The men will be formed in single rank, and in squads not to exceed ten men in each. The instructor will then flatten the sandbag with the back of his hand, and lay a rifle on it, aim it at some small object at as great a distance from it as the drill room will permit (a wafer on the wall, for instance), and explain to the men the following simple rules: The sights should not incline to the right or left. The line of sight should be taken along the center of the notch of the back sight and the top of the fore sight, which should cover the middle of the mark aimed at. The eye should be fixed on the mark, and not on the fore sight. Particular attention should be paid to this rule, as beginners are apt to fix the eye on the fore sight, and not the mark, which prevents the latter from being distinctly seen, and greatly increases the difficulty in aiming.

2. The instructor will also explain the different kinds of sights, viz:

Fine Sight.—When the point of the forward sight is just seen through the notch of the breech sight, the effect of which is to shoot low.

Full Sight.—When the whole of the wedge-shaped portion of the front sight is displayed through the notch of the breech sight, the effect of which is to shoot high.

Half Sight.—When but half the fore sight is seen.

As soon as these rules and regulations are thoroughly understood, the instructor will proceed to the

AIMING DRILL, which will invariably be drilled by the members as follows:

1. Execute the first motion of load.

2. Raise the rifle smartly in front of the right shoulder to the full extent of the left arm without moving the body, head or eye; the arms to move close to the body, the breech sight to be upright; barrel nearly horizontal and pointing a few inches below the mark; the eyes are fixed upon the forefinger inside the trigger guard, both elbows inclined downward.

3. Press the piece smartly with both hands against the hollow of the shoulder, which must neither be allowed to give way nor pressed forward or raised to meet it; the left elbow at the same time being brought as far under the rifle as it is possible without assuming an unnatural position, the right elbow slightly raised, being nearly square with the right shoulder. The center (or rather upper than lower) part of the butt to be pressed firmly against the shoulder with the left hand without touching the collar-bone, the top of the butt being as nearly as possible with the top of the shoulder. The forefinger will be placed around the trigger like a hook, but without pressing it. The head and body will be kept perfectly perpendicular the whole time, no attempt being made to look through the sights.

4. Close the left eye, incline the head to the right over the small of the stock so that the right eye may quickly perceive the coincidence of the rear and front sights, and the object aimed at.

5. Raise the head, look squarely to the front and bring the piece smartly to the first position.

The drill is continued by the commands two, three, four, five; and when the instructor wishes to suspend the exercise, he will command: 1. Carry. 2. Arms. The aiming drill will be continued until the men aim quickly and correctly from the shoulder.

RANGE AND GALLERY.

ALBANY, N. Y., March 3.—The matches at Rensselaerwyck were resumed to-day. Quite an attendance of members were present. One match was shot with following result. Only one entry:

W E Fitch	8	6	10	5	10	7	9	8	5	10—78
B C Andrews	7	9	5	7	6	5	6	9	10	5—69
W T Mayer	6	9	7	5	7	6	4	6	10	7—67
W C Gompie	10	8	4	5	3	5	5	10	9	4—63
A Ryan	6	5	4	6	6	6	6	9	7	7—62
J H Brooks	5	5	7	4	8	6	10	8	4	5—62
J B Rodman	7	2	6	6	10	5	8	5	6	7—62
V La Point	3	7	3	5	6	7	6	4	7	8—56

PRIVATE.

BOSTON, March 5.—A large number of riflemen were present at the Massachusetts Rifle Association range to-day, and shot in the new matches. Next Wednesday will be shot the "challenge match," for the champion team badge of the New England Trap Shooters' Association and Wellington Gun Club vs. the Massachusetts Rifle Association. Below are the scores made to-day, both at 200yds.:

Rest Match.

N Washburn	10	10	10	9	10	10	10	9	10	10—98
D L Chase	10	10	10	10	10	10	8	10	10	10—98

HAVERHILL, Mass. Rifle Club, March 5, 200yds., off-hand, standard target. Strong wind with some mirage:

H Tuck	8	9	7	6	9	6	8	8	10	8—79
J Busfield	9	9	6	6	7	8	7	9	8	10—79
S E Johnson	7	6	7	10	10	9	9	8	7	6—79
J F Brown	8	8	8	9	6	10	5	9	6	8—77
F Merrill	6	4	9	7	5	5	4	9	5	8—63
C Bliss	2	4	5	5	6	4	4	8	6	6—48

WILMINGTON, Del., March 3.—The usual weekly gallery shooting of the Wilmington Rifle Club took place at their headquarters this evening. The shooting of the evening developed some good scores, particularly that of C. Heinel, Sr., which was far the best yet made by the club at gallery shooting. The scores are as follows, out of a possible 90 points on modified Hinman target for 12½yds.:

C Heinel, Sr	9	6	6	4	6	9	9	6	9	9—73
H B Seeds	4	4	9	4	9	4	9	9	9	6—67
W F Seeds	4	6	4	6	9	4	6	6	6	9—60
C Heinel, Jr	1	4	9	4	6	6	6	4	9	0—58
H A Heinel	4	4	9	9	6	4	4	6	3	4—53
F Brinton	3	9	9	3	2	6	4	9	4	1—53
W O'Connor	6	3	3	4	2	6	9	6	9	6—48
W Rice	6	1	4	4	4	4	9	4	9	6—48
C Carleton	3	2	4	4	4	6	4	6	4	6—42
H Simpson	3	6	4	0	6	4	3	3	4	9—43
C Lewis	4	3	4	2	1	3	4	4	2	0—27

NEWARK, March 3.—The Our Own Rifle Club held its weekly shoot at its range this evening. Each man fired ten shots with a possible chance of scoring 120 points. The score at the close stood as follows: Snellen team—Weider 86, Drexler 94, Gill 78, Klem 93, Friedenheit 98, F. A. Freiensehner 96, Jamouneau 86, Snellen 108; total 739. Bertram team—F. Freiensehner 102, Smith 91, Knothe 92, Otto Keifer 78, J. M. Keifer 88, Wiecks 92, Condit 81, Bertram 99; total 723. For the tie between O. Kiefer and Gill for the leather medal there was a hard struggle, but at last Kiefer made 40 and Gill 38. The officers for the next term are: John W. Gill, president; Otto Kiefer, vice-president: F. A. Freiensehner, recording secretary; Wm. Drexler, treasurer; Ed. Bertram, sergeant-at-arms; G. Snellen, captain; Ferd. Freiensehner, lieutenant; Frank Smith, official scorer; S. Friedenheit and F. A. Freiensehner, judges; Wm. Weider, referee; Fred. Knothe, J. M. Kiefer and Wm. Wieder, finance committee.

CAPT. IRA PAINE.—The ponderous marksman is now in Boston and during his stay will attempt to break the record made by him a few months ago, with the revolver, at the range of the Massachusetts Rifle Association. The exhibition will take place at Walnut Hill, probably on the 17th inst., and will be open to the public. Capt. Paine will fire 100 shots at a distance of 50yds., using the standard American target. The best record at the present time is 791 points, made by him Oct. 15, 1886. He will attempt to score 800 points at the coming exhibition.

WILL DAN BRADLEY, who made bullseye rifle score Dec. 29, 1886, please send particulars to this office.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

"FOREST AND STREAM" DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a $100 trophy to be competed for on Decoration Day, May 30, 1887.

The competition will be open to all gun clubs which were organized by the date of the original announcement, March 3, 1887. That no club may be barred by size, the condition respecting the number of men in a team has been changed. The terms are as follows:

To be competed for by teams of three men each. A club may enter more than one team. Entrance fee, $3 per team. The entire sum of the entrance fees (nothing whatever being taken out) will be divided into three cash prizes (50, 30 and 20 per cent. respectively). The winning team will take the FOREST AND STREAM DECORATION DAY TROPHY, value $100. Second team will take the first cash prize, 50 per cent. of all entrance moneys. Third team, second cash prize. Fourth team, third cash prize.

Each man to shoot at 15 artificial targets. Any artificial target manufactured by the following concerns may be used, viz.: Ligowsky Clay-Pigeon Co., Niagara Flying Target Co., (Lockport) Target, Ball and B. P. Co., Cleveland Target Co. The targets to be thrown from any trap made by these companies. Traps to be set to throw targets at least 45yds. from trap. Five targets to be thrown straightaway, five at right angles to the right, and five at right angles to the left. Shooters to stand at 16yds. from trap for 12-bore guns, and 18yds. for 10-bores. One trap to be used.

THE MIDDLESEX AVERAGES.—Below please find the averages for the Middlesex shoot. We could not get them in time for last week's issue, and we are now indebted to the kindness of one of the hard workers of the committee of the club, Mr. W. I. Ritch, for the accompanying official statement. With J. L. Brewer considered to be decidedly the best pigeon shot in the State of New Jersey, with his record as third and fourth, what kind of a show would the other shots of the State have had for any of the honors or moneys? Graham and Stark were not present the last two days or their averages might have been different. More than considerable interest is taken in the coming match, the 17th, between Graham and Brewer at Marion. It will be a one barrel match and very close.

LIGOWSKY PIGEONS.

	Matches.	Birds.	Killed.	Missed.	Per cent.
J R Stice	9	180	144	36	80
C M Stark	7	145	112	33	77 7-27
C W Budd	8	160	123	37	76 76
J L Brewer	5	105	76	29	72 8-21

LIVE BIRDS.

J R Stice	9	143	130	13	90 9-143
C W Budd	9	140	126	14	90
J L Brewer	9	143	126	17	88 16-143
T J Eley	9	143	124	19	86 102-143
Wm Graham	5	95	85	10	89 9-19
C M Stark	6	105	90	15	85 5-7

Stice won both prizes, $50 each, for Ligowsky pigeons and live birds.

NEWARK, March 4.—The Elizabeth Gun Club and the South Side Club, of this city, shot their much-talked-of match at the grounds of the latter club to-day. Each club put in 14 men to shoot at 20 clay-pigeons each at 18yds. rise. The South Side Club was as follows:

South Side Gun Club.		Elizabeth Gun Club.	
Hobert	19	Dackerman	11
Pickering	13	Burton	13
Wells	12	W Parker	19
Philips	16	Harvell	7
Unger	10	Teroy	15
Heritage	9	Williams	9
Von Lengerke	13	C Parker	4
C M Hedden	6	Miller	13
Wheaten	16	Sayre	12
C R Hedden	16	Haines	15
J H Terrill	13	Conover	14
A Whitehead	17	Astfalk	9
Orton	13	Lawrence	11
Breintnall	16—187	Chetwood	10—153

NEW DORP, Staten Island, Feb. 28.—Emerald Gun Club, of New York city. The day was very cold, and very strong winds account for the low scores made. Ground traps, 21 and 25yds. rise, 80yds. bound. Shot under club rules, four prizes:

G Remsen (25)	1010010111—6	Wm Glaccum (25)	0110101111—7
P Butz (25)	1100011011—6	L Schermerhorn (25)	0101110111—6
G W Hudson (25)	1110110111—8	H Rubins (25)	0100100101—3
N Maesel (25)	0000100101—3	L Gebering (24)	0111111111—9
P J Keenan (21)	1001010011—5	J H Voss (25)	1111111111—10
R Regan (21)	0100111000—4	F Schrader (25)	0101111011—7
M Cheny (21)	1111011110—8	J W Godfrey (25)	0111111101—8
Thos Codey (25)	1001011001—5	M W Murphy (25)	0000001000—1
J Maesel (25)	0101010111—6	B Lynch (25)	1111110111—8
C M Grainger (25)	0011111111—8	M McMunn (25)	1111111101—9
J Howard (21)	1011000100—4	S McMahon (21)	0010000110—3
Wm Dwyer (21)	1001001011—5		

Ties: John H. Voss won. M. McMunn won second on shoot off, Bart. Lynch third, P. J. Keenan won fourth or Osiecki trophy.

TORONTO, March 3.—The West Toronto Junction Gun Club held its fourth competition for the medal presented by Mr. D. Blea, this afternoon, when twenty members competed, C. Hinton winning the trophy. At a recent meeting of the club N. Clarke Wallace, M. P., was elected honorary president.

BROWN'S DRIVING PARK, Long Island, March 5.—Despite raw atmosphere and some mud this was the scene of great shooting to-day, when the Collington-Nichols-Perry match came off. Several hacks, with passengers largely in excess of their seating capacity, and a few private carriages, brought the contestants and their friends to the grounds. The Wall street contingent included some well-known clubmen, and a celebrated sportsman and traveler, well known to the readers of the old FOREST AND STREAM, Gordon Gordon, who, after some discussion between the principals, was selected as referee. Your correspondent was chosen to score. Captain Brown handled the traps very satisfactorily. Before the match of the day was commenced Mr. Nichols, on a wager, killed twelve birds straight. Some of the shots were marvellous exhibitions of skill, and young Brown's dog, Robin, retrieved the birds, and his master bagged the "get-aways" skillfully. Mr. Collington used a hammerless L. and C. Smith (7lbs. 8oz.), while Messrs. Nichols and Perry shot with hammerless Scott guns (7lbs. 4oz.) All used 4dr. powder, 1⅛ shot. The birds were very strong and swift. Fifty birds, 30yds. rise 80yds. boundary, both barrels. (The figure 2 indicates second barrel:

Nichols .....1111111111111022211111120212121111121111111112011—47.

WELLINGTON, March 5.—There was a good attendance at the grounds to-day, and some good shooting was done at blue rocks and clay-pigeons. In the medal match Ames won in Class A, Wardwell in Class B and McCoy in Class C. Following were the winners in the several events to-day: 1. Six blue rocks—Cobb first, Dutton, Sanborn and Swift second, Stanton third, Short fourth. 2. Six clay-pigeons—Sanborn first, Stanton second, Dutton third, DeRochemont fourth. 3. Six tin birds—Stanton, Evans and Dutton first, Swift, Warren and Sanborn second, DeRochemont and Wilson third, Shumway and Hutchinson fourth. 4. Six blue rocks—Evans and Shumway first, Swift and Dutton second, Short, Stanton and Sanborn third, Warren and Hutchinson fourth. 5. Six clay-pigeons—DeRochemont first, Swift second, Evans, Wardwell and Short third, Stanton fourth. 6. Six blue rocks—Dutton and Wardwell first, Lawson second, Cobb third, Evans fourth. 7. Ten clay-pigeons—Stanton and Swift first, Shumway, Wilson, Ames and Short second, Wardwell third, McCoy fourth. 8. Six tin birds—Swift, Wilson and Short first, Stanton second, Warren third, Bradstreet and DeRochemont fourth. 9. Three pairs blue rocks—Nichols first, Adams and Wardwell second, Lawson and Evans third, Swift fourth. 10. Six tin birds—Stanton, Swift, Evans and Sanborn first, Reed and Wardwell second, Nichols third, DeRochemont fourth. 11. Six blue rocks—Stanton first, Short, Sanborn, Snow second, Lawson third. 12. Six clay-pigeons—Lawson first, Wardwell second, Nichols third, Sanborn and Cobb fourth. 13. Five clay-pigeons, straightaway—Sanborn and Wardwell first, Swift second, Short and Cobb third. 14. Five blue rocks—Stanton and Wardwell first, Law and Baxter second, Copeland third. 15. Six clay-pigeons—Stanton and Wardwell first, Short and Copeland second, Baxter and Morse third.

THE HOTEL TOURNAMENT.—The Atlantic Ammunition Co., of this city, mean to give everybody a chance to show his skill at the trap during the coming summer, and to that end have instituted a prize for hotel guests. That great army who rush out from the cities only, too often, to make themselves expensively miserable, when they find so little to do and so much spare time to do it in. The Atlantic Co., touching on this point, say: "The wearied city toiler who seeks recreation in the country, at the sea shore or in the mountains, soon tires of the reading room, the billiard room, the piazza and the ball room. The desire among gentlemen, and we might also include the ladies, is growing stronger every year, for out-of-door sports; athletic games and pastimes that call into play new emotions. Boating, fishing, shooting and the like are more and more sought after. Such sports being invigorating, and calling forth new energies, cannot fail to be popular. Then, "'tis English, you know." Thousands of city men shoot; these men are always ready and anxious to find something to shoot at, be it only a sand snipe or a big grasshopper. Many thousands of shotguns are now owned in this city alone. Thousands of young men, and business men, are anxious to learn how to shoot. The immense increase during the past few years in the number of shooting clubs, and individual sportsmen; the millions of flying targets now used, and the constant inquiry where to shoot and how to learn to shoot, plainly indicates that trap shooting is the coming craze. Several hotels bought traps and targets last summer and furnished this amusement to their guests, finding it so profitable as to induce them to greatly increase their facilities for this year." The hotel prize for 1887 is a solid silver cup, to cost not less than $100.

WESTMINSTER VS. RIVERTON.—Riverton, N. J., March 8.—Match at five birds, $2,000 ($1,000 each) between teams of the Westminster Kennel Club, of New York, and the Riverton Gun Club, of Philadelphia; teams of 5, 50 birds at 30yds. rise, 50yds. boundary:

NEWARK, March 3.—The Essex Gun Club had a team shoot at live birds to-day at Erb's grounds, under Hurlingham rules. C. M. Hedden bossed one team and Dr. Nicholas the other. Each team consisted of six men and each man shot at 10 birds at 25yds. rise. The Hedden team won. The individual scores were as follows: Hedden 10, Breintnal 9, Quinlan 10, Heritage 8, Terrill 7, Hayes 8; total 52. Dr. Nicholas 8, Kinsey 6, Unger 9, Whitehead 9, Roberts 9, Freche 5; total 46.... Yesterday Frank Class, of Moniclair, and W. W. Lever, of Elizabeth, shot a pigeon match at Erb's, at 30yds. rise, 35 birds a side, Class was shot out on the thirty-first round, when Lever had 24 downs to his opponent's 19. R. H. Breintnal was referee, and the match was witnessed by a large gathering of well-known trap shooters. Hurlingham rules governed the shooting, the birds were lively, and the stakes were $100 a side.

A COLLEGE TROPHY.—The rhetorician of the Atlantic Ammunition Co. has excelled himself in inviting the college men of the country to compete for the college trophy of 1887, which is to be a solid silver cup, costing $100, and to be given for the highest score made during 1887 by a college team of three men. The cup to be held for one year. Open to competition unless won twice consecutively by the same team.

MAHANOY CITY, Pa., Feb. 28.—A gun club and game protective association was organized here to-day with twenty-five members; there bids fair to be fifty by the opening shoot, May 2. Officers: President, M. M. MacMillan; First Vice-President, H. K. Smith; Second Vice-President, Wm. J. Oliver; Secretary, T. J. Parmley; Assistant Secretary, M. Smith; Treasurer, Wm. D. Reynolds; Executive Committee, MacMillan, Thompson and Davis. Clay-pigeons were adopted for the year's practice.—B. A. C.

THE INTERNATIONAL MATCH.—Macon, Ga., March 4, 1887.—*Editor Forest and Stream:* Will you kindly announce in your trap column the withdrawal of the projected Third International Shotgun Wing Shooting Tournament at Boston, June 1, 2, 3 and 4, 1887, under the auspices of the National Gun Association. This step is rendered necessary by non-acceptance of the challenge to a British team, published in your columns last winter and open until March 1.—F. C. ETHERIDGE, Sec. Nat. Gun Ass.

THE BIG JUNE SHOOT.—The committee in charge of the world's trap-shooting carnival, which is to be held at the grounds of the Wellington Gun Club from May 30 to June 4, inclusive, held a meeting at the Quincy House last evening to further the arrangements. Among the many valuable prizes already offered, is a $1,000 oil painting from a New York artist, which is to be contested for by amateurs only. The committee will have the official programme ready on April 6.

EMERALD GUN CLUB.—The annual meeting of the Emerald Gun Club was held on March 3. The following officers were elected: M. McMunn, President; Richard Regan, 1st Vice-President; Nick Measel, 2d Vice-President; Patrick Keenan, Financial Secretary; T. Cody, Recording-Secretary; John Measel, Treasurer.

THE CAPITAL CITY GUN CLUB, of Washington, D. C., elected the following officers at its annual meeting, March 5: Edward L. Mills, President; J. A. Goldsborough, Vice-President; James A. Green, Treasurer; Seymour Cunningham, Secretary.

A VIOLENT COUGH continued through the winter often brings consumption in the spring. Soothe and tone the irritated and weakened lungs with Hale's Honey of Horehound and Tar, and the cough yields and the danger disappears. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.

JUNE.

18. Brooklyn, Annual, Bay Ridge.

JULY.

18-31. W. C. A. Meet, Ballast Island.

AUGUST.

12-26. A. C. A. Meet, Lake Champlain.

THE A. C. A. REGATTA PROGRAMME.

THE following correspondence between Vice-Commodore Gibson and Mr. W. G. McKendrick, of Toronto, discussing several points that have come up in connection with the regatta programme, explains itself. The letters were not intended for publication, but we have both writers' permission to use them:

TORONTO, Feb. 13, 1887.—*My Dear Gibson:* I was not a little surprised when I saw your comment on the A. C. A. programme in the FOREST AND STREAM. I suppose after reading what I said about it you will see that we are not on the same tack. However, in a thing of this kind it all depends upon whose spectacles you look through, so I would just like to borrow your glasses for a short time to have a peep at things from your side of the fence, and at the same time unload myself of a few questions I have to ask you. First, why do you consider the "open canoe with a single blade" an excellent experiment? In writing about the 75ft. limit you say that "the 75ft. rig is generally conceded to be a fair moderate amount." Now I claim that for such canoes as win the 75ft. limit race, Pecowsic, Venture, etc., that that amount of sail is all they can conveniently carry in an ordinary breeze. That being granted, what chances then have fellows who build canoes to carry over 100ft. in the no limit race? You say, "Why should the crew sit inside, as well stipulate that he should smoke, etc.?" I say "Why should we be limited to 75ft., as well stipulate that I should carry a heavy board or ballast?" And I think my argument is as reasonable as yours, don't you? It all narrows down to this: what kind of a craft do you wish to encourage, because among the most active clubs their canoes are built to take the best possible stand at the A. C. A. meets. You hear about the clubs who have never been to the A. C. A., and I think over one-half of their members own canoes of a beam from 34 to 40in., and they get more solid comfort (not excitement, mind) out of them than we do out of ours. Well now, we do not want to encourage a canoe 36in. wide, and we have made our class rule that prevents it. Now I think our Class B find size is plenty small enough for a general purpose canoe, and I think we should encourage it, but the 75ft. limit immediately knocks it in the head, because a fellow with a smaller canoe than the full limit has just double the chance in the annual races, and what is the outcome of it; Pecowsic and such like cockle shells. This year will see twenty Pecowsics where last year there was one. In fact, I'm designing a half Pecowsic myself, and Leys is getting one; it is not because I would, but because I must, to keep away from the tail end of the race. Now don't you see the outcome of that clause and the end toward which it is working? That race is never won by a cruising canoe now, and I believe that is what it was given for. I would like you to answer this and give me your own opinions on the question, looking at it from the standpoint of developing a good, safe, comfortable fleet of A. C. A. canoes. When I am astray in reasoning, kindly correct me and believe me, a true friend of the canoe. WILL G. MCKENDRICK.

ALBANY, N. Y., Feb. 15, 1887.—*My Dear McKendrick:* You are an exceptional man to desire to see things through other people's "glasses;" and I willingly "lend you mine." This is not a world of absolute justice, all we can hope for is the least harm to the fewest number; so I do not look for a completely satisfied A. C. A. until we reorganize in the happy hunting grounds. The single blade is the legitimate paddle of the open canoe, and I think ought to fairly handicap the lighter boat. Of course, such a rule must not be evaded by canvas or muslin decks; your objections require careful attention. The single blade ought to be retained somehow in the A. C. A. races. The 75ft. limit was started to remedy an obvious injustice long ago. It has always given satisfaction, has been adopted in clubs where it was not known until the A. C. A. took it up, and yours is the first definite proposal I have seen to abandon it. True, a small boat in a very light wind gets a little favor, but that does not amount to much, we want to favor small boats, not does it alter the fact that 75ft. is a good, fair average, safe rig, quite large enough for cruising on any such boat as the race is for. You are wrong in saying that the limit race is not won by cruising canoes, all wrong, look at the records. Just four years ago the cruising boats, light and large, took their place in the public favor and still hold it. There is no such desire for small boats as you talk of. Even Pecowsic is not such a small boat as was in general use five years ago. Now about big boats. All you big boat men (I am sorry to see you join them) forget that the A. C. A. has become what it is because it had small craft easily carried by train and boat; hence our traveling privileges. Just as soon as rowboats and sneakboxes are allowed to intrude upon the privileges accorded to and earned by canoists we shall find they will be withdrawn. Let the fellows that want big boats do their own lugging and swearing. And let them try to get railways to carry them free. I object for one to this wearing out our hard-earned privileges. We do not want them. I have never plumped out in public about these big boat men and hope it won't be necessary. Big boats have a place. I enjoy them and expect to buy a new one this summer. But I would as soon think of taking a hog to a dinner party as of claiming a right to take it free by train as a canoe. Let those men with 34 to 40in. canoes take all the solid comfort they want. I shall not disturb them even if they do stay out of the A. C. A. Yours most cordially, ROBERT W. GIBSON.

P. S.—It would have been just as well to have continued the subject in the FOREST AND STREAM as it is not a private one. If you like I will send yours and you mine and we can see what other fellows say.

My Dear Gibson:

Your favor of the 15th inst. came duly to hand. I might say I have no objection to having my last and this sent to FOREST AND STREAM for publication. Thanks for the loan of those glasses, though they were very misty; in fact the fog of prejudice or something else was so thick on them that they were of very little service to me. With reference to the open canoe question I would say that the single blade was the legitimate paddle of the open craft before the A. C. A. was established, but since then, in paddling as well as sailing, a great many legitimate things have been ruthlessly discarded for the sake of speed, and the single blade is one of them. In '83 all the open canoes but two at the A. C. A. meet used the single blade. Now go to the '86 meet and count them and you will not find a single blade used in the races there. You see the chickens are coming home to roost, when the A. C. A. should have given races for open canoes and single blades to encourage that class of craft they didn't do it and the open canoemen were obliged to adopt the double to keep up with the times. Now as one who has tried them you must admit that the open Canadian canoes are good cruisers, are safe, light, neat and fast general purpose canoes, and because they are light and fast you want to handicap them. I will have to twit you with inconsistency, for when writing about Pecowsic in FOREST AND STREAM, you say: "It is provoking, but if a rival will not go as slow as we do we must try and even up by going as fast as he does. We don't want to hold him back; that isn't the way at all." What you were preaching on Oct. 28 you go back on now and say we do want to hold the men with fast open canoes back, they are too fast, *i. e.*, you want to so fix the races that the slow canoes win (Now, I wouldn't mind letting the slow canoe win if it was a better cruising canoe, but it isn't). So you say we'll make them carry the single again, and the result will be that they will deck their canoes with light cedar or canvas and you will have spoiled one more good cruising craft for the sake of speed.

Now, "Snake," old fellow, if I know anything of your make up you are not the man to do a thing of this kind when it is pointed out to you. You want to see the single blade retained. Now, I want to see the open canoe retained, it is of more consequence than the paddle, though I think it would be wiser to have a special race for single blades, but do not try to force them to race with single against the double, it is coercion of the worst kind. I would suggest a full paddling programme as follows:

First—Do away with Class I. canoes, there are only about three of them in the Association that race, and they are neither of use nor ornament.

Second—Have a race for Classes A and B, sailing canoes only, *i. e.*, fitted with a centerboard and sails, any paddle. As I said before, the Class A man is generally smaller than B, and it will make a very even race. A sailing or general purpose canoe should not be compelled to race against a purely paddling craft as they were before.

Third—Combine Classes II. and III. together, they are practically the same, the III. man has the advantage of a foot more length, but he has to take with it 2in. more beam which makes them very even. Also let Class A, sailing, into this if they want to. As this would be for purely paddling craft the decked paddling boat would have to look after itself. Let them use any kind of paddle, as it's a paddling race the fast paddling canoe should win.

Fourth—Class IV., paddling, any paddle, also let the sailing canoes, Class IV. into this; of course they will be at a disadvantage, and so they should, be just the same as an open or paddling canoe would be at a disadvantage sailing with the decked or sailing canoe.

This would give a very short list of paddling races—First, Classes II. and III.; second, Class IV.; third, Classes A and B, sailing canoes; fourth, a special race for open craft with singles if it is necessary—and I think places the canoes where they should be. What say you? Then if as before, you offer the best flags for the all round record, it will stimulate the general purpose craft at the expense of the purely paddling and purely sailing canoes.

With regard to the 75ft. limit without a cruising load, you say it was started to remedy an obvious injustice long ago. Yes, and the obvious injustice has disappeared long ago, and the 75ft. limit should have gone with it. You can't do away with a bad thing too quickly. It has served its end and should either be abolished or the cruising load carried with it.

Now about the big boats. You class me among the "boat" men, but I absolutely refuse to be put with them. Did I not distinctly say we do not want canoes 34 and 36in. wide and have made our Class B to prevent it; why, then, in the face of that do you pitch me into a 40in. scow? I'll mutiny, sir, and won't go aboard. You must remember that the A. C. A. has not accomplished all the good that it can in this world, and when you see a fellow honestly endeavoring to do what he and others consider would be beneficial to establish a better class of all-round cruising canoes, you should not get on to him with both feet and call him a big boat, rowboat, or sneak-box man; you should look at what he advocates with the light of the present day upon it and see if there is not something that can be made better. Do not come to the conclusion that because the limited sail—without a cruising load—was good four years ago, that it is a good thing still. Time has changed things greatly the last year or two and there is now no fear that this heavy "head sines" will monopolize the first places in our regattas, but that the narrow machine will spoil our cruising craft.

The canoe that I advocate is the light unballasted general purpose craft, just the same as what you built and sailed last season, or, up to the full limit of Class B, *i. e.*, 16×30, or 15×31½ or 15.6×30¾. Now, what I maintain is, that this style of canoe is what we should encourage, it is a good medium, it can be paddled easily and sailed well, and can be cruised in with comfort. Now, the second point I make is that this style of canoe cannot compete, with success, against such craft as Pecowsic in the 75ft. limit, without ballast, perhaps not with it. Take the 1886 limit race. Who won it? Pecowsic. Was she a good cruiser? Is the old Venture a good cruiser? I know the Vesper is a good cruiser, but where was she? ten minutes behind in a three mile race. That shows you what chance a cruising canoe has when racing against a small narrow canoe that I, for one, don't want to see encouraged by giving it a race that it is bound to scoop every time; besides, as has been demonstrated by Pecowsic having as good if not better show than any one else in the unlimited races. In 1885, when chairman of the regatta committee, you wrote a letter stating that you were a cruiser first and a racer afterward, that Vaux was another, and most of the Mohicans were the same, all one-rig men. Now, I know that that big International cup will have a tendency to make many A. C. A. men racers first and cruisers nowhere, or else in a different canoe; that is, building special canoes, but I trust that you will not be among them, but as in days of yore you'll stand by the general purpose canoe and see to it that it receives a fair show in the races. To do this, it is my opinion that the limit race has to be abolished or, as I before stated, if it is a cruising rig, make us carry a cruising load, as when moving from one place to another we never go empty-handed, we always have a load of truck, duffle, or whatever you like to call it.

In your last you state that there is no desire for small canoes such as I speak of. I have a point of getting reliable information on this question. I said last year that where there was one Pecowsic this year there would be twenty, and I find that I was correct, as I will now add ten more to it and say there will be thirty Pecowsics in commission next season, and I am very sorry to learn it, as the persons who are getting them must get them simply with the intention of winning races. They cannot be getting them for comfort or for good cruising boats.

Is this, then, not a question for our regatta committee to thoughtfully consider? Do we want our fleet of good, general purpose craft to degenerate into a fleet of narrow, shallow machines, or whatever you like to call them? If we do not we have to arrange our races so that the cruising craft are not placed at a disadvantage in them; but if any one has the preference it should be the craft that is in general use, not the craft that is built just to win races. We (the canoeists in general) have to thank Mr. Barney for many of the good points he brought out in Pecowsic, but I trust that he will apply the same principles to a wider craft for next season, and in some way head off the impetus he has given canoeists to build narrow, shallow craft.

Trusting that you will receive these remarks as good-naturedly as they are sent, and look at them as they will affect our grand institution, the A.C.A. (may she not degenerate), I beg to sign myself, sincerely yours, WILL G. MCKENDRICK.

TORONTO, Feb. 18.

P. S.—As I said before, I cannot be present at the next A.C.A. meet, so that this question does not personally affect me, and it is just my love for the sport that prompts me to raise my voice against our taking a step backward. W. G. MCK.

MOHICAN C. C.

THE icy condition of their native element, the river, does not deter the Anawares (Iroquois for Turtles) from their usual winter occupation of chinning, both by sending up many winged words into the snowy air and by sending down into their breadbaskets and potato boxes as many of the good things as the table of their host, pro tem., can carry. They demonstrated this double quality at the last meeting held at the house of a comparatively young Turtle, crawled out of its shell only last year, W. Edgerton, who promises this summer to make Lake Champlain resound with the war cry of the Mohicans, as of old. The membership of the club was increased by the election of six new men, who promise to be all active canoeists and canoe owners. They are John F. Rathbone, Gottfr. Lundberg, H. C. Littlefield, Dr. W. Nellis, Charles V. Winne, and John T. Norton. The principal business, requiring the more serious chinning, was on the subject of the summer club house. It was decided to build a palace on stilts costing $500, about six miles below Albany, opposite to Van Wic's Point. The house, for which Commodore Architect R. W. Gibson has made the plan, will stand on the somewhat elevated eastern shore near some ice houses the little passenger steamer Lotta, plying between Albany and down river towns, will land there upon signal, and all the brethren of the paddle will be made welcome when they stop on their way up or down stream.

That most enthusiastic of cruisers, R. S. Oliver, is beating up recruits to follow him on another Delaware trip. This time he intends to start from Port Jervis in order to be fresh when he reaches Little and Great Foul Rifts, so vividly described in the Boston *Pilot*, by John Boyle O'Reilly, some time ago. Who will follow? For now is lamenting that his invalidity shuts him out from much actual canoeing, but he and W. W. Durant will fly the Mohican and A. C. A. pegs on Lake Raquette, in the Adirondacks, this summer, where Fior da Lice is trying to get now, but is hemmed in by snow drifts on the banks of the upper Hudson.

Commodore Gibson's new canoe, built by Piepenbrink, is on exhibition, with her sails set, in the show window of a large dry goods store here. She is a beauty, and makes other biped craft, sailing past on the sidewalk and scudding over the ice, snow and slush, mighty jealous. She will, it is hoped, prove an excellent turtle and go an-a-ware.

The Mohican C. C. will soon have to advertise a "clearing-out sale" of canoes, or build additional store room, for the older members are duplicating their bottoms and the newly-elected ones have ordered their first pieces of water furniture. The meeting and following camp-fire at Turtle Edgerton was a success in every way, even the melodious singing was pleasant to those who helped swell the chorus, how the neighbors and the invisible hostess may have enjoyed it and the perfume of stale smoke next morning, this child is not able to tell. FIOR.

RONDOUT C. C.—On Feb. 28, the Rondout C. C. held a housewarming in their new club house.

HOW WE RAN THE RAPIDS.

THE summer vacation always found us starting out for the woods or mountains with tents and all necessary camping traps. Canoeing was but little known then, or we should have spent our time differently; a canoe trip presents so much more variety than a camping trip, and in fact is far superior in point of pleasure, as its growing popularity proves.

One summer, while comping along the beautiful Juniata River.

"Where roved the Indian maid,
Sweet Alfrata,"

we got ourselves in a perilous position, and were very fortunate in escaping safe and sound. We had good fishing, excellent shooting along the river, if we chose, and a camping place perfect in every respect; but these things lacked the touch of danger which seems essential to every sport.

We wearied of them and wished for something exciting, and we got it. We were assailed by a strong temptation which was constantly in sight. Our tents lay on a grassy slope shaded by huge oak and hickory trees. A beautiful spring poured out of the ground and ran down to the river only a few yards away.

The Juniata in front of our camp raged and foamed through a perfect tangle of small rocks and stones, until a short distance from shore, a ledge of rocks began and continued clear across to the other side. They rose out of water from three to ten feet, and formed an almost unbroken line, effectually holding back the water behind, with one exception. Near the center, the river pouring through for ages, had worn a channel about ten feet wide and partially obstructed by huge rocks here and there. The tremendous pressure of the water above the falls centered itself on this narrow outlet, and it may be imagined with what terrific speed the river dashed over the ledge and boiled among the obstructing rocks below. In crossing the river below the falls our boat was invariably carried down some distance by the swift current, and almost submerged by the huge waves which continued for many yards below the falls.

One Saturday morning we were idlingaround camp throwing out suggestions and passing criticism on our would-be cook who, attired in a white apron, was attempting to make apple pies for Sunday. Finally, becoming exasperated, he attacked us with a bucket of water. We fled in confusion down toward the shore. The sun was shining brightly on the falls, and the huge waves tumbling over and over in their haste gleamed like burnished silver. "I'm going to run the falls," exclaimed Frank Harris. "Who will go with me?" We thought he was jesting. "Oh! I mean it," he continued. "Come on! I'll take you through." "How are you going to get above the rocks?" we exclaimed. "Why, wade up through the shallow water along shore and pull the boat along." That looked very feasible to us, and, ready for an adventure, we fell in with the plan eagerly. We threw our shoes and stockings and superfluous clothing under a tree, and started to pull the boat up along shore.

It was hard work struggling against the swift current, stumbling over slippery rocks and plunging breast deep into holes; but we persevered, laboring with zeal worthy of a better cause, and finally, after a half hour of the hardest work we had ever done in our lives, we got through the rough water, and getting into the boat we rowed up stream.

When we were about a quarter of a mile from camp we stopped. The falls were now below us, and their deafening roar had an ominous sound in our ears. We were not quite so eager now, but no one had the courage to propose going back. We rested a moment, and then struck boldly out into the river. The water became swifter as we approached the center. We got directly above the falls and began to move rapidly down toward them. Swifter and swifter ran the river, nearer and nearer came the rapids, and louder and louder rang their roar in our ears. As we rushed along a break in the trees brought into view our cook who, in blissful ignorance of our present situation, was busily swinging his rolling pin. We sat motionless. The boat was headed direct for the channel, and a few yards more would—we held our breath as the current sucked us into the raging whirlpool and hurled us down among the dashing waves and black rocks. The bow went under water and then rose on top of a huge wave throwing us back toward the stern. One rock struck us on the side and hurled us broadside against another, throwing us off our seats. Wave after wave splashed against the boat, throwing showers of spray all over us, and then the waves subsided a little and we recovered our breath as we grounded against a patch of grass away below the falls, drenched to the skin and on the point of sinking.

Greatly elated over our successful run we bailed out the boat and rowed in to shore and up to our landing place. We found a row of pies laid out to cool and our exhausted cook stretched out in the shade at his ease. "Where have you been?" he exclaimed at sight of our drenched condition and scant apparel. A recital of our adventure made him incredulous. "Don't tell me anything like that. You never came through there. The boat would have swamped in ten seconds. And do you expect me to believe that you pulled the boat up through that swift water?"

"Just wait until to-morrow," said I, "and we'll show you whether we did or not." We hunted up some dry clothes and began to get dinner.

The following day was Sunday, consequently we rested. Monday morning we were through breakfast and were lying around camp undecided what to do.

"Here, now," said Harry Wilton, "you said you ran the rapids on Saturday; now go through them again, and then I'll believe you!"

"All right," we exclaimed, "we'll show you. Won't you come along though?"

"No, I will stay here and watch you."

He was lying under a huge oak tree and could look directly out on the river and the falls. It was cloudy that morning and the absence of the sun's hot rays would make it easier for us.

We stripped off our heavier clothes, and with an *au revoir* to Wilton, who was still under the impression that it was all a joke, we disappeared down the slopes to the river. We had much more trouble dragging our boat up this time. We slipped back continually, and near the end John Morton was carried off his feet and dashed against a rock, injuring his knee. He refused to go back, and putting him in the boat we pressed on, and after a severe struggle reached calm water, and pulled up to our starting point of Saturday. We rested some time, for we were nearly worn out. Finally we struck out for the middle of the river again and began to float rapidly down toward the falls.

I suppose our previous success had made us reckless of danger. We expected to run through as we had done before, and as we drifted nearer and nearer the falls we felt only a pleasurable anticipation. All the forebodings which we had before experienced were gone. We drew rapidly near. Forster and I sat in the stern, Harris had the oars and Morton sat in front. We were in sight of Wilton now. He was still under the tree reading, and had not yet seen us. It was of no use to shout for the roar of the falls drowned every other noise. We began to fear he would not see us at all, when suddenly he looked up. He sprang to his feet, dropping the paper, and stared wildly out toward us. We waved our hands, and Morton in his excitement stood up and waved his hat.

At that moment a sudden lurch and a dash of spray brought us to our senses. We had struck the rapids. Morton jumped for his seat, and as he sat down he moved a large iron anchor which lay on the front of the boat with chain attached.

It dropped over the edge into the worst part of the channel. The chain flew out, and after a couple of sharp jerks, as the anchor slipped along, it caught firmly on the bottom, and the boat was whirled around with tremendous force. I held on to the seat, but Forster was hurled clear out into the waves. He went partly under, but soon rose and was carried down with fearful speed, struggling hard to keep above water. The boat was firmly caught in the midst of the rapids, and was plunging up and down, while the waves, striking violently on the sides and bottom, kept hurling water in on us in an alarming manner. Harris and Morton were tugging at the chain, but without success. A second jerk had thrown me to the bottom of the boat. When I rose I glanced eagerly down the river. To my delight I saw Forster away below, wading toward shore in water up to his breast. He waved his hand encouragingly.

The boat was filling rapidly and was in great danger of sinking. Forster had fortuntately avoided striking any rocks, but I knew well if the boat went under the chances were against our all getting safely through to the shallow water below. Only fifteen feet away was the ledge of rocks and calm water, but it might as well have been a mile. We began to bail out the water with our hats, but it seemed to be dashing in faster than we could get it out.

Suddenly Harris threw down his hat and jumped up.

"Good-bye," he shouted in our ears. "There are too many in the boat. You can keep it from sinking if I am out."

I tried to stop him, but he stepped on the bow of the boat and leaped out as far toward the calm water as he could. He dove under and came up below but on the outer edge of the rapids. A few vigorous strokes and he reached the eddy and swam slowly up to the ledge. The boat, freed from part of its burden, now offered less resistance to the waves, and was tossed about in every direction, threatening to upset every moment. The anchor was firmly caught, and the chain was too securely fastened to the boat to be torn loose. I would have followed Harris's example, but Morton, who had hurt his knee, was unable to swim, and I would not leave him alone.

A glance toward shore revealed a more hopeful state of affairs. Wilton was running swiftly down the slope toward the river holding in his hand a coil of rope. Waving his hand, he plunged in and started to struggle toward the ledge which began some yards out. I watched him breathlessly. Once a dash of water carried him off his feet, but he regained his foothold after a struggle, some yards below, and began to recover the lost ground. He was drawing nearer and nearer the ledge, compelled at times to grasp the rocks firmly with his arms and hold on until he could recover strength to proceed. The rope was coiled around his waist. He was nearly there now; only one rushing channel yet. He plunged into it, was carried down a short distance and floated around into the eddy, where he swam slowly up to the ledge, and was pulled out of water, greatly exhausted, by Harris.

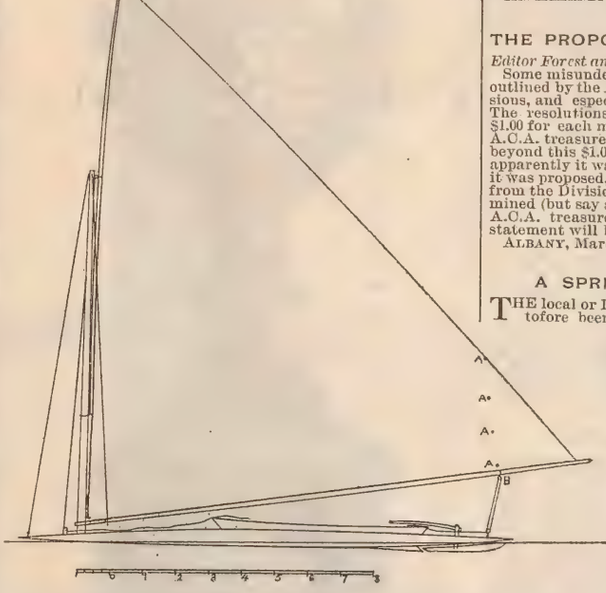
A moment's rest and then both started over the rocks toward the rapids, where our frail boat was still tossing wildly about. Hastily uncoiling the rope, Wilton threw one end toward the boat. Twice it fell short. The third time it was caught by Morton. "Fasten it to the end of the chain," he shouted, so loudly that we heard it above the roar of the falls. We fastened the rope to the chain as securely as possible. Wilton and Harris began to pull on it. Inch by inch they dragged the boat up against the furious current. Slowly but surely we were moving. We were right above the anchor, and now the chain seemed to run under the boat. Suddenly Wilton and Harris fell back on the ledges. The boat dashed back, was stopped by the chain, and before I could realize that the rope had broken, I was hurled out over the end into the rapids. I heard a tremendous rushing in my ears, green lights danced before my eyes, and then I rose to the surface and struck out. As I did so my hand struck something hard. I grasped it and found myself clinging to the boat, while Morton was vigorously trying to pull me out of the water.

The strain on the boat as the chain brought it to a stop had jerked out the board in which it was fastened and the boat dashed on, leaving chain and anchor behind. I succeeded in getting in, and taking the oars, steered through the remainder of the rapids and then rowed over to shore and up to camp, where we received a jubilant welcome from Forster. It was the work of but a few minutes to row over to the ledge and bring back Harris and Wilton. We pulled the boat on shore and walked up toward camp.

"Are you convinced now, Wilton?" I said.

"Yes," he replied, "I am. When you want to run the rapids again I will go along with you."

But we had no desire to come through the falls after our rough experience and the water roared and foamed in vain.



Two weeks later, when we broke camp and returned home, the last thing which met our eyes, glancing out on the river, was the board attached to the chain bobbing up and down among the waves.

W. M. GRAYDON.

THE "FLYING PONTOON."

Editor Forest and Stream:

I send you herewith a sketch of a novel craft which I am now building for a New York gentleman, who has designed her for his own cruising. No boat like her has, to my knowledge, ever been built, and probably your canoeing and boating readers will be interested in a brief description. Her dimensions are as follows: Length over all, 15ft.; beam at bow, 5ft.; beam amidship, 5ft.; beam at stern, 5ft.; depth of hull amidship, 7in.; draft of water in sailing trim, 2in. Balance rudder, protected at forward end by half "swallow tail" skag. Sail, the same in area and arrangement as that of canoe Red Jacket. For reducing sail I have entirely discarded all reefing tackle or gear. The reefing is done by unshipping jaws of boom, taking the latter in hand, and rolling it round after the manner of the old fashioned window shade roller. The sail is thus quickly and easily reduced to any desired amount. The main sheet is attached to the boom by a strap becket or grommet

rope and snap hook at B. Just before reefing, this becket is unsnapped and slipped off. The sail is then rolled around boom as described. Then the becket is passed through whichever of eyelet holes, A, comes to the right spot, again snapped on to the sheet block. The boom jaws are shipped in position, and the reefing is finished by lowering sail into place.

L'Eclair (her name) will be fitted with a weather grip, and we expect her to outsail anything of her size on harbors, creeks and rivers, or in waters suited to the navigation of canoes, sharpies and other small boats. It will be seen by the above description, and from the sketch, that her inverted sheer gives her the same shape and sheer on top as on bottom, while her high flaring coaming will throw off all water that may come on her forward deck. At bow and stern her ends are brought to a sharp, horizontal edge. On account of her broad bottom, and because of her breadth being retained the entire length of her, we do not expect her to heel in a strong wind to any greater extent than a catamaran.

The advantages of this craft are very high speed, great stiffness and safety, unsinkability, lightness and light draft, easy rowing, simplicity of rig, and half the first cost of any sneakbox, cruiser, canoe, or other decked sailboat of equal capacity.

ROSLYN, L. I., Jan. 26. THOMAS CLAPHAM.

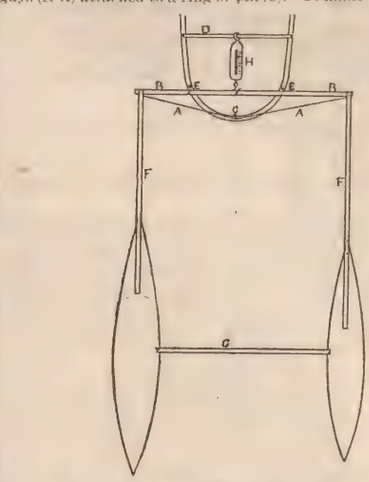
A NORWEGIAN RIG.

Editor Forest and Stream:

None of the various canoe rigs that have been illustrated or described in your columns, within my recollection, is so handy as the rig of a Norwegian ship's boat that was here last summer. It had two leg-o'-mutton sails. The masts were pivoted, and, by means of lines wound around them, could be made to spin around like tops. When sail was to be reduced or taken off altogether, the man at the helm slacked or cast off the sheets, and by pulling on the proper ropes, wound the sails tightly around the masts without leaving his seat. Sail could be instantly shortened on any wind without luffing or altering the boat's course. Why would not this be a good racing rig for canoes and canoe yawls? Instead of luffing to squalls part of the sails could be wound up on the masts on their approach and let out at their departure without stopping the headway or changing the course. Have you ever seen the rig? Vice-Commodore J. L. Stewart, Miramichi Y. C., interviewed the captain, who claimed to have invented it, but another Norwegian skipper says it is common in his country. The sails were about of equal size. The foresail was without a boom, and the mainsail had one. The main sheet was bent on the after clew of the sail and ran loosely through a thimble on the boom, or there was a special rope, within reach of the helmsman, which stretched the foot of the sail in this way. The quickness with which the Norwegian stowed his sails, by winding them up and unshipping the masts, was the envy of the owners of our jib-and-mainsail fleet.

J.

CHATHAM, N. B.



[The idea has been proposed for a canoe, but has never been worked out except as applied to the dandy, which is sometimes reefed by turning the mast by hand. The objection to leg-o'-mutton sails is that the area is too little, and a sprit or yard is necessary to increase it.]

RESISTANCE EXPERIMENTS.

Editor Forest and Stream:

Having experimented with models of pretty much every size under 6ft. I have found a modification of Mr. Rushton's method to work well. It is necessary that the boats towed should be as far aft as possible, so as to be aft of the launch's stern-diverging waves, and spread apart enough to avoid the water from propeller.

To make the conditions for each boat equal, the towing bar (B) —shown in accompanying diagram—is kept on center line by the guys (A A) attached to a ring or pin (C). To make the boats travel

in line I use thin battens (F F) fixed flatwise to decks of boats for 2 or 3ft., while the free ends are pivoted to the ends of towing bar. If desired, the boats may be held apart by a light rod (G) tied loosely to inner gunwales. E E are pins or marks on gunwales of launch to show when the boats balance. D is a rod slipped through ring of spring scale (H) and is fixed at ends to launch; the other end of scale is hooked over towing bar, or if bar is too large, to a loose ring on B. B is marked off into inches and half inches for 1ft. each side of center, and the scale is moved along it and D until B is parallel to E E.

The diagram represents the apparatus when at rest.

As a check on possible inaccuracies, it is well to occasionally place the port boat over to the starboard side. JAMES JOSEPHS.

1412 KEARNEY STREET, San Francisco, Cal.

THE PROPOSED REDUCTION OF A.C.A. DUES.

Editor Forest and Stream:

Some misunderstanding seems to still exist regarding the policy outlined by the A.C.A. Executive Committee in regard to the Divisions, and especially toward the W.C.A. as a Western Division. The resolutions aim at the establishment of the annual dues at $1.00 for each member, and no more either to Division purser, to A.C.A. treasurer or any one else, no assessments or contributions beyond this $1.00. That seems to be clearly stated already, but apparently it was not clearly read. This $1.00 from each member, it was proposed, should be collected by the Division pursers, and from the Division purse some proportionate part yet to be determined (but say a quarter or a third), should be forwarded to the A.C.A. treasurer for general expenses. Your insertion of this statement will be of service to all interested.

ALBANY, March 1, 1887. ROBERT W. GIBSON.

A SPRING MEET ON THE HUDSON.

THE local or Decoration Day meets on the Hudson have heretofore been informally arranged by those interested, there being no authorized body that could make all arrangements, but one result of the organization of divisions of the A. C. A. will be the establishment of the Decoration Day meet as a fixture of each division, and under the authority of the division officers. Thus far nothing has been done toward a local meet on the Hudson, but the Shattemuc C. C. are first in the field with the following invitation:

Editor Forest and Stream:

As it will be impossible for our members to go to the Eastern Division meet at Haddam Island on May 28, 29 and 30 and believing that many of our neighboring canoeists will find themselves in the same position, we propose to hold a meet (the Hudson River spring meet) on Croton Point, having obtained permission from the owners to camp there. We hope that all our river canoeists and all others that can come will join us. Our members will try and make all that come as comfortable as possible. The site for the camp, about 1¾ miles from our village, is a very suitable spot, having a good sand beach and a fine place for land tents, with spring water handy. For our New York and Brookly brethren it will be very easy to reach here, either by rail or water, and we will do all we can in arranging transportation for all that wish it. Our plan is to have camp open Saturday, May 28, and to have a suitable programme of races with prizes for Monday, May 30.

We trust that this will meet with approval of those canoeists who do not intend to go to Haddam Island.

SING SING, Feb. 28. H. M. CARPENTER, Purser.

ROYAL C. C.—The following letter has been received by the Secretary of New York C. C., from the Secretary of the Royal C. C.: "72 Mark Lane, E. C., Feb. 15—C. J. Stevens, Esq., N. Y. C. C.—Dear Sir—In the January number of the *Canoeist*, just to hand, I see you have a notice of the R. C. C. Challenge Cup Race. Mr. Clayton has not renewed his offer of a £25 prize, but the club always offers a presentation prize, value £5, to the winner of the cup. Our spring meeting takes place next Wednesday, 23d inst., and some important changes are proposed in programme. Any information respecting date of challenge cup race, etc., I will send you as soon as settled. Hoping that some of your members will pay us a visit this year when they may be sure of a hearty welcome, I am, dear sir, yours truly, T. G. F. WINSER, Sec." The spring meeting of the Royal C. C. was held on February 23, Captain J. MacGregor presiding. It was decided to hold the usual paddling and sailing races on the Thames, and also a spring camp and a competition for camping prizes. Delegates from the Mersey C. C., Humber Yawl Club and Wear C. C., were present, and after a long discussion it was decided to hold a general meet on Oulton Broad from July 30 to August 14 inclusive, with open races.

NEWBURGH CANOE AND BOATING ASSOCIATION.—The second annual meeting was held on March 2, the following officers being elected: Commodore, J. T. VanDalfsen; Vice-Commodore, N. S. Smith; Captain, Henry A. Harrison; Purser, Henry A. Bartlett; Member of Executive Committee, H. A. Marvel. The following prizes, won last year, were presented: Sailing boats, brass boat lantern to the Bub, Messrs. Waring and Smith; canoes, paddles and silk pennant to the Peggy, Grant Edgar, Jr.; rowboats, a silk flag, to the Scylla, Messrs. Bartlett.

POLICY-HOLDERS in the Travelers, of Hartford, can rely on its $8,055,000 of assets, not on the chance of an assessment.—*Adv.*

SUGGESTIONS FOR AN AMERICAN SLOOP.

Editor Forest and Stream:

Once more I crave indulgence in your impartial paper, and with your leave would say a word for the "representative sloop."

As the season of 1887 opens and a visit from another cutter seems probable, one more chance for the American sloop offers itself. It has never been practically demonstrated that a properly constructed centerboard sloop, built and rigged on American principles, of the length of the Puritan and Mayflower, is inferior in sailing qualities to either, or any cutter that we have yet seen; and I take the ground that a yacht of the loadline length of the Mayflower, with 6ft. draft aft, narrow counter stern, plumb sternpost, 2ft. draft forward (5ft. aft the perpendicular of forward end of loadline), clipper stem, 20ft. beam, greatest beam a little forward the center of loadline length, a good deadrise to this the greatest cross section, with a trifle hollow and the draft at this section about 6ft., very little sheer, good freeboard, straight side amidships, with a good tumble home from there aft to the counter, ballast low down inside, American jib and mainsail rig, as was the Una, with the mast well amidship, short bowsprit, mainsail with fair hoist and good peak, long gaff, low foot, jib with low clew, a fair amount of fore and aft light sail cut to sit, with storm jib carried in stops on the fore side of the mast, with turnbuckle in the tack that could be set at a moment's notice and would take no more wind than a spinaker boom, would be superior to Mayflower and Puritan. My reasons for claiming superiority for this model is that with 6ft. draft less immersed buoyancy is involved and deadrise enough is obtained for good fore and aft lines. At 20ft. beam a yacht at the same angle of heel will change her form less than one 23ft., and give proper spread to the shrouds without channels (a defect in the cutters) and allow the shrouds to run inboard. A counter stern is less cargo than a fantail and of more use, and being narrow, gives good clearance. With a light forefoot she would be knocked off less in a sea than with a deep one. Clipper stem to help extend the lines for a lifting bow, and does not change her over-water body at angle of heel. Placing the greatest cross section a little forward of the center of loadline length is according to the principles of mechanics and common sense. With a hollow to this section she will stand up better than with a round. Great draft at this section, as the greatest bulk is where the greatest force will be applied. Good freeboard to keep as much water as possible off the decks; low rail and tumble in to allow her to free herself when knocked down; flush deck with good crown; small cockpit for helmsman; ballast, inside, low down, as inside you have none of the friction and it loses none of its power; jib and mainsail rig, as there is more driving power in two pieces of canvas than there is in three. The power in the sloop rig is more concentrated and more direct acting. The mast, being well amidships, is more directly over the body of the vessel, and in a pitch forward or a drop aft is less likely to act to her detriment. Good peak and long gaff to hold the gafftopsail to its work. Fair hoist and low boom to bring the power low down. Low clew to jib to turn it well along the foot. We are all aware of the difficulty in making the cutter jib sit and the battens and contrivances required to make it sit at all, and there seems to be no prospect of a good sit with the style now in use (unless with lower clew, and a boomkin with fairleader well up to the clew). Such is not the case with the single jib, well cut with low clew, as the foot and sheet are in line and the most powerful part of the sail acts directly on the vessel, with small loss of power as compared with the cutter jib. I see no benefit to be derived from the slanting sternpost except rapidity in stays, which in a vessel of this size is not of much account. If the signs do not fail, the coming visitor from Scotland bids fair to make it warmer for the mongrels than did her English predecessors, and the feeling of confidence often expressed is apt to be dispelled when they realize that it is Watson they have to conquer, he whom the Madge so unceremoniously introduced at Newport a few years ago.

LOYALTY.

THE CORONET-DAUNTLESS RACE.

OWING to the delay in fitting out the Coronet, the start for the ocean race was not made on Saturday as intended. The Coronet was lowered on Wednesday, but there was not water enough, in consequence of the strong westerly winds, to float her from the screw dock, and she laid there until the midnight tide, when she was warped alongside the pier. Sails were bent, and stores, coal and all supplies were taken aboard, but it was not until Saturday night that the preparations were completed. Mr. Bush has been ill for several days and has been unable to visit the yacht. The Dauntless has been off Tompkinsville during the week, her preparations being completed. A new jib with a bonnet 9ft. deep has been made by Sawyer. On Saturday morning she towed to the foot of East Twenty-eighth street, to avoid the floating ice in the Bay. The preliminary arrangements have all been completed, and checks for $10,000 each have been deposited with Mr. Hurst, the treasurer of the New York Y. C.

The Coronet was built at Poillon's yard in Brooklyn, in 1885, her model being the result of a combination of talent including Messrs. Smith & Terry, of Greenpoint; her present skipper, Captain Crosby; and Mr. Townsend, foreman of the yard. She is of the usual wooden construction and ballasted with some 150 tons of iron, her displacement being about 300 tons, as far as known. When lately on the dock some 8 tons of lead were run into her keel and some of the inside iron removed. The dimensions of the Coronet are: length over all, 133ft.; on l. w. l., 123ft.; beam, 27ft.; draft 12ft. 6in. She is owned by Mr. R. T. Bush of Brooklyn, and is commanded by Captain Christopher Crosby, with W. A. Whittier as first mate, Otto Petersen as second mate, A. Bergholm as boatswain, and fourteen men before the mast, besides steward, cook and messboy.

The Dauntless was originally the schooner L'Hirondelle, built in 1866 by Forsyth & Morgan, at Mystic Bridge, Conn., from a model by Mr. John A. Forsyth. Her first owner, Mr. S. Dexter Bradford, sold her in the following year to Mr. James G. Bennett, who lengthened her bow and rechristened her Dauntless, under which name she has raced at home and abroad for the last 20 years. Her length over all is 124ft., l.w.l. 116ft. 7in., beam 23ft. 7in., draft 12ft. 3in. She has been owned for the past five years by Mr. Caldwell H. Colt, who has used her mainly for cruising. On the race she will be in the charge of Captain S. Samuels, the well-known sailor, who has been so long and intimately connected with American yachting. The first mate will be Mr. H. W. Mahony; second mate, J. H. Willbanks; boatswain, Robert Harrington; Carpenter, G. H. Riverwale; quartermasters, R. F. Willis and Ernest Vijon; steward, cook and sixteen men before the mast. Mr. Colt will sail on the Dauntless, accompanied by Mr. Ernest Staples and Mr. John H. Bird, secretary of the N. Y. Y. C., Mr. Henry T. Blodgett, and Com. L. Q. Jones, Hartford C. C. Mr. Bush will not sail on the Coronet, the only passengers being Mr. J. N. Winslow, of the schooner Agnes, and Mr. W. N. King. Messrs. J. J. Macomb and Edward Matthews, of the New York press, will be on the Coronet, and a reporter on the Dauntless. The latter vessel has been provided with two oil bags, each of a capacity of two gallons, to be hung over the bows in a heavy sea, while she has also two circular life buoys of the usual form, but each fitted with a tube for oil and a spray nozzle by which the oil is allowed to escape at will, the idea, of course, being to calm the water about the buoy. The weather on Monday prevented a trial trip of the Coronet, but on Tuesday she ran down outside Sandy Hook and back. Her sails have stretched so as to require alteration, and the start has been postponed to Saturday.

Of course a long race for large stakes and in winter has attracted a great deal of attention, but in the general enthusiasm over the event the important fact seems to be overlooked, that these boats are by size and build ocean cruisers, and if they are not fit for this work, they are fit for nothing. They certainly have no place with the racing cracks, no one supposes that either would save her time off Montauk or Fortuna in a 20-mile bout to windward under any ordinary conditions, but both are ocean cruisers and are now at their legitimate work. Another important point in connection with the race is that the question of type is not involved, as the two boats are of the same class. The attempt to put forward the Coronet as the embodiment of twenty years advance in naval science is as silly and unfounded as the similar efforts that are constantly made to retard all progress and to keep New York still further in the rear in yachting. The Dauntless was built in 1866, the Coronet in 1885, but as far as any radical improvement in model or build is concerned, there is nothing in the latter to denote that she was not built before, instead of twenty years after the Dauntless. She is simply a big schooner, expensively fitted up, but modelled and built as all the rest of her fellows have been and in her design and construction the ideas as to form, ballast and rig that are generally accepted by naval architects to-day have no place. From this it by no means follows that her owner is not a generous and spirited friend of yachting and that his proposal for a race across is not most liberal and sportsmanlike. Both Mr. Bush and Mr. Colt have shown a spirit in the matter which should stimulate other owners who profess to take a pride in the success of American yachting, and all yachtsmen, here and abroad, will wish them a quick and pleasant passage and will wait eagerly the news of their safe arrival out.

ARROW AND THE QUEEN'S CUP.

WITH two contests lately sailed for the America's Cup and another pending, with two or three important races in prospect for the coming season in British waters; with two American yachts now on the way for England; and with three challenge cups held by British yachts, the coming season promises to be far ahead of all previous ones in the number and importance of its international contests. Its early opening is marked by an ocean race of 3,000 miles, and though nothing positive is known of the plans of the Coronet and Dauntless after their arrival out, it is likely that both will enter some of the summer's races in British waters. Until something more definite is known of the Thistle it is impossible to make plans for the single-stickers, but, as we noted last week, the idea of sending Mayflower across to challenge for the cup held by Arrow is under consideration, and it is not improbable that she may be seen in several races on the other side this season.

QUEEN'S CUP, WON BY ARROW, 1852.

Should she cross, the newer vessels that would be put against her, Irex, Marjorie, Wendur and Genesta, are pretty well known here, but Arrow, though of a very different type and a much smaller vessel, is by no means so well known as the newer boats to American yachtsmen, and in spite of her age, the possibility of a series of races between her and the leading American boat, for an important trophy, give an interest and novelty to the accompanying drawing that is second only to that attaching to the lines of the latest "cracks." The history of the Arrow, for which we are indebted to the files of *Hunt's* and the *Field*, is briefly as follows: She was built in 1822 by Mr. Joseph Weld, one of the fathers of British yachting, at Southampton, being then a lapstreak boat of about 62ft. l.w.l. and 18ft. 6in. beam—of course cutter rigged. After a successful career under the ownership of Mr. Weld and of Mr. Geo. Holland Ackers, who purchased her in 1823, she was again sold in 1832 to Lord Godolphin, and came very near ending her career at the hands of a junk dealer who was the next purchaser. How she was rescued from an ignominious end and reserved for a long and glorious existence is told in the following extract from a letter to the *Field* by Mr. Thomas Chamberlayne, her next owner:

"I bought the Arrow when she was lying on the banks of the river Itchen, full of mud and water, and waiting to be broken up for fire wood. It was in December, 1846, and I gave £116 for her. Her length was then 61ft. 9½in., breadth 18ft. 7¾in., and depth of hold 8ft. 8in. My wish was to get her midship section to build from, knowing how celebrated she had been in former days. I built from the old moulds, and, out of respect for my esteemed friend Mr. Weld, her original constructor, called her after the old vessel, the Arrow; hence the mistake so constantly made in calling her the 'old' Arrow. I have since altered her on several occasions, bringing her up to 84 tons, then to 117."

During Mr. Chamberlayne's ownership many changes were made in the hull until the outcome was a very different boat from the Arrow that beat the Pearl in 1826. The length, beam and draft were increased until a far larger boat was the result; the angle between keel and garboard was filled out with wood in 1865, her bow was opened and lengthened in 1851-52, and in 1874 a lead keel of 6 tons was added. Her owner's method of alteration, as told by himself, is deserving of notice: "My only guide in the construction of my vessels has been the endeavor to perfect a form that would offer the least possible resistance to the element it is intended to pass through; and when going through the water I never miss an opportunity of observing where the water by coming into contact with the boat is broken up. I note this particular spot, and in laying the vessel up, endeavor to remedy the evil, as it shows friction, and consequently resistance. In building on the above plan I of course never for a moment lose sight of the *sine qua non*, viz., power to stand up under a heavy press of canvas, and keep those on deck as dry and comfortable as possible."

After this it is worthy of note that Arrow coincides very closely with the wave-form, as determined by Messrs. Archer and Hyslop. Her present owner, Mr. Tankerville Chamberlayne, succeeded his father in 1876, and in his hands additional improvements were made in the ballast plan. The wood filling of the garboards, put on in 1865, was replaced in 1877 by 3¾ tons of lead, with an addition of 4 tons to the keel, making 13¾ tons outside and 26 tons inside. Up to 1880 Arrow had held her place nobly with the successive additions each season, meeting such boats as Kriemhilda, Formosa, Vol-au-Vent, Neva, Florinda, Vanguard, Oimara, Iona, Cythera and Fiona, but in that year there came out two that left behind all the older boats. Not only were the advantages of modern construction, especially in the matter of ballast, greatly in favor of the new craft, Vandusara and Samena, but a far greater handicap existed in the Y. R. A. rule which rated them at 90 tons, and Arrow at 112, and of late years she has been out of the racing. Under the length and sail area rule the latter disadvantage will partly disappear, but the vast improvements in construction are greatly against the success of so old a boat, whatever the merits of her model. Compared with Mayflower, the depth of body is much less and the ballast consequently higher, as Arrow was originally a boat of very moderate depth, and her extreme draft now, 11ft. 6in. compared with Mayflower's 10ft., is made up largely of additions to the keel, in the form of padding to garboards, etc., while her outside ballast is just half of Mayflower's. Several years since her sternpost was shifted, making her now 75ft. 9in. l.w.l. in place of 79ft. 2in. The following tables show how the boats compare:

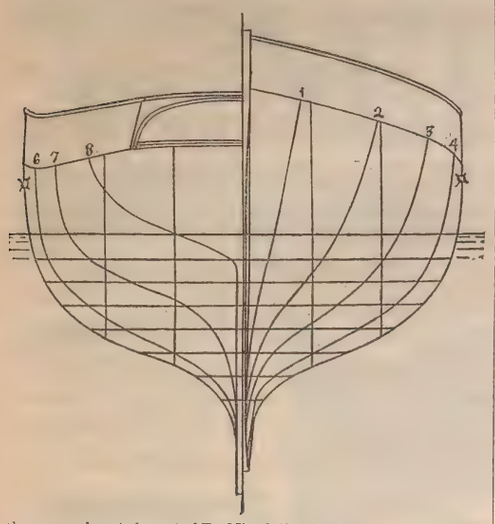
	Arrow.	Mayflower.	Puritan.
Length over all	86	100	93
Length L. W. L.	76.9	85	80
Beam, extreme	18.9	23.6½	22.7
Draft, extreme	11.6	10	8.6
Freeboard	2.9½	3.3	3.2
Displacement	196	110	105
Ballast, inside	26.3	11	13
Ballast, keel	13.7	37	27
Ballast, total	40	48	40
Ratio of ballast to displacement	.38	.44	.45
Mast, deck to hounds	49.4	63	60
Topmast, fid to sheave	41	46	44
Bowsprit outboard	34	38	38
Boom	64	80	76
Gaff	46	50	47
Sail area	+4770	8634	7982

(+) Lower sails only.

The figures show that Arrow is a far smaller and less powerful boat than either Mayflower or Puritan, and with a much smaller sail area. We have not her full sail area by N. Y. rule for an exact comparison, but the spars show the great difference between her and Puritan.

Arrow was in the race for the Royal Yacht Squadron cup in 1851, but went ashore early in the race and so lost her chance. A year later she again met America, this time the latter being in English hands, the occasion being the race for the Queen's Cup of 1852. The following account of the race is from *Hunt's Yachting Magazine:*

"Her Majesty, the Queen, had presented a cup, value 100 guineas, for this day's race, the course for which was right round the island. Princess Olga and Brilliant were entered but did not start. The other vessels were:



Yachts.	Tons.	Owners.
Arrow	102	T. Chamberlayne.
Mosquito	50	Lord Londesboro.
Vestal	74	B. G. Rowles.
America	180	Lord de Blaquiere.
Aurora	48	Le Marchant Thomas.
Zephyretta	180	H. B. Webster.

"There was a good stiff breeze blowing at the time from the southwest. The Mosquito was the first to get under way, and soon shoved her bowsprit ahead of the Arrow, who followed closely in her wake. The America was somewhat tardy in getting her gaff-topsail set, which gave the others a decided advantage in the start, but that was of trivial account when the extent of the course is considered. The Zephyretta was the last to get away, and was about twice her length astern of the America, but at 11h. 2m., when abreast of the Warren Sand, the Zephyretta had considerably overhauled the America, the Mosquito still leading, the Arrow being about half a mile astern of her, and about a quarter of a mile between her and the America. In this order they passed the No-Man buoy, beating up against the tide.

"On rounding the No-Man, the Zephyretta, which was lying close astern, passed the America a little to windward on the starboard tack, and got round the Nab light one minute before her. From this point the Mosquito kept heading the Arrow a very little toward the white cliff at the back of the island, which was now against flood tide. The whole of the yachts thus kept inshore as far as it could be done with safety until they got about a mile and a half below the light, when the wind changed and got round to the west by south—a sort of 'paltry' and 'balling' weather, by which a temporary advantage was alternately gained, first by one and then by another, but still most decidedly in favor of the Mosquito. One great thing in her favor was the power of being able to make short tacks quicker than the larger and longer vessels, and the Mosquito held a much better wind than the Arrow. The America held a good wind, but being a larger vessel and schooner-rigged, she was unable to get up to the Mosquito, who met with the light breeze that just suited her. She had now her jib-headed topsail set, and was so well handled that the America could not gain much ground upon her until after rounding St. Catherine's, when she began to overhaul the Arrow very fast, and finally passed her off Freshwater Bay. The Mosquito was only 4½m. ahead of the America, and the latter about 8m. in advance of the Arrow. After these yachts had got inside the Needles the wind shifted to W. N. W., and the America overhauled and passed the Mosquito off 'Jack in the Basket,' and then became the leading vessel. By the time the Mosquito reached Lepe the Arrow passed her; thence the yachts stretched across the Solent to Old Castle Point, where the three met together, and the Arrow and Mosquito shortly afterward closed the America and passed her. The whole now ran up and passed Osborne with the wind dead aft, the America 'goose-winged,' the same advantage being taken by the cutters, they also booming out their foresails. It was here evident that as long as the cutters could run under their two sails they had the advantage. Eventually they arrived at the goal as follows, it being a neck and neck race between the Arrow and Mosquito, the former being about the length of her bowsprit in advance. They were timed as follows:

Arrow	6 59 30	Mosquito	6 59 31
America	7 01 20	Zephyretta	7 39 00

"Thus it will be seen it was a most exciting match and the alteration which the Arrow had undergone had greatly improved her sailing qualities. Nevertheless it was the general remark, that however well the America may have been sailed and attended to during the match, and with the same canvas as when sailed by her former American crew, her sails did not present that cardboard appearance we have been accustomed to witness; nor did she present that smooth appearance in displacing on going through the water as formerly, when her motion was almost imperceptibe. The Arrow and Mosquito fouled when abreast of Peel Bank, midway between Old Castle Point and Ryde, by the Mosquito's boom dragging the larboard side of the Arrow. The 18th regulation of the Royal Victoria Y. C. states that 'two yachts touching will both be disqualified, unless it can be clearly proved to the satisfaction of the committee which is the aggressor.' On Saturday at a general meeting of the club, a protest was made by Lord de Blaquiere, the owner of the America, schooner, against both the Arrow and Mosquito, cutters, for Her Majesty's Cup, it appearing that when

those vessels got abreast of Peel Bank they fouled each other, which is contrary to the 18th article of the regulations. After investigating the matter the committee declared the Mosquito to be the aggressor, consequently the Arrow retained possession of the valuable prize."

The cup became the absolute property of the owner of Arrow and has been held by him and his son ever since.

In October 1885 the latter, Mr. Tankerville Chamberlayne, offered it as a challenge cup for international competition, similar to the America's Cup, on the conditions that it be raced for by sloops or cutters over the course on which it was originally won, two out of three races, and that six months notice of the challenge should be given. The letter containing this offer, and a later one repeating it, were published in the FOREST AND STREAM of Nov. 19, 1885, and Jan. 14, 1886.

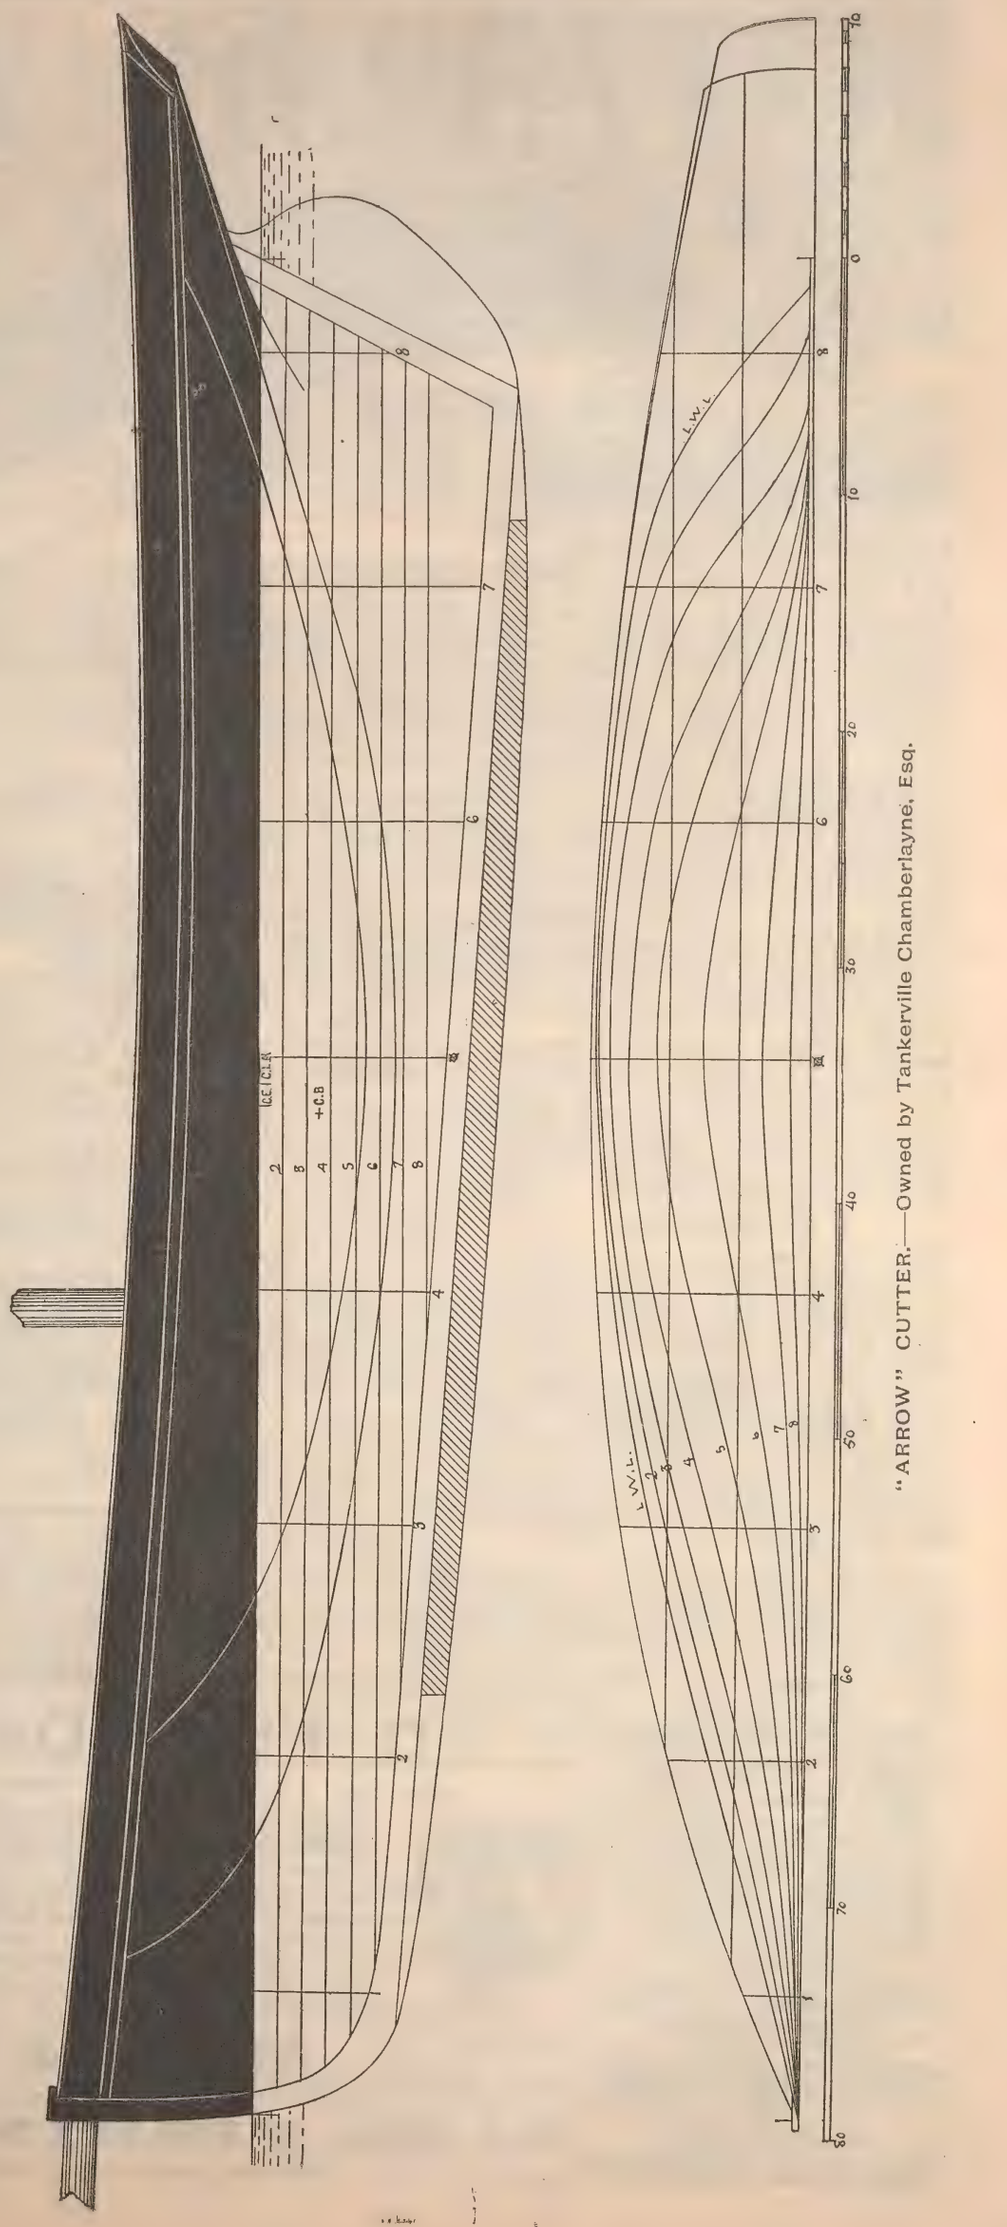
This challenge has never been taken up, but is still open for this year until May 1. Should it be decided to send Mayflower across this year she will challenge for this cup, but further than this, there are other trophies abroad that she will be very likely to have a try for before setting sail for Marblehead again. The two cups won in 1885 by Genesta, the Cape May and the Brenton's Reef, are both challenge cups, and are now open to challenge from any American or British yacht. They were raced for in August last by Irex and Genesta, the former winning in a very unsatisfactory manner, the race being sailed in very light weather, and both cups being put up for a single race. Both cups being now held by Irex they may be challenged for during the season, the races to be sailed from the Needles, around Cherbourg and return, the Brenton's Reef Cup without time allowance, but under the rules of the New York Y. C.

DEATH OF AN EMINENT DESIGNER.

Editor Forest and Stream:

The news has just arrived of the death of Hermann C. T. W. Saefkow, Naval Architect of the German Imperial Marine. This early demise of one of the brightest stars in the profession will be received with the deepest regret by the whole fraternity of yachtsmen the world over. Not long ago we had to lament the untimely death of the rising and promising young architect Payton, and now comes the loss of Saefkow at the age of thirty-eight, in the full prime of his manhood and unselfish labors in behalf of progress in yacht design and construction, specialties in which he had earned a world-wide reputation, and stood second to none in his own country or abroad.

The death of Saefkow, brought about by overwork and study, leaves a vacancy in the circle of competent masters in the theory and art of naval architecture which it will be difficult to fill. He was one of those rare men who, while thoroughly adept in the science of his calling, was none the less practical and amenable to the logic of events. There was not a yacht in America, England, France, Germany or Sweden with the details of which he was not familiar. Their doings he followed with great fondness and close logical scrutiny. He built many craft of all types, but like others in his field, gave his preference, after long trial, to the modern racing cutter as the best combination of all-round qualities in connection with speed.



His Lolly and Anna are vessels unsurpassed in their planning and build, and his numerous other creations are distinguished alike for soundness in conception and grace in execution. He was as original as he was brilliant in his profession, and his labors mark an epoch in the fresh popular development which yachting and naval architecture, on a larger scale, have recently taken in the German Empire and Northern nations. Concerning his career you will, no doubt, receive further information, and I must content myself with these few lines in tribute to one with whom I have enjoyed long and familiar correspondence and whose sympathies ran in the same current as my own. Well could we have spared some lesser light, for in Saefkow as a man, a specialist or a yachtsman, the loss seems irreparable for the time.

C. P. KUNHARDT.

A RIG FOR SMALL BOATS.

NO inquiry is so often made by our correspondents, and none is so difficult to answer, as that concerning the amount and shape of sail to be carried on yachts and boats. The following answers to a similar question in the *Field* are by men thoroughly familiar with the subject, and their advice we can commend as practical and good. The rig described is little known here, but will become popular on trial, as it has many good features:

"In reply to W. H. C.'s inquiries as to sparring a boat 16ft. long by 4ft. 6in. beam for spritsail and jib, I give the following dimensions, but I by no means recommend the sprit rig, much preferring the lug tacked to the mast, after an experience of nearly all rigs for boats extending over fifty years. It may be as well for W. H. C. to know that the sprit rig has been gradually getting into disfavor for boats of any considerable size for quite a quarter of a century, and this has spread also to smaller boats to such a degree that it is now quite exceptional for new boats for amateurs to be fitted with sprit sails, most preferring the working lug, as it is more easily controlled either when set or lowered. Sprits have frequently slipped out of or parted the snorter or becket, which keeps the heel or butt end of the spar to the mast, with the result of driving a hole through the plank, so that boats have sunk from this cause, or have narrowly escaped foundering by the promptitude of some one on board thrusting a cloth into the hole. As the boat in question is 16ft. long, and has only 4ft. 6in. beam, she is quite long enough to do without any boomkin beyond the stem head, to which the head sail or jib can be secured either by a hole through the stem, or by a hook working in an eye at the top of the stem band. For carrying a jib, whether with a sprit or a lug as a mainsail, I would place the mast 5ft. from the fore side of the stem, and as is frequently desirable to do without the jib, a second step should be provided for the mast 2ft. from the fore side of the stem, which double arrangement is equally useful for both lug and spritsail rigs. The foremast for the spritsail should be 8ft. 2in. above the gunwale, the additional depth to the step giving the whole length of the mast; length of sprit 10ft. 6in., length of mizzen mast above gunwale 5ft., whole length to step about 5ft. 9in., mizzen boom 4ft. 6in., mizzen boomkin 2ft. 3in outboard, mizzen sprit 6ft. 6in. Dimensions of sails for the sprit rig: Jib on the luff 8ft. 2in., on the foot 5ft., on the leech 7ft. Main spritsail on luff 6ft. 9in., on foot 7ft. 3in., on head 5ft. 9in., on leech 11ft. 6in. Mizzen spritsail on luff 4ft. 4in., on foot 4ft., on head 3ft., on leech 6ft. 6in. Both jib and mizzen should have each an 18in. reef, and the mainsail two reefs of 18in. depth. For setting and keeping up the main sprit, a single whip purchase on the snorter is a very good arrangement. As W. H. C. has asked for spritsails, I have sketched out and forward the above measurements, but as I do not recommend this rig I have also sketched out a lug rig for this boat as follows: Mast above gunwale 8ft. 6in., depth to step to be added for total length. Jib on luff 8ft. 6in., on foot 4ft. 8in., on leech 7ft. 2in. Lug sail tacked to mast, on luff 4ft. 9in., on foot 7ft. 4in., on head 7ft., yard 8ft. leech 12ft. For mizzen I suggest a sharp-headed or Mudian sail, the mast to be 7ft. 6in. above the gunwale, the sail on the luff 7ft., on foot 4ft. 3in., on leech 7ft. 8in. Mizzen boom 4ft. 7in.,

"ARROW" CUTTER.—Owned by Tankerville Chamberlayne, Esq.

mizzen boomkin 2ft. 3in. outboard. Reefs as before mentioned for previous rigs. Mudian mizzens are often reefed by a roll on the mast, sprit mizzens by dispensing with the sprit, and stopping the peak earring to the mast, thus making it a triangular sail. When a main spritsail is so treated the boat is said to be under a 'goose wing.' As a matter of course, being unaware of the form of the boat's bottom, I do not like to recommend large sails, stability, or the reverse, resulting so much from form in small boats.—J. C. WILCOCKS (Plymouth, Feb. 3).

"In answer to the inquiries of W. H. C., in the first place I would certainly not advise him to rig his boat with sprit sails, but with two standing lugs and a jibforesail. As to the necessity of a short iron bowsprit it depends very much upon the stepping of the forward mast. If the mast is placed well aft in the boat, a sufficiently large jib would be got without a bowsprit. I think the following would be the right place to step the forward mast, provided there is to be no bowsprit, viz., 5ft. abaft fore side of stem. This would give about 10ft. 6in. drift between the masts, as I presume W. H. C. intends to step his mizzen right aft against the transom of the boat. About 5ft. would be long enough for the mizzen on the foot, and 6ft. or 7ft. on the head. If the forward mast were stepped say 4ft. abaft the stem, I should say an iron bowsprit of about 2ft. 6in. would be sufficiently long; however, if the boat is for single-handed sailing, I think it would be better to have her mast further aft and no bowsprit.—O. A. ASHWORTH."

BISCAYNE BAY, FLORIDA.

ON the 22d of February a sailing regatta was held on this beautiful bay, off the most southerly point of the mainland of the United States. It was a thrifle over a series of annual regattas for the sailing championship of these waters, and was held under the auspices of a regatta committee composed of Ralph Munroe, of Staten Island, chairman; C. K. Munroe, Commodore N. Y. C. C., and Messrs. F. A. and E. A. Hine, of New York city. The bay is the most magnificent sheet of landlocked salt-water for racing purposes to be found in Florida, and on it a 40-mile triangular course, affording 10ft. of water over its entire course, could be laid off. As it was, a 13-mile triangular course for the larger boats and a 5-mile beat to windward and return for the little fellows, suited our purpose and gave us some very pretty racing.

The fifteen entries for this first regatta were divided into three classes: First, all over 35ft. in length; second, all between 18 and 35ft.; third, cat-rigged boats 18ft. and under. The three first class entries were: Ada, W. B. Brickell; Pelican, T. A. and E. A. Hine, and Amy, F. S. Morse. The Ada is a fine sloop yacht 59ft. 6in. over all, and was formerly flagship of the Jersey City Y. C. The Pelican is a 41ft. sharpie built by Brown, of Tottenville, S. I., and the Amy is a last year's New Haven built sharpie, 41ft. long.

In the second class Maggie L., a Shrewsbury River cat-rigged sandbagger; Laura, a 31ft., deep, narrow, cutter-hulled and sharpie-rigged, boat; Egret, a Tottenville sharpie; Scud, Rafala and Annie, all sloop-rigged and built in Key West.

The third class contained Alligator, a Barnegat cruiser, built by Stephens, of Staten Island; Carrie, built in Jacksonville, and Edna, Rena, Nemo and Azifazon, built on Biscayne Bay.

There was a time allowance of one minute to a foot of length plus beam, a crew allowance of one man to every five feet of length, a sail limit of working sails only, and shifting ballast prohibited. These conditions were the fairest that could be named under existing circumstances.

The breeze was light from eastward and water smooth, which conditions upset prophecies and defeated anticipations in a most remarkable manner. In the first class Ada won easily, as had been expected, in 2h. 29m., with Amy second and Pelican eight minutes behind her, which had not been expected. In the second class the Shrewsbury sandbagger beat all competitors handsomely, though closely pressed by the sharpie cutter. Maggie L.'s time was 3h. and Laura's 3:01. The Staten Island sharpie, Egret, was beaten one minute by the Scud, times 3:03 and 3:02; and the two locally built sloops Rafala and Annie, after a pretty match race over half the course, came home in 3:29 and 3:54 respectively.

The third class boats were so far distanced by the powerful, home built cat Edna, that she was tired of waiting for the others long before they reached the home mark. Her time was 2h. 12m., and that of the Nemo, which was second boat, was 2h. 34m. Messrs. Alfred Munroe and Charles Peacock acted as time-keepers and judges at the finish.

The festivities of the day ended at the Bay View Hotel with a dinner given by the regatta committee to the captains and crews of all competing boats. Among the spectators of the regatta were Mr. Fairman Rogers and his guests on the steam yacht Magnolia, and the crew of the schooner yacht Lilian. Biscayne Bay lies just inside of Cape Florida, is easy of access to anything drawing 9ft. of water or less, abounds in the most charming picturesque scenery, and if it were only better known to yachtsmen, would, I am sure, be the winter resort of scores of Northern yachts. If some of them, or some of the canoeists who make winter cruises, will only come down here in time for our next annual regatta, they will at least receive a hearty welcome from O. K. CHOBEE.

DELAWARE RIVER.

Editor Forest and Stream:

The first monthly meeting of the Quaker City Y. C. under its new charter was held March 2, at the club rooms, Camden, N. J., President Valletto in the chair. The site for the new club house, the only matter of public interest, was discussed. Many members desire a club house outside of the city after the style of the Larchmont, of New York, while others favor locating in the center of the city. The present location is not adapted to cultivating the social side of the club; it will be retained, however, in all probability, as a storeroom.

The song of the mallet is again heard in our shipyards. The new cutter has gone over to Cramp's for spars, Krause's new 18-footer is ready for the water. Measurer Wilkins' two new 18ft. cats are also ready. Wignall has about completed a 15½×5ft. beam cat for Wilmington, N. C. Louder is rebuilding the Aldine, once a yacht, now to be an oyster sloop. The Thomas is having a new well and centerboard put in. The Carrie Z. has been refastened and is nearly ready to go over. The Gretchen will go off this week, the first yacht in commission. Box's steam yacht Volante is ready to go off Louder's railway. Steam launch Germania has had stern partially rebuilt and is ready for the water. The larger boats are waiting, as usual, until the summer is almost over before they think of getting ready. CHAS. L. WORK.

PHILADELPHIA, March 5.

ANETO.—This singlehand cruiser, illustrated in the FOREST AND STREAM of Jan. 25, 1883, is offered for sale in another column, as her owner wishes a larger yacht. The Aneto was built in the best manner in 1883, being copper fastened and with lead ballast, and we recommend her as a very roomy, staunch and speedy little cruiser, suitable for single-hand work, but with good room for two in cabin and a boy forward.

BUILDING NOTES.

THE Shamrock is now in frame and the upper wales, of 2in. oak, in place. The frames are double, of hackmatack and steamed oak, sided 3¼in., moulded 6 and 3½in. and spaced 16in. The lead keel weighs 25 tons and is about 40ft. long, extending to the rudder. It is 18in. deep and was cast in heats, each layer being allowed to cool before the following one was poured, so as to avoid the contraction that caused such trouble with the Atlantic's keel. The greatest draft is well aft, the keel rising considerably at the forefoot, where it is cut away, rounding into the conventional clipper stem above water. The sternpost has a decided rake, and the counter is long and light, especially for Bay Ridge. The steamer for ex-Com. Rhodes is ready for the water, except that the sternpipes and shafts for the twin screws are not in place. She presents nothing striking in the way of model except a stern of phenomenal ugliness; for the rest of her hull it may be said that it is better than the stern. Mr. Mumm has the keel out for a steam yacht for the Rev. John Aspinwall, to succeed the Sentinel. Just how many steam yachts Mr. Mumm has built for Mr. Aspinwall we do not now remember, but it is a goodly number, and they have evidently been satisfactory. Pocahontas is now lying in the basin, and Mr. Mumm is at work fitting her up inside. She will be finished in plain pine, the limited round being divided in the usual manner, a stateroom on the starboard side, one or two very small rooms abreast the passage on the port side. The headroom is limited and the forecastle is very low and small. Mr. Mumm will haul out Medusa on the first high tides.

Mr. Ayers is busy with the twin-screw lighter for San Domingo, which is now caulked and painted. He has nearly completed the alterations on the Tahoe, making a great improvement in her looks by a long, light counter. From the size of her nosepole it is evident that she will do some racing. On the beach Mr. Driscoll has in frame a tugboat. He has completed the Sea Gull and she is housed over in the East River. Wallin & Gorman are completing the new Mignonette, and also another small catboat similar to the one previously built for Mr. Blood. She is handsomely finished inside with mahogany. They have the little 18ft. cruiser in frame and will cast her keel as soon as the weather improves. The Mignonette will have all lead ballast instead of iron.

BUILDING AT GLOUCESTER.—Messrs. Higgins & Gifford have in hand at present the following craft: Two cutter-rigged boats 36ft. in length, 12ft. beam, 5ft. depth of hold, for West Indies; one Excelsior lifeboat for Life Saving Service, District No. 1, 26ft. in length, 6ft. 6in beam, 2ft. 4in. deep; one yacht 18ft. 4in. long, Sassacus model, sloop-rigged, for parties in Savannah, Ga.; one yacht 25ft. long, sloop-rigged, Osceola model, but with a round stern, for Cape Cod; three surf boats 26ft. long for West Indies; four schooner-rigged sharpies 35ft. long, 8ft. beam, 2ft. 6in. deep, for Central America; one rowboat 12ft. long for Portland, Me.; one cutter, from Edward Burgess' design, for Messrs. C. E. & F. L. Cunningham, Boston, 27ft. 6in. length over all, 8ft. 6in. beam and 4ft. 8in. draft of water; also a number of mackerel seine boats, one of which is a new and improved model, for Capt. Solomon Jacobs, Gloucester, 40ft. in length, to be built with special regard to extra rowing qualities.

PORTLAND Y. C.—The officers for 1887, elected on March 3, are Commodore, Charles W. Bray; Vice-Commodore, George C. Owen; Fleet Captain, Neal D. Gould; Treasurer, Joseph H. Dyer; Secretary, George Doane Rand; Treasurer, H. P. Waterhouse; Fleet Surgeon, Charles D. Smith; Trustees, Commodore C. W. Bray, (ex officio), K. D. Atwood, J. P. Thomas, J. M. Brown; Regatta Committee, Commodore C. W. Bray (ex officio), F. L. Moseley, H. P. Larrabee, H. R. Virgin, P. R. Stevens; Membership Committee, Geo. Doane Rand (ex officio) T. H. Chase, C. J. Farrington, E. H. York; House Committee, J. Hall Boyd, (the second member will be appointed at the next meeting). The date of the annual cruise was fixed from May 28-31, and the challenge cup regatta June 16. The fleet numbers now 3 schooners, 17 sloops, 6 cats and 4 steamers.

CRUISING.—Ruth, s.s. Mr. Swits Condé, owner, of Oswego, N.Y., was lately at Charleston, S. C., with her owner and family on board, having called on her way from Oswego to Florida. She left Lake Ontario by the Erie Canal and Hudson River, thence by the inside route to Moorehead City, N. C., and from there arrived at Charleston on February 22. From there she will take the inside route to Florida.... Nirvana, schooner, Gen. H. W. Perkins, has been reported as arriving at Nassau in safety.. Helen, schooner, Mr. C. D. Middleton, was at Charleston on March 2, from St. Augustine.... Alva, steam yacht, Mr. W. K. Vanderbilt, was at Havana on February 26, having arrived on the 21st, her time being five days from Scotland Lightship. She fell in with fog below Hatteras.

NEWARK Y. C.—At the annual meeting on March 7 the following officers were elected: Com., Chas. E. Cameron, sloop Emmy C.; Vice-Com., Thos. J. Roche, sloop Annie R.; Secy., Chas. H. Mayhew; Financial Secy., Thomas F. Luff; Treas., E. M. Grover; Measurer, Chas. E. Cummings; Trustees, E. L. Phillips, L. Wright, Jr., S. J. Stafford. The experiment of having rooms in the city, a move which the club were compelled to make owing to being cut off for the winter from their clubhouse, has turned out such a success that it will be continued.

NEW ROCHELLE Y. C.—A meeting was held on March 7, at the Hotel Brunswick, at which the following officers were elected: Commodore, Charles Pryer; Vice-Commodore, John H. Ryley; Rear-Commodore, E. C. Sterling; Secretary, W. H. Wilmarth; Treasurer, Eugene Lambden; Measurer, H. A. Gouge; House Committee, William E. Wilmerding, Amos Brown and T. B. Jenkins; Membership Committee, D. D. Archer, Jr.; Walter Large and J. K. Buchan; Law Committee, Charles H. Young and Charles D. Ingersoll; Trustees, N. D. Lawton, C. P. Buchanan and George H. Barker.

THISTLE.—We learn by a private letter than on February 17 the plating of the Thistle was completed and the rivetting about finished. The mast and spars were ready and the ironwork well advanced. The woodwork is also being pushed and the yacht will be ready in good season. The challenge has not yet been heard from and may not be for some time yet. Of course nothing is yet known of the dimensions.

CONSTANCE, yawl, Mr. Prescott-Westcar, arrived at Gibraltar on Feb. 1, eleven days out from Dartmouth. The entire distance was a beat against a heavy head sea, under topsail and staysail and No. 3 jib, the yacht never lying to during the entire passage. Constance was built from Mr. Dixon Kemp's designs in 1885, and is 83ft. l.w.l. and 18ft. beam. On Feb. 9 she was reported at Malaga.

LYRA, schooner, the famous old sailing yacht, is at the yard of her builders, Messrs. Camper & Nicholson, Gosport, where she will be lengthened 36ft. and converted into an auxiliary steamer with triple compound engines. She will also be fitted with electric lights.

RARITAN Y. C.—At the annual meeting on March 2 the following officers were elected: Com., Dr. H. W. Philips, sloop Moya; Vice-Com., E. J. Hadden; Secretary, Conrad F. Hall, sloop Falcon; Treasurer, Wm. A. Crowell; Measurer, W. L. Farroat.

OLLIE, steam yacht, built in 1885 by Messrs. Poillon, is being lengthened 12ft., and will receive a new compound engine and a new boiler under the supervision of Capt. J. M. Walters.

CYPRUS.—This famous five-tonner has been purchased by a yachtsman of Hamilton, Ont., and will come across this spring. She was designed by Wm. Fife, Jr., in 1879.

JERSEY CITY Y. C.—Officers for 1887: Com., H. B. Pearson; Vice-Com., Dr. J. H. Vondy; Treasurer, P. W. Figueria; Secretary, C. C. Pierce; Measurer, G. L. Winn.

WENDUR, yawl, Mr. Watson's steel flyer, will come out as a cutter this season, under which rig she will meet Irex, Marjorie, Genesta and Thistle.

NAMOUNA, Mr. James G. Bennett, was reported at Bombay on Feb. 11, sailing on the 14th for Calcutta, Singapore and Batavia.

IREX, cutter, will have a silk spinaker for light winds, now making by Lapthorne, according to the *Field*.

SHONA, cutter, Mr. C. H. Tweed, will fit out early in charge of Charles Barr, who sailed her last season.

MEDUSA, cutter, Vice-Com. Centre, S. C. Y. C., will haul out at Mumm's for more lead on the keel.

MOHICAN.—Mr. J. Clark will cross the Atlantic in the Mohican in time for the cup races.

ESTELLE, schooner, has been purchased from ex-Com. Smith by Mr. J. F. Phillips.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

F. C. R.—The registered number of champion Joe is 925.

MABEE, Canada.—The color of the Irish setter is a rich blood red.

C. F. K.—See answer to another correspondent on same subject.

H. E. M., Hazelton, Mich.—The bird described is an evening grosbeak.

J. W. D., Bowmanville.—We believe that the Maynard Co. make the rifle.

T. J. L.—"Bally's Practical Taxidermy" will give instructions in feather curing.

C. B., Buffalo, N. Y.—Send the flower to Thorburn & Co., John street, New York.

OLD COLONY CLUB, Plymouth, Mass.—Write to J. Otis Fellows, Hornellsville, N. Y.

WENONAH, Ashland, N. H.—Plans of sharpie were published in our issue of Sept. 13, 1883.

G. W.—The Smith and Wesson, Merwin, Hulbert & Co., Colt, or Winchester, is perfectly safe.

J. H. F., Jersey City, N. J.—The owner of the bitch cannot alter the terms of the agreement.

H. A.—Mr. Jack's address is as given. Mr. Kunhardt may be addressed care of this office.

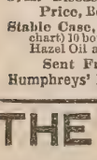
T. A. T., Johnston, Pa.—We have no pictures of the fox-terrier for sale, nor do we know of any one that has them.

J. B. McL., Chillicothe, O.—Register your dogs in the *American Kennel Register*. They can be registered at any age. We have no record of the dogs you mention.

B. S. H., Rochester, N. Y.—Bogardus's book is a good one; and you will also find what you want in Hallock's Gazetteer. See also back numbers of FOREST AND STREAM.

ALMER.—Quail may be kept in a room of the size given. It should be light and airy. Feed them buckwheat and screenings. They will probably not breed in confinement.

S. I. L., Owen Sound, Ont.—Will you kindly explain to the unsophisticated the difficulty of eating two quail a day for forty-one days? To ordinary observers this feat appears easy. Ans. The difficulty is that the stomach is apt to rebel, and the quail eater to be overcome by nausea.



J. P. H., Fort Wayne, Ind.—Last evening the superintendent of one of our railroads asked me if I had ever seen in the columns of the FOREST AND STREAM the reason why a dog would turn around once, twice or more before lying down. I could not remember having seen it, and I ask you what is the supposed reason and is it an inherited habit? Ans. Some hold that the habit is a survival from the dog's savage state, when before lying down it looked around to see that no enemy was near.

W. A. T., Ontario.—In a trap baited with raw meat was caught a species of bird unknown to any one here. It is of a brown color; wings of great length; legs red; head, red and covered with short hairs and wrinkled; upper bill turned down like a parrot's, and white just ¼in. from the top, the rest of the bill very red, and nostrils protrude above. From what I can make out it is of the vulture species and eats carrion meat. Ans. The description seems to fit the turkey buzzard (*Cathartes aura*), but you give no size, do not say whether it was the size of a tomtit or a goose.

JOBRISH, Idaho Territory.—I would be glad if you could tell me the difference between a lynx and a wildcat. There are here among the rocky cañons a number of the genus *Felis*; they weigh about from 30 to 50lbs., are a sort of mottled yellow and tabby on the back, with a tail about 6in. long, white toward the end, but tipped off with black; and they have tufts standing straight up from each ear, what are they? Ans. A lynx is a wildcat. All American wildcats are lynxes. The one you refer to is probably the bay lynx (*L. rufa*). In some localities, where both the Canada and bay lynx are found, the former is called a catamount and the latter a wildcat, but usually the terms lynx, wildcat and catamount are indiscriminately applied to both the short-tailed cats of temperate North America.

NEW HAVEN, CONN.

THE NEW L. C. SMITH HAMMERLESS GUN.

This new gun embodies all the essential features of our hammer gun, together with a new oscillating cocking mechanism and automatic and independent safety combined. This gun is not equalled in ease of manipulation, symmetry, durability and shooting qualities by any hammerless gun made.

Of the eleven gentlemen who broke 100 straight inanimate targets for a place in the Chamberlin Cartridge Tournament prizes, five of them used the "L. C. Smith" gun. The following are the gentlemen: D. C. Powers, Cleveland, O.; Andy Meaders, Nashville, Tenn.; H. McMurchy, Syracuse, N. Y.; Fred Erb, Jr., La Fayette, Ind.; J. C. Hendershot, Cleveland, O.

EVERYTHING THAT IS NEW IN SEEDS

RARE IN PLANTS

is offered and described in our CATALOGUE No. 280, which this year we send out in an illuminated cover. The Catalogue is replete with new engravings of the choicest flowers and vegetables, many of which can only be obtained from us; and contains, besides, 2 beautiful colored plates, and very full instructions on all garden work. Altogether it is the best ever offered by us, and, we believe, is the most complete publication of its kind ever issued. Mailed on receipt of 10 cents (in stamps), which may be deducted from first order. Please be sure to order Catalogue by the number.

PETER HENDERSON & CO. 35 & 37 Cortlandt St., NEW YORK.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

THIRTY-TWO PAGES.

Four pages are added to the usual twenty-eight, and this issue of Forest and Stream consists of thirty-two pages.

A RAILROAD TO COOKE CITY.

If all the railroad bills introduced during the last session of Congress, for the relief of the suffering miners of Cooke City, had become laws, that community could no longer have complained that it had no outlet to the world. Most of these bills, however, failed to pass both Houses, and so at the adjournment lapsed. One of them did pass, and received the President's signature. This was the bill granting to the Rocky Fork and Cooke City Railway Company the right of way through a part of the Crow Indian Reservation in Montana Territory. The text of this bill will be found in another column. It may be hoped that under the soothing influences of this law, the howls from Cooke City, which for several years have rent our ears, will be quieted. Hitherto the principal occupation of the enterprising Cooke City miner has been sitting on a stone by the side of his prospect hole, waiting for a trusting Eastern capitalist to appear on the scene, and exchange his capital for the miner's hole. And while he sat there, alternately scanning the horizon for the approaching capitalist, and gazing into the depths of the prospect hole, the miner chanted his doleful ditty, whose burden was that all Cooke City required to make it a second Butte was a railroad outlet. Permission to build a railroad has now been secured, and what will the miner do?

The bills granting a right of way from some point on the Northern Pacific Railroad across the Crow Reserve to Cooke City, to the Stillwater Company and to the Billings, Clark's Fork & Cooke City Railroad Company passed the Senate, and were favorably reported by the House Committee on Indian Affairs, but never reached a vote in the House. This is especially unfortunate in the case of the last-named corporation, which has carefully surveyed its line and has the money pledged to build it, as soon as it receives authority from Congress to enter the Reservation. On the other hand, there seem to be grave doubts about the Rocky Fork and Cooke City Company's intention to build its road. Its line, we believe, has never been surveyed. It is stated that during the debate in the Senate Mr. Cockrill objected to this road that it was only a paper charter, and that those who sought this right of way had no idea of building. On Senator Allison's assurance that this was not the case and that the enterprise was *bona fide*, he withdrew his objection. Of the methods by which the passage of the bill was obtained in the House we will say nothing, but if all the pledges said to have been made to Congressmen by the projectors of this road are carried out, the line will have to be very heavily bonded. And if this charter should be transferred to another corporation, would this conveyance include, we wonder, the obligations of the Rocky Fork and Cooke City road to Congressmen? The fact appears to be that this Rocky Fork project was originally started by a few individuals to protect some coal claims which they held on Rocky Fork, and that afterward, as the thing developed, it seemed worth while to push the scheme for its own sake, in the hope of selling the right of way to others.

It is by no means impossible that the Rocky Fork people might find a practicable route to Cooke, over the eastern foothills of the mountains, although the most desirable line is that surveyed by the Billings, Clark's Fork and Cooke City Railroad, which has already been approved by the Secretary of the Interior. The Rocky Fork people have two years in which to complete their road, and before commencing operations they must, if the President so orders, obtain the consent of the Crows to their passage through the latter's lands. If work is not begun this summer we are not likely to hear much more of the Rocky Fork and Cooke City Railway Company.

WINTER IN THE PARK.

We have received advices from our Special Yellowstone National Park Midwinter Explorer, who wrote from the Grand Cañon of the Yellowstone on Feb. 28. His route had been from the Mammoth Hot Springs to Norris, Lower and Upper Geyser Basins, thence to Yellowstone Lake by way of Shoshone Lake, thence down the lake and river to the falls. Wind and weather permitting, he will return from the Cañon over Mt. Washburn, and by the way of Yancey's to the Hot Springs.

Those familiar with the Park will thus see that the FOREST AND STREAM Explorer, even without the aid of Crow scouts, Government troops and a large force of packers and guides, has accomplished the tour of the Park which the *World* expedition set out to make, and which it failed to carry through. There is everything in knowing how to select your men. It will afford us pleasure, therefore, providing the FOREST AND STREAM Explorer survives the perils of snow and cold to which he is constantly exposed, to lay before our readers, and the *World*, an extended and exact account of the Park in the winter. This we hope to be able to do in the course of a few weeks. The relation will be an interesting one.

It must be remembered that the National Park in winter is almost an unknown land, and that the public has never been told of what goes on in this truly Arctic region, where the thermometer sometimes falls to 50 below zero, and the snow sometimes drifts over top the tallest trees, where avalanches are of every day occurrence, where the geysers spout through tremendous craters of ice, and the water-falls build up at their bases tremendous frozen barriers which look as though they must dam the stream. The few travelers who venture into this icy land, do so only by the help of snowshoes, and literally take their lives in their hands.

Our explorer writes: "I have seen many wonderful and strange sights—strange and wonderful even to me, and I have been in the mountains for sixteen years and through the Park almost a hundred times in early spring, in summer and late in the fall." He reports having seen 150 elk the day he left the Hot Springs, and on Alum Creek saw signs of hundreds that had been there two or three weeks before. Sign of bison were also seen near the heads of Alum and Trout Creek. The snow has been so deep that the game has been driven off from many parts of its winter range.

He also reports a case where a band of elk, caught in a deep cañon and imprisoned there by the snows, came near starving to death, and would have done so if he had not rescued them by breaking a path for them through the snow. Not all of them escaped, it is true, for the rescue was accompanied by a tragedy which must have thrilled the onlookers.

The story of his journeyings over snow from four to forty feet deep is, so far as we have seen it, as fascinating as any novel, and it will be followed with intense interest by every one who knows or desires to know about the Park.

Of the game our explorer saw, the buried forest he passed over, the icebound lakes he traversed, and the battle between heat and cold that he witnessed the story will be told in coming issues of FOREST AND STREAM.

SNAP SHOTS.

THE patent coffee-mill at Albany is grinding away.

The July woodcock shooting and so-called "codification" game bill, already noticed at length, has been introduced by Assemblyman Langbier. Hadley, of Franklin county, is on hand with an opposition "codification," which for clumsiness of construction and multitudinousness of local exceptions and special provisions is as ridiculous as disgraceful. It has fifty-nine sections, and ought to have just one more providing that any one who may read the entire bill through with intent to understand it shall upon conviction thereof be adjudged a lunatic and committed to the Auburn Insane Asylum. Finn, the New York liquor dealer, has pushed his "free lunch" lobster bill to a third reading. If he does not succeed in getting it through, he might induce Hadley to tack on to his bill a clause exempting from the restrictions of the lobster law the northeast or southeast corner, as the case may be, constituting the lunch counter of Finn's saloon. This would be quite in keeping with the back-door and pasture-lot clauses of the codifications.

When it comes to suing to recover fines voluntarily paid for unlawful June deer water-killing, Gen. George M. Harmon appears to be a fighter from Fightville. He has won his $40 from Game Warden Huntoon, but the Court ruled that there was no case against Commissioner Stillwell. Harmon has appealed, on what ground is not clear, except that he seems bent on annoying the Commissioner. Mr. Stillwell can stand it; he is in the position of the good-natured giant from one of the back districts who, when remonstrated with for permitting his virago wife to beat him, blandly responded, "Oh, that's all right; it don't hurt me any, and it pleases Sally."

A correspondent of the *Billings Gazette*, who has just come to the Mammoth Hot Springs from Cooke City on snowshoes, writes as follows: "From Soda Butte to Mammoth Hot Springs I saw large herds of elk, some of which I estimated at thousands. I am confident I saw fully seven thousand elk between these two places. Also many mountain sheep, deer and antelope. There the snow is not above two feet in depth, and to-day I actually saw the top of the sage brush." It was just through this winter range for game that the railroaders wanted to run the railroad. But the railroad will not run.

In the vicinity of New York the ground is frozen stiff and the season is backward, but the snipe have put in an appearance. The first English snipe of the year killed in this neighborhood was shot last Monday by Mr. Langstaff, of Newark, N. J., and exhibited at Messrs. Von Lengerke & Detmold's, in that city. Ducks have appeared in Long Island waters, and good shooting is looked for as soon as the inlets are open.

The Michigan game warden bill has been passed by both houses, and only awaits the Governor's signature to become a wise and long needed law. If the New York markets are to be opened for a more extended sale of Minnesota and Michigan venison, those States will be called upon to devise better machinery for enforcing their non-export laws than they appear to have at present.

One man's food another man's poison. Here are county supervisors in the United States giving bounties to encourage destruction of hawks and owls; and meanwhile in the rat-plagued Neligherries of India the tea and coffee planters are considering how they may breed hawks and owls as allies against the ruinous rat.

The terms of the FOREST AND STREAM Decoration Day Trophy for trap-shooting at artificial targets are given elsewhere. It is hoped that there may be something in the competition to add to the outdoor pleasures of that holiday.

TRAILING A WAR PARTY.

I HAVE just read, with deep interest and great pleasure, Pioneer's bear story in your issue of March 3, and it brings to my mind a long train of pleasant memories. It so happened that I lived and grew up in the neck of woods he speaks of, and I have tramped, hunted and fished many a day along the Big Turkey and several of its tributaries. I have explored many of the rocky fastnesses and caves in Clayton county, no doubt including the one in which he snared the bear. This was "befo' the wah, sah," though not so far back as the time of which Pioneer writes. The bear had made his last track in that country previous to the date of my going there, and deer were then too scarce to make the hunting of them interesting. About the only game we had was wolves, foxes, woodchucks, rabbits, squirrels, partridges and quail. Although these were all dear to me then (no pun intended), and though I enjoyed hunting them with all the enthusiasm of the average boy sportsman, I have long since tired of such small fry and have frequently, in later years, wandered into the Far West in search of larger game, and this brings me to the subject of which I set out to write.

On one of these annual pilgrimages I fell in with a man whose boyhood days were also spent in this region mentioned by Pioneer, and whose name will, doubtless, be familiar to him and to many other readers of FOREST AND STREAM. His father's homestead is situated, as nearly as I can remember, about two miles northeast of Colesburg, and I presume very near where Pioneer and his friends had their fun with the bear.

I refer to Mr. Sam Fishel, who left the old homestead and emigrated to Montana in, I think, 1858, when there were scarcely more than a corporal's guard of white men in that territory and when their hair was extremely liable to be removed at any time without their consent. I met Fishel in the fall of '82 at Fort Maginnis, where he was then employed by the military authorities as a scout. I knew nothing of his identity when I went there, nor until we had ridden together nearly a day, he having been detailed by the officer in command of the post to guide me on a hunting expedition into the Snowy Mountains.

You may imagine our surprise when, in the course of a rambling conversation as we rode across the plains, we discovered that as boys we had lived within four or five miles of each other. Questions and answers flew thick and fast then, and the important points in our respective histories since leaving the old homesteads were rapidly brought out.

Sam proved one of the most genial companions and best hunters I have ever known. We were together in the saddle, by the camp-fire, or hunting on foot for three weeks, and many a thrilling narrative was drawn from this veteran frontiersman.

He had operated at various periods as hunter, trapper, miner, guide and scout, and though a modest, unpretentious man, little disposed to speak of his own achievements, was always glad to narrate any incident in his life if convinced that it would interest a listener.

I will repeat here only one of these. He and a friend were trapping and hunting at the head of the Judith Basin in midwinter. A band of Piegan Indians made a sneak on their camp one night and stole all their stock—two saddle and two pack horses. The feelings of the hunters, on discovering in the morning that they were afoot—in the heart of an uninhabited wilderness—can only be imagined by men who have been there. They examined the trail and found that there were eleven of the Indians, all mounted, and that they had gone north.

Fishel and his partner, after discussing the matter seriously for an hour, determined to follow the thieves in the best manner possible, and try to recover their stock. They, therefore, set out for another trapper's camp some ten miles away, arriving there at noon. There were at this camp three men, and, fortunately, they had five horses, enough to mount the entire party. In accordance with the western idea of courtesy, these three men at once placed themselves and their horses at the service of their unfortunate neighbors, and in an hour all had dined, and, with a supply of food, well armed and equipped, were in their saddles and off toward the trail of the thieves.

On reaching it they took an easy gait and followed it three days and three nights, stopping only long enough each night and morning to allow their animals the necessary time for food and rest; the deep snow and bright moonlight enabling them to follow the trail by night as readily as by day.

At daybreak on the morning of the fourth day the pursuers sighted the marauders encamped on the bank of the Missouri River, near the ranch of a squaw man and trader. The remnant of a camp-fire smoldered and flickered in the gray of dawn, around which lay the redskins, wrapped in their blankets and sleeping in fancied security, not deeming it possible that their victims could follow them so far on foot, nor probable that, in the then unsettled condition of the country, they could get other mounts on which to make a pursuit. One Indian had, however, been left on guard, more, perhaps, to prevent the stock from straying than to watch for possible enemies; but he was crouching over the scant fire, and as Fishel and his friends watched him from the top of a hill a quarter of a mile away, they saw him rise up, look over the herd, and as they were all feeding intently on the willows, he wrapped himself in his blanket and lay down among his friends for a morning snooze.

Our friends now hastily decided on a novel ruse. One of them dismounted and crept cautiously toward the Indian camp while the others went directly to the ranch, and cached their horses and themselves in the corral. The man on foot now cautiously approached the tired and half-starved herd, rounded them up and drove them quietly to the ranch where he and his friends soon placed them safely in the corral. The party now went to the ranch house, woke the proprietor and explained the situation to him. He remonstrated stoutly against any violence being done to the red men, with whom he wished to be friendly, but his visitors were largely in the majority, so they ordered him peremptorily to keep still and await developments at the Indian camp, which was in plain view of the ranch house. Finally, when the sun was half an hour high, one of the Indians woke up and looked around. Failing to see the horses he gave the alarm, and the camp was instantly a scene of commotion. On examining the signs about the camp and finding that their stock had been driven toward the ranch by a single man on foot, they seemed to conclude at once that the ranchman had come down and driven them in, and shouldering their guns they boldly started up to the house presumably to demand an explanation. Our friends inside awaited the coming of their foes with breathless anxiety, with a cool determination to quit even with them. The muzzles of their rifles were at the loopholes of the cabin, the hammers were drawn back and a finger rested on each trigger. The reds were allowed to come within 30yds. of the house before a weapon spoke. Then, at a preconcerted signal, each man covering his allotted foe, five little clouds of smoke shot out from the side of the shack, five short, sharp reports rang out on the frosty morning air, and four of the red thieves fell dead in their tracks, the fifth badly wounded.

The remaining six, uttering shrieks of terror, turned and fled in the wildest dismay, but a shower of lead followed them with such telling effect that three more were brought down before they reached cover. The remaining three made long and rapid strides toward their home beyond the British border, without making any further effort to recover even one each of their own cayuses to carry them, and Fishel and his friends, after resting a day or two at the ranch, returned with their own horses and those captured in the action to their camps.

Fishel said, with a modest glance at the camp-fire, as he finished, "that was a good many years ago, but I have never had a horse stolen by Indians since. When we got back to the stage station we found out that the thermometer had been from thirty to forty degrees below zero all the time we were gone. We suffered a good deal with the cold, but if we had known it was that cold we would have frozen to death sure." U. BET.

SPORT IN NEW BRUNSWICK.

Editor Forest and Stream:

Having had several years experience in Canada, principally in this Province, and spent all my spare time and much more than all my spare cash on sport with rifle, gun and rod, I think if I jot down a few rough notes on when, where and how to obtain sport, I may perhaps be of service to some of your readers who may be thinking of trying New Brunswick, and also repay the debt I owe to some of the correspondents of FOREST AND STREAM for valuable information freely given as to other sporting regions.

Our big game consists of the usual Eastern list—moose, caribou, deer and bear, a few wolves and perhaps the panther (*Felis concolor*); at least an animal much resembling it has been described to me by hunters and lumbermen from widely different localties. In the way of game birds and wildfowl we have geese, brant, ducks, ruffed grouse, Canada grouse, snipe and woodcock, and trappers obtain beaver, otter, sable, black cat, foxes, lucifer, mink and musquash. Now, although this list may seem a long one, let no man be led astray by it. Some of these animals and birds exist here in enormous quantities, but unless the sportsman choose his ground carefully and be there exactly at the right time, he will reap only disappointment as his reward. As a rule all our game is migratory; even moose and caribou change their abode so much with the varying seasons, that as far as the sportsman is concerned they might almost be considered as migratory. Moose, for instance, in summer are around the streams, lakes, and low spruce lands generally, in the summer they "travel up" to the hardwood ridges, often many miles from their summer quarters, and usually winter in some sheltered valley where moose wood and young maples abound. I proved this change of ground practically some years since in Ontario.

Two other sportsmen and myself were, one fine September, on the western shores of Lake Temiscamingue after much labor in portaging our effects up the numerous falls of the Ottawa River. I believe there is a railway to the lake now. We expected to find moose very plentiful, as an officer in the Hudson's Bay Company's employ had been there in the summer and seen both game and tracks in abundance. The tracks we certainly found, indeed in certain favored localties the ground was trodden up like a barnyard, but we had eventually to shift our ground some twenty-five miles to the eastward before we found moose. Caribou also change their pastures a good deal. In September they are scattered all over the woods, the bulls running about continually looking for the cows; in October they bunch up and take to the barrens; but with the first frosts they leave the barrens, as the slightly frozen crust will not bear them, and take to the woods again, and do not venture into the open ground until they have got over all fear of breaking through. After this they stick to the barrens until the snow becomes too deep for them to get at the moss (*Lichen rangiferina*), when they resort to the woods of thick spruce and also to lumber works, the "wool" hanging from the tops left by the lumbermen being the attraction. Deer (*C. virginianus*), after having been nearly exterminated, the settlers say by wolves, but probably quite as much by crusting, are becoming numerous again. They have been seen on the eastern side of the St. John in several localties, and are even reported from Burnt Hill Brook, on Miramichi, where tracks have been noticed this fall. They will probably become sufficiently numerous for good shooting in a few years. I believe we owe this animal's return to the game laws just over the border in Maine being properly enforced, some of the Maine surplus deer having strayed over. More power to the game wardens' elbows. Bears are very plentiful, and are often reported seen quite near towns and villages, and scaring somebody badly, as often as not the "schoolmarm." Bear hunting is most unsatisfactory work, and the beasts reported are generally seen along the streams or roads. In the woods their hearing is so acute that a man generally has no chance of stalking them. They are sometimes very easily killed when shot. I know of several killed with 1¼oz. No. 5 shot, and one with ½oz. No. 8, which a naturalist had loaded for collecting purposes; the bear in this case was not more than five yards from the muzzle of the gun. Behind the shoulder low down is the "skudflekk" of a bear.

I will now try and indicate some localities where reasonable sport may be expected, the time to go and the outfit required; the last is a very delicate matter, as every good sportsman has some pet way of his own, so when any one does not agree with me let him agree to differ. Several (if not all) roads lead to Rome, and one way may be as good as the other.

The best moose country now remaining in New Brunswick is along the borders of Northumberland and Victoria counties about Little's, West Lake and the Cow Mountains. There are three ways of getting to this country, which is very remote. The first route is by the North Western Railway to Cross Creek, thence by lumber road to head of Clearwater, thence following the county line some 10 miles or so to the ground. Take plenty of men, as the "sacking" is heavy; and cut down weight far as possible. Route No. 2 is from Newcastle up stream about 60 miles, following a lumber road on which a horse and drag can be taken; by this route you strike the ground from the other side. Much of the region between Southwest Gap and the heads of Nepisiquit and Tobique rivers is yet unknown to the map makers, and game is very plentiful. The third and last route is up the Tobique River by canoe to Long Lake, from the eastern extremity of which the desired ground lies to the eastward. As Indians and canoes can be got at the mouth of the Tobique (this sounds the easiest way, but generally in August and September, the moose calling season, the water is very low, and canoeing up stream means hard, slow work.* This country, I repeat, is very inaccessible, but when one is there he will find game plentiful. The sportsman, however, may have considerable trouble in obtaining a good moose caller; they are scarce. I know of only one or two, and they are not to be found among the degenerate Milicet Indians of Fredericton, where guides are generally engaged. To insure sport the party should be on the ground by the first full moon in September. Remember never to shoot more meat than can be saved and eaten, as the country is too remote to get anything out at that period of the year before it spoils. There are duck and caribou to be had, too, but they can be obtained better in more accessible localities.

Caribou are plentiful in most parts of the Province. One was killed last year by the locomotive of the night express near McAdam Junction; and I have seen their tracks within three miles of Fredericton. I believe there is not a single county in the Province that does not hold these deer. But (alas for these "buts") in the fall when their heads are at their best and worthy trophies of a sportsman's skill, hunting them in thick woods is like looking for a needle in a bundle of hay. The places to obtain sport are large barrens, and the time about Christmas, although many of the best heads are spoiled by that time; but earlier sport is very uncertain, indeed it is so at the best of times with caribou. After hard frosts for the first fortnight in December and a nice fresh fall of 3in. or so of snow, a visit to any of the following localities with good Indians, will possibly result in the capture of some of these fine beasts: The barrens between Tracadie and Coraquette rivers, in Gloucester county, best got at from Bathurst; Myshrall Lake, a few miles from Boiestown; Cain's River barrens and Gaspereau River, Grand Lake. The last two are reached from Fredericton, and although more hunted over than the others, are occasionally very good. A great many caribou are annually killed in the lumber woods, but it is not the same sport as stalking them on the barrens, and those killed in the lumber woods are nearly always shot after the legal season has expired.

Leaving big game and turning our attention to wing shooting, geese naturally claim first place. These birds, in their habits, differ much from duck. The latter drop into any lake or pond that offers them food and shelter. Not so, however, the geese. They seem to have certain haunts, and will on no account try other, and, seemingly, equally inviting marshes. I have remarked this same characteristic of the European geese in Norway. When going south, after leaving the northern parts of that country, they halt only once or twice at certain well-known lakes in the whole eleven hundred miles of that kingdom. Canada geese assemble in large numbers in October along the northern coast of New Brunswick, from Campelton to Bay Verte. Particularly good places for sport are Eel River, Bathurst Harbor, Point Miscou, Tracadie Gully, Richibuet's Beach, Point Escuminac. As soon as heavy storms come on, toward the end of the month the birds begin to leave for the south. The principal stopping places are Myshrall Lake, the Bull Pasture Plains, Cranberry Bog and French Lake, all a few miles from Fredericton. It is said that they frequent some of the lakes on tributaries of Salmon River, Grand Lake. There are probably a few other localities, but it is certain that many lakes lying in the track of the migrating birds are never visited by them, though why, I for one cannot tell. French Lake, which is a great resort with them, is to all appearance a very inviting place for wildfowl; it is surrounded by farms, and the birds are shot at night and day; nevertheless, they always rest there. This fall they were there in thousands.

Black ducks breed on most of the inland lakes and rivers, and the shooting at French Lake and Upper and Lower Timber lakes is occasionally very good in September. A few summer duck and teal are also shot, but other kinds are scarce, except bluebills, later in the season, say the end of October. The ducks are shot in the evening as they drop into these rushy lakes to feed, and the shooting for half an hour or so before dusk is great fun. When the birds are frozen out at these lakes they are usually to be found for a few days longer at some well known resorts along the bay shore, where good shooting is obtained until their final departure for the United States. A perfectly broken retrieving spaniel is of great assistance for this shooting, and I will almost double the bag.

Woodcock breed in suitable localities all over the southern portion of the Province and on the St. John and its tributaries, but do not extend to the Miramichi waters, although one was seen at Little Southwest Lake, and a friend informed me he saw a pair in June at Shippegan, in Gloucester county. I fancy, however, that these are exceptional cases. The rule seems to be that the birds follow up the St. John River and its tributaries, to their very heads in many instances, but go no further north. I believe that there is occasionally very good shooting in certain covers along the coast. Judge W., one of the best woodcock shots in the Province, told me that a few years back he got 17 birds to his own gun in one day,

*We are advised by Mr. Edward Jack that there is a good portage of 19 miles from Gulquac to Tobique Lake, with a lumber camp at end of portage.—ED.

near St. John. Inland we never get large bags, two or three couple being a good day for two guns, at least near Fredericton. The birds disappear from the middle of August until the end of September.

Snipe shooting on the marshes of the St. John River is occasionally very good; I have several times shot twenty couple in an afternoon, but this shooting depends altogether on the seasons; some years good, others poor. To my fancy snipe shooting is the best sport we get, and it is a pity that the season is so short. Oromocto, Gagetown and French Lake, near Sheffield, all on the St. John, are very good places for snipe. The Tantramar Marshes in Westmoreland county are well known and much frequented by American sportsmen. There is a fine little marsh at the mouth of Tête-à-gauche River, Bathurst, that will yield good sport after a nor'easter early in October, but there is no shooting there after Oct. 14.

CHAS. A. BRAMBLE.

FREDERICTON, New Brunswick, December, 1886.

CRANBERRY LAKE.

Editor Forest and Stream:

W. R. Bishop, the hotel proprietor at Cranberry Lake, paid me a short visit to-day. That reminded me that I spent the first two weeks of last September on the inlet of Cranberry Lake and had neglected to report what I saw and heard. I left Canton Sept. 1, reaching the foot of the lake at 2:20 P. M. Here I met Steve Ward, an old woods companion of bygone days, who, now a professional guide, was to be a helper during my outing. It was decided that we should camp near the foot of the rapids on the inlet. The sporting season had fairly closed, the last guest had departed from the hotel, and the little steamboat which plies the lake had been dismantled. This made it necessary to raise a spruce breeze. To lighten the burden, my driver and the ex-engineer of the steamboat, Will Smith, took a second boat and part of my duffle. In 30 minutes from the time we drew rein we were afloat. Darkness overtook us before we reached camp, and a toilsome hour was spent in the floodwood, which had by the falling of the water closed up the channel. At 9 o'clock we were in a good open bark camp, and an hour later were tucked under our blankets.

Steve and I were afloat at dawn hoping to get a shot at a deer, which, if successful, would enable me to send some fresh venison back home by my teamster. This was a well-arranged scheme and would have been very nice if it had succeeded. The start was rather discouraging—overcoat and mittens on and an icy seat to sit upon. Then the fog was so thick we would have been unable to penetrate it but for having a sharp-pointed boat. Half an hour of this business satisfied me that the friends at home didn't like venison anyhow, while I myself greatly preferred bacon. Breakfast over and our assistant boatmen departed, we went fishing. Faithful work until the middle of the afternoon only brought to creel a few small trout, and they were taken at odd places on the rapids. The day had been fine, but the night was too cold to think of floating, and we turned in early. The next day we went down through the floodwood, over into the Dead Creek country and looked up the trail to Cat Mountain Pond. A glimpse of two deer taking a hurried departure out of range of the rifle gave us encouragement. Blue herons, loons and black ducks were occasionally seen and a very pleasant day was passed; scarcely less so that we had nothing to show for it on our return to camp at evening.

That night we had visitors at camp. Visitors at camp in the woods are always welcome or unwelcome. There is no half-way about it. These were two guides who had been on a little hunt on their own account. They had the meat and hides of two deer which they said they killed at daylight down on the lake. The fact that they had a dog with them, and that the dog was lame, was very suggestive of the manner in which the deer might have been killed. The venison was very good, however, and our thanks were due them for a generous piece left behind when they took their departure next morning up the river.

I had intended staying at this camp the entire trip, but by midday changed my mind and we packed up and started up stream. First came half a mile of still water, then a hard carry past three miles of rapids. It was 9 o'clock that night before we were snug in camp on the still water above. At this place, known as the Bridge on the Inlet, though the bridge has been carried away by high water and never replaced, a Mr. Steinberger was just completing a frame house intended for his own family and to accommodate a few guests. While such a stopping place will be a convenience to sportsmen belated in making camp or in bad weather, it is hardly probable it will get patronage enough to make it pay the proprietor. Here we saw several friends who had just come in by road from Fine, and we read our first accounts of the Charleston earthquake.

At this particular place, and some fifty rods from where the new house is building, my nerves got quite a shaking up one night some nineteen or twenty years ago, and, as it was one of those little experiences we always remember, I will relate it. It was early in the month of May, and I had arranged with a friend to make a trip to Cat Mountain Pond, a pond at that time undiscovered by Verplanck Colvin, and probably unknown save to a few. There is fair fishing there for quarter-pound trout to-day, but twenty years ago the water fairly tasted fishy. We were to go by Foot & Walker's line from Fine, the distance being about twenty-five miles. My friend had this advantage over me—a log that I could go under he could step over; and as he had to come five miles on his road to where I lived, I thought I would pull out early and let him overtake me. I attended to my part of the programme, telling my people I would stop at the inlet and wait for them if not overtaken sooner. Half an hour after I left word came that he could not go, but in happy unconsciousness I trudged along, taking longer and more frequent rests as the hours wore away. Thus it was nearly night when I reached the inlet. In those days there was then an old log cabin built against a large split rock, the rock forming one end of the shanty and the back for the fireplace. At this end the roof was left off for a little distance for the smoke to escape, and at this particular time the door was gone. As the night was cold I interwove spruce boughs the best I could to stop the wind, and lay close up to the little fire I had built to keep warm. In those days we thought a blanket a useless burden.

Some time in the night I awoke. I was lying on my right side, my back to the embers. I was wide awake all at once, but did not stir. Something heavy, warm and soft was resting on my left side. What could it be? The shanty ground was infested by hedgehogs—not desirable bedfellows. The ridge was a runway for panthers and wolves, or had been in bygone days, and even then I knew that traps were set for them on either side within a mile. I thought of the stories I had read of savage animals finding people asleep and lying down beside them until they would awake. My hair "riz" a little. I thought of the story I had heard how once upon a time a fisherman had waded the middle of this same stream for a mile toward camp while a panther followed along the shore. I thought how Old Tom had, within a very few years trapped or shot several of the varmints within the radius of five miles from where I was. I thought of my rifle standing in the corner a few feet away and wondering how I could get it most quickly if I needed it. I wondered what the—mischief—was on top of me. I reasoned that I must find out without disturbing my visitor, if possible, and then think what to do if I was left time to think. By turning my head a quarter way around I could see. But would not the least stir I made bring trouble, if trouble there was to come? Well, I had to risk it anyway. So far I had breathed regularly and kept perfectly still, but knew I could not continue doing so for any considerable time, I would get nervous. Slowly—an inch at a time, I turned my head.

The shout that rang through the cabin could have been heard a mile away, and I nearly died laughing to see that great big rabbit try to find the hole he came in at. I laughed myself to sleep again.

It was noon when Steve dipped his paddle in the water on our start for the New York Camp, some dozen miles up stream. Half way up, at the Battle Ground, we stopped for luncheon. The Battle Ground is a name given to an old camp ground where two guides once settled a little difference of opinion on some subject. Unwritten history says that one got a black eye, and the other got dumped into the river.

It was a beautiful day. I enjoyed very much lounging on the bow seat while Steve's strong arms wielded the paddle. We arrived at camp at 5:30. As the camp would easily accommodate twenty we had lots of house room, and after a hearty dinner and a pleasant chat turned in.

At daylight next morning, with rod and gun, we paddled up to the Plains, keeping a sharp outlook for deer. Saw none, and turning about put down the gun and took up the rod. I am no fly-fisherman, and this morning was trying to swap venison for trout. Only three or four fingerlings got the worst of the deal for the first half mile. These we dropped over and on to a sand bar on the right hand side of the stream, while on the left was some 5ft. of water with a gravel bottom and no particular cover. Nothing in fact to indicate a better chance for a trout than could be found every ten rods for as many miles down the stream. "Now, go slow and you'll get a good one." "How large?" "Oh, a couple of pounds, perhaps." "Think so? I am afraid I will not get any, then, for I doubt my hook holding a two-pounder. However, here goes," and as the line sank and was drawn toward the surface with that peculiar twist of the wrist (a novice once said to me, "I don't see how it is that you get all the trout and I none, for I watch you and wiggle my hole just as you do."), a broad gleam of gold flashed beneath it and set my heart pounding like a hammer on an anvil. A second cast and a half-pounder showed himself plainly. A third cast and—"Moses! Steve, he'd reach half across the river." "Well, why don't you catch him. I told you he was there. Cast again and a little lower down, and—is it a log I am hitched to?" Mighty lively log I found, as I struck as hard as I dared, and the fish started downward and down stream. Scientific fishermen call it "giving him the butt," I believe. My rod bent double. I could almost hold tip and butt in the same hand. A few brief moments and he turned up stream. In a moment more I had him in sight, and the rest of the battle was fought out on that line. The struggle was brief, not over ten minutes, and Steve reached down into the water and slipped thumb and finger into his gills and took him in. As he came over the side of the boat the hook dropped out. I inclose the hook. This was not the trout I had seen. It was a shorter one. But I wanted no more. What if there was another big one there, he would keep for me or some one else. We paddled back to camp, and river weight (we had no scales) made our fish go 4 to 4½lbs. He measured 19½in. long, 4½ deep, 2¼ through from side to side, and 11½ in girth. His tail was 5in. broad, and a stick 3¼in. long could be set between his open jaws. It was the largest trout I had caught in many years, though Steve was with a party earlier in the season who caught two the same day of about equal size at this same hole. Toward night we dropped down the river to Gouverneur Camp and floated. It was cold and foggy. I got a glimpse of eyes once for a moment only, and we drove another out of a big cove. We soon got enough of the sport; went to camp, built a fire, warmed up and turned in, to be awakened long after daylight by the chatter of the bluejays. Returned to our home camp, had breakfast, cleaned the guns and paddled up to the Plains. Leaving our boat at a chain of rocks we walked up to the old cabin, a mile or more. It was hot, and the drink from the almost ice cold spring was very refreshing.

While here two hunters came for provisions from Clear Pond, where they said they were camped and were hounding deer into Big Deer Pond (Colvin's Lost Lake). Clear Pond is in St. Lawrence county, Big Deer just out of it. They reported another party at Grass Pond who were hounding into Mud Lake. Grass Pond is in St. Lawrence and so is part of Mud Lake. As they said our game protector (Leonard) had visited the Grass Pond party and advised them that it was "all right" so long as they did not put the dogs out in St. Lawrence county, I did not see as I could do more than wish that we had a protector who would give different advice.

During an hour's stay at the cabin two men on their way out of the woods came from Five Ponds, where they had left several others hounding. Five Ponds are just outside St. Lawrence county.

That night we were tired and turned in early. Our slumbers were disturbed by the quill pig who got his head into a corner of the shanty, where Steve could only make caroms on his back with a club and I was obliged to decide the matter with the Marlin.

Next morning we decided to break camp for good and drop down to Gouverneur Camp; so we fished along down and caught small ones, enough for dinner. Here we were joined by Archie Muir, forester for this section. At night the moon shone until 1 o'clock, when we started out, Muir down and we up the river. The deer were well educated here, and a breaking of brush or a splash in the water around some bend was all the indications we had of game for some two miles, when, rounding a bend up at the next one and in the open water at the mouth of a cove stood a deer. It was a long shot, but the light showed him plainly, and we loaded a nice yearling buck into the boat and returned to camp. Here we loafed for a couple of days and then dropped down to the bridge again. That night we were out on the river, but a hard shower, the first for the trip, drove us to shelter. The next day the weather was colder and seemed to threaten more storm. I had planned to go down through the lake, but changed my mind, and leaving Steve to go that route alone, I hired Steinberger to carry my pack five miles to the main road, and in company with Muir started at noon. Once out to the clearings, a soft word induced honest Billy Moncrief to drive us with his big gray horse and lumber wagon to Fine Village, a distance of twelve miles, where we arrived at supper time Saturday night. How to get home thirty miles, that was now the question. The livery man thought I was his meat sure and would take me home for eight dollars. On the contrary, I spent thirty cents for a telephone message, had a pleasant ride with an old chum ten miles to Edwards, where my own team met me, and by a little past midnight I was home again. When I awoke next morning the wind was blowing a gale and the rain coming in sheets, nor do I remember a single pleasant day for the next two weeks.

J. H. R.

CANTON, N. Y.

JOHN BOYDEN.

IN the death of Mr. John Boyden, who died at his home on Monday evening, March 7, Worcester loses another of its older citizens, a whole-souled honorable gentleman, widely known and universally esteemed. He was a most enthusiastic sportsman, and among sportsmen he had a very extensive acquaintance. Mr. Boyden retired from business some twenty years ago with broken health, and for the past ten years has been quite an invalid, although much of the time, until his last illness, he was able to be about town.

His interest in all that pertained to sportsmanship was retained in a remarkable degree years after he was unable to endure the fatigue of a day in the field or at the range. In later years he seemed to enjoy much in anticipations that were never realized. At the approach of each returning shooting season, he would remark that he "believed that he felt better than a year ago and hoped to get out a little." But during the last nine years of his life those days so much anticipated never came. I well remember the last day he spent in the field when, though too feeble to endure much of a tramp, he enjoyed the sport with the keenest relish, remaining out the entire day. It was nine years ago the first of last September, the opening day for partridge shooting. As usual on that occasion I was engaged to accompany Uncle Nathan Harrington, and Mr. Boyden was to go with Messrs. A. P. and G. H. Cutting. It proved a red-letter day for both these veterans. It was the first time after the amputation of his foot Uncle Nathan had attempted an all day shoot, and Mr. Boyden had done little, if any, shooting for several years previous to this occasion. It was late in the afternoon when our friend got in what proved to be his last shot at a game bird. He had been able to do little more than ride to the covers and wait while his companions hunted them through, and while thus resting upon a large stone in an opening between two runs his friends drove a partridge across the opening within easy range and he killed it, the bird falling at about 35yds. The story of that little occurrence with every detail was told many times in after years, and while no one ever had the slightest suspicion that he intended to vary a hair's breadth from the truth, the distance grew with years to 70yds.

Mr. Boyden was very entertaining in conversation, and a call from a brother sportsman, which was intended to be of a few minutes' duration, was more often prolonged to hours. He seemed never to tire of talking upon his favorite theme, and his dry wit was of a style peculiarly his own.

He was one of the first to engage in the organization of the Worcester Sportsman's Club thirteen years ago. He presided at the preliminary meetings, and was elected as its first president. He felt, however, that his health was hardly firm enough to perform the duties, and although he yielded to the earnest solicitations of his friends, he retired at the close of one year's service.

He was the pioneer man to import setter dogs into Worcester, the first were his famous pair of blue beltons, Rock and Juno. This was some twenty-five years ago. About fifteen years later came the Gordon setter Marble's Grouse and the Gordon setter bitch Hope. When abroad, many years ago, while traveling in Scotland, he made the acquaintance of the celebrated gunmaker Alex Henry, the acquaintance ripening into warm friendship, which lasted through life. His admiration of his friend's work amounted almost to bigotry, and he began to import his fine guns and rifles in the early days of breechloaders. For a while he managed to dispose of a great many among his friends, but as the shooters became acquainted with the work of other makers, he found it difficult to get the fancy prices at which he held them, and he had several in his possession at the time of his death.

The last few years he has been a great sufferer, his disease finally assuming the form of rheumatic paralysis, rendering him entirely helpless. He was 70 years old and leaves a wife. E. SPRAGUE KNOWLES.

WORCESTER, Mass., March 9.

[The acquaintance of one of the FOREST AND STREAM'S staff with Mr. Boyden extended over thirty years; and in that time many were the field excursions taken in his company, and filled with incidents which are still fresh in memory. Mr. Boyden was one whose charm of manner and speech rendered the enjoyment of his companionship a privilege. The qualities which go to make up a sportsman were possessed by him in an eminent degree. He was a frequent and valuable contributor to the FOREST AND STREAM, communications from his pen having also appeared in the old *American Sportsman* and the *Rod and Gun*].

THE GREAT AUK.

[From the Audubon Magazine for March.]

OUR illustration this month has a double interest, because it represents a form of bird life which can now be seen only in pictures. The great auk, once so abundant on the northern coast of America, no longer exists. Not very long ago, when your mother's grandmother was young, and wore a poke-bonnet, it would have been no difficult task to find auk skins enough to trim all the hats in America, but in our day we can find not a single auk.

Naturalists and geologists, who find the fossil bones of animals stored away in the rocks, tell us of many forms of life which have become extinct. Most of them have disappeared because of great changes and unfavorable conditions quite beyond the control of man. But the great auk, like the dodo of Mauritius and some other birds, has wholly ceased to exist because exterminated by the cruelty of man. Had its human foes been less wanton, the great auk might still be numbered among American sea birds. Its melancholy fate is an instance of the destruction which might be wrought upon other species of birds, if the plumage hunters were unchecked.

The great auk had neither means of defense nor powers of flight. Its safety lay in its home, which was on outlying rocky islets and points of land, where there were no large mammals that could injure it. Its powers of swimming and diving gave it safety from the eagles, the only winged creatures which could successfully attack a bird of such great size. As soon as civilized man entered upon the scene, however, the great auk's danger was apparent.

The great auk—the representative of the penguin in the northern seas—lived up to the beginning of the eighteenth century, without any serious diminution of its ranks. That it was to some extent used as food by various nations is quite certain, for its bones have been found in the shell heaps left by coast dwelling tribes; but this did not affect the supply.

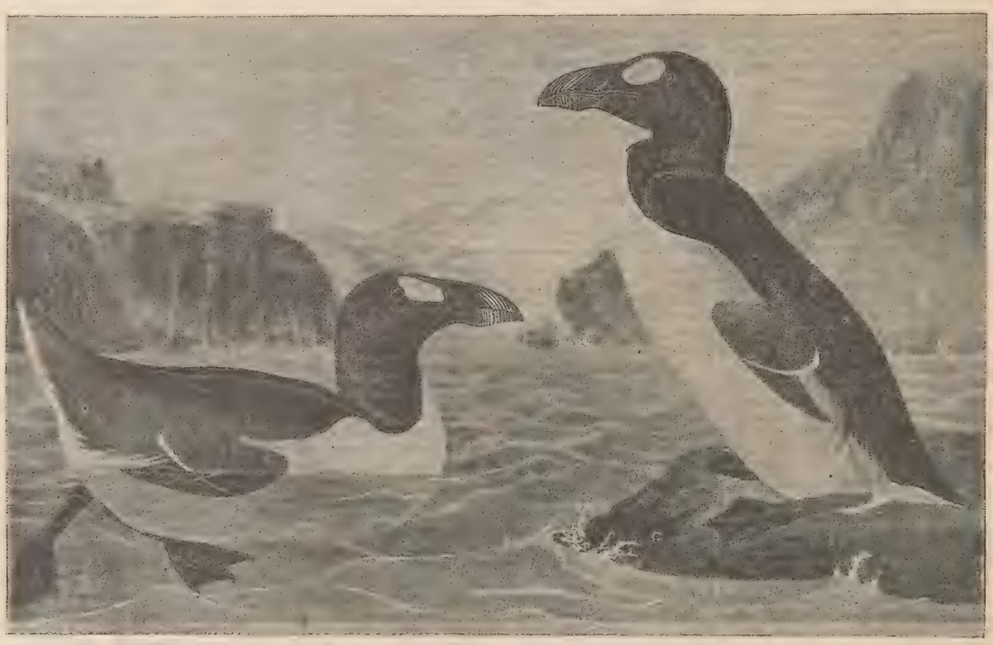
Up to a comparatively recent date a general impression prevailed that the great auk was a bird of the far north, and was commonly found within the Arctic circle. This does not appear to have been the case. It was an inhabitant of the North Atlantic Ocean, being abundant on small islands off the coast of Iceland and Newfoundland, but it is doubtful whether it ever occurred except casually within the Arctic circle. It has been said by Reinhardt that it was found occasionally on the coast of Greenland, and that one was killed on Disco Island, in Davis' Strait, but later writers are not disposed to credit these accounts. However, it is clear that it was a bird capable of enduring a great degree of cold, for being practically wingless it was no doubt resident where hatched, or at all events could not wander far from home in search of a warmer climate.

The old accounts of these birds—which were known by a variety of names, such as wobble, penguin, moyack and alk—speak of them as being very abundant, and show very clearly how readily they were destroyed. Thus Captain Richard Whitbourne, of Exmouth, Devonshire, England, in "A Discovrse and Discovery of Nevv-fovnd-land," printed in 1622, says: "These Penguins are as bigge as Geese, and flye not, for they haue but a little short wing; and they multiplie so infinitely, vpon a certain flat Iland, that men driue them from thence vupon a boord, into their boats by hundreds at a time; as if God had made the innocency of so poore a creature, to become such an admirable instrument for the sustentation of man."

A little later, in 1672, John Josselyn, Gent., in a work on "New England Rarities," printed in London, writes: "The Wobble is an ill shaped fowl, having no long Feathers in their Pinions, which is the reason they cannot fly, much unlike the *Pengwin*; thep are in the Spring very fat, or rather oyly, but pulled and garbidg'd, and laid to the Fire to roast, they yield not one drop."

In a work on Greenland, by Hans Egede, printed at Copenhagen in the year 1718, and translated and published in London in the year 1818, it is stated that "There is another sea-bird, which the Norway-men call Alkes, which in the winter season contributes much to the maintenance of the Greenlander. Sometimes there are such numbers of them that they drive them in large flocks to the shore, where they catch them in their hands."

Coming down to modern times we find that early in the present century the great auk was abundant on the islands on the coast of Iceland, but that in 1807 an English privateer visited these islands and killed most of them, and that again in the year 1810, the inhabitants of the Faroe Islands, being threatened with starvation, visited Iceland and made havoc among the auks.



From these inroads the species never recovered, and after this time we hear of them as occurring on the coast of Iceland only in small numbers. The last seen were two killed in 1844.

On our own coast this species was once very abundant. We have seen what Captain Whitbourne said of it on the Newfoundland coast, and we know from the occurrence of its remains, and from the testimony of witnesses, some of whom may be still living, that it used to be plentifully distributed along the coast of Maine and Massachusetts as far south as Boston Bay. Mr. George A. Boardman learned from a Methodist missionary, who was stationed on the coast of Newfoundland near Funk Island from 1818 to 1823, that during the whole of his residence these birds were present in considerable numbers, and that the inhabitants destroyed many of them for their feathers. Often the boys kept them as pets tied by a string to the leg. Mr. Audubon states that during a voyage to England, perhaps about 1830, Mr. Henry Havell hooked a great auk on the Newfoundland Banks and brought it on board. This seems to be the latest record we have of its occurrence on the American coast, though Mr. Ruthven Deane published in the *Bulletin* of the Nuttall Ornithological Club an account of a young bird which was picked up dead on the coast of Labrador in 1870. About this occurrence, however, there seems to be some doubt.

All accounts agree in stating that this bird was very abundant in the seventeenth century, and that it bred on rocky islets off the coast where it was free from the attacks of any enemy except man. When on shore the birds sat upright and moved along by short steps about as fast as a man would walk. It is generally agreed that only one egg was laid. This was large, pointed and white with brown or chocolate spots. The birds made no defense of their egg but would bite fiercely when caught, inflicting severe wounds with their great strong bills.

So far as known seventy-eight skins of the great auk exist in various museums, and besides these there are a number of skeletons, parts of skeletons, and mummies taken from shell heaps and old breeding places.

The length of the great auk was about 30in., and the color was as follows: The head, neck and upper parts were black, fading to snuff brown on the throat and sides of head and neck. The lower parts, a large oval spot in front of the eye and the tips of the secondary wing feathers are white. The white of the breast and neck extends upward in a point into the brown of the throat. The bill is black with the grooves between the transverse ridges white. The feet and claws black, eye hazel.

THE GREAT AUK (*Plautus impennis* Linn.).

SEA BIRD NOTES OF THE GRAMPUS.

THE following notes of the writer's observations when on the United States Fish Commission's schooner Grampus, September and October, 1886, in most cases simply mention the occurrence or capture of the species noticed. In those instances where habits have been observed they have been mentioned.

Sept. 23.—Coast of Maine, vicinity of Casco Bay. I saw scattering jaegers (*S. pomatorhinus* and *S. parasiticus*). These birds are frequently called bos'ns and gull-chasers by Cape Ann fishermen. The latter name seems well applied, as these birds will compel even the herring gull (*L. argentatus*, var. *smithsonianus*) to disgorge its food. They seem to avoid any conflict with the shearwaters, either *P. major* or *P. anglorum*. One flock of some seventy-five white-winged coots (*M. velvetina*) and a few single ones were seen. One warbler, either female or immature, alighted on the main boom and on the deck today. It looked like *Geothylpis trichas*. Seven cherry birds (*A. cedrorum*) were also seen. Three alighted on the rigging and one on the main boom within ten feet of me.

Sept. 24.—Off Portland, Maine. Saw scattering gulls (*L. argentatus*) and two small hawks too distant to name.

Sept. 26.—La Have Bank, between 63° and 64° west long. and about 42° 55′ north lat. I saw a great skua, commonly known as sea hen (*Megalestris skua*). Capt. Collins went out in a dory, but failed to get a shot. He got one Arctic tern or mackerel gull (*S. macroura*). The first kittiwake or winter gull (*Rissa tridactyla*) was seen to-day. It was an immature bird. Several bos'ns (*S. pomatorhinus*) were noticed, but too distant to shoot.

Sept. 27.—La Have Ridges, lat. 42° 46′ N., long. 63° 12′ W. Captain this evening shot a hawk, but owing to the darkness, it was not picked up. I think it was *Astur atricapillus*. This bird hovered over the vessel off and on for some five minutes. I saw a turnstone (*Strepsilas interpres*) this morning. This bird is known by various names, as calico back, chicken bird, red-legged plover, and chicaree. Some shearwaters (*Puffinus major*) have been seen. This species, with *P. anglorum*, are the hagdons, or hags, of fishermen.

Sept. 28.—La Have Ridges, lat. 42° 50′ N., long. 63° 20′ W. Captain shot a jaeger (*S. pomatorhinus*); I shot a female sooty shearwater, or black hag, *P. fuliginosus*). This species is much less common than either *P. major* or *P. anglorum*; one dark *pomatorhinus*, thirteen *S. pomatorhinus* in ordinary autumn plumage, six common hags (*P. major*), and an immature herring gull or gray gull (*L. argentatus*, var. *smithsonianus*) were obtained. Birds are not plenty, perhaps three or four common hags have been seen. The petrels, common known as Mother Cary chickens, particularly *C. leucorrhoa*, were the most numerous. *O. oceanica* were also seen. Messrs. Carswell and Williams caught seven petrels alive this afternoon. These birds became so eager to get the pieces of cod liver which were thrown out to attract them, that they flew very close to the vessel's side, and thus these seven were caught in a dip net. The birds were on the wing at the time and much dexterity was displayed by the above-named gentlemen.

Sept. 29.—La Have, lat. 42° 46′ N., long. 63° 15′ W. Saw the first gannet (*S. bassana*). It was in the immature gray plumage. Two adult *R. tridactyla* were also noticed. Mr. Williams shot two common jaegers (*pomatorhinus*). I shot two common hags (*P. major*) and a fulmar petrel (*F. glacialis*). This latter bird is the noddy or marbleheader of fishermen. It is also known as oil bird and stinker.

Sept. 30.—La Have, lat. 42° 45′ N., long. 63° 16′ W. One adult and three immature winter gulls, six bos'ns (*pomatorhinus*), one of them in dark plumage, and six hags (*P. major*), in ordinary fall plumage, were taken.

Oct. 1.—La Have Ridges, lat. 42° 50′ N., long. 63° 25′ W.

Rough weather all day. Saw some hags, bos'ns (*pomatorhinus*), winter gulls, mostly immature ones, and petrels, both *O. oceanica* and *C. leucorrhoa*.

Oct. 2.—La Have Ridges, lat. 42° 48′ N., long. 63° 12′ W. Strong northwester all day. Saw a sea hen (*Megalestris skua*) twice to-day. This bird came within 30yds. of the stern. I did not shoot the first time because it seemed too rough for men to go out in a dory. The boats were lashed so that it would have taken some time to get them ready to put out. However, the men having volunteered to go for so rare a specimen, the second time it came near I shot at it. Though hard hit it got away to leeward. Had it been smoother water I think this specimen could have been found dead on the surface astern of us. Shooting from a vessel rolling and pitching, as was the Grampus at this time, renders "killing clean" a matter of much uncertainty. Those who have tried it will appreciate this. There is no doubt whatever about the identity of this specimen, as it was seen by both Captain Collins and myself. It seems perhaps singular but none the less true, that this species is most commonly noticed when the weather is stormy or blowing hard. The flight is bold and strong.

Oct. 3.—La Have Ridges, lat. 42° 52′ N., long. 63° 4′ W. One winter yellowleg (*G. melanoleuca*) flew around the vessel and then headed for land. I shot one adult winter gull and several others mostly immature. Also saw a noddy, a jaeger (*pomatorhinus*), a hag (*P. major*), and a few Leach's petrels.

Oct. 4.—Passage from La Have to Roseway Bank. I shot three winter gulls (*R. tridactyla*), two were adult and one immature. Saw perhaps twenty-five or thirty of these birds, a few bos'ns (*S. pomatorhinus*), and one hag (*P. major*). Roseway Bank, lat. 43° 19′ N., long. 64° 46′ W.—Saw three ducks fly past the vessel and alight ahead. We sailed past them when they arose, and as they flew by a second time one of them was knocked into the water. It was picked up and found to be an immature velvet duck (*M. velvetina*). This bird, in its immature stage, is the common gray coot of the New England coast. In the adult plumage, or when old enough to show white in the wings, it is the white-winged coot, of which mention is made in the beginning of these notes. After dinner we filled away for Shelburne, N. S. On nearing the land the kittiwakes or winter gulls became scarcer, and the herring gulls, mostly immature gray plumaged birds, seemed to take their place.

Oct. 5.—Shelburne, N. S. Gray gulls (*L. argentatus* and *L. marinus*) were frequently seen flying about the harbor. Several crows (*C. americanus*) were noticed. A short walk on shore brought to notice one robin (*S. migratorius*), two Canada jays or whiskey jacks (*Perisoreus canadensis*), two song sparrows (*M. melodia*) and a number of snow birds (*Junco hyemalis*). Ruffed grouse (*B. umbella*) and Canada grouse (*S. canadensis*) are common. We bought them for twenty-five cents a pair. They are known by the names of birch and spruce partridges all through Maine and the provinces of New Brunswick and Nova Scotia.

Oct. 7.—Underway along the coast from Shelburne to Pubnico, N. S. I saw a flock of twelve eiders (*somateria*), among which were two old females. Some *argentatus* seen, but the winter gulls seem not to have worked in from the banks as yet. At Pubnico I saw some crows alight on the rigging of a schooner that was lying at a wharf. Of course, no people were on the vessel. Crows here seem to feed around the rocks, wharves and beaches wherever fish or fish offal may be picked up. I saw them eating dead squids on the beach at Shelburne.

Oct. 8.—Off the mouth of Pubnico Harbor I saw a lone eider drake and a flock of white-winged coots.

Oct. 9.—Southeast of Nova Scotia, lat. 43° 03′ N., long. 65° 55′ W., Captain shot one and Mr. Carswell shot two winter gulls. I went out in a dory, taking a bucket of fish livers to decoy the birds within shooting distance. Pieces of these livers thrown into the water and allowed to drift to leeward will almost invariably draw such birds as jaegers, gulls, fulmars and shearwaters within gunshot. For the rest, 3¼drms. of powder and 1¼oz. of No. 4 shot in a 7¼ or 8lb. 12-bore, will be all one needs. Almost all the birds obtained will be inside of thirty-five yards, and frequently a less distance. As a result of my efforts, under circumstances as above related, I have to-day shot two gray gannets (*S. bassana*), two whiptails (*S. buffonii*), two noddies (*F. glacialis*) and twenty-one bos'ns *S. pomatorhinus*). Four of the latter were in the dark plumage and the balance in the more common mixed dark and white. I have seen to-day three gray gannets, about forty bos'ns (*pomatorhinus*), four whiptails (*S. buffonii*), a hundred or more winter gulls (*R. tridactyla*) about equally divided between adult and immature birds, two Cary chickens, species uncertain, and a flock of six or eight phalaropes too distant to name the specief. These little birds are commonly called sea geese by fishermen, though why I do not know. Certainly the size has nothing to do with the name. Not a hag (*P. major*) has been seen for the past two days, and that they "are found on the coast in winter," as some writers state, is, in my belief, incorrect, not only as regards *P. major*, but also *anglorum* and *fuliginosus*. Captain Collins agrees with me in this. I have been interested in our coastwise birds for twenty years, and have yet to see the first one of these birds off our New England coast in winter. At noon to-day a little snow bird (*J. hyemalis*) hovered around the vessel a minute or two and then, without alighting, flew away to the land. From this and numerous other similar instances that have fallen under my notice, it seems plain that these stragglers from terra firma possess an instinct which tells them the course back to land.

Oct. 10.—Bay of Fundy near the 43d parallel of latitude and between 67° and 68° W. longitude. Scattering jaegers (*S. pomatorhinus*) have been seen to-day, and one flock of twelve winter gulls were seen sitting on the water in a very cosy and sociable appearing manner. Between Cashes and Cape Cod a land bird was seen. It looked like some kind of a sparrow. A snowbird (*J. hyemalis*) alighted several times on the vessel. In the afternoon, just before making Highland Light, Cape Cod, two or three scattering winter gulls were noticed flying. It seems clear that these birds work south in the autumn off shore and move in nearer the coast later on.

Oct. 12.—Vineyard Haven, Island of Martha's Vineyard. Early this morning some three hundred, perhaps more, terns, apparently *hirundo* and *macroura*, young and old, were observed. Ornithologists know how much alike these species appear when only a short distance off, and even in hand when young. I beg, therefore, to be appreciated in my use of the word apparently. These birds were in two flocks, and when first noticed were flying close to the water and compactly, after the manner of shore birds. They came into the Vineyard from the eastward and soon scattered about in search of food.

Oct. 14.—The objects of this short cruise were to observe the mackerel catchers, and to look for birds with the view to obtain, if possible, some black hags (*Puffinus fuliginosus*). We left Wood's Holl at 7:30 A. M. and stood out into the Sound. Besides the usual members of the Grampus's crew one other gentleman, Mr. Thomas Lee, of the U. S. F. C. steamer Albatross, went with us. The first birds to attract our attention were the jægers (*S. parasiticus*), in dark mottled immature plumage. They were very common. Of that new bird, Corey's Shearwater, we must have seen seven or eight hundred. They were not shy to approach, and were bold in coming around for food. They sat in flocks scattered over the water. These flocks numbered from 50 to 75 to 100 in places, and again they were in smaller squads or single. These birds have all the boldness in flying or sailing with set wings within easy gunshot, to pick off pieces of liver, that the so-called hagdons possess. They sit on the water heading the wind and sea almost as lightly as the gulls. In starting to fly, they first raise their wings, apparently treading water with their feet at the same time. Keeping their wings elevated and partly open, their bodies having by this time become clear of the water, they run along "dog-paddle" fashion on the surface, gaining speed and moving their wings. They rise thus to the wind and proceed usually some 20ft. in this manner, when both feet are moved forward together for some 10ft. further. The bird by this time is fairly under way, and the feet being drawn up so as not to catch the wind, our winged passenger proceeds boldly about his business. In alighting, they spread out both feet under and well forward of the body. In taking food they keep their bodies clear from the water by the use of both wings and feet. Again, when feeding as I have seen them, on small herring, at Gay Head, they sit with folded wings on the water, and feed by swimming to windward after these fish. If the fish sink and reappear further ahead, the birds take wing to the quickly-discovered spot and settle for feeding as before. As observed by the writer, these birds seemed to keep by themselves. Sometimes they might be seen sitting on the water and also feeding in company with *S. parasiticus*.

Of the other birds seen there were 50 or 75 winter gulls (*R. tridactyla*), adult and immature, one dark bos'n (*pomatorhinus*), two gray gulls (*L. argentatus*) and a few scattering white-winged and gray coots (*M. velvetina*) were observed.

RAYMOND L. NEWCOMB.

MOUNTAIN GOATS.

FORT SIMPSON, British Columbia.—In looking over some old numbers of the FOREST AND STREAM, given me by a friend, I noticed that in the number of June 10 questions were asked about mountain sheep and goats. Most likely the queries have been answered, long ere this, by people of far greater experience than my own. Still, it strikes me that to have data from various parts would be acceptable.

During the summer months the goats keep high up on the mountains. In fact, on the tops of most of the hills in this vicinity, few of which are over 4,000ft. in height. They appear to feed pretty generally in the day time, and I think rest at night. Their favorite food consists of various plants, and of one species in particular of which I send you a dried specimen. This grows nearly everywhere in this country—on the tops of the mountains, in the low valleys, (when not too thickly timbered) and on the sphagnum moss. I am not botanist enough to say to which order of plants it belongs. Where goats are plentiful this plant will be cut off close to the sod. Grass is also eaten.

Up to this season of the year the old "billies" keep rather by themselves (leaving the "nannies" with their kids and year-old offspring in flocks), which is often the fashion of buck deer, isolating themselves early in the year, and like the deer, seeking out their harems in the autumn. As winter comes on they all move on down to the foot of the mountain, and in the depth of winter it is not uncommon to see whole herds within a few hundred feet of some of the inlets of the sea. Indeed, Indians shoot them often from canoes. The Indians state that in the winter, when the mountains are covered with snow, the goats seek strongholds partway up the mountain sides, among the great slabs and blocks of trap and granite, which in falling have arranged themselves into natural roofs and sheds, generally at the foot of some crag. Huddled together for warmth, they pass the winter in these places; not moving in boisterous weather, on more genial days descending as I have stated, nearly to the foot of the mountains to browse and nibble the bushes and lichens. As the spring advances they follow the snow up the mountain sides until the summits are reached, or, if the snow be perpetual, to the very edge of it, where the herbage is kept green by the constant moisture.

They young are brought forth about the month of June, possibly late in May. Though awkward looking, they in a short time become so agile as to scale places whither their poor dams scarce dare follow.

Wolves are great enemies to goats, and no doubt make great havoc when the kids are young. Old goats, that is full grown ones, have a habit of sharpening their horns, the Indians say, always at a certain season to prepare for fighting. However that may be, their horns certainly bear the marks of having been whetted on stone, on the outside of the points, and are as sharp sometimes as knife points.

A word, perhaps, anent the stalking of these queer little fellows, may not be amiss. Moccasins must be worn for this hunting, for both hard leather and gum soles are in reliable, owing to the great quantities of moisture continually seeping through the thin soil on the mountain sides; and though in some places it is hard and dry enough footing, yet there are others in which a misstep or a slip means a dreadful mangling if not death. All in all the whole hunt, stalk and seeking, is in the climb up the mountain side. Once the top is reached (in this section at least) goats are nearly sure to be seen, if not, it is an easy matter then to follow along the range until they are found. Once found, of course keeping to leeward of the band, they are very easily approached, and by taking the most ordinary precautions of concealment, one may, if so inclined, shoot ten as easily as one, for the sound of the rifle seems not to offend the uninjured ones. Who would do this? None but an insatiate barbarian.

Packing the best parts of one—including the head for mounting—will be task enough for the hottest blooded sportsman. Your goat is on your back, stranger, with all the superfluous bone removed. Done up into a snug pack to fit the angles of your back. Grab "old reliable" firmly, pay no heed to the ptarmigan which whirr out of your way. Don't listen to the whistle of the marmots, nor yet, when lower down, to the blue grouse, but look to your feet and where you are going to plant them. Camp is reached finally, and then for a goat steak, of which you will find that those taken from a kid or year-old are excellent. Old nanny, pretty good, but tough, old billy, as strong as a steam engine.

W. B. A.

EGGS OF FARALLONE CORMORANT.

(*Phalacrocorax dilophus albociliatus* RIDGWAY.)

MR. W. OTTO EMERSON, of Haywards, Cal., has furnished me with a description of the nesting and eggs of this new cormorant for the forthcoming third edition of my work, "Nests and Eggs of North American Birds," and as there is not yet a published account of these particulars the following may not be without interest.

The series of eggs upon which these notes are made consists of three typical sets, obtained through the kindness of Mrs. Rugg, of Farallone Island, who holds the honor of collecting the first birds and eggs of this variety.

The bird is as common on the Farallone as Baird's cormorant (*Phalacrocorax pelagicus resplendens* Aud.), and it nests on the rough ridges or points of rocks overlooking the island. About the first of May they may be seen carrying weeds and dry sea kelps to their nesting sites, where they construct a flat, loose and bulky platform, which is on the whole quite a shallow structure.

Their nesting is similar to that of other cormorants and they may be observed sitting on their empty nests for hours at a time, probably, as Mr. Emerson suggests, for the purpose of working out the hollow of their nests with their large feet, for which purpose they are well suited.

By the middle of the month many have begun to deposit their lime-covered eggs. These compare well with those of Brandt's cormorant (*P. penicillatus* Brandt), and are a little larger than the eggs of Baird's. Mr. Emerson says: "A set of five measures as follows: 60 by 40, 61 by 39, 62 by 39, 60 by 40, 62 by 39 mm. respectively; these were taken May 20, 1886; their general form is rather ovate oval and quite round at the greater end."

Their color and general characteristics are the same as those peculiar to other cormorants' eggs—light greenish in color and coated with a chalky substance. "Another set of four are more pointed at the smaller end and a little longer, measuring respectively: 65 by 39, 64 by 37, 62 by 38, 63 by 37mm. This set was taken June 22, 1886, and like the first, incubation was well advanced."

Four eggs seem to be the average number laid, and both male and female assist in the process of incubation, one remaining on the nest or beside it while the other is off on a short fishing excursion. According to the A. O. U. Code the habitat of this bird is "Coast of California, south to Cape St. Lucas and Revilla-Gigedo Islands." Mr. Emerson says, "it no doubt breeds along the coast northward from Santa Cruz and Monterey Bay."

OLIVER DAVIE.

COLUMBUS, Ohio, March 8, 1887.

QUAIL IN CAPTIVITY.—Three months ago we procured fourteen quail from West Virginia. I made a coop 2½ft. by 2½ft. square, but found after a few days' trial that it was entirely too small, so I made a new one 8ft. by 8ft. and 5ft. high. I give the birds what wheat screenings they will eat up clean, varying the ration with cracked corn and buckwheat, and every other day either cabbage, turnip tops or celery. Three times a week I give them about four quarts of dry fine gravel baked in an oven until all the moisture is out of it. My birds are doing finely and I have not lost one. I think that most of the losses of quail, if traced, will be found to result from their being too closely cooped, with too much grain, dirty water, and very little green food or none at all; and then, when gravel is given, it is generally thrown in wet and freezes, and thus the birds get very little benefit from it. Particular care should be taken every day to scald the vessel from which they drink and to give only pure water. By pursuing the above course, I think that quail can be wintered with very small percentage of loss. We have had no quail here for years and hope to restock from this small number. I will write this fall and tell you how they pan out.—H. C. G. (Bodines, Pa.).

THE WEIGHT OF QUAIL.—Apropos of "J. M. W.'s" inquiry in your issue of Feb. 17, as to the weight of quail, and of his remark that the swamp quail in Georgia are larger and of darker plumage than the upland birds, I will inform him that in Cuba we also have them of darker markings than are the *O. virginiana* of the north and east, and these birds are classified by Gundlach as *Ortyx cubanensis*. We also have here quail of identically the same plumage as the *O. virginianus* of New York and New England, of which latter I have in my time killed many bags, and also have a male and female now in my dining-room that were killed and mounted in New York with which to compare ours. These form a considerable portion of most of my bags made here, and since reading "J. M. W.'s" inquiry I weighed four of these, taken without choosing, from my last bag, with the following results, viz.: 5½oz., 5¾oz., 6¼oz. and 5¼oz.—NEMO. [There is but a single variety of quail in Georgia.]

SPRING BIRD NOTES.—Perth Amboy, N. J., March 14.—The writer saw several flocks of grackles near Trenton, N. J., on the 9th inst. He saw robins, bluejays, a song sparrow and a shrike near South Amboy on the 4th inst. Bluebirds have wintered in and around Perth Amboy, and a song sparrow sang merrily in a garden here on the 12th, when the mercury stood at 28°. The larger varieties of hawks have begun to migrate. Three English snipe were seen here on the 11th.—J. L. K.

WINTERING OF MEADOW LARKS.—Jersey City Heights, N.J., March 18.—C. H. A. asks where do meadow larks winter. L. replies correctly. I have seen them all over where there were salt marshes, when hunting in winter. If your correspondent will take a stroll in mid-winter in the marshes of New Jersey he will see more than he will be able to shoot at any time.—A. M.

THE MAINE COMMISSIONER CHARGES.

Editor Forest and Stream:

In the Boston *Herald's* report of the Harmon June Sunday deer killing case, as copied in your issue of March 10, the statement is made that Harmon and his guide, having each paid a fine of $40, the State "had thus received pay twice for the same deer."

I venture no opinion as to the magnitude of the offense being enhanced by its committal on Sunday—to my mind it is far greater from the fact that it was committed on a June day than that it was committed on a Sunday, but the other part of the pleading barely needs answering. Two men conspire to commit an offense, and commit it. Both take part. At the end one directs the other how to apply the knife and the other obeys the order. They are, in legal parlance, *particeps criminis*, and it is a good defense neither in law nor in equity, that because the leader has paid the penalty for his confederate he should be held innocent himself. The State of Maine does not advertise to sell deer on June Sundays to Connecticut generals at $40 per head in the water. I venture the opinion that if there had been a dozen generals in the same boat, and only one expert oarsman, hunter and guide, and the thirteen contributed, by their efforts, to the death of the deer, each individual general would have been liable to the fine of $40, while the three experts, in one, would have been liable to but one fine of $40 among them. I may be all wrong in this, but I think (not having the law before me) that the statutes of Maine prohibit the killing of deer on June Sundays and other June days, and they do not license the killing of deer at $40 per deer.

Now a word in regard to Mr. Stillwell, who is evidently the point of attack in this widespread newspaper tirade. Mr. Stillwell is an enthusiast on the subject of fish protection and propagation, and has given his time and thought and energy—his whole heart and soul to it, for many years. No one who knows him will doubt his sincerity and enthusiasm in the matter. He originally took comparatively little interest in game protection, and many years since, when I took up the latter, I had many long talks with him trying to induce him to take hold of game as he had of fish. He said that he did not care personally for it as he did for fish, and was half afraid to openly urge the game laws that I was urging upon the Legislature, for fear that they would prejudice the fish laws. I think he would bear witness that it was largely through my arguments to him and urgent requests that he concluded to help unite the two interests of fish and game protection. He will remember that he advised me to start a movement for a separate commission on game. It was with great difficulty and after many long talks that I succeeded in enlisting him in the cause. I think that "the fly that he rose to" first was the suggestion that, if the fishermen joined forces with the gunners we could, together, far better protect both woods and waters, and that while we could not hope for some years to get paid game protectors alone, if we joined hands and made our fish wardens game wardens also, we could get better wardens and better pay. The Legislature passed a general bill putting upon the Commissioners of Fisheries the duties of game commissioners with double work and no increase of salary. The results of the game law have been far beyond even my own expectation, and many thought me extravagant at the time in my prophecies of the results to be hoped for.

Moose were almost extinct in Maine when the bill prohibiting killing for five years was passed, and many of the best informed hunters with whom I talked said "Yes, you are right, but you are too late." Two or three years ago I had the pleasure, for the first time, of meeting Mr. J. G. Rich, the famous trapper and hunter of the Rangeley Lake region, a man who has probably killed more moose than any other man now living in Maine, and I was more than pleased to hear him say that moose were more numerous than they had been for twenty years; and if I remember rightly, that there were more deer in the State than there had been for thirty years. You know him well, as he writes short and pithy articles for your paper. The best "signs of the times" in Maine are that our people generally have been educated up to a true realization of the value of our fish and game productions, and our railroads, hotels, merchants, all classes, in fact, recognize the purely commercial principle that it pays the whole community better to keep our trout and deer at home, and sell them "on the fin" and "on the hoof" to those who like them served that way rather than to turn them over to a few market-hunters and exterminators. I think the battle has been won in Maine. The railroads and hotels realize that they can make more money by having wealthy men come in here for fish and game than they can by sending it to Parker's, in Boston, or Delmonico's, in New York, and our best guides, hunters and fishers are beginning to see that they can sell a moose, deer or trout for more money to a city sportsman in Maine than they can to a city restaurant in Boston or New York; and the same game more times over. They tell a very good story of a famous old guide at Moosehead Lake who, instead of charging the regular price of hunters (*i. e.*, so much for shooting a moose and swearing that "the gentleman who was taken out killed it himself sure), developed the idea of charging so much for putting the gentleman within 40yds. of a moose. I do not believe the stories told that some have made as high as $400 per month on one moose hide as capital. MAC.

MAINE.

Editor Forest and Stream:

The enemies of the Maine Fish and Game Commissioners have already received one serious setback. It is evident that they have pinned their colors to the skirts of Gen. Harmon, and that they hope to overthrow the Commission through him and his troubles on the question of killing the deer at Rangeley on that June Sunday, about which so much has been said and written. Gen. Harmon brought suit at Farmington, on Wednesday last, nearly two years after the affair, to recover the $40 he paid Geo. D. Huntoon, supposing him to be a game warden, when, as a matter of fact, Huntoon's commission had run out. Harmon was not content with bringing suit against Huntoon, the only person who knew anything about the affair at the time, but has tried to draw Commissioner Stillwell into the affair deeper than he could possibly have been guilty of, since he was not present at the time, nor did he know of it till afterward, when Huntoon came to him to have his commission renewed. The writ sets forth:

First—That the plaintiff paid George D. Huntoon and E. M. Stillwell forty dollars under a mistake of fact in June, 1884. Second—That the plaintiff paid the sum by reason of the fraud and deceit of the defendants. Third—That the sum was paid as due on a complaint before a trial justice, when in fact no legal judgment was ever entered against the plaintiff, and that the sum came into the hands of the defendants in this action. Fourth—That the sum was paid by the plaintiff to the defendants on an agreement that it was to be used to pay the fine in the case, and that no judgment has ever been entered in the proceedings, and that the money has not been applied according to the agreement. Fifth—That the sum was paid by the plaintiff to the defendants, under an agreement in which the consideration has failed. Sixth—That the plaintiff paid the sum to the defendants, believing Geo. D. Huntoon was a fish and game warden, when in truth and in fact he was not. Seventh—That proceedings were commenced against the plaintiff before a trial justice, in which judgment was entered, and under proceedings that were illegal and void; that under a mistake of the facts the plaintiff parted with his money, which has come to the hands and possession of the defendants. Eighth—The defendants wilfully and falsely represented to the plaintiff that they were lawfully and properly entitled to the money, thereby deceiving and defrauding the plaintiff and inducing him to part with his money.

Gen. Harmon testified that he took no part in the killing of the deer, but that he plead guilty in order to settle the case. When he paid Huntoon the money he believed him to be a game warden and entitled to receive it. Just here, it may be remarked, that the Maine Commissioners have repeatedly tried to prevent this killing of game out of season by rich men, and then of complaining of themselves, and paying the simple nominal fine; that in this particular case the further prosecution of Harmon was ordered by the Commissioners with that end in view, though they did not even know the name of the guilty party, never having seen him. The commission of Huntoon was offered as evidence by the plaintiff that it had expired at the time, and that he had no authority to take the money.

The first witness for the defense was Commissioner Stanley. He testified to receiving the money from Huntoon, and that he paid it over to Commissioner Stillwell on July 4, some time afterward. It also appears that Mr. Stillwell immediately paid over the money to the State at Augusta. A receipt from the State Treasurer was introduced in evidence. Lengthy arguments were made by the attorneys on both sides, but the discomfort of Harmon and his north Franklin allies began when, in his charge to the jury, his Honor, Judge Emery, ruled that no evidence had been introduced implicating Mr. Stillwell, and directed them so to find. The jury, after being out a few minutes, brought in a verdict against Huntoon of $41. Counsel for Harmon takes exceptions against the ruling of the Judge in regard to Commissioner Stillwell, and so far as he is concerned, the case goes to the law court.

This filing of exceptions throws a flood of light on the motives of Gen. Harmon. It is as plain as day that it was not the recovery of the money paid that he was after, for he gets that in the verdict against Huntoon, but that it is the prosecution of Mr. Stillwell he most desires, and that in this revenge he is being used as a tool by those people of north Franklin who desire the overthrow of the present able Commission. Curiously enough these friends of Harmon claim that he has won a victory in the case. One of the enemies of Mr. Stillwell telegraphed immediately to a Maine paper that Harmon had won a victory. But in all honesty, let us ask if the victorious party in a suit usually appeals a case? Indeed I am informed by an able Massachusetts lawyer that there is not the least chance that the full bench of Maine will for a moment entertain the appeal of the counsel of Gen. Harmon, but that they will at once throw it out of court. Harmon has recovered his $40 from the man to whom he paid it and there the case ends.

This is one victory for Commissioner Stillwell, than whom no man in the country has done more for the cause of fish and game protection, and it is to be hoped that it is but the beginning of a series of victories; the second to be at Augusta on the 28th of March, when that worthy man is to be charged by those disgruntled people of north Franklin, aided by the Jack Darling element, accused of a laxity of duty in enforcing of the game laws, and at the same time by Gen. Harmon of enforcing them too much. Gen. Harmon is not a resident of Maine, unless he claims a residence from the fact of his interest in the cottage where he spent considerable time at Rangeley Lake. He killed a deer in that State in close time, or rather he was *particeps criminis* to the killing of it; and it is a familiar legal principle that even if there had been ten men in the boat at the time, each one could have been made to pay the fine, under the law; it is also a fact that the hunting of a deer, even with the intention of taking it alive in close time, is punishable. Besides, I have it from good authority, that the venison was spirited away, out of the State, although contrary to law to transport it at any time. Mr. Harmon may seem high and mighty to those people in north Franklin, to whom he pays money, but he should rather have considered himself lucky to get off so easily as he did, for having killed a deer under circumstances so exasperating to a Commission trying to do its duty. Commissioner Stillwell gave me an account of this case before he had ever seen the man, indeed did not have his right name, and I shall not soon forget the sorrow and disgust he expressed at the outrage, as we both then agreed it was. A full account was given in FOREST AND STREAM a few weeks after. And now, lest some may accuse me of desiring to do Gen. Harmon an injustice, permit me to add that I have never met that gentleman, and have nothing in the world against him, except that he took part in killing the deer as mentioned above, and that since, instead of thanking the good laws and their earnest enforcement that there are deer in Maine to be lawfully killed in open season, he appears, to the eye of one deeply interested in the welfare of fish and game in that State, to be willing to work out revenge on the Commissioners for trying to do their duty with an impartial hand.

SPECIAL.

DAYS ON THE DOLORES.

LEAVING the cars of the Denver and Rio Grande Railroad at Montrose, Col., one morning early in the fall, B. and myself boarded a four-in-hand stage, and settled ourselves for a long ride into the wilds of the southwestern part of the State. For three days we pushed on into the mountains, fording rivers, and threading narrow cañons, being always in the midst of the grandest of scenery. With every mile that we advanced the road became worse, until finally it surpassed anything we had ever seen. It was a sort of imaginary thing that we were only made conscious of by tremendous jolts and jars which threatened to dislocate our livers and fracture our spinal vertebræ. This unpleasantness was owing to the superabundance of boulders spread along the road to give it the appearance of an eastern turn-pike, I suppose. However, about nightfall on the third day, we reached our destination, a spacious and comfortable log-house, on the banks of the beautiful Dolores River, 110 miles from Montrose. Here we received a hearty welcome from our host and his family.

After a day spent in recuperating our mangled forms, we started out on a hunt, traveling in a wagon drawn by a pair of mules and driven by our host. Seven miles from the river, we went into camp, near a depression in the ground, containing a small amount of dirty water which had drained into it, and this constituted our water supply for the next three days. We had scarcely left our seats in the wagon, intending to unhitch and water the tired-looking mules, when they suddenly became thoroughly resuscitated, and dashed away through the woods with the wagon, sprinkling its contents generously along in the tall grass; and it was only after a considerable run that the recreant team was recovered. The remainder of that day was spent in looking for game on the north side of the camp, but none was discovered, and we had to content ourselves with bacon, bread and coffee for supplies.

The wagon cover was then stretched across a pole supported at both ends by crotched sticks, and under this shelter we spread our blankets and slept soundly till early morning. Before the sun rose we were off to the south side of the camp to hunt, taking with us our host's fine hound, to follow up any fresh trails we should strike. Carl thoroughly understands his business. He never runs a deer except when bidden to follow a wounded one, and he is never known to bark or make the slightest unnecessary noise when hunting, and he can follow up the most difficult trails. We had tramped for two hours without finding any game, and had turned about and were returning to camp when Carl struck a fresh trail, and in a few minutes a yearling doe bounded out in front of us and ran behind a bush 75yds. away. B. and I both fired quickly; I missed but his bullet broke its neck, killing the game almost instantly. Our host threw it over his shoulder as if it had been a rabbit, and carried it for two miles into camp.

The next two days it rained almost incessantly, so we concluded to go back to the ranch before our meat spoiled. Two days afterward we set out up the west branch of the Dolores with two wagons, one of them belonging to hunter and trapper Rogers, who kindly offered to guide us to a good camping place near the best hunting ground. Twelve miles down the Dolores valley we struck off into the valley of the west branch of the Dolores, up which we continued about five miles, fording the river at least twenty times, and then went into camp in a grove of beautiful silver spruces, on the banks of the little mountain torrent, famed for the abundance of trout in its waters. Our friend, Mr. Rogers, caught a nice string of these gamy fish, which were duly enjoyed for supper. Long before daylight the next morning, our host and myself shouldered our rifles and began the ascent of a mountain near the camp, intent on gaining the almost level country, called a mesa, on the summit. For two hours we toiled up the steep and densely wooded side, and at last reached the summit just as day was dawning, and obtained a splendid view of the surrounding country.

We entered the woods, and for two hours saw nothing to shoot at except a flock of spruce grouse, of which we killed a couple of brace. Entering an open space or park, we saw three deer a long distance away. Down we dropped on our stomachs, and crawled up to within range. The deer proved to be an old doe and two fawns. These we had no intention of killing, as it was the big bucks we were looking for. However, my friend proposed that we watch the movements of the animals, and then try a little game that he had used to decoy deer within shooting distance on the plains. When the old doe was feeding, we stood up gently and kept as still as possible; but we must have made a slight noise, for she raised her head and eyed us intently, then trotted a few yards toward us, stopped and regarded us again, and continued the same tactics until she was within 50 feet of us, when, having satisfied her curiosity, she uttered a snort and all three turned and disappeared in the bushes. Not long after this we entered another park, and saw at the other end, about two hundred yards away, what my companion said was a fine large buck, with his head in the bushes; and, as there was little chance of our getting any closer without being observed, I concluded to try a shot. Dropping on one knee, I raised my rifle, took a careful aim, and fired, and was delighted to see the deer fall in its tracks. On my going up I found that the ball had broken its back, close behind the shoulder; and as this was the first deer I killed, I was consequently much elated. After dressing the game, my friend carried it back to the edge of the mesa, where we left it, and then started back into the woods to get another shot; and before we had gone a mile, he killed a fine doe in mistake for a buck.

Then came the business of getting the deer down the mountain, which, with our rifles, belts, grouse and heavy rubber coats (or slickers, in Western phraseology), was no easy matter. The only practicable way was to drag the game. A rope was tied to the hindlegs of each of the deer, and in that way we started. The descent was so steep that the animals were continually getting fast under logs and rocks, or would roll down upon us, and more than once did my pantaloons come in contact with the ground; then, to make matters more cheerful, a heavy thunder storm came up and drenched us. But finally we reached the foot of the mountain and were soon in camp and under the shelter of our tent, as tired and hungry as it is possible to be after having tramped all day without having anything to eat or drink.

We stayed at the camp two or three days, but as it rained and hailed almost incessantly during that time, we did not hunt very much, although we followed a bear trail for a long distance without seeing any bear, and B. and myself each had a shot at a deer, but both missed.

Returning to the ranch, we passed the time in fishing for trout in the river by the house, and in making short hunts in the surrounding woods, and B. succeeded in killing a young buck.

A few years ago this region was teeming with blacktail deer, elk and bear, but the game is fast being exterminated by market hunters, and through the agency of the United States troops stationed in that locality who hunt at any and all times of the year. The resident ranchmen and farmers believe in protecting the game, and I was told by some men that they had been there for years and had never killed a deer.

At last our pleasant sojourn was over, and having driven over to Durango we boarded a train and were whirled away to our homes in the East. But we shall always remember the hospitality and generosity of our mountain friends, and the pleasant days of the past.

NAVAJO.

PHILADELPHIA, Pa.

HUNTING IN THE TRANSVAAL.—II.

Being extracts from a letter accompanying some lion skins sent by the writer from South Africa to his sister in Nova Scotia.

* * * YOU have two sorts of lions. The big black-maned lion and dark-colored lioness—and the smaller sort—light yellow-maned lion and light-colored lioness. The first we killed in low fly country. After a long chase he was shot in a hindleg, which made him stand and growl most ferociously, and allowed us to approach him and give him an express bullet in the ribs, which floored him; then with the muzzle of the gun within a yard or two we put one through his brain, for, however dead they appear to be, a bullet through the head makes it sure. The next we killed was the little one. It was a male and had the audacity to rush one of the Kafirs, when Robert knocked it over with a shot in the forehead. At the same time we caught one alive. The next was the largest skin, a black-maned lion. We were walking along looking for game in fly country and got close to a troop of impallah, which we would not shoot in case we disturbed large game, when they scampered off, and the old lion, who had been wanting one of them, jumped out of the grass and ran away from us. I could have fired, but I had not a good shot. I had missed two that trip by firing through the bush at a long range, and I thought I would follow and probably get a good shot; however, I soon lost him. One of the boys shouted, saying he had gone another way; so I said, "Run on first as you saw where he had gone." I ran close at his heels. The wretch, without saying a word, jumped to one side, and in two strides I almost stepped on the lion. He gave a roar, and was bounding away when I shot him down through the back, and as he was wriggling and growling I shot him in the head. I had got much closer to him than I had bargained for. I looked round for the boys and saw them standing at the foot of trees ready to climb, and the boy that got such a start recovered next day.

The next skin is that of a light-colored lioness, a fine soft coat. I generally used it as a blanket. When we were wintering the cattle about twenty miles from where we live, the lions came one night and killed a fine ox. In the morning I hung up on a tree part of the bullock and looked for the lion or lions, but I lost their spoor. The next night they climbed up the tree and scoffed all the beef, left part of a nail sticking in the bark and killed an ox belonging to a wagoner standing close up against a Kafir kraal. Tom happened to join me the previous day, so we got three or four Kafirs to follow the three distinct spoors. After following four or five miles we got into a gully with some bush, and presently saw one five hundred yards off running down the gully, so we galloped down and cut him off from getting away, then we saw one up the gully and cut him off and one of our dogs started barking in a bush close to Tom. He gallops to the bush and sees a big lion has cleared from it, but he was a hundred yards off when sighted, and just as he is pulling the trigger another lion at his elbow lets a roar, but fortunately does not pounce on him. This was in a little thick clump of bush on the bank of the gully, the gully was nice and open, about eight feet deep with gentle sloping banks. Tom couldn't see the breast to get a shot, so walked backward. I heard Tom's shot and the brute growling, so galloped down and left the horse behind a bush, and being on the opposite side of the gully I thought by keeping quiet she would break from Tom and come my way, I got into the gully for a fine open shot. Tom, not knowing that I had come, was calling me, so I had to answer. I no sooner answered than out she came, making enough noise and showing her pretty teeth. I fired, but was too high and she drew back into the bush. Next time I got her on the shoulder before she got out of the bush, which settled her. You will see the first shot was too high as it just cut the skin for two inches on the head and only grazed the skull—her head and nose being level I ought to have fired into the open mouth. She was with young, having three very pretty unborn male cubs, a bucketful of fat and about seventy pounds of beef not chewed.

The next skin is that of the dark-colored lioness, she paid us a visit where we generally live about twenty-five miles from Spitzkop. When the cattle were brought up at Lundown one of the little herd boys said a beast had caught one of the cows. I said, "Why didn't you spear it?" He replied that the other little boy said no, it would kill him. She was a big Dutch cow, so badly torn that we had to kill her. The oxen and bulls had driven the beast off, so I made sure that it would be back before morning. The cattle are not kraaled at night, they stand all round the wagon; I was living in a wagon at that time. About 2 o'clock in the morning I heard a rumpus and ran out with the lantern; the oxen clearly showed me where he had gone, into a little bush 2yds. square about 60yds. away, so I left him till daylight, not knowing what he had got. In the morning I was looking at the spoor as it had run through the cattle, when one of the Kafirs with the dogs followed the spoor to the little bush, and up jumped a lioness and ran down into a gully full of reeds and bush. It would have given a fine shot as it had let the dogs get very close, but I never dreamed that it would sleep there. It had taken a calf in the night and run right through the troop without putting it down. I got the rifle and dogs and three little urchins and ran on the spoor. The dogs soon bailed it up in a clump of bush, but it always broke from the opposite side as soon as I got up, and away to another bush and backed in, and did this several times. Last of all they bailed it up in some scrub 4ft. high. I got up close enough and waited until she would show herself; all I could see was the scrub moving as she lashed her tail from side to side. Presently she walked forward a couple of steps where the scrub was shorter and I shot her in the shoulder; she dropped out of sight and I gave her a couple of minutes to die before going forward. Just as I was within a few feet of her, going very cautiously, one of the little urchins who waited from where I shot, called out that she was standing up. As I was in long scrub I had to get out again pretty sharp; but then he said it was only one of the dogs, so I got forward again and touched her; she moved, so I put a shot in her brain

I had four dogs at the start, but only three were in at the death, and one of them with a gash from the shoulder down the forearm cut with a claw. I followed the spoor and found the other one torn past recovery—the lioness had caught it by the face with its paw, torn part of its mouth off and cut it badly about the face and put four fangs into neck and shoulders. As she had a litter of young pups, I had her carried home and stitched her carefully up, but she died in the night. Although young common dogs they were very game; you will see their teeth marks on the skin at root of tail. Not one in a hundred will go in to a live lion, and very few to a dead one.

A couple of months after that, an old lion caught a heifer in the daytime, and the oxen drove it off; but as I was not there I didn't hear of it until next day. The wagon driver had put the dog on the spoor and very soon bailed it up in the bush, but although he had a good rifle he wouldn't go and fire at it; next day I hunted all about, but no luck. However, in about four days he returned in the night and killed a fine cow within four yards of the wagon. All the dogs happened to be shut up in the stable excepting one, and I heard that one barking viciously for an hour or more, but it being nothing unusual I didn't get up. At last the driver came and said a cow was lying dead; we found her two hindquarters eaten. I set a spring gun baited with beef, but he had had his fill and didn't return. I heard the gun go off and expected to find him lying dead, but it happened to be only a big cowardly wolf, the skin of which you have. We found that he had one of my fowls inside.

Now for the tiger skins. The one sent to Tom's young lady he killed in the low country. He saw a troop of impallah about forty yards off and told one of his Kafirs to try a shot. The boy fired and missed as usual, when up jumped the tiger and ran off, or rather bounded off. Tom bowled him over with a bullet through the shoulder. They have the same number of lives as a cat, and although the bullet could not have been in a better spot, he was not dead, but crouched down as if going to spring. They are most vicious, dangerous brutes. Tom finished him with a shot through the head. You remember hearing of poor Capt. Bowlby being killed by a tiger here; it was wounded and he missed it as it charged him. He died in three days, more from the force with which it struck him than from wounds, although both wrists were chewed to a jelly and he had severe scalp wounds. A tiger made a terrible mess of one of our boys; it was enough to kill any white man, but he got all right again. His head looked as if it had been used for some days by a butcher as a chopping block.

The skin sent to James I killed a couple of days before Tom got his. I was passing within half a mile of some immense boulders on the bank of a dry creek, and said to my three youths, "Come and see if there are no lion cubs this year." It used to be a favorite spot for them. When we got within four hundred yards we saw two cubs playing on the top of the boulders. (The boulders as big as a house.) We arranged to wait on the opposite bank of the creek and shoot one of the cubs. This would make a row and wake up the mother, which was sure to be within hearing. We intended to shoot her and then go and catch the cubs, one, two, or may be three. Well, we waited patiently for some little time, and out comes one and then another. I shot one on the top of a stone. It fell down, growling, out of sight; the other ran away. I fired and missed it. We waited very patiently for the old one, but there was no appearance, and then we crossed. Keeping a good lookout, we came upon the blood spoor going in below a rock. We procured long sticks and tried to feel for the cub; but still there were no signs. I offered a reward to any boy who would crawl in and pull it out, urging that it must be dead and there could be no live ones, as cubs are always growling; but not one of them was game enough to draw the badger, so we go away around to the back of the stone. Sentries were placed all the time so that there will be no surprise from the bush. We dug away the sand and stones and made a little hole, and to our surprise there moved past the little hole the eye and side face of a tiger, so it was just as well that the proffered reward had not been accepted, or there would have been a little Kafir boy the less in Africa. I fired in at the hole, which made him growl and show his head, and then he was finished with a shot over the eye. The entrance enlarged enough, and we dragged out a fine male as fat as a pig. From not seeing them distinctly at first, we thought they were lion cubs. First shot high up on the ribs and broke back bone; second shot in at the little hole only took a piece of skin off the back.

Your tiger skin we got in fly country this winter. Tom and Beck and I were shooting. Tom came in one afternoon—had seen a young giraffe which had just been killed by a lion, so we arranged to go next morning at cock crow, when we would probably find him feeding on it. We got within 50 yards and saw that it was gone. Three boys left us and went into the creek and Beck accompanied them. We followed the drag spoor for about 40 yards, and suddenly saw a big tiger disappear over the bank. I rushed to the bank after giving him time to cross, which he didn't; and I heard a growl on my right. Here was a Kafir on his back, with a face of terror which I couldn't describe. He had almost trodden on the tiger as he jumped down the bank, and it gave the tiger such a scare that it didn't collar the Kafir. Tom and I both fired and broke a hindleg when he stood, and we fired again instantaneously and both bullets went through his head. We now looked for the giraffe and found it twenty feet from the ground, laid nicely over the branch of a tree. What remained of the giraffe two men might have lifted with difficulty. The strength of these animals is something wonderful.

The skin in bad order is of no use, being only that of a wild dog. We caught 14 young ones this year and kept two. They are tame enough now. I have also two wild pigs. I had a beautiful little red deer which would follow me about; but one of the dogs killed it. Robert has two baboons, a stork four feet high and a beautiful tiger half grown.

W. S.

SHOOTING WITHOUT A DOG.

SOMETIMES, when after a long tramp I return empty-handed, tired and hungry, friends will laugh and ask all kinds of silly questions; and when I think of all the bad shots and how many times that same old partridge fooled me, I try to make up my mind that I will stay home the next time. But long before the next holiday appears, thoughts of the shooting grounds come up in memory. There is one place near the old back lane, down by the old apple trees, where I can flush a partridge nearly every visit, and in my mind I try to give a good reason why I should not trip her up the next time. Once last fall I was creeping along an old stone wall, carefully, slowly to the meeting of two walls, where a partridge was wont to flush every time; but this time there was no whirring of wings, nor tearing gun to cheek as the bird went flashing through the woods. I found instead some empty shells—shells of a different size from those of my own gun—my partridge was gone. Sometimes there comes a day that makes up for these failures and disappointments, and so it happened one fine December day.

During the night a few inches of snow had fallen, and soon after sunrise found me in an old pasture, amid patches of juniper, a tangle of blueberries and huckleberries, and a few stunted pines in the hollow. It was not long before I noted signs. Here a fox has been along, and how careful he was not to go through this tangle; he follows the old cowpath. Here is the track of a partridge, clear cut and crisp. Rabbit tracks criss-cross every way. But what are these tracks? They are too small for partridge, and there must be a dozen of them. It flashes across my mind—they must be quail, and I have never killed a quail. My grip tightens on my gun; carefully I look ahead; why, here they crawled through this hole in the fence; on top is a strand of barbed wire; bless wire fences anyhow; over we go. They have been feeding under these oaks; everything is torn up. I can look ahead quite a way now; right ahead is a sharp corner at the junction of two stone walls, beyond this an old turnip patch. How warm the December sun is! They may be behind that big stump sunning—no, a few more steps; the woods are open enough; queer I can't see them. All of a sudden—whirr, whirrr, whirrrrrr. There they go across the turnip patch, over into the pasture.

It is getting pretty warm by this time, and I wish I might fly over that wire fence, too. I think they went down near that cluster of pines. Scon I am only a short distance from them, hold my gun at ready, finger on the trigger, my eyes taking in everything; when, from almost at my feet, the covey bursts with a great racket; like sparks they disappear over the stunted pines; one flies straight ahead for the oaks, and just as he clears the fence I fire. At the report down he comes. There he is only winged; can barely reach him. I am stuck in the barbed wire; a few inches more, and—r-r-rip goes my coat—who cares? In my haste do not reload the discharged barrel of my gun, and pay for my hurry as I deserve, for only a few steps from where I fired rises another bird; bang—a clear miss—good-bye; and just as I remove my gun from the shoulder, whirr goes another to my right.

It seems to me to take all too long to load a muzzle-loader. After reloading, instead of going in the direction of where I marked down the first bird, I managed to come around on the edge of the bush. Careful now. A few steps more. He must be in the hollow. There he rises. I am proud of this shot, for the bird was nearly 30yds. before I pulled, and at the report he plunged headlong among the bushes, dead as a nail. I beat the bushes for a long while now, but cannot flush another bird. Hark! what is that? Not the clear, bold call *Bob White*. How sad it sounds, only one note at a time; *White, White, White*. They are calling to each other. Is my conscience reproaching me? Well, if it is, I am sneaking in the direction of the call all the same. The sound comes from near where I shot first, and just before I get there, on a little knoll, the covey rises with a great whirr. Both barrels are sent right into the flying covey, but none stay with me. No amount of beating around will flush them again, so I make a bee line for that house on the ridge; here lives a friend of mine. I must show him my game, of course; he admires my trophies, and tells me there is another covey back in his swamp, and regrets that he cannot go with me. The swamp, I find, is all cut up with tracks of rabbits, skunks and partridges, but I flush only one quail; this one, however, gives me even more pleasure than the others, for it flushed behind me. I whirl around and shoot. Where is he? Am sure he went no further. I search for a long time; at last go back to where I shot, and take a beeline to where he disappeared, look into every bush and hole, take a fresh start several times, and am just on the point of giving up when I see him squatting almost at my feet. He is only winged and it is as well that I find him.

The next day I flush the same covey again near the first spot, but can put up only a single bird, which is bagged in good style. It must be pleasure, indeed, to own a well-trained dog.

O. F. N.

LAWRENCE, Mass.

MICHIGAN GAME WARDEN BILL.—Grand Rapids, Mich., March 12.—*Editor Forest and Stream:* The Michigan game and fish warden bill, introduced in the House of Representatives by Hon. A. L. Lakey, of Kalamazoo, and which passed that body some weeks ago, was passed by the Senate yesterday, and given "immediate effect," so that it now only awaits the approval of the Governor to become a law. The game and fish protectionists of Michigan are under great obligations to the Committee on Judiciary of the Senate, to whom the bill was referred, for their promptness in reporting it favorably and urging its immediate passage. The Michigan Sportsmen's Association have been laboring for this consummation for the last twelve years. They now feel that their efforts have been indorsed by the people of the commonwealth through their Senators and Representatives, and congratulate all good citizens.—E. S. HOLMES.

THE CAMPAIGN AGAINST BRUIN.

Editor Forest and Stream:

Inclosed find an interesting and original letter from an old hunter in the Alleghany Mountains, Pennsylvania. Being from the pen of a whole-souled, weather-beaten lover of the forest, it will be of interest to all readers of your valuable paper who have come in contact with these simple children of nature. E. H. B.

PALATKA, Florida, March 6.

BROCKPORT, Feb. 19.—*Friend Ed:* I made myself a good knapsack yesterday, and packed it with the intention of going to Camp Bowers this morning, but it is raining and freezing as it comes down, so I thought I would put in the time writing to an old friend. I want you to take your memorandum and put down the numbers and names and locations of my bear pens, then you will understand what I may write hereafter. Wal and I took the old mare out and killed her on the left of the road at the top of the Perry Kelts hill. Then we built pen No. 1 near by and named it "Newhouse." Last Thursday G. Himes and I went out and built pen No. 2 on the divide between the head of Packard Run and Walburn Run and named it "Calamity." Friday we built pen No. 3 at the head of Rock Shanty Run and named it "Old George" in honor of our old friend. When it quits raining Wal and I are going over to build pen No. 4 below our shanty, near the laurel and big rocks before you get to the coon rocks, and we will wait for a name from you for that pen. Pen No. 5 we intend to build on the other side of the coon rocks, near the head of Coward's Bend Run, and name it the "Boss." Then George and I are going over to build one on Long Point, between the branches of Walburn. I intend to make a double-barreled pen of that and call it the "Double-header," and put in a partition and two lids. I will have three pens to look at when I go over and three coon traps. I expect to hear *waf-fah-waf-fah*. I have four double springs to take over next time. I will set three of them under that coon rock. I am bound to have revenge. There is a bear perambulating the woods that makes a track longer than Old Burchfield. I call him Moccasin-foot. George and I have each ordered a genuine Newhouse bear trap, and old Moccasin-foot will feel the close embrace of one of them, or I am fooled.

I have made one lick and will make five more. When I get back from the woods I will write again. If you should take a notion to come up and have a time, write and I will have everything ready for a good time.

I think spring has come to stay. Pigeons are flying; chipmonks (chipmucks) are out, and the bluebirds are here. When George and I were over building pens there was snow in the willows and none on the hills near camp, for we struck three coon tracks (an unlucky number, I think, Ed), and followed them on to Coon Ridge, where the snow played out, but we found a poplar tree (of course the largest one in the woods) directly on their line of march, that had been used for years. We threw off our coats and hats and went to work with a will. The tree was frozen hard clear through, but I chopped while George puffed and blowed, and George chopped while I sweat, puffed and blowed. Just before the tree was ready to fall George cut a club, cleared the way and squared himself, with blood in his eye, ready to make short work of at least three coons. The tree cracked and started, crashing through the smaller trees to the ground, and when the old monarch struck the frozen ground the slivers flew in every direction. In an instant George was in the top and—well, there is one consolation about it, that old porcupine will never fool another man.

Well, dinner is ready and I will close for the present, hoping this has found you well and prospering. Write to

Yours, as ever, JACOB FIELDS.

PACKING A DEER.

THE article on deer packing in a recent issue reminds me of personal experience in that line, and suggests an account of a method perhaps superior to that given. Years ago the writer made one of a party that passed a very pleasant week or two in hunting and fishing along the St. John's River in Florida. We sailed when it was possible, made an ash breeze when it was not, stopped here and there along shore, shot an occasional 'gator, lunched beneath the umbrellas of the palmettoes, pulled in, hand over hand, the unwilling bass as he threw the spray from his wide open mouth, chokingly protesting against such violent compulsion, now and then stopped a duck in his swift journey to better feeding grounds, and in one way and another passed the days in a very enjoyable manner. Neither counting room, counter nor office pointed a warning finger at us, and we were due at the wharf whence we started, on our return, and not a moment sooner. There was great satisfaction in that.

Arriving one day at a point where we intended looking for deer, we tied up in a little bayou and marched forth across the prairie that stretched from the river a mile or two to the hamak whose dark green wall rose in a long line from right to left. Passing through this fringe a few score yards we came to a beautiful savannah sentineled here and there by towering pines and dotted occasionally by patches of scrub palmetto, just the place for deer. Before we had made the tour of this promising field, a fat doe sprang from her well-concealed nest in the palmettoes, and with gaily defiant wave of her flag, bounded away only to tumble in a struggling heap at the crack of the gun. And this is the way we prepared her for packing: The bones of the forelegs were taken out from knee to foot, leaving the foot on the skin. Bones of the hindlegs were tied together, and putting one arm and the head through the loop so formed, as the soldier carries his blanket in a roll, the doe was backed and carried nicely, disemboweled, of course. O. O. S.

PRESENT AND FUTURE. Is the Yellowstone Park going to be saved to the people for generations to come, with all its wonders, mountain streams, fauna and flora? If not FOREST AND STREAM is not to blame. And be the man hanged on ten thousand kites that gives his vote to desecrate it. If that day ever comes I hope nature will revenge herself by turning the Niagara up stream and emptying the waters of the Great Lakes by the way of the bayous of the Mississippi into the salt-water gulf. Strong talk, but I want others after me to smell the forests, paddle the streams and go a fishing and hunting. Big and best medicine. Fresh air, sunlight and out-of-door sports.—DR. E. S.

POWDER AND WADS.—Charlestown, N. H., March 12.—I note "J. M. W.'s" letter of March 2, and am glad to find that we agree about wadding and penetration. I certainly should have expected just the results he got, but as I wrote am sorry that he did not try both 3 and 2 wads on 2½drs. of powder. The snow here was knee deep when I last wrote, but we have had 20in. more since, and locomotion outdoors is practically impossible, except in the middle of the main road, or in the ditches which have been opened out by snow plows and shovels up the village side walks, fairly covering the fences on either hand. I will endeavor to make some penetration tests next season, but can say now that I fully agree with him as to the excellent qualities of Hazard's electric or ducking powders, which I use myself for the little shooting I do nowadays. I do not see that it is at all inferior to the Curtis and Harvey, which I was taught by "Frank Forester" forty years ago was the only powder worth shooting with. I have also found Dupont's Eagle Ducking very excellent. I do not think the Hazard Company put up an "eagle" brand, and the "orange" powder is made by the Rand & Laflin Powder Company, of Westfield, Mass. I wish "J. M. W." would try the wads I mentioned, viz., one pink or black edge and one thick merino felt on the powder, and a card board on the shot. I think the thick elastic felt expands so as to fill the barrels and give a better result than a multitude of thinner hard wads. If he will do this and compare the result with the trials which he has already given, the notes will be of value, and judging from the present appearance of this part of the world, he will be able to do it at least two months before I shall have an opportunity. I also think that with such wadding he will get a high degree of penetration with only 2½drs. of powder, as I have used that quantity with very good results for many years, but the powder had to be good.—VON W.

A CAMP ON THE CASS.—Dr. E. Sterling, of Cleveland, O., sends us a sketch with this note: This is a rough sketch from memory of a hunting camp on Cass River, Tuscola county, Mich., where O. H. Perry (uncle of Mrs. Whitney, wife of Secretary Navy Whitney) and myself, from 1853 to 1860, spent the best days of the year, especially in "Indian summer days" to mid-December, finding what the primeval forests produced, and killing game only as we wanted it for our lunch and now and then for some renagade Ottawas that camped eight miles above us up the river. The land then the State Surveyors called "swamp sand," and valued at 12cts. an acre. Now it is a settled country, and will average $30 an acre. Forest, deer, elk, bears, porcupines, buffalo, grouse, squirrels of three kinds, all gone. Villages have taken their place. By the way, our Oliver H. Perry was a grand-nephew of Commodore Oliver Hazard Perry of Lake Erie naval battle fame, the only officer on a water fight that ever captured all the vessels and crew of the enemy.—DR. E. STERLING.

WINCHENDON, Mass., March 12.—The Winchendon fox hunters have been quite successful this winter in capturing foxes, coons and other animals, whose fur is sought for in the market. The record of foxes of each of the quartette is as follows: Chester T. Houghton 24, Marcus M. Houghton 17, Henry H. Lawrence 5, and Wayland Phillips 5.

A SWIMMING SQUIRREL.—A Kittery, Me., correspondent, "F. B. C.," relates that the game taken during a day's trip to Chases' Pond, in upper York, included woodduck, ruffed grouse, sandpipers and a gray squirrel which was shot while it was swimming in the pond 50yds. from shore.

SNIPE.—Princeton, N. J., March 11.—On March 8 noted five kildeer snipe. March 5 three more snipe, variety unknown. March 10 two robins in apparently fine condition.—T. R.

THE NEW YORK GAME LAW.

Editor Forest and Stream:

The communication of Robert Barnwell Roosevelt, in your issue of 10th inst., on July woodcock shooting, is noticed with regret upon his own account, as well as in general reference to the subject. Regret because it is supposed he is one of the fish commissioners, and ought to be sure of being correct before making such an assertion as that "woodcock go south in August, etc.," as an excuse for the July killing, this bird so rapidly being depleted by the increasing "summer resort" demand. It is felt he will regret putting himself on record over his own signature, as inserting so incorrect a statement, and justifying this practice in defiance of the general opinion of true sportsmen, as tending to extinction of the species. Sportsmen acquainted with the habits of this bird well know the contrary of the assertion; that they migrate about the same time as robins. Coming about the same time in the spring and going about the same time in the fall. The autumn migration is during the October full moon, thence moving gradually southward, depending in progress upon the severity or suddenness of approaching frosts. Previous to going, when swamps become flooded, they move to high ground near by and gather in the best feeding spots.

That they leave their nest the instant they are out of their shells is true, but they are carried by the parent only to the feeding ground in the vicinity, and which is seldom their breeding place. In dry time they move to moist places for better feed, and in heavy rains move to cornfields, hopyards and the like, where the rain brings worms to the surface. In August moulting they are sickly, feeble and dumpish, and resort to hiding among thick ferns or weeds, when they more often hide than fly, and when forced to fly often go not over a rod or two. A few years ago, when change was made from July 4 to Aug. 1, this same motion was advanced by a State senator, that woodcock left his county in September, as a reason against Sept. 1. It has since then been clearly proved that the best bags were made in that county late in October.

As to their July size, the parent bird is doubtless about the same as in October, and probably this is what the gentleman kills in July, while her young are hidden under some rotten log, bog or root, helpless and unable to fly. The writer has seen parent birds carrying young upon their backs to hide as late as July 27, and found and handled the young one so hidden, a mere chick in down without feathers. These are stunning facts for those who favor turning the pot-hunter loose in breeding time to gratify the clamor of "watering place" guests with more money than sense. It is enough to say that the more conscientious and best informed sportsmen so far met, favor Sept. 1 as the proper time in common with partridge. Not one such has been found to favor July. Such are those probably referred to as "weak-backed dudes," as if that would adorn the dignified office or help the Roosevelt bill.

The complete copy of that bill shows its origin out of similar notions as the woodcock scheme. It purports to be a codification of existing law. Examination shows nothing but what is much clearer and better expressed in existing law, while a good codification is extant already. Closer scrutiny discloses important provisions wholly omitted, and that every change made points in the one direction of nullifying the benefits of existing law. It has scarcely a provision that pot-hunters and marketmen may not throw their hats through. As samples: Sale of venison until March 1, means inducement to crust deer; deer killed and consumed in the woods is practically a permit to all fishing and hunting parties to kill all they please. "Out of the State venison may be had, sold, etc.," but who will prove where any piece of venison was killed? Trout fishing to commence March 1, when scarcely through spawning. As Seth Green says, he has taken spawn as late as April 1. The 6in. trout law, "catch and kill," is equally meaningless, as it allows them to be kept alive in "private reservoirs" by thousands, one of the very things the law was aimed to remedy and prevent depletion. The above are only a few of its many bad feature, so bad it cannot be modified. Outside of its authors the general sentiment is unanimous in its condemnation so far as any expression has been heard. JOHN D. COLLINS, Sec.

UTICA FISH AND GAME PROTECTIVE ASSOCIATION, Utica, N. Y., March 1.

Editor Forest and Stream:

Considerable exception is taken in this locality to the Roosevelt bill in Albany. Our principal game here is the lordly grouse, which all should like to see protected as much as possible. The bill, should it become a law, although it shortens the season, will not afford as much protection as the present. As it is large bags cannot be made in September or until the leaves fall, and this connected with the hot weather prevents market-hunters from getting enough together at a time to pay to ship to market. I think if the season is to be shortened, December should not be included in open season. When winter sets in early a great many birds are killed this month while budding, and should the time of selling be extended to Feb. 15, birds would be killed this way in defiance of the law. If there is need of time beyond the time of killing for selling, 15 days would be plenty for dealers to unload.

BINGHAMTON, N. Y. FAIR PLAY.

In the New York Assembly, Hadley, of Franklin county, has introduced a bill making the open seasons as follows, dates inclusive: Deer, Aug. 16-Oct. 31 (sale of venison Nov. 1-Feb. 28); wildfowl, Oct. 2-March 31; quail, pinnated, ruffed and spruce grouse, hare, rabbit, gray and black squirrels, woodcock Oct. 1-Dec. 31 (grouse in Adirondacks, Sept. 1-Dec. 31.); trout, salmon April 1-Aug. 31 (in Adirondacks, May 1-Sept. 14; on Long Island, April 1-Aug. 14; black bass, muscalonge, pike, perch, June 1-Dec. 31 (with exceptions).

A RAILROAD TO COOKE CITY.

A BILL

Granting to the Rocky Fork and Cooke City Railway Company the right of way through a part of the Crow Indian Reservation, in Montana Territory.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the right is hereby granted, as hereinafter set forth, to the Rocky Fork and Cooke City Railway Company, a corporation organized and existing under the laws of the Territory of Montana, for the construction, operation, and maintenance of its railroad through the lands set apart for the use of the Crow Indians, and commonly known as the Crow Indian Reservation, beginning at a point at or near Laurel, in Yellowstone County, Montana Territory running thence by the most practical route to or near the mouth of Rock Creek, commonly called Rocky Fork; thence up said creek to the coal mines near Red Lodge Post-Office, in Gallatin County, in said Territory; thence by the most practicable route to Cooke City, in said Gallatin County.

SEC. 2. That the right of way hereby granted to said company shall be seventy-five feet in width on each side of the central line of said railroad as aforesaid; and said company shall also have the right to take from said lands adjacent to the line of said road material, stone, earth, and timber necessary for the construction of said railroad; also ground adjacent to said right of way for station buildings, depots, machine shops, side tracks, turnouts and water-stations, not to exceed in amount three hundred feet in width and three thousand feet in length for each station, to the extent of one station for each ten miles of its road.

SEC. 3. That it shall be the duty of the Secretary of the Interior to fix the amount of compensation to be paid the Indians for such right of way, and provide the time and manner for the payment thereof, but no right of any kind shall vest in said railroad company in or to any part of the right of way herein provided for until plats thereof, made upon actual survey for the definite location of such railroad, and including the points for station buildings, depots, machine shops, side tracks, turnouts and water stations, shall be filed with and approved by the Secretary of the Interior, which approval shall be made in writing and be open for the inspection of any party interested therein, and until the compensation aforesaid has been fixed and paid; and the surveys, construction and operation of such railroad shall be conducted with due regard for the rights of the Indians, and in accordance with such rules and regulations as the Secretary of the Interior may make to carry out this provision: Provided, That the President of the United States may, in his discretion, require that the consent of the Indians to said right of way shall be obtained by said railroad company, in such manner as he may prescribe, before any right under this act shall accrue to said company.

SEC. 4. That said company shall not assign, or transfer, or mortgage this right of way for any purpose whatever until said road shall be completed through that part of said reservation through which it shall be constructed: Provided, That the company may mortgage said franchise, together with the rolling stock, for money to construct and complete said road: And provided further, That the right granted herein shall be lost and forfeited by said company unless the road is constructed and in running order through said reservation on said line within two years from the passage of this act: And provided further, That no part of said line shall touch any portion of the National Park.

SEC. 5. That said railway company shall accept this right of way upon the expressed condition, binding upon itself, its successors and assigns, that they will neither aid, advise nor assist in any effort looking toward the changing or extinguishing the present tenure of the Indians in their land, and will not attempt to secure from the Indian tribes any further grant of land or its occupancy than is hereinbefore provided: Provided, That any violation of the condition mentioned in this section shall operate as a forfeiture of all the rights and privileges of said railway company under this act.

SEC. 6. That Congress may at any time amend, add to, alter, or repeal this act.

SEC. 7. That this act shall be in force from its passage.

New Publications.

"FROM THE FORECASTLE TO THE CABIN."

NOW that the merchant marine of America is, like its navy, almost a thing of the past, a glorious memory, it is most important that this memory of its past greatness be preserved, in the hopes that it may keep alive a feeling that will in the future impell our legislators to do what those of the present and the immediate past have so woefully neglected. Foremost among the vessels of the past, when American ships were commanded by American sailors, were the Liverpool packets, which, for a time, made a brave though hopeless fight against the use of steam on the seas and rivaled in speed the earlier steamers. Of all these none has become so famous as the Dreadnought, and none among American skippers is so well fitted to tell the story of a seaman's life as her captain. Who Captain Samuels is need not be told, his fame is known to all who are at all concerned in American yachting or shipping, but the story of his long and useful life is less widely known. Those who would know more of it will find much that is exciting and interesting in the book "From the Forecastle to the Cabin," which has just appeared from the press of Harper & Bros. Going to sea at the age of 11 in the orthodox manner, by running away from a stepmother, Captain Samuels saw the rise, the long period of prosperity, and the decline of the American merchant marine, and experienced all the fearful vicissitudes of the common sailor's life before rising to the high positions that he has since occupied. What he went through is told in plain and simple language and in a manner that carries the impress of truth though some of the occurrences are as exciting and wonderful as any sea novel. While by no means a boy's book it is a book that every boy who wishes to run away to sea should read with his regular course of Marryat before he packs to leave home.

There are plenty of interesting and exciting sea tales, thanks to Cooper, Marryat and Michael Scott, and there are a few more serious and reliable records of sea life, foremost among which will always stand Dana's "Two Years Before the Mast." Between these two, Captain Samuel's book will find a lasting place, combining the life and incident of the works of fiction with the more permanent and important facts of a sailor's life with its many hardships, and also of the glories of a fleet, now passed away, that Americans should always hold in remembrance.

A VIOLENT COUGH continued through the winter often brings consumption in the spring. Soothe and tone the irritated and weakened lungs with Hale's Honey of Horehound and Tar, and the cough yields and the danger disappears. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

MESSRS. L. W. FERDINAND & CO., 267 Federal street, Boston, whose advertisement appears in another column, announce a new and complete catalogue of fittings for yachts and canoes. Intending purchasers might do well to see it.—*Adv.*

WELL SPENT.

THEY laughed and called me idler,
And said I had lost a day,
Because my creel was empty
And my rod had had no play.

But I smiled and made no answer,
For I knew what I had found
Far up by a fall of the water,
With murmur of gentle sound.

Where a leaf went slowly sailing
Round the little basin's edge.
And a bit of foam from above it
Kept trembling hold on the ledge.

And there on an oak tree ancient
My rod had leaned unused,
While prone on the turf and the shadow
I had looked and listened and mused

So I smiled and made no answer
When they said I had lost the day.
For I knew I had made me riches—
I had brought a thought away.

EDWARD CARLTON.

A SALMON FIGHT IN THE NIGHT.

THE moon is often credited with great influence over the affairs of men. Old-fashioned farmers cut timber, plant crops and kill hogs in the old or the new of the moon with a religious observance of tradition; and I knew one old fellow who would only make soap under the new moon, and not then unless he could stir it with a "saxafrax" stick cut when she was in her last quarter. There are many anglers who hold to the belief that the moon exercises a considerable influence over the race of anadromous fishes, especially salmon, and that they rise better and more freely at certain of its phases than at others. I am not one of these, but I do wonder if the sun exercises any control over us anglers! Certain it is that at this season of the year, when the sun is daily getting higher and more nearly over our heads, we become aware of symptoms not noticed during the early winter when it was further south. Then it is that we wander restlessly about the house for a day or two, stopping most frequently at the door of the closet in which we so carefully stored away our precious tackle at the close of the last season, half ashamed of what we know we are about to do, but will not, we think, do quite yet, partly because we really enjoy the pleasure of fighting our inclination yet a little longer, and partly because we fear that the indulgence of our desire to overhaul our tackle while weeks and months must elapse before we can use it will only add to our restless longings; that the pleasure of anticipation will, if we indulge it, become a pain before we can gratify it.

Such has been my case for two or three weeks past, and up to this time I have been able to master my inclination; but two or three recent articles in your paper have so aggravated my symptoms that I have had to yield, and now the disease has full sway over me.

You published, two or three weeks ago, the story of the salmon that was saved—now I purpose to write of the salmon that was lost. It was in 1882, an off year for salmon, and my sport had been indifferent. I had been ten days on the river and had hardly taken that number of fish, and even they were small, as my score-book shows.

It was in the afternoon of Saturday, July 8, and the weather was perfect; the sun was generally under a cloud with an occasional gentle fall of rain, which was so fine and gentle as to be rather mist than rain; a slight current of air down stream made casting a delight, and the water was in elegant condition. Under these favorable circumstances I took my seat in the canoe and floated down to a pool a mile or more below my camp at the head of the island which I had left undisturbed for some days awaiting just such conditions of sky and water as then existed. The pool was bounded at its upper end by a sharp riffle, made by an obstructive ledge of rock that shot out from the right bank of the river and extended two-thirds of the way across the stream.

A hundred and fifty yards below the pool terminated at the head of a large island, the passage of which is always accomplished by the channel next the left bank of the river, that on the right being accounted dangerous by reason of the many sharp, jagged rocks lying in its bed.

The mountains rose abruptly from the very edge of the water, and the dark evergreen of the foliage extended to the shore. Twilight fell early in that deep gorge, and when it became dark it was very dark indeed. Near the head of this pool I anchored my canoe and with high hopes commenced operations. Cast after cast followed, and yard after yard was added to it, but the water was apparently barren. Another fly was substituted and the water carefully searched again with no better result, and the canoe was allowed to drop down with the current ten or fifteen yards to enable me to reach new ground. So I fished slowly and carefully, for I did not wish to reach the foot of the pool until later in the afternoon, say between 6 and 7 o'clock, the hour when salmon, as I know them, are most willing. Near the foot of the pool, nearly opposite the head of the island but in the left hand passage, is a large brownish red rock, covered by water at all seasons; it is a celebrated resting place for salmon on entering the pool, and well known to all anglers who frequent that portion of the river.

It was here that I expected to raise my fish and at this point I arrived just at the proper time.

I had got out about sixty feet of line and a yard or two more would place my fly just where I wanted it, directly over the rock, and I was in a state of most pleasurable anticipation, with all my attention concentrated on that point, when by far the largest salmon I had ever seen rose within a very short distance of the canoe. His leap was prodigious, and when he disappeared it was with such a tremendous splash, and he was so nearly at hand that he actually splashed us with drops of water thrown off by his vigorous action.

Most salmon anglers have a belief that a leaping fish, that is one that leaps apparently for pleasure, being attracted by nothing visible to the eye of the angler, will not rise to the fly; but I have found that it is always worth while to try them, so I sat down at once and quietly reeled in my line until the upper end of the leader was nearly in the tip ring.

After waiting ("resting him") five minutes by the watch, meanwhile discussing with my men the weight of the fish, which we all agreed was at least thirty-five pounds, and the chances of our capturing him, I allowed the fly to float over the spot where he rose. My heart was in my mouth I assure you, partly because I feared he would not rise at all and partly because I feared he would, for he was so nearly under the tip of my rod that I fully expected that something would break if I should fasten him. Hardly had the fly touched the water before he rose to it with a leap even more vigorous than before, and was hooked. His first rush took the tip of my rod far below the surface of the water, but everything was free and the fish, after taking some fifty feet of line, made one more leap and then followed the canoe quietly.

As we were getting up the anchor and working up toward the better landing place near the head of the pool, Old Frank, turning to me, said, "That fish will weigh forty pounds sure." I had had three good views of his proportions, and, although I generally dislike to weigh my fish in that way, I was of his opinion in that case. The landing place was on the left bank of the river, and in front of quite an area of dead water, deep and free from snags and rocks to entange line or leader.

To this point we brought the fish without difficulty, but there he sulked. He lay about six feet from shore and in eight or nine feet of water, and there he seemed disposed to remain. After waiting fifteen minutes for him to commence operations of his own accord, I had recourse to the usual mode of starting sulky fish, and pitched a peck or so of stones at him; it was of little avail, however, for he would not move at all except when some stone larger than usual landed unusually near him, and then only to move lazily off fifteen or twenty feet and return to the same spot. Night was fast coming on and I was anxious to bring the fish to an understanding as quickly as possible. I therefore sent the man out with the canoe to stir him up with their poles. This had little more effect than the stones, as he could not be persuaded to move more than a few yards, and that in so lazy and sluggish a manner as to suggest sucker rather than salmon.

It was a dangerous thing to do, since had the fish really started then, as he did later, he would probably have taken the line under or against the canoe, when it would certainly have parted.

I therefore abandoned myself to a patient waiting for him to get over his sulky fit and behave like a game fish. It was now after 7 o'clock, and I felt sure that I was in for an after dark fight; so I got my seat out of the canoe, had a ring of smudges made around me, sent the men into the woods for bark for flambeaux, lit my pipe and waited events.

It was just five minutes past six when I hooked that fish, and for two hours and ten minutes he maintained that passive attitude; then, at fifteen minutes past eight, he commenced a wonderful performance. Up and down and around and about that pool he rushed, never still for a moment, now taking line off the reel at a fearful rate, now rushing toward me faster than I could possibly recover it, leaping at the end of each wild rush, as I could tell by the ear only, for it was now too dark to see more than sometimes the splash. For thirty-five minutes this performance continued, and until I was just ready to give that fish twenty-five dollars to give up or get away. Every muscle and nerve of my body was aching. I was wet to the skin, and the flies and mosquitoes were something awful.

Before dark fairly shut down on us I had taken in the geography of the situation, and decided upon my plan of action if certain events occurred.

From where I stood I judged it to be about one hundred and twenty yards to the head of the dangerous rapid on the right hand side of the island; I had just that amount of line in the reel, and had made up my mind that if the fish determined to leave the pool by that route while daylight lasted I should follow him in the canoe, but that after dark he might go alone; if he essayed the other and safer passage, I determined that I would go with him whether it were daylight or dark.

At last he seemed to have made up his mind and headed straight for the head of the rapid, as I could tell only by the direction of the strain, for it was too dark to see anything more than twenty feet away.

I kept my thumb on the coil of line until it seemed that he must be in the very head of the wild water, and feeling that the time had come when I must trust everything to the strength of my tackle, I threw my rod well back and shut down on him. He struggled fiercely for a moment, gave it up and became perfectly passive. I could feel from the changing direction of the strain that he was gradually swinging in with the current toward the shore on which I stood, and supposed that his (and my) troubles were over and that he was dead. The current where he lay was, however, so heavy that it was impossible to bring him up against it, and I dare not, could not, in fact, go down to him; so I sent the men with the only remaining flambeau and the gaff to look for him below, as he was now evidently close under the bank. It was a weird, strange sight, to see them as they passed down, sometimes crawling and stumbling over the rocks, and sometimes wading where the rock shore was too precipitous to afford a foothold. At last I could see that they had located the fish, and while one held the remains of the flambeau high overhead, the other, gaff in hand, waded gently into the water. I distinctly saw him advance the gaff, and just as distinctly felt the fish move out into the stream, and then I knew that he was not dead as I had supposed. However, I gained twenty or thirty feet of line by the maneuver, and again he came close under the bank. Three times was this repeated and I gained line every time; I was doing well enough, and I felt that I ought to direct the men not to attempt to gaff him, but to keep this process up until I could get him into the deep, still water near at hand. I was, however, completely exhausted and quite indifferent to anything except to get the affair off my hands somehow; and I said nothing. At last the gaffers made a slash and a stroke—I felt the gaff on the leader and everything let go.

The fish was gone after two hours and fifty-five minutes of exhaustive work. It was just nine o'clock when I reeled in my line and we started for camp, and ten when we arrived. My friend had become seriously alarmed, and was just about starting out in search of us when he heard the metallic ring of our iron-shod poles on the rocks and stones of the river bed.

Not a word was spoken until just as we came near the landing, Old Frank turned to me and said, "That salmon would have weighed fifty pounds."

I always thought myself that he would have weighed a hundred. S. A.

SALMON IN THE HUDSON.

THE Troy *Times* of the 11th inst. contains the following account on this subject. We think the writer is mistaken in saying that the State Commissioners do not favor the movement. The only opposition we know of has been merely an occasional slur or sneer from a superintendent, whose intense egotism prompted him to oppose all fishculture not done by himself, and who imagines that he is the greatest of all fishculturists because of some cheap newspaper notoriety. The last report of the State Commissioners speaks with praise of the co-operation of the U. S. Commission, and there is no rivalry or jealousy between the two, as we understand the case, except in the quarter to which we have alluded. The *Times* says:

"A large number of our citizens who have, in common with others who reside upon the Hudson, appreciated the successful efforts of the United States Fish Commission in restocking the Hudson with salmon after our own State Commissioners had failed to do so, are moving in the matter to secure the construction of fishways, that the salmon may reach the waters of the upper Hudson as a spawning ground, and to secure such legislation as will prevent the catching of salmon in nets without interfering with the usual shad fishing. At the outset, however, these efforts are met with the assurance that the State Fish Commission do not favor the movement, and it cannot have their support from the fact that such legislation would interfere with the shad fishing, which is of a paramount consideration. If this were true, the objection would be a reasonable one, but in this matter the position of the State Commission is untenable, and is seemingly taken without knowledge of consistency. By far the larger portion of the shad caught in the Hudson are taken in gill nets, and the meshes of the latter to take shad must have a limited size of mesh, far too small to take salmon, and if the State Commission will look into the matter intelligently they will learn that the nets made to gill salmon in the rivers of Canada would let all the migration of shad which enter the Hudson River pass through them. Not only is this true, but it is a fact that where gill nets are used to catch salmon, so generally will the salmon jump over them that their tops are covered with bushes to compel the fish to run into their nets. The nets most interfering with the stocking of the river with salmon, are the seines used in the shallow waters of the Hudson between the cities of Hudson and Troy, and the drop-nets at the Troy dam, which take the salmon from just below the dam when seeking a place to ascend to the upper Hudson.

"Last year over fifty well-developed and lusty salmon were taken in the Hudson on their return from the sea. These fine specimens of fish were grown from the salmon-fry put into the Hudson River some three years ago by the United States Fish Commission, and it is also a fact that the upper Hudson is now well-stocked with the fry put in the succeeding years, and all that is wanted is to furnish means for these fish after they have gone out from the river to the sea, to be provided with means to make the ascent of the several dams on the river so that they can reach a proper spawning ground. The Hudson River is a salmon stream, as established by the well-developed fish returning to its waters after having been placed therein as fry, and well-authenticated tradition and history of the fact. If our State Commission failed to make the Pacific variety develop in the Hudson, they should not pout and sneer at the better and more intelligently made efforts of the United States Commission, or refuse to co-operate with those who desire to restock the river with a fish that would be quite as profitable as the shad."

DISEASED TROUT.

Editor Forest and Stream:

My attention being called to a paragraph in your valuable paper inserted by Mr. Atwater, of Montreal, in reference to our trout in Canadian lakes, which are at one period of the year affected by a disease, which is caused, in my estimation, by the absence of rocks and rough gravel, whereby they may rub or cleanse themselves of those little tormentors like a diminutive worm or boring insect, scarcely visible to the naked eye; still, there they are tormenting the fish, which fly to every spot where they can by friction free themselves. It is the same in the old country, several species being subject to the same, particularly grayling, trout, roach and dace, also the barbel, or what you call in this country the sucker. In the month of July, wherever there are weeds growing, you have no difficulty in lowering your hands in the weeds, and when you feel a fish work the fingers continually until you feel the head and tail. By forcing the middle finger in their mouths and at the same time forcing the fish to the bottom, you can throw them out by scores. The left hand must also encircle the tail. You will find beds of weeds when in flower from six to eight feet square, contain sometimes a dozen fish; these fly to the weeds and scour themselves. The Airbyshire fishermen call it the "rut" in fish. The grayling and roach are particularly infested, so much so, that I have had no difficulty in placing my landing net under them, they making very little effort to get out of reach. They are found generally in the side of a swift stream where rough sand and stones abound, in about four or five inches of water, and being in that state are not fit for human food. A jolly old angler, a resident here, was out on the St. Lawrence one hot afternoon fishing, when he observed a similar incident among the bass, some hundreds rising to the surface and making a circle round his boat for a considerable time, and disturbing the water within three yards of boat, and most probably they had also become affected, which caused him to laugh, as they followed each other under and over, darting in a continual circle for upward of half an hour. I should like to hear the opinion of some of those who are practical fishermen of ancient date, like myself, the old Yorkshire fly-maker and fisher.

MALTBY, SR.

MONTREAL, Can.

THE FALLS POOL.

"DO you know that dark hollow, Mr. Harry?" asked Will, pointing to a deep ravine a mile below us.

"Yes, what about it?" I said.

"Why, down that hollow comes a little creek that has in it the biggest trout you ever saw—regular whoppers. Five years ago I caught in that creek the biggest trout I ever saw anywhere in these mountains. I often thought I'd go back, but I never got there, and I don't believe that creek has been fished in since, for nobody knows of it."

"Well, suppose we try it," I said.

"All right Mr. Harry; I'll take you to it, and if you don't catch the biggest trout you ever caught, why—well I'll carry all our traps home myself."

We were eating our noonday lunch on Eagle Creek, 20 miles above old Barney's cabin, when Will pointed out this ravine. It lay to the east of Eagle Creek, a mile below us. The mountains on either side rose high and steep and covered with hemlocks, giving a dark, gloomy appearance to the mouth of the ravine.

"Mr. Harry, there's a hole up that ravine just below a falls that's got trout in it as long as that stick," said Will, holding up a stick 2ft. long.

"Nonsense, Will, you don't mean it."

"I tell you it's the truth. I saw them that day, and I broke my line on a trout that was as long as that stick, and I know it," said he, with a positive shake of his head.

"Well, Will, as soon as we finish dinner and have our smoke, we'll start for this creek and try to find some of these big trout."

"I'm thinking if we strike over the mountain about where we see that big pine," said Will, pointing to a high pine that stood boldly out on the mountain top, "I'm thinking if we cross near that pine, we'll strike the creek on the other side just about the falls, and then we can fish down to where it empties into Eagle Creek."

"All right, you be the guide and I'll follow."

An hour later we shouldered our traps and started on our journey over the mountain. It was about 5 o'clock when we broke our way through the last patch of laurel and stood on the bank of the creek. It was a wild mountain stream rushing through a deep valley. The volume of water was immense, but the channel was narrow and rocky and the stream dashed about among the rocks until it seemed a boiling mass of foam. The roar of a falls below came plainly to our ears.

"There it is," said Will, "I knew we'd come out near the falls. We can't fish in this swift water; let's go in down to the falls."

It was possibly 6 o'clock when we reached the falls. Concealed behind a rock which stood at their edge, I looked over the prettiest bit of fishing water I had ever seen. The rocky sides of the stream converged just above the falls and the water narrowed into a small channel, leaped up, massed over itself, shot in little hissing streams into the air and then made the leap down twenty feet into the pool below. For ten feet below the falls the water was boiling and seething and whirling in swift swirls. Beyond stretched a long narrow pool, where the water lay smooth and quiet as though resting after its long rush down the rapids. The rocks and ferns that lined the sides were mirrored in its clear, deep green water.

"Now," said Will, "it's getting toward evening. Put on some gray flies and cast over near that rock that's sticking its nose out of the swift water and I think you'll see a good fish."

I did as Will directed. Before the flies touched the water the tail fly was taken and I landed a poor little trout of eight inches. "Well, Will, if this is one of your big trout, we could have done better on Eagle Creek."

"Never you mind, Mr. Harry, that's only a little fellow that was skimming near the top; try them again."

I lengthened my line and cast well below the swift water. The surface broke just as the flies were beginning to make their trail visible on the water. Two streaks of gold leaped into the air; a quick, sharp stroke, and both were hooked. Down they plunged into the depths; back and forth they sped across the pool, until wearied and exhausted, they gave up the struggle and we landed them in the slack water at our feet, good 12in. trout both of them. The next half hour I took six more, the largest 15in. I was taking the last one from the hook when Will cried: "Oh, look there, Mr. Harry!" I turned and looked in the direction he pointed. The wake of a fish was plainly visible on the surface. We watched it several seconds as it circled around through the clear water near the surface. Just then a white moth came out of the pines and flew across the pool. It was fully three feet above the surface, and had reached the middle of the pool when there was a splash, a long streak of light shot into the air, an instant remained in sight, then plunged back into the water. "Quick," said Will, "put on a white fly and try that fellow, he's the biggest trout I've seen this many a year."

I tried fly after fly, I trailed across the place where we had seen him, but no rise came. I was beginning to despair of getting him when Will started off into the woods and soon returned with a large white moth. "Try this; I think this 'll fetch him if anything will."

I put on a large hook and carefully fastened the moth on it, then dropped it into the water at the foot of the falls.

The moth was instantly sucked under out of sight, and the line sped downward. It had gone some twenty feet when I felt a quick, decided strike. The line tightened, then remained stationary. "Will," I said, "I have a fish and I think he's a good one." "I don't think you have," said Will, "I think you're fast on a log." It did look more like being fast on a log than anything else, but certainly I couldn't have been mistaken, certainly I felt the strike of a fish. "Well Will, look out then," I said, "I'm going to pull anyway, and we'll see what it is." I raised the point of the rod until the line became perfectly straight; then I struck, struck hard. I thought it was a log. The line remained stationary, taut. A feeling of disappointment took the place of the eager expectation with which I struck. "Will, I guess you were right, I— By Jove, it's a fish after all, and a good one." I tightened the line and gave a sharp pull. What a dash he made; such a dash as as only one of these mountain trout can make. The line whizzed through the rings. The reel fairly smoked as it whirled around. Forty yards of silk spun out before I thought of trying to stop that mad rush. When I did raise the rod it was useless trying to stop the course of the trout. The rod bent into a half circle. The line became thin as a single hair with the tension. Still on went the trout. Yard after yard sped out. He was nearing the rapids below the pool. I tried to check him again. In vain. With a fierce rush he passed into the rapids. Fortunately my line was a long one. Down the rapids he went. Long as was my line it was now almost run out. I could spare but little more. I jumped to the top of the rock near me, from it to the ground beyond, and ran along the side of the pool. The fish stopped in a swirl in the rapids. I was careful not to disturb him. I had seen his energy in the still water. What would it be if his next flight were down among those foamy waters below. I looked with dismay at the dash of the waters beyond the little swirl in which he was resting. Will had followed me and was looking over my shoulder.

"Will," I said, as I stood reeling up the slack line, "what are we going to do if he goes on down the creek?"

"I don't know," answered Will, "I never saw a trout like that, I-I'd break my line and let him go, he'll break your rod if you don't, and that's the only rod you've got."

"No," I said, "I'll break my rod, or I'll break my neck running over these rocks following him, but I'll not let him go."

"Well, if you will do it, go ahead," said Will, "but you're giving him too much time to breathe."

Will was right, I was leaving him too long in one place, and yet after what I had seen of him I was almost afraid to start him again. I raised the rod and straightened the line and drew it tight. A sullen shake was all the answer I got. I gave a smart, quick pull. Instantly he was off, keen, fierce, gamy as when first hooked. Again the reel whizzed. Away he went for the rapids. I almost gave up hope, as I saw his course. I determined to keep him out of those swift waters if possible. I advanced the butt of the rod. The slender tip bent until its rings rattled on the fingers holding the butt. For a moment the strain on rod, line and nerves was intense. Suddenly the line slackened. The rod flew back straight. "Gone," said Will.

For a moment I thought he was, but no, he had only changed his course. The next instant he was heading up stream, coming with wonderful speed up through the swift water. We were standing just at the foot of the pool where the water entered the rapids. Up he came nearer and nearer. I had difficulty in gathering up the slack line, so rapid was his flight. An instant more and he had sped past us back into the falls pool. In the center of it he stopped again. "Well," I said, wiping away the perspiration which was streaming from my face, "that's the gamiest trout or fish of any kind I ever had hold of." "That's so, Mr. Harry," answers Will, "and I don't think your chances for getting him any too good, yet. Aint it kind of funny that he's never jumped out yet. We haven't seen him." It was strange. In all his struggle he hadn't broken the surface. "There's something odd about that trout. Trout don't stay down deep like that. He seems afraid to show himself. But you're giving him too much rest."

I acted on Will's suggestion and tightened the line. Instantly, and as if to refute Will's words, he darted upward. The surface broke, and a long streak of salmon-colored light shot into the air, his great mouth open and his jaws shaking, the water splashing in every direction. Three feet, if an inch, he leaped clear of the water, then down he went with a plunge and disappeared into the green depths. "Great heavens!" shouted Will, "that's the biggest trout that ever grew. Why it's three feet long." It did look that length as it remained for an instant suspended in the air. "Look out," shouted Will, "it's making for the falls." It was going up stream again, pulling all the weight I dare put upon it. Before it reached the swift part of the current it circled out to the edge. At last I got it turned head down stream. Suddenly off it darted again directly across the pool. Rising to the surface, it splashed the water like a dog swimming. Twice more it ran the length of the pool. Once it nearly made the rapids below. Twice it jumped out far up near the falls, but each run was slower and weaker; evidently the struggle was nearing the end. At last I found I could control and guide the fish that so far had gone as he pleased. Still strong and active, he yet yielded to the drawing line, and suffered himself to be led rather than to struggle to have his own way. Gradually and carefully I led him to the foot of the pool, where we stood. Twice I got him into the shallow water at our feet. Twice he made a desperate struggle and ran back into the deep water. The third time, as I brought him up, Will slipped the landing-net around him, and the fight was over, the fish was caught. The instant I saw him inclosed I dropped my rod. The long struggle was ended. The fish was caught, safe, landed. During all the fight my nerves had been strung up to their highest pitch. I had watched each flight perfectly cool. I had held back the blood that was leaping through my veins. I am certain I was cool and collected until I saw the net inclose the fish; then I felt my knees tremble. The hand that had held the rod shook—every fisherman has experienced the same sensation. I sat down on a rock to rest. The fish, still surrounded by the net, lay at my feet. Great goodness, what a fish it was to come out of that little creek. I felt all a fisherman's pride in my capture. Never before and never since have I had such a fight with anything that swims as I had that evening on the little stream in the mountains. I looked at Will. He was standing gazing at the fish in astonishment.

"Well, Mr. Harry," he said, "I didn't think that there was such a trout anywhere in the mountains or anywhere else, as this one. Why," striking and measuring it with his hands, "it's more than 2¼ft. long." When we got it home it proved by actual measurement to be 32½in. in length.

"You'd better take it out of the net," I said. Will carried it a few yards from the water, and when taking it out he suddenly called, "Oh, come here, Mr. Harry, just look at this fish; it's the funniest trout I ever saw." I went to him. The fish was lying on the grass. I stooped over and examined it. It certainly was a strange-looking trout. It looked like a trout; it had the dark back and rosy sides of a trout, but it lacked the yellow and vermilion spots. Its eyes were not so prominent as a trout's. Its head was flatter, its teeth larger, sharper and more irregular, its tail more deeply forked, its pectoral and dorsal fins were a bluish green; its tail an olive yellow striped like a perch. In shape it was like a trout, though slimmer; more muscular looking. Evidently it was not a trout unless of a rarely seen variety. It certainly had shown some rare powers of endurance.

"Will," I said, "that isn't a trout."

"No," he said, "I never saw one like it. But what is it if it ain't a trout?"

"I don't know," I answered. And I have never to this day been able to find out what kind of a fish I caught that evening, though I have examined numerous books and asked many fishermen.

It was growing dark when we finished examining the fish, so we concluded to stay where we were for the night and try the falls pool again in the morning. Supper over, we lighted our pipes and lay down on our beds of branches. Oh, the luxury of that quiet smoke! the camp-fire blazing among the pines, the music of the falls, the refreshing coolness that had taken the place of the day's heat, the odor of pine and balsam lading the air, the quiet, lazy, indolent feeling that comes after a hard day's tramp. Who wouldn't trudge through forests, climb mountains and wade streams for the pleasure of their evenings by camp-fires alone in the great forests?

For an hour I lay there, going over again my struggle with the trout, and looking forward with eager expectation to the morrow.

Suddenly a low rumbling sound over the western mountains interrupted my meditation. Then the low moaning sound of wind sighing through the trees reached our ears. A few minutes later a flash of lightning lit up the pines with a pale, sickly light. The wind grew stronger. The lightning flashes brighter and more frequent. The thunder louder and nearer. And soon the pattering of rain drops warned us that one of those sudden mountain storms was upon us. "There's a shelving rock above here," said Will, "and we had better get under it before the storm comes." Hastily moving our beds and dry wood under the shelving rock we kindled a new fire, and it had scarcely begun to burn when the storm burst in all its fury over the valley. The rain fell in torrents. The lightning flashes were constant. The most terrific thunder I ever heard burst peal on peal over our very heads. For more than an hour the storm raged in all its fury. Then the lightning and thunder ceased, and a quiet, gentle rain fell through the pines. Sheltered by the overhanging rocks, and lulled by the falling rain, we soon slept soundly.

It was broad daylight when we awoke. The little stream of the night before was now a raging torrent of murky, black-looking water, all fishing in it over for days to come. Reluctantly I packed my fishing rod and we started for old Barney's, and never since have I got back to that little stream that dashes down among the hemlocks in the heart of the Alleghanies. F. I. SHERMAN.

PODDLER FISHING AT THE PIER.

THE river Tweed, which forms for some thirty miles of its lower course the boundary between England and Scotland, is known to anglers and epicures as one of the finest salmon rivers in the British Islands. With its 120 miles of main channel and its 1,000 miles of tributaries and their branches, it affords to the migratory salmonidæ a vast extent of spawning grounds, and offers to the angler a series of casts in stream and pool which not only supply sport and food to the residents of the vicinity, but annually attract hundreds of visitors from other parts to enjoy the sport of salmon fishing in this celebrated stream. I may say, in passing, that the Tweed and its tributaries are no less renowned for the abundance of speckled trout which they all contain from their sources to the sea, and for the grand sport they afford to those less ambitious brethren of the angle who do not aspire to the capture of the lordly salmon, but content themselves with the pursuit of his humbler relative.

While salmon and sea trout may be observed ascending the river at every season of the year, the great annual migration of the spawning fish takes place during the months of October and November, when the fall rains have swollen the rivers sufficiently to give them access to the upper waters. At such times these fish may be seen at the several caulds (mill dams) which obstruct their upward course, leaping and struggling in great numbers in their endeavor to surmount these obstacles. One afternoon in November, 1846, I went to New Mills on the Whitadder, a pretty little river which joins the Tweed about three miles from the ocean, to see the fish ascending the dam. The river had been in high flood the day before, but the weather was too wet and the roads too dirty for pleasant walking, and when I got to the mill the water had fallen considerably. The dam, I may explain, is constructed so as to have the steep side up stream, and the down-stream side has a slope of some 30ft. with a height of 10 or 12ft., the whole being solidly built of stone. The water was running about a foot deep over the south end of the dam, near which I stood, but only 3 or 4in. deep toward the middle, while a few feet of the north end rose above the level of the stream, and the water below the dam reached about one-third up the slope. During the hour I stood watching I counted 120 attempts made by fish to surmount the cauld, only some 20 of which were successful. Those which I saw were mostly small, ranging from 2 or 3lbs. to 8 or 10lbs. in weight, and were evidently sea trout, the larger fish having no doubt gone up in the deeper water on the previous day. They would leap clear of the water and attain about half-way up the slope, but after striving to swim upward they would become exhausted and be swept back into the pool below.

Those which succeed in getting over this, and the many dams which cross the various streams, after depositing their eggs in the gravel, drop downward toward the sea, though many of them remain in the fresh water till the spring freshets, when they come down in great numbers as "kelts" or foul fish, their silvery brightness gone and replaced by a dull brick red or dirty brown color, their bodies lank and lean, and presenting altogether a dilapidated and disreputable appearance.

The eggs hatch out in the following spring, and those of the embryos which escape the pursuit of their numerous enemies, viz., water insects, crayfish, eels, speckled trout and even the older fry of their own species, remain in their native streams eighteen months or two years. During this period of their lives they are known as "parr," and are distinguished by their slender and elegant shape, their deeply forked tail and by rows of "finger-marks" and numerous black and red spots on each side. About the beginning of their third year, when they have attained a length of from 4½ to 5in., a change comes over

their appearance, the finger-marks and spots are covered and concealed by a coating of bright silvery scales, and the natural instinct of their kind impels them to leave the fresh water and transfer themselves to the briny waters of the ocean. On experiencing this change, they assemble in shoals and commence their descent of the river. Arriving within the range of the tide, they linger for a few days in the brackish water and drop gradually down toward the mouth of the river, floating up and down with the set of the tide, adapting themselves to the changes of medium. When this is completed they pass out into the open sea, and scatter themselves along the coast in search of the food appropriate to the new phase of their existence.

They generally arrive in the tidal part of the river in the months of April and May, and their arrival is the signal for the assembling of a host of enemies, which assail them during the whole period of their stay with unremitting perseverance. Flocks of terns circle in the air and ever and anon dart down with unerring aim upon the unfortunate stragglers which come too near the surface. Fleets of guillemots and razorbills float upon the surface and pursue their prey in the depths beneath. Loons and grebes, singly or in pairs, sink from sight with hardly a ripple, and reappear with a fish in each bill, and even the mighty solan does not disdain the small but tempting morsel, while occasionally a seal pops up his round bullet head and gazes around as if taking his bearing. Nor are these their sole nor even their most dangerous enemies. Keenly as they are pursued by their aërial foes, beneath they are subjected to a persecution still more sanguinary and unrelenting. While their persecutors may be counted by hundreds, their scaly pursuers must be numbered by thousands, and while the former, for the most part, can capture only those which expose themselves near the surface by daylight, the latter can follow them into the deepest recesses of the current both by day and night. Of these predatory fish there are several kinds, but the chief depredators are the poddler or saith, the young of the coalfish, which generally weighs from 1 to 4lbs.; the lythe or hake, a shorter, thicker fish, olive on the back, and having a projecting jaw like a pike or bulldog, and weighing from 2 to 8 or 10lbs., and lastly the codlings, white and red, from 3 to 10 or 12lbs. The poddlers are the most numerous, and they give the name to the fishing.

My tackle consisted of a rod thirteen feet in length, stout enough to lift ten or twelve pounds of fish up the side of the pier. It was made in two joints, the bottom of ash and the top of hickory and lancewood, with a splice joint tied with waxed twine when in use instead of a ferrule in the middle; a reel holding eighty yards of stout water-twist linen line, and a foot-length of three-ply salmon gut closely laid and securely knotted. The sinker was a pencil of lead with a brass wire cast lengthwise through it and turned into a loop at each end, weighing altogether about three ounces. This was fastened to the extremity of the foot-length. The so-called flies were made from the white feather from a goose's quill tied on a tinned "haddock hook;" three or four of these were fastened to the foot-length at intervals of eighteen inches apart, the snoods being shortened so as to project not more than four inches from the line; another, on a snood of about twelve inches long, was attached to the lower loop of the plummet. To use this tackle with the best effect, the practice is to first plumb the depth of the water and shorten the line until the plummet is raised a foot or so from the bottom; hold it so for a short time and then give a steady upward pull (not a jerk) of three or four feet, and continue doing so at intervals of about ten seconds. When a fish is struck do not be in a hurry to land it unless a heavy one, as often others will be attracted to the bait and every hook filled. The best time to enjoy this sport is when high water occurs at from four to six o'clock P. M., beginning to fish when the tide has turned an hour or an hour and a half. On such an evening I have often commenced fishing at 7:30 P. M. and before nine o'clock have landed from 60 to a 120lbs. of fish. This was by no means a wanton slaughter, for there were always plenty of boys on the pier who were glad to get the surplus for home consumption. The poddlers were mostly taken on the upper hook, the lythe on the lower ones, and the codlings almost without exception on the hook below the sinker. One evening when the fish were biting freely and the lythe were unusually numerous, I struck something which I supposed from the dead resistance to be a bottom hold; but on raising the point of my rod and putting on a strain a sudden rush seaward took off 30yds. or so of my line and obliged me to run twice that distance along the pier at the top of my speed, when the fish headed for the opposite shore; the strain, however, was too much for him. This maneuver he repeated again and again, but the hold was good, the tackle trusty, and I brought him up against the strong current in a series of diminishing semicircles, of which the fish described the circumference, the line the radius and myself the center, until at last I succeeded in bringing him around the corner of the pier, where there is a "batt," that is a platform of hewn stone with sloping sides, used for drawing the seine of the Crabwater salmon fishery on, on which I landed a very dead run fish, and my son brought up the ladder, not a salmon, as I had vainly flattered myself, but a lythe over three feet in length and weighing twenty-five pounds, the largest fish ever taken at the pier up to that time, May, 1854.

In comparative culinary value these fish vary very much. The flesh of the poddlers is soft and insipid; that of the lythe is much firmer and better flavored, while that of the white codlings, after feeding for a week or two upon the salmon fry, acquires a richness and delicacy it does not possess at any other time. One of these fish of six or seven pounds weight split open from the throat to the vent, lined with a stuffing of bread crumbs and finely minced suet, moistened with milk and seasoned with green parsley shred very fine, pepper and salt and baked in a rather slow oven, makes a dish fit to delight the palate of the most fastidious ichthyophagist. N. B.—I believe that a good black bass, channel cat or pike-perch cooked in this way would not be much inferior.

A good deal of discussion had arisen respecting the length of time the salmon fry remained in the salt water before they returned to their native streams as grilse. The prevailing belief was that they returned in the fall of the same year in which they went down; but some persons maintained that it was absurd to think that a fish which required two years or more to attain a weight of three ounces could grow to a weight of three pounds or upward in six or eight weeks. In order to settle this point the Berwick Shipping Co. instituted a series of experiments in the years 1842-3-4-5-6, in which I had the pleasure of assisting. Considerable numbers of these smolts were captured and marked by inserting loops of silver or copper wire in their fins or tails, varying the position in each year, and keeping an accurate record of the same. Several of these marked fish were subsequently recaptured as grilse and identified by myself and others, but not one of those so taken had remained in the salt water for a shorter period than fourteen months, during which time they had attained a weight of about three pounds, and most of these had lived in the sea for two years or more, when their weight increased to from six to eight pounds.

In my former letter, "One evening late in August, 1884," should have read, "One morning late in August, 1844." SC. D.

AN ALASKAN SEA SERPENT.

Editor Forest and Stream:

If, indeed, any of the aquatic animals long drawn out, however they may vary in "form, structure, appearance and habits," and even size, may be considered a sea serpent, then truly "the existence of veritable sea serpents * * * is no longer disputed and denied." But is not such a use of the term simply trifling with words? The idea current in most minds is that the so-called sea serpent is some unknown animal of the serpent kind or having the form of a serpent and especially characterized by the gigantic size it attains; 3,000 or 4,000ft. of length have been even assigned to it. The application of the name to any moderate-sized or small aquatic animal is therefore a misnomer and nullifies any special significance connected with the name. The naturalist knows of numerous forms to which the name is as applicable as to the fish noticed by Mr. Hallock in FOREST AND STREAM for March 10. If, however, the general conception of the sea serpent is held as a criterion, then I for one must dissent from the probability of its existence. My reasons for dissent have been given in an article entitled "The Sea Serpent Myth," published in the *Forum* for March.

As to the so-called "Alaskan sea serpent," it is a well-known fish of the family of Alepisaurids. The Alepisaurids belong to a large group, chiefly confined to the deep sea and open sea, called Iniomes, and the family consists of about half a dozen species and is represented in distant seas. One kind is quite commonly caught by the bank codfishermen in deep water and two or three kinds have been caught in deep water off the Pacific coast of North America and sometimes they come even into shallow water or are driven on the shores. The figure given in FOREST AND STREAM gives a very poor idea of the fish. The dorsal, for instance, is very long and unbroken, and reaches from near the nape to the vertical of the oval. The form is also much less elongated and slender than is represented. It may be added that the skin is perfectly smooth, naked and not scaly. A figure of a species closely related to the Alaskan fish is given in the atlas of "The Fisheries and Fishery Industries of the United States" (page 202). It is the *Alepisaurus ferox*, originally described from Madeira, and which is called by the bank fishermen the "lancet-fish." The Alaskan fish may be either *Alepisaurus* (*Caulopus*) *borealis* or *æsculapius*. Both are found in Alaskan waters, and the name "handsaw fish" is applied to either indifferently. THEO. GILL.

SMITHSONIAN INSTITUTION, March 11.

THE MYSTIC ANGLERS.—Fort Wayne, Ind., March 9.—Yesterday our club was presented with a beautiful gold medal by Mr. John H. Bass, of this city, and our wealthiest citizen. Mr. Bass is president of the Bass Foundry and Machine Works, of Chicago, St. Louis and of this city, and is a gentleman whom our people respect more on account of his liberal ideas, benevolence and genial sptrit, than any other in the city or county, in fact, northern Indiana. He is a lover of legitimate sports, although his business prevents much indulgence. On his large and beautiful farm west of city he has everything the heart can desire. His fish ponds are gems, the largest, I believe, in the State artificially made, and are well stocked with fish. The medal is to remain the property of the club, no one being entitled to it longer than a stated period, and must be won to be worn by the members. As we are forninst fishing for count, the largest black bass taken with rod, line and hook held in hand, weight to decide (not loaded), using live or artificial bait, gets the medal, subject always to the above conditions. The fish must be taken from streams in this county, of which we have seven which contain black bass. The medal will henceforth be known as "The John H. Bass Medal." The medal is made of fine gold, shield shape, on which are two rods beautifully chiseled out and raised above the plate, a landing net, with the figures 1887 and inscription "John H. Bass to the Mystic Anglers, Fort Wayne, Ind." On top of the shield is a fine Kentucky reel. A minnow net is supported under the shield from hooks projecting from the sides. The pin is attached to the shield by gold chains and represents a black bass in motion—the scales are very distinct and a ruby represents the eye of the fish. The medal is 2¾in. long, the fish 1¾in., and the shield 1⅝in. wide.—JOHN P. HANCE.

WATERPROOFING LINES.—*Editor Forest and Stream:* Some time since, in FOREST AND STREAM, I incidentally alluded to and recommended a certain carbon oil for waterproofing fishing lines. I have not lost faith in it; but, nevertheless, wish to call attention to another preparation for the purpose. Last fall I happened to be chairman of a committee appointed to test the value of this preparation for waterproofing muslin, etc., for certain purposes. It was found, after long-continued trial, to be excellent. It occurred to me that it would be equally good for fishing lines, landing nets, etc., and was found to be so. It is cheap, easily applied, and is mildew proof. The company, no doubt, would waterproof lines and nets; but, inasmuch as the preparation can be bought by the gallon, the angler can do his own waterproofing. It is made by the American Waterproofing Fiber Co. of New York. I may add that the line is not weakened by the preparation, but rather strengthened. Naturally, the line is made a trifle heavier, but in use it is lighter than an unprepared line, as the water does not soak into it. Perhaps some of the readers of FOREST AND STREAM will give this thing a trial, and report the result. That is the proper way to get at its merits.—PETRA.

SALMON AND SEA LIONS.—The destructiveness of the lion among the salmon and other fishes of the Pacific coast is well known. Concerning this the Portland *Oregonian* says: "William Arnold has been gunning for sea lions of late at Tillamook and with good success, having already 246. The bodies of these huge beasts blown ashore lined the beach for miles. While others have been writing letters about fish wheels, traps and pound nets, Mr. Arnold has taken his little gun and done good practical work for the preservation of our salmon interests and salmon nets. The sea lion was doubtless created for some useful purpose, probably to prevent salmon from becoming too numerous. Vast numbers of them congregate at Tillamook Rock and at Seal rocks, a few miles south and near the shore, where they live at their ease and prey upon the shoals of salmon entering the Columbia. It is estimated that half of the salmon which come into the Columbia in the early part of the season are captured by sea lions, which also damage nets to the amount of thousands of dollars."

CASTALIA, O.—The Cold Creek Trout Club have purchased the entire property of the Castalia Mining Company, and it is rumored here that the machinery in the mill will be disposed of and the large building arranged for a magnificent club house and billiard parlors. This change would give the company one of the finest club houses in western Ohio, and the transfer will improve the village of Castalia many thousands of dollars and give employment to more laboring men. The stream of water, fed by the famous Cold Creek springs, is one of the grandest trout streams on the globe, clear as crystal, pure as snow, cold as ice in summer, and never freezes in winter.

THE COMING TOURNAMENT.—*Editor Forest and Stream:* The committee on rules of the National Rod and Reel Association have agreed in adding the following to Rule 4: "In the contests with light rods of 5oz. and under an allowance of 1½oz. will be made in favor of such rods as have a solid reel plate."—G. POEY, Secretary.

THE PRESIDENT'S OUTING.—A workman at Frankfort, Ky., has sent President Cleveland a reel, with the compliments of "a Kentucky Republican, who loves him for the fish he has caught." In a letter of thanks the President said: "The sight and handling of it makes me long for the time when I can put it in use."

Fishculture.

Address all communications to the Forest and Stream Pub. Co.

THE FOOD OF THE SALMONIDÆ AT SEA.

BY W. ANDERSON SMITH.

[From the Journal of the National Fishculture Association.]

IT is well known to most sportsmen, as well as to most naturalists, that once the salmon enter our rivers they may rip up a fly in play, or a minnow even, in exuberance of spirits, but until they spawn they do not seem to be, as a rule, "on the feed." The voracity of kelts, on the other hand, is sufficiently understood and the great injury those do who remain in the waters where the young salmonidæ are struggling for existence. This being the case, it is certain that before such a strong fish can bring itself again into condition it must reach fishing grounds of exceptional richness, and, from their great numbers, also of exceptional extent. Authorities have spoken of the food of the salmon with a doubtful expectation of being believed, because the greater portion of fish with which they have come in contact have had empty stomachs. The same was formerly said of the herring. The press teems with communications denying that the salmon feeds at all in fresh water, and by analogy may seem to suggest that they do not eat anything very tangible in salt water. An indefinite idea prevails among unscientific observers that something they call "suction"—and that seems to point to microscopical supplies—builds up the large rich bodies of these fine fish. A list of authorities gives color to these ideas of the untrained observer. "Ova of sea-urchin," "Entomostracea and Crustacea," and "Ova of Echinodermata," being the characteristic accounts, when they do not simply assert "sand eels."

Now we have no doubt that all these objects go occasionally to build up the system of the salmon, but the salmonidæ cannot as a class be called "insectivorous fish," like the herring or mackerel, and their onslaughts on the floating life of the sea of an invertebrate class are only make-shifts, in the absence of the more important food to which they must in reality mainly look.

Since a paper read last year before the Scotch Fisheries Improvement Association, I have had some further experience with regard to the food of the smaller salmonidæ at sea, although by no means such an extensive experience as I had hoped for. During an expedition of several months' duration, extending from the mouth of West Loch Tarbert in Knapdale to Portree in Skye, sea trout and salmon were found to be exceptionally scarce; and at the same time the herring were almost entirely absent, at a time of the year when they are commonly on that coast. All floating invertebrate life was found to be extremely backward of development, owing to low temperature prevailing throughout the district in question during the season; the herring and mackerel that feed upon such life were equally unripe; and no doubt the salmon and sea trout, that in our opinion largely depend upon herring in earlier stages of growth, were deficient on our west coast for the same reasons.

In an inquiry of this kind it is necessary to obtain as great a gathering of facts as possible, and from widely different districts. I have received statements of fact from men of knowledge and experience bearing upon this question. Their publicity may lead other observers to add to the bulk of evidence. One of the most experienced and cultured fishcurers of Lewis assured me that, in his experience, salmon at sea fed upon herring sile. Maclaine, of Lochbine, informs me that at one time off Colonsay he came upon large fish leaping out of the water in their eagerness to seize their prey, and these were found to be salmon chasing herring. On the west of Mull, salmon taken in the fresh water direct from the sea were found to be full to the mouth of herring sile, and this is thoroughly well authenticated by several eye-witnesses. Dr. MacKinnon, Strath, an experienced angler and correct observer, tells me that the celebrated Young, of Inversbire, had mentioned to him having obtained a grilse full of young herring—those in the mouth covered with silver scales, and those further down well digested—showing their rapidity of digestion, and perhaps accounting for the absence of food in the stomach as a rule in rivers. At one time the salmon caught in the extensive sea fisheries of the Messrs. Hogarth, Aberdeen, were, prior to the days of rapid transit, all preserved in Aberdeen. Mr. Rae, a salmon fisher of experience, assured me that his father, when em-

ployed in Messrs. Hogarth's establishment, stated, as the result of his experience of the thousands of salmon there treated annually, that salmon not only fed mainly upon herring, but on that coast no good salmon fishing was obtained until the herring were upon the coast.

All these presumed facts go to corroborate our former suggestion and point to this great ocean food supply as being a strong inducement for the salmonidæ, as for all whitefish, to follow them to their haunts.

It is certain, however, that a voracious fish will not confine itself to any single species of food. Mr. Willis Bund, in his most suggestive and valuable work on "Salmon Problems," refers to the belief of fishermen that the salmon feeds on sea-mice (*aphrodite*), and to the fact that on the Usk there is a saying, "A good year of lamperns, a good year of salmon." He also refers to the fact of a salmon taking a spinning bait. A gentleman assures us that he has taken a three-pound grilse with a minnow when trolling for lythe (*Gadus pollachius*) in the sea. Before Buckland and Walpole (Sea Fisheries Commission) a fisherman observed that the salmon (salmonidæ from three pounds to twenty-one pounds) taken in his kettle net "were feeding on the same thing as the mackerel." No doubt the floating invertebrate life of the sea is the common food of the mackerel, but when taken near shore they would be full of crustacea such as *mysis*, a class I frequently find in quantity in the stomachs of sea trout.

During my recent expedition some facts have come before me that are somewhat interesting in themselves, while having a bearing upon the question before us. Most naturalists are aware that the tapeworm goes through a species of metamorphosis, and when found in any animal must have previously reached a certain development in some other animal that has probably been its prey. Now, when in a certain season all the sea trout taken in the district of Loch Slapin, in Skye, proved to have tapeworms, and to be generally in a sickly condition, we naturally ask if this is a common occurrence elsewhere, and what can they be living upon at such a time? It seems that the occurrence was most exceptional in Slapin, and has not apparently occurred again; while the probability is that a creature of some size was the repository of the cysts of the tapeworm. What this was we, of course, can only conjecture, but sea trout do eat *Cephalopods* freely, as we have personally noted, and in these high class molluscs we have observed what appeared to us to be the cysts of tapeworms. This would be a useful subject for inquiry, as the taking of *Cephalopods* with such a company of guests should be at once followed by their dispatch to the nearest aquarium, where means for the experiment would always be at hand.

Again, sea trout eat sand-eels, and a correspondent from "The Lewis" sends me an account of a large sea trout with sand-eels in its stomach. Few fishes, indeed, are proof against the fascination of sand-eels, whose aggressive friends are numberless. It would be unjust to examine this subject without quoting from Mr. John Anderson, of Denham Green, whose sixty years' experience in the trade is always freely at the service of the public. He writes: "I have seen twelve small herring in a fish of ten pounds, and in brackish water I have seen fish full of young smelts, whiting and shrimps." Again, "I have seen grilse with eight or ten young herring, and a trout of 8lbs. with an 8in. sand eel in its stomach." Once more he writes: "The principal food of whitefish and salmon are—first, the herring and then their fry. The old herring of both kinds, after they have spawned, seek out to sea to recruit themselves, and after they have been feeding on the rich food there for several months, they seek the coast, chased in by shoals of whitefish and salmon. The young fry of the herring seek our estuaries, and up to the brackish water, where they continue feeding for six months, then down to sea to meet their own parents. The young of the winter-spawned herring leave the brackish water in October, and seek down our Frith (of Forth) to feed on whitefish then arrived from sea; and the young of our summer herring leave the brackish water in March, and, seeking down to sea, draw our salmon into and up our friths and then into our rivers. It is no uncommon thing to find a dozen of good herring or a score of young herring in the cod's stomach, and frequently several herring or a score of fry in the salmon's stomach along with shellfish." He no doubt here uses the term "shellfish" in its rough general sense as covering "crustacea."

I am disposed to question some of the views here expressed, more especially as to the idea of a summer and winter herring, confident as I am that the herring spawns throughout the year; but the facts of herring being taken frequently in the stomachs of salmon remain distinct, and coming from one with a lengthened experience of a very extensive fish trade, is of very great importance. It is commonly objected that scientific observers are not in the habit of meeting herring in the stomachs of salmon; but it must be remembered that their opportunities are very limited, that salmon are rarely taken "on the feed," but only when hastening back to the fresh water, that when taken they are mostly despatched direct to the fishmonger, who alone, as a general rule, has an opportunity of examining the contents of a salmon caught in the sea.

We require more "facts" on the subject, but there are sufficient to make it a reasonable statement that, from evidence of practical men on the East coast, and observers on the West coast, salmon, like most other fish, are mainly dependent upon herring for subsistence. I have taken herring and sea trout in the same draw of the seine net, and both were full of herring sile. But sea trout are different in character from salmon. They feed voraciously not only when coming in shore, but even in fresh water, so that they are commonly taken with their stomachs full, at a time when the salmon has ceased to feed and is only anxious to ascend the river.

The great importance of the food question in connection with the salmonidæ lies, in the first instance, in its bearings upon the stock of our rivers and streams. If this class of fish feeds mainly upon such fish as the herring, the stock of a river will depend more upon its purity than upon its richness in food. Every small stream in the herring-haunted West Highlands can be filled with a stock of sea trout, knowing that if the youngsters can reach sufficient maturity to proceed to sea a large proportion will return in good condition. For not only do they devour the herring when obtainable, but they keep much in shore and devour everything edible among the rich fringe of seaware, whether crustacea or anneiids or naked mollusca, such as cephalopoda. It ought to be a primary object with our fishculturists to stock every suitable river with salmon and every stream that reaches the sea with sea trout. As yet little has been done in this direction, but if it were carried on contemporaneously with the incubation of herring in quantity, I have no doubt that the land of the Western Highlands and islands would soon come to be looked upon as little more than a rendezvous for fish and fishermen, as Newfoundland has always been.

MR. MULERTT RECEIVES A MEDAL.—Mr. Hugo Mulertt, of Cincinnati, Ohio, the well-known fishculturist and breeder of ornamental fishes, has been awarded the great silver medal of the Imperial Russian Society Acclimatation at their recent annual meeting in Moscow. The letter transmitting this medal states that it is awarded for constant co-operation with the ichthyological section and in acknowledgment of interesting and useful work. The conferring of this medal is a very high honor and one that is appreciated by Mr. Mulertt. Alexander von Humboldt and the celebrated botanist, Von Siebold, were recipients of this same medal, and we believe Mr. Mulertt's to be the first which has come to America.

THE McDONALD FISHWAY.—Sharon, Va., March 10.—*Editor Forest and Stream:* The three new fishways built by Col. McDonald, last fall, on Red Creek, Wythe county, this State, are truly models of their kind. They represent the knowledge gained in building many structures for the passage of fish over dams, and combine the maximum of simplicity, solidity and efficiency. They are being carefully observed and reported with a view of publishing the results. It may interest your readers to know that a rainbow trout, a ripe female, ran from Tate's Run, a small stream flowing through the Wytheville hatchery grounds, up the small fishway erected at the hatchery as a model. The fish was captured and the eggs secured. Numbers of yearlings and two-year-olds have been taken, but this is the first ripe spawner observed. These facts indicate the establishment of the rainbow trout in the stream as a resident species, an important fact in considering the desirability of stocking Virginia waters with this fish.—R. C.

SHAD IN THE MISSISSIPPI.—Office of the Secretary, Lee County Game and Fish Protective Association.—*Editor Forest and Stream:* It is my pleasure to be able to report the success of the shad plant made in the Mississippi River some years ago by Prof. Spencer F. Baird. Yesterday quite a number of these fish caught here were on sale in the market; one of 2lbs. weight brought fifteen cents, catfish selling at ten cents per pound and black bass at twelve and a half cents per pound.—F. S. WORTHEN, Secretary.

FIXTURES.

DOG SHOWS.

March 22 to 25, 1887.—Spring Show of the New Jersey Kennel Club, Newark, N. J. A. C. Wilmerding, Secretary, 17 Murray street, New York.

March 29 to April 1, 1887.—Inaugural Dog Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence. Entries close March 15.

April 5 to 8, 1887.—Third Annual Dog Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass. Entries close March 19.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 19 to 22.—Fourth Annual Dog Show of the Philadelphia Kennel Club. E. Comfort, President.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4697.**

BUFFALO DOG SHOW.

THAT the show held at Buffalo last week was a good one cannot be disputed. I expected to find about 250 dogs on exhibition whereas there were about 400 all told, and a glance over the prize list will show that the quality throughout was much better than is generally found at shows with greater pretentions. Mr. John Davidson handled the pointers and setters, Mr. Krueger took foxhounds and beagles, and the balance of the sporting division, as well as all non-sporting classes, fell to my share. The catalogue was not accurate and there was some delay in bringing the dogs into the rings, but in other respects the management was good and reflects credit on Mr. Fellows, whose devotion to the cause was appreciated by his many friends. The secretary and assistant were at all times courteous and obliging, and the same hearty greeting which ever awaits me at shows held outside of this city was freely extended to me and to others.

The local reporters, as usual, left their brains at home, and somebody played a huge joke on your esteemed city contemporary, the New York *Herald*. Particulars may be interesting to some of your readers and therefore I give them. It was not until Wednesday night that I finished judging and by Thursday evening I realized the fact that the work before me was more than I could accomplish, consequently I resolved not to be interrupted by anybody or by anything if I could possibly avoid it. I was getting along nicely on Friday morning when a lean, long-cast, cow-hocked specimen of the *bore*hound type, out at the elbows and thick in skull, coolly asked if I could tell him where to find "that great red dog from New York." There was a weedy-looking Irish terrier sitting on a bench close by, and pointing to it I said, "There is the dog you are looking for." No sooner had I commenced work again than a fellow had the cheek to come and ask me to supply him with notes for a report. This was too much for me. I explained my position and declined, whereupon the courteous news seeker turned on his heels and blurted out, "If you won't help us we won't help you, wait and see." Next morning a friend directed my attention to the following ludicrous dispatch which appeared in the *Herald:*

"More Dogs than Prizes.—By telegraph to the *Herald:* BUFFALO, N. Y., March 11, 1887.—The international bench show of dogs broke up in a row. The principal trouble was that too many Canadian dogs were given prizes. The exhibitors of the miscellaneous class think they were given no show because they had to compete against all kinds of canines. It is also charged that owing to the fact that Superintendent Fellows came from Hornellsville that the Hornell Spaniel Club was given undue advantage."

The heading itself is absurd and suggests that there are, or ought to be, as many or more prizes as dogs. The show "broke up in a row." Who ever saw a dog show that didn't break up in a row? Loose say a couple of hundred dogs and leave the balance, say two hundred more, chained in their places, and there is row enough to satisfy the inmates of a bedlam. There was just such a row at Buffalo, and there will be a similar row at the next dog show and at every other dog show to come. "Too many Canadian dogs were given prizes." The catalogue shows that eighty dogs from Canada were entered and that sixteen were successful in winning first prizes. "The exhibitors in the miscellaneous class think they were given no show because they had to compete against all kinds of canines." This is rich. It is generally supposed that a "miscellaneous class" is a class for all kinds of "canines" that don't happen to have a class provided for them, consequently the exhibitors, who know what a "miscellaneous class" is, could not possibly have thought anything of the kind, and the *Herald* has fallen into a stupid blunder. "It is also charged that, owing to the fact that Superintendent Fellows came from Hornellsville, that the Hornell Spaniel Club was given undue advantage." This is a vicious and untruthful statement, and places the *Herald's* correspondent in an uncomfortably tight corner. The Hornell Club entered two dogs, both in the champion class, and as there was no competition in either class, they, of course, won. These dogs were beaten for all special prizes. Where is the "undue advantage" and who "charged"? The *Herald's* untrustworthy reporter should be bounced.

Mr. Davidson was first to get to work. He handled his classes in a business-like way, and his decisions were well received.

SETTERS—(MR. DAVIDSON).

Knight of Snowden, well shown, was an easy winner in the open class for English setters, and while he is not quite the type of dog I like, he has many good points to commend him, notably excellent forelegs and feet, good chest and back, nice flat coat of good texture and a catching color. His head is too small for his body, and he does not move behind as he should do, although he is said to be a dog of more than average speed and a stayer. Pride of Dixie, placed second, was not my choice for the place. He is too full in cheek, occiput not properly developed, muzzle of good length but too fine at the point, stop not defined, the head being much too shallow and flat in appearance, with an expression that certainly is not correct. Neck straight; shoulders not well placed; chest fairly good; a slight weakness in loin; quarters above the average; legs of fair strength; pastern longer than I like; hocks too wide apart. Feet not round, but of fair thickness through the pads; texture of coat good. I would have placed Prince Hardy, vhc. reserve, second. He has a better head than Pride of Dixie, and is his equal in other respects. Ted's Bangs, hc., is fairly good in body, but he is wide in front, faulty at the elbows, and deficient in head properties. Canada, vhc., has a rather sour head and a long and badly-carried tail—faulty at both ends. Noble Philip, c., is lathy and flat-sided, and is deficient in loin and tail. Dan, not noticed, too much resembles a St. Bernard for my fancy. Just a fair class. The winners are blue beltons. Eight entries in the corresponding bitch class, with Mydora, rather a nice white, black and tan, clearly the best of the lot. She has a fairly good head, just a trifle doggy; ears fairly well placed and of good length, but might hang closer; neck not quite clean; shoulders loaded; chest good; back rather short; quarters rather narrow and lacking in power; hocks fairly good; legs not quite straight, feet rather thin through the pads; coat short but of good quality and free of curl; tail not well carried; a bitch showing some quality. Lassie made a good second; she has rather a nice head and is much above the average in quarters and hocks. She is faulty behind the withers—too round and slack, and her tail is not right. Coat flat and of good texture. Lady M., vhc. reserve, was third best, although shown much too fat. She is good behind the last rib, and has a nice flat coat. Skull too round, barrel too round and rather slack, chest too wide and forelegs not quite straight. Feet thinner through the pads than I like. Carry Roy, hc., is deficient in head properties. A fair class, well judged. There were eleven entries in the puppy class, but I failed to find anything that will be heard from in good company at future shows. Lone Star, a white, black and tan daughter of the winner in the previous class, was properly placed first. Skull fairly good, muzzle of good length but not quite clean below the eyes, ears rather short and not carried close to head. Neck might be cleaner, chest wide, shoulders badly laid on, back short with back ribs not long enough, loin flat, quarters drooping, stifles fairly well bent but rather weak, elbows out, forelegs not straight, stands a trifle over at knees, tail too long and curled, hocks of fair strength and well bent, coat good.

In the class for Irish setter dogs Bruce, with his typical head and excellent coat and color, was too much for Romeo, who is very deficient in neck, quarters and feet, besides possessing several other defects. Banker, vhc. reserve, is well known. Jessie placed another first to her owner's credit, winning handily in the bitch class. She has been so often described in these columns that I will say no more than that she was in a fair condition and won easily enough from Nellie Husted, who has not improved since I placed her second in the puppy class at the Fanciers' show last year. She has grown very throaty and moves badly off her hind legs. She has still rather a nice head, but it is not first-class; her coat and color and feather will always deserve notice. Miss Laura, vhc. reserve, is a fairly good young bitch with too strong a head. The puppies were not a good lot and there was not a future winner among them.

Nine Gordon dogs of far better type than we usually find formed a fairly good class, and Royal Duke sustained his reputation by winning with several points to the good. Jack, placed second, shows age; his color is gone. In skull and muzzle he is much above the average, although heavier than I like. He is too wide in chest, straight in shoulders, stifles and hocks; has good feet, a nice coat and shows a fair amount of Gordon character. The balance of the class were workmanlike dogs. Nora, Mr. Glover's old bitch, was best of the eight entries in the next class; she was always a fair bitch, but never a crack. She was bred to Royal Duke at the show and he should give power behind as well as in the pasterns to the offspring. Rose, too round in skull and pointed in muzzle, was second. She is fairly good in coat, but will not do in many other respects—at least not for the bench. Chest too shallow; body shorter than I like; quarters drooping; lacks Gordon character; too much of English type; legs and feet fairly good. Gyp II., vhc., is deficient in head and coat. Josephine is too tapered in muzzle and is not good in skull. The puppies, six, were only moderate, Royal Duke II. being about the best of them. He is too round in skull and very full midway between eyes and occiput; nose half black and half flesh color; eyes fairly good; ears set too high and not well carried; neck throaty; mouth cankered; body and limbs too light; pasterns long, and feet flat and open; quarters, tail and coat fairly good; will be too light all over and bitchy in head when developed. I must not say any more or he may bite me next time we meet.

POINTERS—(MR. DAVIDSON).

Pommery Sec, a son of Graphic and Vinnie, was clearly the best dog in the open class for his sex. He is just a fair sort but will never tread in the steps of his distinguished sire. Head just fair; eyes rather light; muzzle lacking in depth; ears set on too high; neck of fair length; back a trifle slack; loins flat; quarters fairly good. Will improve. Jeff, second prize, is a rather coarse headed dog; too cheeky, neck not clean; chest too wide; shoulders straight and heavy; back ribs not deep enough; loin flat; second thighs weak; hocks long and straight; stands over a trifle at knees; tail too long and not fine enough toward end; ears good; forelegs and feet above average; condition excellent. Don and Don Quixote are not up to show form. Of the nine others shown Queen Bow, a specimen of much more than average merit, had a clear win. Skull rather round; muzzle fairly good but not square enough; ears might hang closer; eyes too light and rather small; chest and back fairly good, also quarters and hocks; tail rather long and might be finer; shoulders muscular and free; legs and feet excellent; shows considerable character. Dress, placed second, occupied a similar position at Waverly, and was described in your re-

port of that show. There was nothing in the class that could approach these bitches in good looks, and Pommery Sec was far ahead of Bell II. in the puppy class.

SPANIELS—(MR. MASON).

These classes, as a whole, were very well filled, and the quality throughout was excellent. Captain Muldoon had the class for Irishmen to himself, and walked over for the prize; his coat requires attention.

There were eleven entries in the class for spaniels over 28lbs. weight, and in my opinion Newton Abbot scored an easy win. He is of the Sussex type, but is too dark in color for a typical specimen of that breed. He could be improved in skull and muzzle; eyes too light; ears of good length. Body not round enough; quarters fairly good; forelegs of good strength, but not quite straight; feet too thin through the pads, but well feathered; elbows thrown out more than I like; tail well placed and well carried; coat of good quality and flat; feather much above the average; condition excellent. Entered as 32lbs; actual weight 34lbs. Darkey was second best; skull too short and full and cheeky; muzzle lacking in depth and squareness; neck not quite clean; ribs too flat and body too short; neither loin nor body round enough; too narrow in front; forelegs too long and light in bone and not quite straight; feet small and turned out; elbows not well placed; coat too curly about neck and quarters; symmetery not of a high order, the *tout ensemble* being that of a rather flat-sided, leggy and light dog.

Hornell Silk, looking very well, was alone in the champion cocker class. The open class for cockers, black or liver, was an excellent one. Eighteen entries, and I divided it for dogs and bitches. Brant, a very nice little dog by Obo II., was, I think, clearly entitled to first prize. He is much above the average at all points, and I venture the opinion that my decision will be indorsed by others. His forelegs are not quite right, and he would be improved by more feather; a credit to his breeder, Mr. Willey. Doc, often described in these columns, was second, followed by Obo Jr., Woodstock, a fair puppy, and Master Shina. Dr. Niven's smart bitch Busy made a nice winner in the bitch class, and gave Brant a hot race for the special, her too fine muzzle and rather flat sides keeping her from the coveted position. Lady of the Lake, in nice form, was second, followed by Juno W., Belle, Frou Frou and Queen Obo. It is a pleasure to judge such classes.

The next class I judged as being for spaniels of any other color, whereas the class was intended for cockers of any other color. Royal, a nice little red dog with a stylish head, was much the best, and Roxy should have been second, but as the book I was using said "any other color" instead of cockers, any other color, I gave the prize to the second best spaniel regardless of breed. This was Sport, Jr., a field spaniel, and a big one at that. Royal repeated his victory in a puppy class of seven. Frou Frou and Lucy, just fair specimens, being next in order given.

When the open class for cocker spaniels, black or liver, was called out, Lewis, who had in charge Doc and Dixie, disappeared, and Dixey being under lock and key could not be found. I waited twenty minutes or more for Lewis to turn up, but he did not do so until after the class had been judged. Precisely the same course was taken by Lewis when the puppy class was called on, nobody could find either him or the dog Dixie. The owner of Doc and Dixie is too good a sportsman ever to think of instructing an employe to keep his dog back in case of hot competition. This sort of thing must be stopped, and at once.

FOXHOUNDS—(MR. KRUEGER).

These classes were carefully handled. Among the English hounds Mr. Dan O'Shea's Ranger once more scored first. He is rather coarse in head; skull flat; ears not correctly carried; neck rather short; body too long cast and lathy; chest a trifle shallow; back ribs not very well sprung; legs good and strong; coat and brush fair. Bugle, second prize, is coarse in head—cheeky. His body is a trifle long and his chest too shallow; ribs well sprung and loins good. Among the Americans, Victory was clearly the best; a specimen of more than ordinary merit. Capital head, eyes, ears and muzzle; good back, loin and quarters; feet not quite right. Trailer, placed second, is not so good either in head, body or limbs as the winner.

DEERHOUNDS—(MR. MASON).

Mr. Thayer showed a splendid team in these classes. Chieftain, one of the grandest living, was alone in the champion class for dogs, and his kennel companion Wanda, but little behind him in good looks, was first in the bitch class. In the open classes Highland Laddie, Bras, Ramona and Thora swept the boards, and Brazen, a fair puppy from the same kennel, had the puppy class to herself. Thora has not the size of her kennel companions, but is built on speed lines and is doubtless as clever as any of her associates. These dogs are well known to your readers.

GREYHOUNDS—(MR. MASON).

Memnon, the gallant victor of many a prize on the bench and afield, was well ahead of everything in the greyhound class. His mouth is gone, and he will soon have to give way to youthful opponents. Had there been another really good greyhound in the class I should have downed him, for with his teeth all out his muzzle looks very weak and snipy. Misterton and Spring, placed equal second, have neither the limbs or quarters of Memnon, neither do they equal or approach him in other points. Lancashire Witch was absent. Heather Belle, well-known, scored in the bitch class after a sharp tussle with Juno, whose conspicuous faults are in loin and thighs.

BEAGLES—(MR. KNUEGER).

Rattler had the champion class to himself, and Tomboy, a new one, scored first in the open class for dogs. He is deficient in skull and muzzle, does not stand quite straight in front and might be stronger in the pastern. His quarters are good, and having youth on his side he may improve. Ginger, second prize, is too long cast, bad in legs and altogether wrong in coat and tail, but a true beagle. The winning bitch is coarse in head and ears. She is, however, good in forelegs and body; coat too soft. Actress II. has a fairly good head, but is too long between the couplings; brush and coat excellent. Tramp, the puppy prize winner, has a promising head, body a trifle long and ears a trifle short; legs and feet fair; a promising pup. Butler, second prize, is not nearly so good as the winner, being very deficient in head, ears, elbows and quarters; not at all likely to develop into a show dog. Classes well judged.

DACHSHUNDE—(MR. MASON).

This breed was better represented than is usually the case, but there was not a crack in the class. The winner, a red bitch, is too flat in skull and short in face, which is not sufficiently tapered; eyes dark, nose black; ears placed high and too short; legs of fair strength, crook and feet better than the average. Fripon is also flat in skull; ears too short; body of fair length, but not low enough; light of bone. Flash, vhc., was all out of condition. Feldman, hc, knuckles over, a serious defect.

MASTIFFS—(MR. MASON).

Nap, brother to Albert Victor, the well-known English winner, was first in the dog class. He is a big dog with a better skull than the average; muzzle too long but not pointed; eyes light; ears rather long; ribs too flat and not carried far enough back; legs too long for bulk of body; feet open and flat; hindquarters fairly good. A big dog, too short and flat in body, and too long in legs. Hero, second prize, lacks in volume of skull and muzzle; body too shallow and short; ear at off side badly carried; rather leggy; tail good; moves well; expression not dignified. Rose was best in bitch class. Skull lacking in volume, especially at sides; muzzle not deep or wide enough; back much too short; body too shallow; stifles too much bent; forelegs light of bone; tail good; eye and expression fair. The second prize winner is too long and dished in muzzle; ears not well carried; eyes rather full; body too short; limbs too light and hocks straight; tail, feet and coat good.

ST. BERNARDS—(MR. MASON).

The magnificent fronted Otho represented rough-coated champions, and the Hospice Kennels scored first and second in the open class for dogs (ten entries). The winner is a new face; he has plenty of head but is too full in cheek, muzzle fairly good, ears of nice size and well placed, back a trifle slack, loin fair, quarters good, tail not well carried, forelegs of good strength but not quite straight, feet good, coat straight; not a big dog; symmetry and quality above average; not in very good condition; will improve. Alvier, second prize, is too round in skull and not square enough in muzzle. In ears, back, loin, stifles and hocks he will do. Tail curled and badly carried; legs, feet and bone good. There were several fairly good dogs in this class, including Barry, second prize at New Haven, 1885. Sir Charles was absent. There were ten entries in the bitch class, and Norah, the winner, was closely pressed by La Duchesse, a long, roomy bitch, spoiled by a weak head. Jeanne d'Arc, a winner at Waverly last fall, was vhc., and several others in the class deserved and received notice. Cora, a well-built puppy, deficient in head, just beat Lady Alpha, who is also lacking in head properties and is not so massive as the winner. Hector, Rigi, Thuna, Queen of Sheba and Mont Rose were the winners in the classes for smooth-coats. I have always had a good word to say for Hector, who is not likely to be beaten in his class just yet. So long as Leila is kept at home the specials for smooth-coated specimens appear to be at his mercy. I put him over Otho for the special for best St. Bernard in the show. While he is not quite so good in front as his kennel companion, he is infinitely better behind and has more length of body.

NEWFOUNDLANDS—(MR. MASON).

About the best class, taken as a whole, that I have seen in this country, Bruno and Leo, first and second, are well known to your readers. Folly, vhc. and reserve, is a big dog and stands on good limbs, but his head is not the correct thing, and his coat is too short. Jim, hc., light in eye and not right in head, could win at many of our shows. Jack, unnoticed, was in no condition to be shown.

COLLIES—(MR. MASON).

There was some excellent material in these classes, the quality being better than I have seen at any other show in this country. Roy Boy walked over for the championship and then Clipper, in elegant condition, clearly beat Nullamore. It must not be forgotten that when these dogs met at Waverly Nullamore was second, and Clipper, I think, hc. The latter was beaten there by several points, but on this occasion he came out in great form and in his present condition is a hard dog to beat. He reminds me of my old dog Carlyle, but is not so good in ears as that dog and has a worse brush. Nullamore was looking well, but his soft coat and faulty head will always handicap him. Bonnie Scotland, vhc. reserve, is well-known, and Tarn, vhc., while not quite right at either end, is by no means a bad one. Luella, a sweet specimen, was first in the bitch class, and must have felt gratified when she downed Clifton Maid, a Crystal Palace and Darlington winner. Luella's coat is a trifle soft but it will improve, and her ears are not quite right, but in other points she has the best of Clifton Maid, and I think I got them right. Glenlivat, a very grand young dog, had no difficulty in winning in the puppy class. This is much the best specimen I have ever seen in this country, and one of the best collies I ever laid eyes on. It is difficult to say how good he will be when filled out so grand is he in head, coat and general conformation. Good bitch as Luella is, she was clearly beaten. Roderick Dhu is spoiled by having prick ears.

FOX-TERRIERS—(MR. MASON).

These classes were well represented, the quality being of high order. Richmond Olive was alone in the champion class and was in good condition. Raby Mixer, Bacchanal, Little Swell and Raby Jack were the winners in the open dog class. Mixer made his bow to the public on this occasion. He is a very good dog; stands rather high on the legs; ribs not well sprung and back ribs too short; chest not deep enough. He has a capital terrier head which is growing rather full at the cheeks; punishing jaws of good length; excellent eyes; very neat ears and the best of legs and feet. He stands remarkably well on his legs, is fairly good in coat, and shows considerable character. He is not in very good condition, and a pound or so of flesh put on in the right place will improve him. Bacchanal made a good race for the blue ribbon. He is always a grand little dog and is better in body than Mixer. His teeth require attention. Raby Jack, well known, was vhc. reserve, and Little Swell, much above the average in many respects, but too wide in front to compete successfully with the cracks, was vhc. Media, a new bitch of Mr. Belmont's, won rather easily from Meersbrook Nan in the bitch class. The latter has not improved on her Newport puppy form, and her rather round skull and soft coat will keep her back when in the best company. Media is quite a nice bitch, better in head and coat than Nan, and her equal in other respects. All of Mr. Belmont's dogs were looking well, and there is evidently somebody at work on them. Bacchan was hard as a board, and showed up in great form. Mephisto was the best of the five puppies shown. Nice head, cheek bones rather too prominent for a puppy; ears neat; ribs rather flat and not carried far enough back; chest rather wide, back a trifle long; legs and feet good.

BULL-TERRIERS—(MR. MASON).

The quality in these classes was excellent. Maggie May, who came under my notice for the first time, is a grand bitch, and Young Count, who won first in the open dog class and first in the puppies, is the best American bred one I have seen. If he lets down and gets rid of the superfluous leather about his head he will make it hot for some of them.

OTHER TERRIERS—(MR. MASON).

Bobbie Burns, the first prize Dandie, is one of the best dogs of the breed I have seen in this country. Lady Kate would do with more length of back and does not carry her ears quite right. Topsy, vhc., is too soft in coat for a Skye. The first prize Irish terrier is large and shaggy in coat. Fly, second prize (looks very like Erin to me) is much too weedy. Bristler, second prize, a wire-haired terrier, is too small; her weight is given as 16lbs.; she weighs 14⅓lbs. on my scales. The quality in the Bedlington class was excellent. Domino, a good one, spoiled by long, flat feet, was first, and Sentinel, another good one, second. The bitch has more length of leg than the dog, and she beats him in several other points. Rocks, lower on the leg than I like, was hc. Nanon, rather a nice black and tan, scored an easy win over Beppo. She has a good head and is much above the average in legs, body and coat; leg markings too smutty. Beppo is too full in cheeks and is not quite right before the eyes; chest rather wide, elbows out, chest not deep enough, markings fairly good, color rich. The winning Yorkshire is much too light in color and her back is too long by inches. The toys are too round in skull and short in face.

BULLDOGS—(MR. MASON).

Robinson Crusoe, Britomartis, Hillside and Josephine were the winners. All are well known to your readers. There were three puppies entered, but I withheld the prize for want of merit.

PUGS—(MR. MASON).

There were seventeen entries in these classes, and the quality was above average. Max, well known, clearly beat Pippo, who is just a fair puppy. Vesta was much the best of the six bitches shown. What's-What took second, and was first in the puppy class. Her head is rather smutty; muzzle a trifle long and lacking in volume; body color too smutty; ribs too flat; toes white; tail too long and not well carried. Bradford Buby was absent.

TOY SPANIELS—(MR. MASON).

It was getting very dark when these classes were called out; visitors crowded around the ring, making it very hard work to place the dogs correctly. I gave Hazel and Victoria first prizes in the class for King Charles. Both are faulty in skull and muzzle, also in body, color and marking. It is just as well that the owners of the Blenheim spaniels Banjo and Daisy should know that the latter, placed second, is much the best specimen, and that the decision in favor of Banjo will be reversed if ever the dogs come under my notice again. I could scarcely believe that I had committed such a blunder when I saw the dogs sitting side by side in a good light. No comparison—the bitch very much better in skull, ears, coat, feather, limbs and color.

ULMERS—(MR. MASON).

The best class I have seen in America. Cæsar, the winner, is a dog of more than ordinary merit. Skull fairly well shaped and of good length; eyes correct in size and color; muzzle strong and of fair length; neck of good length and strength, but not quite clean; shoulders muscular and well-placed; back rather slack and loin flat; legs of good strength, but not quite straight; feet fairly good, but not set quite straight; a dog of good size, showing power and quality. Juno, equal second, with Don Cæsar is of the same type as her kennel companion. Nero, vhc., is too heavy in skull and square in muzzle; not of correct type. Don Cæsar is a fairly good specimen and should be heard from again.

CHARLES H. MASON.

Following are additions to the awards published last week:

In field spaniels, Wilson & Tinning's Beau II. was com. In spaniel puppies Woodstock was second instead of Woodstock Nora. In American foxhounds J. Condisk's Pilot was very high com. and Toot won first in puppies. In beagle bitches Sing was first, Actress II. second and Queen II. reserve. In rough-coated St. Bernards Associated Fanciers' Ralman was high com. instead of Reginald. In bitches, J. H. Shipperan's Abbess was com. In mastiffs, the Buffalo Hat Co.'s Hero was second. In puppies, Ashmont Hero was very high com. Banker, Irish setter, is owned by Jean Grosvenor instead of B. F. Lewis. Following is a list of the remainder of the

AWARDS.

ST. BERNARDS.—SMOOTH-COATED—No entries.—OPEN—*Dogs:* 1st and very high com., Hospice Kennels' Hector and Woban; 2d, J. W. Dunlap's Rigi. *Bitches:* 1st and 2d, Hospice Kennels' Queen of Sheba and Thuna. *Puppies:* ROUGH-COATED—1st, A. Laidlaw's Cora. Very high com., Alta Kennels' Lady Alpha. High com., J. E. Porter's Princess. SMOOTH-COATED—1st, Hospice Kennels' Mont Rose.

NEWFOUNDLANDS.—1st and 2d, D. O'Shea's Bruno and Leo. Reserve, W. W. Silvey's Folly. Very high com., H. Breitweiser's Jim.

COLLIES.—CHAMPION—Associated Fanciers' Rob Roy.—OPEN—*Dogs:* 1st, Jas. Watson's Clipper; 2d and reserve, Chestnut Hill Kennels' Nullamore and Bonnie Scotland. Very high com., L. Biddle's Tarn. High com., D. O'Shea's Sadie. *Bitches:* 1st and reserve, Chestnut Hill Kennels' Luella and Pem; 2d, Associated Fanciers' Clifton Maid. *Puppies:* 1st, Jas. Watson's Glenlivat; 2d, Chestnut Hill Kennels' Luella. Very high com., A. R. Kyle's Roderick Dhu.

FOX-TERRIERS.—CHAMPION—J. E. Thayer's Richmond Olive.—OPEN—*Dogs:* 1st and reserve, J. E. Thayer's Raby Mixer and Raby Jack; 2d, Blemton Kennels' Bacchanal. Very high com., E. Lever's Little Swell. *Bitches:* 1st, Blemton Kennels' Media; 2d and reserve, J. E. Thayer's Meersbrook Nan and Nina. *Puppies:* 1st, Blemton Kennels' Mephisto.

BULL-TERRIERS.—CHAMPION—F. F. Dole's Count.—OPEN—*Dogs;* 1st, F. F. Dole's Young Count; 2d, W. W. Silvey's Baroon. *Bitches:* 1st, F. F. Dole's Maggie May; 2d, D. O'Shea's Nettie. *Puppies:* 1st, F. F. Dole's Young Count.

SKYE, DANDIE AND HARD-HAIRED SCOTCH TERRIERS.—1st, Jas. Rae's Bobbie Burns; 2d, C. A. Shinn's Lady Kate. Reserve, P. Miller's Topsy.

WIRE-HAIRED AND IRISH TERRIERS.—1st, G. D. Fowle's Greymount; Equal 2d, D. O'Shea's Fly and G. Bell's Bristles.

BEDLINGTON TERRIERS.—1st and 2d, W. S. Jackson's Domino and Sentinel. High com., W. W. Silvey's Rocks.

BLACK AND TAN TERRIERS.—1st, E. Lever's Nanon; 2d, J. Whittaker's Beppo.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Robinson Crusoe. *Bitch:* J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, J. E. Thayer's Hillside. *Bitches:* 1st, J. E. Thayer's Josephine. *Puppies:* Prizes withheld.

PUGS.—CHAMPION—D. O'Shea's Judy.—OPEN—*Dogs:* 1st, Dr. M. H. Cryer's Max; 2d, G. Bell's Pippo. High com., G. W. Fisher's Tom Thumb. *Bitches:* 1st, Dr. M. H. Cryer's Vesta; 2d, G. Bell's What's What. Reserve, G. Scheffner's Rexibe F. *Puppies:* 1st, G. Bell's What's What.

YORKSHIRE TERRIERS.—1st, J. Grimm's Lilly.

ROUGH-COATED TERRIERS.—UNDER 7LBS.—1st, D. O'Shea's Nellie; 2d, G. J. Pfeifer's Doodle. High com., G. Leininger's Topsie.—SMOOTH-COATED—1st, J. Kennedy's Mage; 2d, J. C. Hottinger's Pansy.

KING CHARLES AND PRINCE CHARLES SPANIELS.—Equal 1st, J. Grimm's Hazel and Associated Fanciers' Victoria.

BLENHEIM SPANIELS.—1st, B. F. Lewis's Banjo; 2d, C. F. Bingham's Daisy.

ITALIAN GREYHOUNDS.—Prizes withheld.

GREAT DANES.—1st and equal 2d and very high com., Wolverine Kennel Club's Cæsar, Juno and Nero; equal 2d, Osceola Kennels' Don Cæsar.

FRENCH POODLES.—1st, 2d and very high com., J. S. Williams's Pinkey, Miney and Tiney.

MEXICAN HAIRLESS.—1st, F. J. A. Bier's Chico; 2d, W. H. Hall's Dick. Very high com., F. L. Brooks's Nix.

MISCELLANEOUS.—1st, Glencoe Collie Kennels' Sir Lucifer; 2d, E. Hahn's Nellie.

SPECIAL PRIZES.

Largest collection, D. O'Shea. Best setter, T. G. Davey's Knight of Snowden. St. Bernard Hospice Kennels' Hector. Smooth the same. Irish water spaniel, Hornell Spaniel Club's Captain Muldoon. Cocker spaniel, Brant Cocker Kennels' Brant. Dog and bitch, Brant Cocker Kennels' Brant and Juno W. Kennel of four, Brant Cocker Kennel. Collie, Jas. Watson's Glenlivat.

PHILADELPHIA, March 15.—*Editor Forest and Stream:* I will give $10 for reliable information who the party was that smuggled my cocker spaniel puppy Dixie off his bench at the Buffalo show and brought him back as mysteriously as he disappeared, long after the classes he was entered in (open and puppy classes) were judged.—WILLIAM WEST, Prop. American Cocker Kennels, Camden, N. J.

CURRENT NOTES.—The American Field Trials Club have decided to run their inaugural trials at Florence, Alabama. The grounds are all that could be desired for the purpose, and to insure plenty of birds the club will abundantly stock them with quail, and no effort will be spared to make the trials the most successful that have ever been held in that section.... There will be a meeting of the Executive Committee of the American Kennel Club at Room 20, No. 44 Broadway, New York, on Wednesday, March 23, at 1 o'clock P. M.,... Mr. Windholz has found Rockingham, reported lost last week.... Mr. Geo. Poyneer of Williamsburgh, Ia., has established a kennel for the purpose of breeding Chesapeake Bay dogs.... There is considerable talk of a dog show at Toronto, Ont., the coming summer.

THE AMERICAN KENNEL REGISTER has 130 entries for the March number, bringing the total number of dogs whose pedigrees are given in the *Register* to 4,827.

THE BOSTON DOG SHOW.

AMONG the large additional number of entries received by the bench show committee of the New England Kennel Club is that of Mr. John E. Thayer, of Lancaster, Mass., who may in truth be called a pillar among breeders. His entries consist of 17 deerhounds, 12 fox-terriers, and 10 bulldogs, making a grand total of 39 dogs entered by one exhibitor. This is the largest number of dogs ever entered by one person in America, and when the value of the exhibit is taken into consideration it is doubtful if it has ever been equaled in the world.

The winner of the Homebred puppy sweepstakes, of the American Fox-Terrier Club, which is to be decided at the show, will receive $110 in cash, and a valuable silver cup added by John E. Thayer.

Mr. Martin Dennis has consented to judge collies at the Boston show in place of Mr. Mercier, of England, who can not attend on account of sickness.

After the entries close Saturday, March 19, the managers believe that they will be able to announce a very large increase over the number of entries received last year.

BENCH SHOW COM., N. E. K. C.

Editor Forest and Stream: I notice with much pleasure the great improvement in the classification and arrangement of prize lists in United States as exemplified by that of the New England Kennel Club for their bench show in April next.

It is most gratifying to all concerned to find that the non-sporting classes are opened to such an extent as to afford the non-sporting breeders ample opportunity to exhibit any breed he deems fit for exhibition.

The promoters of the New England Kennel Club's Bench Show are to be congratulated on the very satisfactory manner they have prepared their prize list, and is well worthy of emulation by the other clubs.

It is to be hoped the increased attractions in the list referred to will meet with the reward it deserves.

JOHN F. CAMPBELL.

MONTREAL, March 10, 1887.

PACIFIC KENNEL CLUB.

A SPECIAL meeting of the executive committee of the Pacific Kennel Club was held at the office of Dr. C. G. Toland, chairman of the committee, on Monday, February 7. Messrs. Jas. E. Watson, John F. Carroll, J. Homer Fritch, Ramon E. Wilson, Ely T. Hutchinson and H. H. Briggs were present. Mr. Russell, the superintendent of the North Pacific Coast Railroad, was present to advise with the committee as to various matters of interest to the club, Dr. Toland in the chair, Mr. Jas. E. Watson, secretary. On invitation Mr. Russell made a statement about the advantages offered along the line of the North Pacific Coast Railroad for a site for such kennels, clubhouse and appurtenances as would properly meet the needs of the Pecific Kennel Club. Mr. Russell remarked that, for sporting breeds of dogs Marin county had advantages possessed by no other locality conveniently accessible from San Francisco. Quail, snipe and ducks were abundant in pretty much all portions of the county, and climatic conditions were very favorable. Mr. Russell expressed himself as thoroughly in sympathy with the Pacific Kennel Club in all its objects, and said that if the club should locate its kennels within reach of his railroad he would gladly extend all courtesies possible, and would transport all lumber needed free of charge to the club. The executive committee formally thanked Mr. Russell for his very generous expressions. Mr. Fritch urged the wisdom of locating the club property in proximity to ground on which sporting breeds of dogs could be worked.

After considerable discussion it was ordered that a plat of land in Marin county be examined with a view to its purchase by the club. The gentleman, to whom was delegated the duty of looking up land, was instructed to find a place of about twenty acres of clay soil, upon which is a running stream.

The opinion of the executive committee is that the club should purchase a proper piece of land and erect upon it suitable kennels and a club house. Present prospects are that such a scheme will reach consummation within a year. The activity of the club and the general interest shown in its affairs augur well for its future. Its membership is increasing rapidly, the accessions being from among the best men of the city who are able and willing to assist in establishing a strong club. When the time comes for the club to give a dog show it will have such social affiliations as to make its exhibitions most successful.—*Breeder and Sportsman.*

DOGS ON CHAIN.

Editor Forest and Stream:

I have three fine blooded bird dogs, one Gordon setter and two pointers. These dogs are each chained, during most of the day, in an ordinary cow stall in the barn, but are released for a run every afternoon for about one hour. I am told by some people that so much restraint worries the dogs, and is not only cruel, but harmful to them. By others I am told that game dogs should always be kept in restraint, with the exception of moderate exercise, otherwise their hunting faculties, or at least their eagerness, will be dulled. Please give me your views, and am I doing right with my dogs?

G. W. G.

From "Ashmont's" excellent work, "Dogs, Their Management and Treatment in Disease," we take the following remarks, which have our fullest indorsement:

"Exercise develops the muscles of the body, increases their functional activity, hastens the digestion of food, and renders its assimilation easier. It improves nutrition by elevating the temperature, opens the pores of the skin, stimulating its functions, and through the lungs, by the stronger movements excited, it favors the exhalation of impurities and excesses.

"Too much importance cannot be attached to this subject. Keeping a dog confined with insufficient exercise is cruelty itself. Never chain a dog should be the rule, but unfortunately it cannot always be observed. Certain methods may, however, be resorted to, and a confined animal have greater freedom and still be restrained.

A post can be set up as far from the kennel as the limits of the owner's premises will allow, a wire fastened to it and passed through a ring, the other end attached to the kennel and drawn taut. The dog can then be chained to the ring, which will slide freely the entire length of the wire, permitting greater latitude, and the animal still be held in check. This means may be employed in cities, and where it is impossible to allow them to run at large.

"When dogs are kept in yards, the plan adopted by the writer can be resorted to. Fences or hurdles can be built entirely across the inclosures. These must be placed low at first, simply high enough to force the animal to make an easy jump, then in three or four weeks raised a few inches, another interval allowed to pass, and raised again. The results from the employment of this means are admirable, especially in the case of dogs inclined to be weak in the loins, and needing development behind.

"In conditioning dogs, especially for exhibitions, no better exercise can be recommended than slow walking; the distance being from two to four miles daily. By this means they will eat more, digest it better, and accumulate flesh more rapidly.

"While exercise is imperative, extremes must be avoided and caution used. If a dog is habituated to following a team, there is less danger of over exertion; if not so accustomed, care must be observed lest the system be disordered by too great effort. In winter, if a hard run is taken and he returns in a heated condition, he must not be shut into a cold kennel, but be allowed to cool gradually in a warm room. Violent exercise must never be allowed after a hearty meal.

"It is a wise plan to accustom dogs to climatic changes, yet they must be protected during the hotter days of summer, from the sun's intense heat, or the exposure will cause debility and often convulsions."

THE DENVER DOG SHOW.

Editor Forest and Stream:

I see in your valuable journal a report of the above show. Being here seeking health, with plenty of time on hand and naturally fond of all kinds of dogs, I spent most of each day at the hall while the bench and chicken show was going on. Seeing the report of the show gave me a desire to say a few truthful words about it. The hall was entirely too small for the proper display of the exhibit and room for the crowd constantly in attendance. The benching was very poorly done, and there simply was no management about the show. No one seemed to have control of anything except that the man at the door took the tickets. The show lasted from Tuesday until Saturday night, and there never was an ounce of any disinfectant used during the entire week, and if the loss of young dogs is not great from disease contracted at this show it will be a wonder. The judges were all mere amateurs of no experience as breeders, or extensive dog owners and handlers, and the awards seemed to be made according to whether the owners were friends of the judge or not.

Mr. E. E. Pray is a gentleman, but he ought not to allow his friends to use him in the capacity of a judge. Mr. Page's experience as a hound man must certainly have been limited to a few chases after jack rabbits on the prairies of Nebraska and Kansas, and Mr. Thomas was entirely at sea with the various classes assigned to him, as, for instance, he gave the first St. Bernard prize to a large black and white mongrel, and the Skye terrier prize to a Yorkshire, and so on. I might name a dozen blunders equally bad, but to the dogs themselves.

Mastiffs, first ought to have been withheld, and second given to Humbold, who is good except he is too leggy and was shown too low in flesh. St. Bernards had nothing for competition fit for first and second, he would have suited either very well. Mr. Trimmer had on exhibition a dog recently imported, called Hackney Monk, by the great Plinlimmon, he is of good coat and nicely marked, but is not of the great size one looks for in the St. Bernard. In Newfoundlands, Baker's entry was only fair. In greyhound dogs, we liked Winfield's Dude much better for winner of first than Nebraska Jack, the latter very poor across the loins, has bad feet, and a weak head before the eyes, he has a good tail, but it is so long that it hangs to one side instead of in a straight curve upward. In bitches, the winner of second is much the best greyhound of the two, and a white bitch, Lady W., was far better than either. In puppies, Fly and Nada were far superior to the winners. Rough-haired greyhounds are a sort of mongrel greyhounds, which are seen nowhere else but in Colorado, a cross between a greyhound and a kangaroo dog, brought from Australia. There were but three entries, all from the same family. J. Moscom's Belle of Denver, first; and J. Winfield's Happy Jack, second; E. N. Jenkin's Ring not noticed. Ring ought to have been placed second. Deerhounds had no entries. This is very strange, as I am informed that the Landseer Kennels have some twenty of the very best deerhounds ever seen in America, and yet Dr. Van Hummell did not exhibit one of his grand dogs. I met the great dog champion Mac on the street, he has muscled up in fine shape, and looks far different and better than when I saw him on the bench at New York last year. Bloodhounds had no entries. In pointers, Rebel, a very fair little dog, was given first, while vhc. would have been a good card for such a dog, but I am told the judge sold him to his present owner. English setters were a poor snipy lot. Irish setters were a good class and properly placed. Gordon setters should have been, Ben Hur first, Jones's Grouse second, and Monk nowhere. In cocker spaniels, Todd's Jet II. is a splendid specimen of the breed. Dixey Jet's son is a good young dog. The bitches were a good lot and rightly placed. Collies were a fair lot. Bulldogs, a good class. Scotch terriers had not a full-bred specimen in the show, but this was one of the classes on which the judge was not well posted. The same may be said of Skye terriers. In Italian greyhounds, the winner of first was a grand specimen of these rare dogs. In pugs, first and second should have been reversed. In bitches, the winner of first had one eye out and was suckling pups, while the winner of second was a grand bitch and in good condition.

The most remarkable part of this remarkable judging was the novel way they distributed the many handsome special prizes, donated by the merchants of Denver. For instance, the special (a shooting coat) given for the best collection of sporting dogs, was actually won by J. Winfield, who won one first and two second prizes and had two breeds on the bench, but it was given to C. F. Hoeckel, who was without a prize and exhibited only greyhounds. A copy of "Stonehenge on the Dog" was to go to the best greyhound bitch, but the judges awarded it to Lady Trump, the winner of second prize. An elegant piano scarf, donated to the best pug, was awarded to a dog that was not noticed among the prize winners.

I hear a good deal of talk about this club becoming a member of the American Kennel Club next year, and holding their future shows under those rules. I would advise them to first try and get some members into their club who would know some little about dogs, and who would carry out the rules. I am told that it has some excellent citizens among its members, but they merely lend their names, and let a few sharps run and control the working of the club. Being a true friend of the dog and his future in America, I think such facts as these ought to be made public, so that they can be remedied or abandon the idea of holding shows. My idea of a bench show is to bring together the best specimens, and by proper judging educate the people to what constitutes the best dog, and thus induce them to breed and buy the better and improved dogs. This can be done on a grand scale in this grand city of Denver with an honest and able management.

NEW YORKER.

DENVER, Col., March 8, 1887.

THE WATERLOO COURSING MEETING.—The annual Waterloo coursing meeting at Altcar, Eng., began on Thursday, Feb. 19, and finished on Saturday. According to the London *Field*, public interest in this event is declining. Following is the result: Waterloo Cup: R. F. Gladstone's black dog Greater Scot (MacPherson—Madge) and T. D. Hornby's red dog puppy Herschel (MacPherson—Stargazing II.) divided. Waterloo Purse: G. J. Alexander's black dog puppy Alec Ruby (Alec Halliday—Rubia). Waterloo Plate: M. G. Hale's black bitch Happy Omen (Millington—Radiant) and T. Graham's black and white bitch puppy Harpstring (Glenlivet—Polly) divided.

THE AMERICAN FIELD TRIALS CLUB.—Cincinnati, O., March 12.—*Editor Forest and Stream:* The first annual field trials, under the auspices of the American Field Trials Club, will be held at Florence, Ala., during the month of December, 1887 By order of the Board of Control—W. B. SHATTUC.

THE AMERICAN KENNEL CLUB.—*Editor Forest and Stream:* The A. K. C. really promises to become a factor of weight and use in American kennel affairs. It still fails to give exhibitors and owners evidence that it intends to afford them any protection from rascals, but I believe it will yet work itself up to the point of punishing one knave, and we can afford to wait in hope for this. In providing sound rules, directed toward the providing of justice to all, it is really making some progress, and it will surely yet come to the point of exacting some observance of its own rules. But it is threatened with a recurrence of the same malarious attacks that so poisoned its blood in its infancy; but I have sufficient confidence in the sense of such men as Morgan, Child, Donner, Smith, Peshall and Vredenburg, to believe that the flood of soft soap and menus of flapdoodle that is being dealt out to it, are not allowed to have much weight with them, but there may still be soft-headed noodles who take in the stuff about the A. K. C. being representative of the breeders of the country, through the various kennel clubs that make it up. This rot is being dealt out as solemnly as though sensible men could be made to believe it; yet who are the breeders thus represented? What clubs do the Ashmont, Orlando, Wacouta, Hinsdale, Minnehaha, Saratoga, Mt. Clemens or Saginaw mastiff kennels belong to? What mastiff breeders besides the Winlawn, Pine Grove, Lake Waccubuc, Green Mountain, Riverside, Weymouth and Camden kennels, are represented in any way in any club? I may have missed a few kennels who may belong to "the clique club," and who may thus be some day represented in the American Kennel Club, but is a body "representative" of mastiff breeders when such dogs as Ilford Cromwell, Debonnair, Alice, Lorna Doone, Bal Gal, Baby, Ilford Cambria, Nap, Rose, Ashmont Nero, Lorna Doone II. (the last two the famous "Amidon" mastiffs), the dark horses you can all imagine the owner of, etc., are absolutely outside of its fold? This is not adversary to the A. K. C.; breeders don't particularly care whether there is an A. K. C. or not, as long as they get sound rules and honest dealings; but what in the world is the use of aping the cuttlefish and raising a stour, to hide the truth? Let the A. K. C. stand on its own merits, let it be fairly judged as to what it is doing and what it will do, and if it cannot stand by this test let it fall, and the sooner the better. I, for one, believe it can and will stand this exposure to the light of day, but the day is long passed when the canine public can be tempted to emulate the ostrich and bury their heads in a tub of hogwash, at the bidding of anybody. I have quoted mastiffs and mastiff breeders, as being familiar to me, but cannot those posted as to other breeds, supplement, in their own minds, what I have said as being the case with every breed? Then take the composition of the A. K. C. How many of the members really represent anybody? Two-thirds of the stock of the Western Pennsylvania Poultry Society is held by two men, one of whom don't own a dog and don't know a mastiff from a boarhound, the other may own a foxhound. What breeders do they represent? In fact, taking out the New England, New Haven, Westminster, Philadelphia and Cleveland clubs, how many known breeders belong to any of the other clubs?—W. WADE (Hulton, Pa., March 9).

WHY DOES A DOG TURN AROUND?—*Editor Forest and Stream:* I notice in the answers to correspondents that "J. P. H." inquires the reason why a dog turns round once or twice before lying down. I have noticed when watching a dog do this that he keeps his head low, so do not think he does it to look about him. A dog on being put into a bed of fresh straw, immediately turns until he has made himself a nest. Do you not think that the most probable reason of this is that straw, grass, etc, being a dog's natural bed, he turns before lying down to make all the straws run the same way, thereby making a smoother and more comfortable bed than it would otherwise be, and that from doing this he instinctively turns when lying down, whether on a carpet or on the bare ground.—CLUMBER.

THE NEWARK DOG SHOW.—There are 530 entries for the Newark dog show, distributed among the classes as follows: 56 St. Bernards, 17 mastiffs, 2 Newfoundlands, 2 Great Danes, 7 greyhounds, 12 deerhounds, 41 pointers, 28 English, 34 Irish and 19 black and tan setters, 56 spaniels, 70 collies, 38 beagles, 2 basset hounds, 4 dachshunde, 13 pugs, 9 bulldogs, 18 bull-terriers, 45 fox-terriers, 2 black and tan, 6 Irish, 2 Dandie Dinmont, 2 Bedlington, 3 Skye, 13 Yorkshire and 5 toy terriers, 6 toy spaniels, 6 poodles, 4 miscellaneous and 8 in the selling class. This is 14 less than the number entered last spring, and 103 more than last fall.

WIRE-HAIRED FOX-TERRIER LOST.—Mr. R. H. Barlow writes that some one has stolen his wire-haired fox-terrier bitch puppy, six months old. She is mostly white with one half of her head black, a black spot at root of tail, and black slash across left shoulder. A liberal reward will be paid for information that will lead to her recovery. Address Ronald H. Barlow, 1316 Walnut street, Philadelphia, Pa.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Flossie. By F. M. Shelley, Sheridan, N. Y., for black, white and tan beagle bitch, whelped Aug. 11, 1886, by Prince (Ringwood—Roxy) out of Krueger's Maida.

King Fred. By J. V. Patterson, Sheridan, N. Y., for black, white and ticked English setter dog, whelped Nov. 19, 1886, by Ted Llewellin (A.K.R. 599) out of Marcella (Prince Phœbus—Stella).

Roy Gladstone. By F. M. Streeter, Lehigh Tannery, Pa., for blue belton English setter dog, whelped Dec. 25, 1886, by Iron Duke (A.K.R. 3638) out of Trusty Gladstone (A.K.R. 1550).

Tiny. By Jas. Bartholomew, Columbus, O., for Scotch terrier bitch, whelped 1882, pedigree not given.

Jip. By Jas. Bartholomew, Columbus, O., for Scotch terrier dog, whelped April 18, 1886, by his Billy out of Tiny.

Donald Croxteth. By C. M. Munhall, Cleveland, O., for liver and white pointer dog, whelped Dec. 28, 1886, by Croxteth (Young Bang—Jane) out of Patti M. (Donald—Devonshire Lass).

Biddy. By Francis Brooks, West Medford, Mass., for red Irish terrier bitch, whelped August, 1886, by Garry (A.K.R. 2198) out of Judy (A.K.R. 2199).

Maud K. By Northwood Kennels, Columbus, O., for black and white English setter bitch, whelped March 27, 1886, by Dash III. (Blue Prince—Armstrong's Kate) out of Mabel Blue (Royal Blue—Eudora).

Zura. By W. F. Todd, Portland, Me., for lemon and white pointer bitch, whelped April 10, 1886, by Bang Bang (A.K.R. 394) out of Zanetta (A.K.R. 1261).

Dashing Dot. By J. M. Kinney, Staunton, Va., for black, white and tan English setter bitch, 7mos. old, by Dashing Rover (Dash II.—Norna) out of Ranee (Gladstone—Frost).

Rockford. By C. E. Gilchrist, Charlestown, Mass., for blue belton English setter dog, whelped Jan. 12, 1887, by Frank Dale (Grouse Dale—Lady Thorne) out of Donna (Royal Blue—Dryad).

Northwestern Kennels. By Ad. J. Klofanda, Eau Claire, Wis. for his kennel of sporting dogs.

Scotch Terrier Kennel. By Jas. Bartholomew, Columbus, O., for his kennel of Scotch terriers.

Northwood Kennel. By W. F. Knell, Columbus, O.

Chesapeake Kennel. By Geo. E. Poyneer, Williamsburgh, Ia., for his kennel of Chesapeake Bay dogs.

NAMES CHANGED.

Northwestern Kennels. Eau Claire, Wis., March 9.—*Editor Forest and Stream:* Mr. A. M. Graw, of Milwaukee, wrote to me stat-

ing that he has claimed the name Badger State Kennel for the last five years, and I therefore change the name to Northwestern Kennels.—AD. J. KLOFANDA.

Sir Obo to Brant. I have thought it best, in the interest of many who are interested in the career of my cocker dog Sir Obo (A.K.R. 3456), recently sold to Chas. M. Nolles, to call attention to the fact that his name has been changed by his new owner to Brant. As he has just won first prize at Buffalo, and as he is known to many of my friends in the United States and Canada as Sir Obo, I wish to draw attention to this change of name.—H. G. CHARLESWORTH.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Lady May—Royal Albert. H. Pape's (Hoboken, N. J.) English setter bitch Lady May (Lofty—Maud Muller) to Blackstone Kennels' Royal Albert (Sir Alister—Novelty), March 2.

Fannie Obo—Black Pete. H. C. Bronsdon's (Boston, Mass.) cocker spaniel bitch Fannie Obo (A.K.R. 1311) to James P. Willey's Black Pete (A.K.R. 3071), Feb. 22.

Flirt—Marchboy II. John Kaschenbach's (Wilkesbarre, Pa.) beagle bitch Flirt (Rino—Fly) to W. F. Streeter's Marchboy II. (A. K.R. 2919), Feb. 24.

Isle—Duke of Lee's. Dr. R. H. Derby's (Lloyd's Neck, L. I.) St. Bernard bitch Isle (A.K.R. 2755) to E. R. Hearn's Duke of Leeds (A.K.R. 1535), March 11.

Lady Bright—Gun. Chas. York's (Bangor, Me.) English setter bitch Lady Bright (Rink II.—Aida) to his Gun (Gladstone—May B.), Feb. 21.

Althea—Black Pete. Harry D. Brown's (Waterbury, Vt.) cocker spaniel bitch Althea (A.K.R. 842) to J. P. Willey's Black Pete (A. K.R. 3071), Feb. 17.

Bessie—Belthus. J. O. Donner's (New York) English setter bitch Bessie (Ranger II.—Mallard's Belle) to H. F. Schellhass's Belthus (Rock—Meg), February.

DEATHS.

Flossie. White, black and tan beagle bitch, whelped Oct. 11, 1886 (Racer—Maggie), owned by F. M. Shelley, Sheridan, N. Y., from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. H. F., Dwight, Mich.—Please advise me what can be done for a dog with a swelling on his neck which seems to be enlargement of the glands of the throat. It does not affect his general health or appetite. Ans. Give 10 grains of the iodide of potassium in solution mixed with the food night and morning.

ULMER, Yonkers.—Setter nine months old has lost appetite almost entirely; has quite a little fever, no cough; is always ready for exercise, and will go five miles without apparent fatigue; bowels quite loose. She is becoming emaciated; hair comes out in spots size of a ten cent piece on parts of body. I tried Fowler's solution, 5 drops per day, but it caused bad diarrhœa. Have looked for worms in vain. Her coat is fine and silky, and she is apparently well except loss of appetite and frequent panting. Ans. Give 4 drops of tincture of aconite every two hours until fever subsides. Give a two-grain pill of quinine three times daily. Keep the bowels regular with syrup of buckthorn. Do not feed meat.

H. E. M., Lock Haven, Pa.—My pointer has scaly mange. A spot appeared on his back six weeks ago, on which hair came out and white scales appeared. Have been treating him for scaly mange per directions given in FOREST AND STREAM: Fowler's solution arsenic, five drops twice daily, and applying balsam of Peru ointment, and calomel on alternate days. Spot is size of half dollar, neither increases nor decreases, skin covered with rough scales; no other spots have appeared. Ans. You are treating the dog just right; you had better keep his bowels freely open either with Epsom salts or castor oil. You may try the oleate of mercury, rubbing it in with a coarse tooth brush once daily, instead of the balsam of Peru ointment. No, it is not serious.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

RANGE AND GALLERY.

BOSTON, March 12.—Unfavorable weather for rifle shooting occasioned a slim attendance at the range to-day. A few scores were finished. The scores at 200yds.:

Decimal Off-hand Match.

C E Berry, A	9	10	10	8	10	8	9	5	8	9	—86

WILMINGTON, Del., March 7.—Monday was "badge" day of the Wilmington Rifle Club, but the bad condition of the weather, both overhead and underfoot prevented a good turnout of the members. The thick, foggy condition of the atmosphere was very unfavorable for good shooting. The following are the scores on standard American target, out of possible 100 points:

Badge Match, 200yds.

H A Heinel	9	6	5	9	10	5	3	3	8	4	—62
R Miller	6	8	4	5	4	4	5	7	8	6	—57
H Simpson	7	2	3	2	7	8	7	5	4	9	—53
S J Newman	4	4	7	3	3	8	4	5	4	9	—51
J B Bell	8	4	4	3	6	5	8	1	5	1	—48
W O'Connor	0	6	7	6	2	5	4	5	9	3	—47
W A Bacon	1	4	3	2	9	5	5	3	4	7	—39

Record Match, 100yds.

R Miller	9	7	9	7	7	9	10	10	9	9	—86
H A Heinel	8	10	7	8	8	8	8	7	10	6	—84
J B Bell	7	9	10	8	6	5	9	8	10	5	—79
W O'Connor	8	8	9	6	10	8	9	7	5	8	—78
H Simpson	9	10	10	7	4	5	6	8	6	6	—71
W A Bacon	9	6	9	8	5	5	9	10	4	6	—71
S J Newman	9	7	4	5	5	9	7	8	8	4	—66

LAWRENCE, March 12.—At the regular weekly shoot of the Lawrence Rifle Club at Riverside Grove this afternoon, 200yds., off-hand, Standard American paper target, the following scores were made:

Practice Match.

O M Jewell	8	8	9	9	9	6	10	10	8	—86
C M Hill	10	7	10	9	7	7	8	8	7	9—82
Daulton (Mil.)	7	5	10	10	9	10	8	7	7	8—81
Colonel M. Beal	8	6	8	10	6	8	10	8	3	3—70
D P Norris	5	9	7	6	8	9	5	7	6	2—64

Prize Match.

C M Hill	8	8	10	6	6	9	10	10	10	8—85
O M Jewell	9	6	9	8	10	9	9	7	8	9—84
Colonel M Beal	9	5	4	6	6	6	6	7	7	9—65
D P Norris	8	9	6	8	8	5	4	4	4	9—65

M. W. Daulton used a regulation Springfield rifle and factory ammunition with 500-grain bullet.

HARTFORD, March 6.—The regular monthly shoot at 200yds. of the Franklin Rifle Club yesterday, resulted as follows:

H Andrus	6	10	8	10	7	7	9	8	5	8—78
H M Pope	10	9	10	6	6	8	9	5	7	5—75
E C Henn	4	10	4	7	9	10	7	5	4	9—69
L H Robertson	6	6	8	6	8	4	6	8	4	5—61
W W Tucker	5	8	5	4	5	5	8	3	7	5—60
T H Britten	8	6	6	6	6	4	9	4	6	5—60
F K Rand	5	4	6	8	5	6	5	4	7	8—58
E J Duley	10	4	0	4	6	5	4	10	9	4—56
W S Loveland	8	3	4	9	3	4	8	0	10	4—53
E F Beach	4	4	5	6	4	9	4	4	7	6—52

The medal was taken by Henry Andrus, and the half dollars by E. J. Duley, 0.2, H. Andrus, 0.9, and W. S. Loveland, 1.2.

GARDNER, Mass., March 10.—There was a good attendance at the last regular meet of the Gardner Rifle Club, at Hackmatack Range. Hinman target, 200yds.:

I N Dodge	82	85—167	F E Nichols	71	70—141
G C Goodale	80	86—166	C L Leland	62	70—132
W C Loveland	82	83—165	D E Warfield	60	55—115
G R Warfield	78	76—154	C Crabtree	62	53—115
H C Knowlton	74	73—147	E C Dodge	54	56—110
C N Edgell	71	71—142			

HAVERHILL, Mass., Rifle Club, March 12, 200yds., off-hand, standard target:

S E Johnson	9	10	8	9	10	6	7	7	10	9—85
J Busfield	8	5	8	8	9	10	8	6	6	5—75
J F Brown	7	6	9	8	5	9	7	4	6	7—68
L Jackson	5	5	5	4	9	3	6	6	9	10—62
F Merrill	6	4	5	5	7	5	9	4	5	7—57

Strong variable wind; good light.

BULLARD MATCH.—The Bullard Arms Company has concerted its first published scores of the second match, and it now transpires that the Ingersoll Rifle Club, with it score of 783 points, does not win the trophy. The change is due to the efforts of Mr. A. C. Gould, editor of the *Rifle*, who was convinced that there was some error and maintained that the scores were not correct and pointed out that the Canadians must have shot under the rules of the National Rifle Association of Great Britain, which, at short ranges, permits the shooter to fire in the kneeling or sitting position, with support from the elbow on the knee. The following letter has been written by the secretary of the Canadian club in reply to repeated direct questions as to whether they observed the rules of the National Rifle Association of Great Britain or America; whether they shot in a strictly off-hand position or with a rest allowed by English rules. This letter settles the question, and the Bullard Arms Company announce the Canadians' score as rejected: "Ingersoll, March 7, 1887.—Bullard Repeating Arms Company.—Dear Sir: Yours of the 3d received, and in reply would say that our club shot off the match on Feb. 5 in accordance with the British rules, and most of our men shot off the knee, as we supposed that was the proper way and allowable in your match; however, if your rules call for off-hand shooting I suppose our score will be debarred. I am very sorry to have caused you all the trouble. I assure you it was a misunderstanding on our part, as we thought we could shoot under our rules. I have been talking with some of our men, and they express doubt about some of the scores being made in strictly off-hand. Therefore I would suggest, if suggestions are allowable, that the secretary and president of the winning club or team attest to the correctness of the score on oath before a competent magistrate. I think you would get more clubs to enter if a clause to that effect were added to your conditions. We will have the pleasure of entering for your future matches, and now that we understand the conditions, hope to win a rifle or two. Regretting the amount of trouble we have caused, I am yours, GEORGE G. BECK, Secretary."

THE HURST RIFLE.—Senator Joseph R. Hawley and his former partner, Mr. Hubbard, of Hartford, Conn.; Captain Stanley, of Pennsylvania; Mr. C. B. Borham, of St. Louis, with Lieutenant A. G. Berry, U. S. N., Lieutenant-Commander Watson, Lieutenant A. Morrell, Lieutenant M. L. Wood, Lieutenant Hemphill and other naval and ordnance officers stood in the driving snow for several hours on March 5, before the firing butt at the Washington Navy Yard, to witness the first of the official tests ordered by the Navy Department of the reinforce rifle and artillery cartridge invented and patented by General H. P. Hurst, of Summit, Miss., who was present. The experiments were conducted under orders from the Navy Department by Lieutenant H. Morrell of the Navy, who did the firing from the shoulder in person. The following results were obtained: Charge of powder, 60gr.; bullet, 1in. in length, steel point and shaft, with leather bands at base (a new projectile recently invented by Senator Joseph R. Hawley); weight, 83gr.; caliber, .32; second or accelerating charge of powder, 150gr.; fired from the shoulder, with little or no recoil, penetrated 19 inches of pine and lodged in 20th inch. Another shot, same weight of powder and ball, pierced two iron plates, each twenty one-hundredths of an inch thick. A number of other shots were fired with similar results. The cartridge, it is claimed, is adapted to all small arms and artillery. It was made by Mr. W. M. Harley, one of the experts of the yard, from drawings by Chief Draughtsman Tibbetts, and is a creation of wonderful simplicity and ingenuity.

NEW BEDFORD, March 12.—A squad of New Bedford City Guards at Bay View range to-day made the following scores at 200yds.: Corp. McBay 45, Lieut. Morgan 37, Priv. Young 34, Priv. Rice 30, Priv. McInnis 28, Priv. Almond 26. The members most interested in target practice are agitating the question of forming 600 and 800yds. ranges.

PRACTITIONERS.—The Holyoke, Mass., *Transcript* calls men who shoot at a target, target practitioners.

NEWARK, N. J., March 11.—The Our Own Rifle Club is one of the live gallery clubs of the city, and the members held their weekly shoot for their diamond badge last evening, with the following result: Snellen Team: Dietzel 100, Drexler 96, F. A. Freiensehner 80, Knothe 102, Condit 80, Weider 83, J. M. Kilfer 91, Limberger 80, Snellen 114—Total 826. Ferd. Freiensehner Team: Bertram 98, Smith 98, Otto Kiefer 84, Wilms 77, F. Freiensehner 91—Total 834. The match between G. Dietzel and Ferd. Freiensehner took place Monday. Each man fired 50 shots with a possibility of making 600 points. At the end of the fortieth shot the score stood 870 for the former and 879 for the latter. Dietzel then made 102 and Freiensehner made 80, this leaving the former winner by 15 points. Another match was arranged between them.....

The Rutgers Rifle Club had its regular weekly shooting on J. Huegel's range, 528 Bank street, this evening. Each man shot ten shots with a possibility of scoring 120. The score was as follows: Capt. Dietz's Team: G. Meisel 105, Joe Smith 75, F. Schaeffer 83, W. Frost 85, E. Osmun 81, Wm. Smith 78, J. J. Farrell 90, H. Allen 82, T. Galligan 45, Capt. F. Dietz 106.—Total 825. E. E. McGraith's Team: J. Hilderbrandt 84, H. Snyder 97, M. J. McArdie 91, J. J. Dalton 77, Joe Goeckin 75, R. Schwartz 72, L. Smith 66, William Black 75, Charles H. Squier 57, E. A. McGraith 93.—Total 788. The Dietz Team winning by 37 points. The club is now in a prosperous condition and expects shortly to win the laurels in a contest with Our Own Club.

WIMBLEDON AND CREEDMOOR.—The announcement is made that Wimbledon Common will be abandoned as a place for long-range matches after next year. The objections to its continuance as a range are raised by adjoining property owners, among whom is the Duke of Cambridge, Commander-in-Chief of the army. The case with Creedmoor is different. The Rifle Association wants to abandon the range on account of its inaccessibility, but cannot do so for the present, as no good substitute can be procured. It was thought that Staten Island would furnish the new spot, but the hopes founded on this have thus far proved delusive.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

"FOREST AND STREAM" DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a $100 trophy to be competed for on Decoration Day, May 30, 1887.

The competition will be open to all gun clubs in the United States which were organized by the date of the original announcement, March 3, 1887.

CONDITIONS.

To be competed for by teams of three club members, each man to shoot at fifteen artificial targets thrown from a single trap.

A club may enter more than one team, provided, however, that no member may shoot on more than one team. Entrance fee, $3 per team. The entire sum of the entrance moneys (nothing whatever being taken out) will be divided into prizes, as stated below.

Each team may shoot on its own grounds, or elsewhere, as convenient. Scores are to be certified to by three club officers, under conditions which will be explained in due time.

Any target manufactured by the following concerns may be used, viz.: the Ligowsky Clay Pigeon Co., Cincinnati, O.; the Niagara Flying Target Co., Suspension Bridge, N. Y.; the Target Ball and B. P. Co., Lockport, N. Y.; the Cleveland Target Co., Atlantic Ammunition Co., 291 Broadway, N.Y.city, agents. Not more than one style of target to be used by any one team.

Targets to be thrown from any trap manufactured by any of these companies; trap to be set to throw the targets at least 45yds. from trap.

Five targets to be thrown straightaway, five at a right angle to the right, and five at a right angle to the left.

Guns of 10, 12 or smaller bore may be used. Distance 18yds. for 10-bores, and 16yds. for 12-bores or smaller. Any charge of powder, with 1¼oz. shot. Gun to be held below the armpit until shooter calls pull.

PRIZES.

First Prize.—The team making highest score will receive the FOREST AND STREAM DECORATION DAY TROPHY, value $100.

Second Prize.—The team making second best score will receive a cash prize of 50 per cent. of all the entrance fees.

Third Prize.—Team with third highest score will receive 30 per cent. of entrance fees.

Fourth Prize.—Team with fourth highest score will receive 20 per cent. of entrance fees.

In case of tie on highest scores made the tie must be shot off, under same conditions, for the TROPHY. Ties for any other prize must be shot off, unless by unanimous consent divided.

NEW HAVEN, Conn., March 9.—Third monthly shoot New Haven Gun Club; American clay birds, 5 traps:

J. R. Stice first money, T. J. Beers second, H. Nichols third. For the club prizes—T. J. Beers won first, S. S. Gerard second, G. Ortseifer third.—L. W. W.

THE UNKNOWN GUN CLUB.—The regular monthly shoot of the Unknown Gun Club took place March 10 at Dexter's Park, L. I. There was a large gathering of the members and friends. Some good shooting was done, the birds being in first-class condition. R. Monsees killed seven birds straight, winning for the second time this year the club badge and first money. H. Knebel, Sr., E. Harard, J. Brown, J. Bamford and H. Knebel, Jr., killed six birds each and tied for second prize. Vroome, Link and Rathjen killed five each and tied for third. The ties in the last classes could not be shot off, there not being sufficient birds, so the winners divided.

Referee, J. Boyle.

CINCINNATI, March 5.—*Editor Forest and Stream:* Match between J. E. Miller of the Price's Hill Gun Club of this city, and Phil. Nose of the Miamitown (O.) Gun Club. 100 American clay birds each, 18yds., 5 traps, National Gun Association rules, $50 a side. Mr. Miller, on several occasions, has broken 100 clays in succession, and his score of 159 straight breaks has never been equaled. Mr. Nose is a modest young farmer, whose experience at the trap is very limited. Last summer he occasionally appeared at the club grounds near Cincinnati, where he attracted much attention by his awkwardness and peculiar style of handling his gun when at the score.

Phil. Nose	1111111111—10	J E Miller	1101111111— 9

R. D.

NEW YORK, March 12.—Regular pigeon shoot of the New York German Gun Club, Sea View Park, New Dorp, S. I., March 10. Match at 10 live birds, H. & T. ground trap, club rules, gold medal first prize:

Boesenecker (25)	1011110101—7	Bohling (30)	1110011101—7
Hemmer (25)	1011011101—7	Sauter (21)	1011110110—7
Schlicht (25)	1111101101—8	H Kunz (21)	1010111101—7
Greitner (21)	1010110001—5	Muller (21)	1010111010—6
Lucas (21)	0010110101—5	Schiller (21)	1101103111—7
Birnbaum (25)	0111101101—7	Bomhoff (21)	1101011011—7
Schmitt (21)	1111111101—9	Hassinger (21)	1110051111—7
Garms (30)	0101115111—7	Klein (21)	1011101100—6
F Kunz (25)	0110101101—6	Strube (21)	0111110101—7

o Dead out of bounds. Gold medal to Schmitt.

Team shoot, 2 birds each; H. & T. ground trap, 21yds. rise, 80yds. bound; shot under club rules; whole money to the winning team.

Team A.		Team B.	
Schmitt	11—2	Boesenecker	11—2
Garms	11—2	Bohling	11—2
Schiller	11—2	Hemmer	11—2
Hassinger	11—2	Sauter	11—2
Birnbaum	11—2	Schlicht	11—2
Strube	11—2	Muller	01—1
Klein	10—1	Kunz, H	11—2
Bomhoff	10—1	Kunz, F	10—1
Greitner	10—1—15	Lucas	00—0—14

The rest of the 250 birds at hand were shot off in individual matches without official scoring. The average shooting was very fine, only 34 birds being lost of the lot. After the shoot came the regular club dinner, when, upon motion of President Schmitt it was resolved to enter a team in the FOREST AND STREAM Decoration Day Trophy Match. The festivities came to a close with three hearty cheers for FOREST AND STREAM.—TELL.

BOSTON, March 12.—The Brighton Gun Club held its weekly shoot at the Faneuil grounds this afternoon. Five prizes were offered, consisting of wads, shells, screw-driver, gun cleaner and oil-can. The scores on the prizes were as follows, 5 prizes, 10 blackbirds, 10 clays, 10 bats:

J Coyle	5555333—22	Maguire	4304222—15
O'Connell	4243441—21	Horrigan	5311435—15
Grace	3444212—18	Breivogel	0221132— 8
McDonald	4233321—17	Hill	2220000— 6
Devlin	2342321—16		

First sweep, 5 bats—J. Coyle first, O'Connell second, McDonald third.

Second sweep, 5 bats—Kirkwood first, Maguire second, McDonald third.

Third sweep, 5 clays—O'Connell first, Kirkwood second, Maguire third.

Fourth sweep, 5 Peorias—Kirkwood first, McDonald second, Breivogel third.

Fifth sweep, 5 Peorias—J. Coyle first, McDonald second, O'Connell third.

Sixth sweep, 5 bats—McDonald first, J. Coyle second.

TORONTO, March 7.—A very interesting live bird match was shot at the byres to-day between teams of 10 men, each representing the Owl Gun Club, of this city, and the Guelph Gun Club. As will be seen by the following score the Owls won by 9 birds:

Owls.		Guelph.	
J Humphreys	5	Walker	5
J Douglass	5	Edwards	3
C Cockburn	5	Singular	2
C Rogers	4	Ellis	6
H Humphreys	4	Hallady	3
J Montgomery	5	Wayper	4
A Elliott	5	Shattuck	4
G Crothers	5	Johnstone	3
J J Abbott	3	Hall	3
C Ayre	5—47	Turnbull	5—38

BOSTON, March 9.—The trapshooters assembled in large numbers at Walnut Hill to-day. Appended are the scores of the champion badge match:

M.R.A. Team.		Wellington Team.	
Stark	1111111101111111—14	Lawson	1111111001011—12

WORCESTER, Mass., March 10.—Regularmeet of the Worcester Sportsman's Club, Coal Mine Brook Range. There were seven events as follows: Seven clay-pigeons, 16 entries; 6 blue rocks, 15 entries; 7 clay-pigeons, 16 entries; 6 blue rocks, 17 entries; 7 blue rocks, 16 entries; 7 blue rocks, 17 entries, and 7 blue rocks, 5 entries. During the afternoon there was a match between W. S. Perry and Chas. Howe. Perry gave Howe 15 points. The result was as follows:

Perry	0111101001101111101011111100011011011111—34
Howe	0110111011100010111001101011000010+15—33

SAN DIEGO, Cal.—Although there has for some time existed in this city a gun club, until last week there has never been a formal organization of one. In response to invitations, a number of sportsmen have formed themselves into an association for sporting pursuits. They are, George Merritt, F. W. Frances, B. C. Hinman, G. M. Ridwell, C. R. Dauer, B. Barnes, D. B. Hinman, John Machachlan, G. B. Breeze, William Darling, Henry Seabold, P. W. Goodwin and W. C. Hinman. Officers: President, John Machlachlan; Vice-President, C. R. Dauer; Secretary, Percy W. Goodwin. Treasurer, George Merritt; W. C. Hinman, Will. Frances and D. B. Hinman, Directors.

SOUTH SIDE GUN CLUB.—At the annual meeting of the South Side Gun Club of Newark, N. Y., the following officers were elected: President, J. D. Orton; Vice-President, E. L. Phillips; Treasurer, Alfred Heritage; Secretary, Asa Whitehead; Executive Committee, Lemuel Thomas, Alfred Heritage, Oswald Von Lengerke. The retiring president, Mr. W. R. Hobart, who had filled the office since the club's organization in 1881, stated in his address that during the club's existence the receipts had been $4,100, disbursements $3,900, and that the club had used over 108,000 artificial targets.

TORONTO, March 7.—The members of the West Toronto Dog and Gun Club held their annual meeting in Bailey's Hall, Huron street, this evening. There was a large attendance of members. All the reports proved satisfactory. The following officers were elected: President, John Smilie, re-elected; Vice-President, F. Habart, re-elected; Secretary and Treasurer, A. G. Jackson, re-elected; Committee, H. Bull, A. Ranney, E. Dollery, D. Beatty and John Bailie.

NATIONAL GUN ASSOCIATION.—*Editor Forest and Stream:* In the way of a boom for the National Gun Association, and to give another reason why all target manufacturers and all sportsmen should join the National Gun Association and thus assist in furthering this national sport, the following action has been taken: On March 8, 1887, the board of directors of the Ligowsky Clay-Pigeon Company resolved as follows: That the general manager be authorized to donate $400 of the stock (out of the original $500 which they had subscribed to the National Gun Association to assist sportsmen in originally forming the same) as special prizes in the various tournaments to be held this season. This leaves them only $100 of stock, being the same amount which all target manufacturers have been asked to subscribe to have their targets used at the association tournaments. Thus far the Globe Flight Co., of Philadelphia, and Crittenden and Card, of Cazenovia, N. Y., only have accepted the liberal offer of the association. In pursuance of the above resolution a number of shares of the stock have been placed at the disposal of the Iowa and Illinois circuit of tournaments, managed by J. F. Breitenstein, of Keokuk, Ia., and also to the Texas State Sportsmen's Association for their annual tournament this year. We have a few more shares on hand which we will distribute as soon.—J. E. BLOOM.

NEWARK, N. J., March 7.—The third monthly shoot of the Union Gun Club was held at Dr. Jobs' farm, at Springfield, today, with 25 members present. Three of these were from Elizabeth and the remainder were from Springfield, Milburn, Cranford, Westfield and other places in the neighborhood. They shot clay-pigeons thrown at various angles, and 20 birds were allowed to each man. William Morrison, of Springfield, broke 18 and won the gold badge. William M. Parker, of Elizabeth, broke 16 and took the silver badge. The leather medal, which has heretofore been held by W. H. Marshall, of Milburn, fell into the charge of Mr. Fritz, who won it by breaking only 2 out of 20. Mr. Marshall was not at the match, but he has since offered to shoot a little private match with Mr. Fritz, just to see who really ought to wear the sole leather chest protector until the April shoot.

WELLINGTON, March 12.—Thirty-one gunners faced the traps at the grounds of the Wellington Club to-day to practice in the several sweeps and to contest for the Macomber badge and the medals offered by the club. The pleasant weather made the sport agreeable and some good scores were the result. In the badge match at 10 Macomber birds Wilson and Lawson tied with 9 each, but in the shoot off the former won. In the medal match Oliver won in Class A, Nichols in Class B, and Dutton in Class C. Twenty-five sweeps followed.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.

JUNE.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3, Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

A CRUISE TO CHARLOTTE HARBOR.—I.

BY TARPON.

ALL through the months of January, February and March, 1886, it blew, howled, whistled, rained and was wet, nasty and disagreeable. People who came to Tarpon Springs for pleasure and to escape the cold winter, wished they had stayed at home, and the old residents here wished they could get away.

Our trip to Charlotte Harbor had been planned early in the winter, but so unsettled was the weather that it was postponed from time to time until March was nearly gone, and we were seemingly no nearer a start. Finally in sheer desperation we stowed cargo, and after one or two false motions, got away on April 1, but before we were twenty miles on our way we thought we had made an "All Fool's" job of it. Hardly were we out of the river ere the wind hauled to the old quarter—N. W. First it came in gentle puffs, then harder and harder until it was blowing half a gale. Well, it was a fair wind and we made the most of it.

Our fleet was made up of the sloop Honest John, and the open Peterboro canoe Horicon, the sloop 16ft. 5in.×4ft., and the canoe 14ft. 6in. × 26in. We were soon abreast of Hog Island—not a very pretty name certainly, but still a very pretty island. A fine place for beach birds, shells and fish.

Next came Clearwater Key, with its collection of whitewashed houses which look white and glaring in the strong rays of the sun. We cross Little Pass, which is a trifle lumpy, and are soon in smooth water on the inside of Sand Key. Now the bay narrows down, the water shoals, and we are soon flying through the narrows, but not for long. Northerly winds make low tides, and we strike the shoalest part on the last of the ebb. Some time is wasted trying to drag through. Sometimes it is quite exciting, as there are here and there holes with from 2 to 5ft. oi water, and the boat, with all sail on is worked across the mud flat by inches. All at once the nose slides into deep water with a surge and a rush, she gathers way before the strong breeze and tears along for a few minutes like mad, only to pile up on the mud on the other side. We soon tire of this work, so down jib and mainsail, and we'll get dinner.

Easier said than done, for we are surrounded by flats and oyster bars, there is no dry land within an eighth of a mile; but we are old cruisers, so we fill the little kettle, fish out a bundle of pine splinters and with these and a hatchet wade through the mud to a clump of mangrove bushes, a few minutes sufficing to gather green twigs to make a foundation for our fire, which, started with the pine splints and fed by dry twigs from the tops of the mangroves, is soon burning cheerily. As the kettle is placed in position a flock of willet are seen; the Skipper picks up the gun, and an instant later two fat birds are fluttering out their life at our feet. The Skipper takes off their jackets while the cook cuts the spits, and with a thin strip of pork to each, they are soon sputtering before the fire. After dinner we push on, sometimes wading, we at last reach through the narrows and open out on Boca Caya Bay. The wind is light now and we have a narrow difficult channel, and so when we reach John's Pass, forty miles from home, we vote it a good day's work, get our tea and turn in.

The next morning was bright and clear and we were up betimes and soon away. We make a quick run to Disston City, and after purchasing a few stores, push on to Pass-a-Grille, stop for dinner at the old camp built by Nessmuk and Tarpon a year ago, and where they hived up through a furious sou'wester. After our siesta we start with a light breeze but a strong ebb tide, and drift and sail alternately, reaching Egmont about 4 P. M. We find quite a busy time; two large schooners are here, the smaller one a fishing vessel from Cedar Keys, and the larger a government schooner in the lighthouse service, and engaged in repairing the wharf, cottage, outbuildings, etc., of Uncle Sam. A comfortable camp is soon made, tea prepared, and everything settled for the night. Mr. Moore, the genial light keeper, puts in an appearance with an invitation to come up to the house. We, of course, accept and spend an hour delightfully, chatting of the life in this isolated region, examining the many rare shells and curiosities collected by Mr. Moore and his family. Later on there comes a party from the government boat. One brings a banjo, another a violin, all are singers, and we manage to pass a very pleasant evening. It was quite late when our last pipe was smoked out, and with a look at the boat we rolled up in our blankets.

I wonder if other cruisers than myself have found out that nearly all mishaps are caused by carelessness. We had anchored the sloop on the edge of a narrow, deep channel, where the tides run with great force. At 3 o'clock I looked out; the boat was riding to the tide, bringing the sea about abeam. I watched her for some few moments, saw she was all right and then rolled over for another nap. As I went off to the land of dreams, I had an indis-

tinct memory of the thump of a steamer's paddle, but was too far gone to notice the fact that the boat, being very low in the water, would have a poor show in the swash of a large steamer.

I woke at daylight with a start and one look told the story. There lies the Honest John, still riding to the tide, but with every swell rolling right over her.

One yell to the cook: "Turn out, we're wrecked in port." We ran to the beach, launched the Haricon, tripped the sloop's anchor, and soon had her on the beach; but what a show that was, everything was afloat, the tin cans of bread were tin cans of pudding, the dried beef was dry no longer, peaches and apples soaked ready for use, the glasses had washed out from the stern locker and were in the bottom of the boat with the gun and axe, and all nearly covered with sand.

Our canned goods were all right, however, with the exception of labels; these were all washed off, and when we wanted some Boston baked beans we frequently opened a can of peaches; but it made a delightful uncertainty as to what we were going to have for dinner, so we did not mind that.

Our boat was at last cleaned of water, our effects spread on the beach to dry and, thanks to the kindness of Mrs. Moore, many things were saved that at first seemed to be ruined. Many loose articles were washed out of the boat and came ashore, some, doubtless, went to sea, as we never saw them afterward.

Altogether we got out of it better than we expected, and we learned never to anchor a heavily loaded open boat in a tide-way, where there is a prospect of large steamers passing close by.

We spent the day quite pleasantly wandering round the island, hunting rattlesnakes, chasing half wild pigs and watching the lighthouse men at their tasks. A visit was made to the little cemetery where a number of Uncle Sam's sailors are waiting the boatswain's call. One headboard had the single name "Jack, aged 13 years." It reminded me of the lines:

"If his mother were waiting, in that world or this,
If he had to remember a good bye or kiss."

A grave is sure to bring sober thoughts anywhere, still more so on a lonely island like this, where the only sounds heard are the ceaseless swash of the surf on the beach and the sough of the wind through the palmettoes. Our strolling was brought to a close and rather suddenly, by the light keeper calling our attention to a large diamond-back rattler which he had just killed. There are some people who are not afraid of rattlesnakes, but we were, so we quietly meandered to the beach and prepared supper.

The next morning opened with a strong sou'wester, and after waiting nearly all day for a slant we made sail and stood for Passage Key, a small barren islet about a mile south of Egmont. We stood along all right so long as we could keep under a lee, but when we opened out the passage and got the long rollers from the Gulf, we had to start sheets a little. The little craft hung to it bravely, however, but the sea was too heavy for us to make Passage Key, so, easing sheets a little more, we stood for the mouth of the Manatee River, which we reached after dark.

When the darkness came, it came like a blanket. And as neither the Skipper or the Cook had ever been there, it was quite a question as to the kind of land fall we should make. As we entered the river the wind chopped, and we worked along carefully with pole and paddle. An hour passes, we sight a dark object on the starboard, and then another. What are they? Clumps of trees, perhaps. At any rate we'll find out. The prows soon grate on the beach. The Cook is ashore, reconnoitering. Soon he hails, "Come ashore. Fish ranch; good shelter."

The fleet is soon secure. We look about, find a large seine boat in one of the sheds, make our bed on her half deck and are soon asleep. We sleep like tired cruisers, and only wake as the sun peeps in at us through the open sides of the shed.

In the morning we found we were camped on Shaw's Point, a sightly place with some half dozen fish sheds, a shell house, and two Spaniards in charge. They were surprised to see us, as they had not heard us land the night before. They shrugged their shoulders when we spoke of going on, and said, "Can't do it; too moosh sea in bay." After breakfast we thought the same. The wind rose with the sun, and we soon saw we had better stay where we were. Dividing our forces, the cook went to Palma Sola for stores, while the Skipper tried to improve camp a little.

A large box was turned down for a table; two salt tubs answered for seats; a piece of burlap was made to answer for a door, and we were housekeeping.

Three days are spent waiting for better weather. The fourth one brings it, and we are off. The wind is in the old quarter, but quite reasonable and we soon beat out of the river and swing off for Sarasota Bay. We made a very good run, and at 4 P. M. were in sight of Sarasota and the Scotch settlement, a new town on the sand bank order. The last two hours of our run were quite exciting, we were dead before it, the sea was very heavy, and the Haricon seemed to want to climb over the stern of the Honest John. The cook did not like that arrangement, so he laid down across the taffrail and acted as a buffer for the canoe; it grew a trifle monotonous, however, and he was ready to camp by the time we made port.

The Sarasota of to-day is a town of but a year's growth. It was formed by a colony of Scotchmen who were induced to emigrate by the glowing accounts held out by Florida land agents. Those of the colony who could turned back for home as soon as they had seen the country. The remainder, for the lack of funds, were compelled to remain, and are now trying to make the most of a bad bargain. Old Sarasota will be remembered as the place where the gang of thugs had their headquarters some two years since. It is about two miles south of the Scotch settlement.

The third day saw us headed for the Mangroves, a narrow, torturous passage between the mainland and Sarasota and Chaise's Keys. The water is very shoal, with numerous oyster bars, mud flats, etc. We worked down some ten miles, when, for lack of water, we were compelled to camp. Our ground was well chosen, in front was a bed of very fair oysters, while just across were flats where the birds congregated by the hundreds. Back of the camp was a trail which led to the outer beach, some two hundred yards away, where were shells by the million.

Our camp was pitched on a little bluff said to be an old Indian camping place. The heaps of oyster shells surrounding go far to prove it. The cook and skipper both laid themselves out to make a cosy camp. The shelter was stretched just right, material for a camp-fire piled in readiness, oysters gathered for supper and breakfast, and an hour before sundown all was finished. Our supper was the crowning success of the camp; each had done his best, and when the order was given to "fall to" there was nothing lacking, not even an appetite. After supper came the usual routine, smoking and story telling. The Cook does not indulge in the luxury of a pipe, but the Skipper could smoke enough for two, so there was nothing lost. The camp-fire that night was a living joy, built of huge logs of the red cedar and chinked with pine knots, it gave out the pungent resinous flavor of the pine, the delicate aroma of the cedar, with the brightness and sparkle of both combined. That was a happy evening; everything seemed at peace, the voices of the night, sometimes harsh and discordant, were now low-toned and musical, the very waves on the beach climbed up the sand with a gurgling laugh, while a great owl resting on an oak near the fire felt so happy he forgot to hoot. But the Skipper got tired of telling twisters concerning his early days and the Cook of relating college scrapes, so the fire was fixed and each, rolled in his blanket, was soon asleep.

"An hour passed on, the Turk awoke." Crash! Bang! Fire! "What's that, who, when," and Skipper and Cook came to their feet with a bound. "What's the matter?" A glance tells the story. One of the cedar logs had burned through, capsized over another, throwing a bushel, more or less, of live coals and ashes into the blankets of the sleepers.

Things were soon got to rights, but all sleepy notions were banished for the time, so down sit the party with another batch of stories which the incident has brought to mind.

The Cook gives out first, and the Skipper, who is telling a story of a fire at sea, is reminded by a little snore from the aforesaid Cook, that his eloquence is thrown away, so he breaks off short, looks pityingly at the sleeping youngster and thoughtfully fills his pipe.

Finishing his smoke, the Skipper arranges his bed anew and starts again for the land of dreams. But it was not to be. Just as he began to lose all memory of times, places and people, there was another alarm, this time the burnt log capsized the other way, setting fire to some dry brush, vines, etc., and in five minutes there was a conflagration, in five more the fire had completely flanked the camp and there was a right smart chance of being burned out of house and home. But perseverance and a wet bush will do wonders, and in half an hour we were safe.

"Skipper," says the Cook, "didn't you say this was an old Indian camping place?" "So I've been told," says Skipper. "Well," rejoined the Cook, "I believe it, and I believe we've roused the Demon of the Seminoles." "May be so," says Skipper, "but it's so near daylight now he can't give us any more trouble." In fact it was getting gray in the east, the fire was cuddled into shape to roast oysters, water boiled for coffee, and soon we were following the narrow trail which led to the beach.

A DINNER TO MR. BARNEY.—On March 10 the Springfield C. C. gave a dinner at the Massasoit House to Mr. E. H. Barney, whose successful efforts have done so much for the reputation of the club during the past year.

THE A. C. A. REGATTA PROGRAMME.

Editor Forest and Stream:

Some points in Mr. McKendrick's letter addressed to me in the FOREST AND STREAM seem to require answers.

First—We are apparently agreed that the single blade paddle is getting into disuse in A. C. A. races. Any experiment aiming at keeping the legitimate and natural propeller of the open canoe in its proper place deserves consideration. There are difficulties—perhaps the sailing canoes must be raced separately. I do *not* go back on my declaration, that to handicap a fast rival is a weak act. The open canoes were admitted to the same paddling races with sailing canoes, when they universally carried single blades, armed with doubles they are quite out of place there. Now, they should either retain the handicapping conditions or have separate races. This is not a question of privileges to be argued by lawyers on each side. The fast light open canoe is not a rival of the sailing canoe under paddle because the latter simply declines to race against the former; it would be absurd. Nor have I nor any other sailing men, sought to handicap them as rivals; they are not rivals; they are such different things that I use one of each kind. Perhaps they should be separated entirely. Let the regatta committee decide.

Second—The 75ft. limit was originated to remedy the obvious injustice suffered by cruising men who carried only one rig for all uses and who had not a fair chance against the racing rig men. The obvious injustice has not disappeared; the remedy is so effective that it is not felt so much; but there is just as much need now as ever there was for a limited sail race. It was not against the lead mines that this rule was aimed, but to defend cruisers in at least one race against big rigs designed for racing.

Third—Pecowsic is 16ft. x 29in., very nearly full Class B. Mr. McKendrick must overlook this when he insists in calling her a small boat and demanding bigger craft after having disavowed big boats. We entirely agree in the need of thoughtful attention to the rising racing types, but one season of experience will do more good than a whole code of rules in discouraging undesirable craft. R. W. GIBSON.

VESPER BOAT CLUB.

THE Vesper Boat Club of Lowell, Mass., held its annual meeting on March 9, with President Paul Butler in the chair. The treasurer and secretary each read their reports, showing a prosperous condition of the club. The latter report is of special interest as showing the extent of the change which has been going on in the club, originally a boating organization, since the introduction of canoes, some half a dozen years since. The report reads as follows: "Looking at the general life of the club, one acquainted with its history cannot fail to note its changing character; not that its interest in aquatic sports is evanescent; but that its interest is constantly seeking new forms of expression. The former keen interest in rowing competitions has been partially superseded by the use of canoes—a change which has really strengthened the individual interest in aquatic sports. Recreation rather than exercise per se, seems to be sought for, and for this the canoe seems best adapted. The engagement book shows an undiminished use of the club boats, and a constant use of the club canoes. The registered engagement of boats and canoes last season, show a use of the facilities of the club by 50 per cent. of its membership; in 1885 it was 40 per cent.; in neither year, however, were names always registered when a club boat was used. An observation of this, sufficiently close for the purporse, warrants the addition of at least 15 per cent. for this class; add also a similar percentage for boat owners who do not use club boats at all, and also for members who use the facilities of the club in company with others, and there is a total of something over 90 per cent. of the membership actually using its facilities. This shows that the interest in good wood in the Vesper Boat Club. The record book also shows a constantly lengthening boating season. In 1885 the first engagement was recorded May 16; the last Oct. 1—a period of 149 days. In 1886 the first engagement was May 1 and the last Oct. 20, or 173 days, a gain of 24 days over the preceding year, while it is certain that a large proportion of the canoes were in use from the time the ice left the river, about the middle of April, up to its closing by frost in November, a period something over seven months. Other books would undoubtedly show corroborative facts in this respect, and it will be seen that the introduction of canoes has greatly increased the length of the boating season, and enormously enlarged the benefits which the individual member derives from his connection with the club. For the present year the club may look forward to a good regatta this spring. The new life introduced in the club in the last two years, with that which may naturally be expected to come in this spring, warrant this expectation.

This is a most gratifying showing for canoeing where it has come into direct rivalry in a club famous for its rowing, but the same fact is noted elsewhere. Rowing clubs, as a rule, must depend for that general interest necessary to a prosperous growth on shell rowing and racing, and without these and the strong competition they engender there are few clubs that can succeed. For this work it is necessary that the club shall have a number of men with time and disposition to train steadily for a large part of the year, and to do a great deal of hard work. Besides the rowing men there must always be a large number of members who, while not racing themselves, take an active interest in the success of their crew, and are willing to bear the heavy expenses of new boats, training, etc. Under these conditions shell rowing has declined greatly in late years, as may be seen in many localities. On the Kill von Kull, once made famous by the Nassaus and Argonautas, it is dead; and though there are several rowing clubs still on these waters, their old time glory has departed, and they have no prominence in the racing world. On the Harlem too rowing has declined, and the same is true in many other places. The men who rowed in 1875 or even before, have retired from racing, and no new ones fill their places. In all of these clubs canoes are found in increasing numbers, and canoeing, as a rule, is gaining in favor as rowing loses. One strong reason for this is that the attractions of canoeing are so different from rowing. There is very little pleasure in merely rowing in a shell, when the excitement of a race is lacking, and the necessary practice is but a hard grind and not a pleasure. There are times when a sharp spin does a man good and gives him healthful exercise, but no one will claim that a daily pull in all weathers, under some martinet of a coach, is anything but the hardest of work; but this is necessary to success in rowing. The canoe, on the other hand, has the great charm of personal ownership and command, the canoeist has the sole responsibility for the proper management of his boat, while the latter is adaptable to racing as keen and exciting as any shell rower knows, and at the same time to a great variety of pleasure uses, such as camping, cruising, pleasure paddling and sailing of afternoons, and to taking a companion along. In short, the difference is that most rowing alone or with a crew is purely mechanical work, much so as gymnasium practice, while in canoeing the individual resources of the canoeist are continually called on in one way or another. The Vesper Boat Club have found the benefits of canoeing in a far greater interest among all members in water sport and in the club's welfare, and they have now under consideration an increase of the membership limit from 100 to 150. Officers: President, Paul Butler; Vice-Presidents, Andrew G. Swapp, David S. Goddard; Treasurer, Ralph F. Brazer; Secretary, Rodney F. Hemenway; Executive Committee, Henry W. Salmon, J. Arthur Gage, Joseph P. Battles.

BATTENS AND REEFING GEAR.—Cold Spring, N. Y., March 5.—*Editor Forest and Stream:* The use of battens in sails, both for purposes of flattening and reefing the canvas, has been known to the Chinese for hundreds, if not thousands, of years. The writer saw at Shanghai in 1872, in a race of the yacht club there, some eight or nine of the European and the American owned boats rigged in Chinese fashion, the sails being made by an American sail-maker named Cooke, a resident of Shanghai. These boats were in model like our catboats, but much larger in general. In a race also of cutters belonging to men-of-war, one of the cutters of the U. S. ship Monocacy and several of the boats of the English ship Cadmus were also rigged in this manner. The writer adopted the rig also for a small boat of his own, and found the sail superior to any boat sail ever seen by him in any part of the world before or since. Reefing becomes, with such a sail as spoken of, simply a matter of slacking away the halliards, of which there is only one set to a sail. The mast in the boats of the Shanghai club was stepped almost in the midship station, the sail projecting a fraction forward of the mast, and being secured thereto by parrels on each batten. The manner of rigging the sheet was peculiar and singularly effective. The writer would be glad to see it given a trial on our catboats, but has for 14 years nearly tried in vain to induce some one to adopt it. For sailing close-hauled in small boats the Chinese rig is unequaled in the opinion of—ALCYON.

HARRISBURGH C. C.—On March 3 the Harrisburgh C. C. held its annual meeting and dinner at the residence of Col. McFarland. The officers elected are: Commodore, Geo. McFarland; Vice-Commodore, M. Fager; Lieutenant, H. L. Shole; Secretary, H. Martin; Corresponding Secretary, W. Frank Whitman; Treasurer, Jacob Hoak.

A.C.A. DUES AND YEAR BOOK.—Brooklyn, N. Y., March 4. To the members of the American Canoe Association: The following has been mailed to each member of the Association: Dear Sir: You are hereby notified that at a meeting of the Executive Committee of the American Canoe Association, held Feb. 12, 1887, at New York City, Mr. William M. Carter, of Trenton, New Jersey, was elected Secretary-Treasurer of the Association, vice Dr. C. A. Neide, retired. The inclosed memorandum, which is made up from the books of the Association, is believed to be the present condition of your account. Will you remit the same to the Secretary-Treasurer at your earliest convenience, so that the Year Book may be issued correctly at an early day. Delay has occurred in issuing the above, but with the co-operation of members the Year Book can be issued at its proper time. It is particularly urged that each member will send to Secretary Carter his address, as he wishes it to appear in the Year Book, and also that he will inform all the members in his locality. The addresses of a number of members, especially in cities, are so vaguely given that they cannot be reached by mail. We do not wish to drop any of these, and therefore hope that the above suggestion will be followed. Accompanying the circular is a statement of the condition of each member's account as shown by the Secretary-Treasurer's books, which have been carefully examined by Mr. Carter and myself. In conclusion, I think it proper for me to call attention to a suggestion made by Mr. Carter, which is that the Secretary-Treasurer of the Association be made a bonded officer. This subject will be referred to the Committee on Revision of Constitution.—Very truly yours, ROBERT J. WILKIN, Commodore.

THE HUDSON SPRING MEET.—*Editor Forest and Stream:* The cordial invitation of the Shattemuc C. C. to their brother canoeists to take "pot luck" with them on Decoration Day, seems to me to be about the right thing. The custom of a "little meet" along the river on that day was successfully started three years ago. Why give it up? Personally it meets my views to a fraction, and, without speaking officially, I think all of our members that can get away will spend a "short term" at Sing Sing on that occasion. The distance is so short from New York and transportation so easy that I trust the southern delegation will be a large one—good it always is. Brooklyn, New York and Knickerbocker should show up well. The mosquito fleet from Jersey should also be on hand—now is their chance to get to a near-by meet. Yonkers can easily arrange to. The unattached canoeists will certainly find welcome, and who knows how many thereafter may think it about the right thing to send their little dollar to Trenton and invest in an A. C. A. certificate. It is too early in the season to speak of those Indians up at the frozen North, but nevertheless I hope to see the Mohicans out in force, and Rondout by that time will have given up ice-boating and should be ready to join in the "love feast" at the Shattemuc beach—the "corn dance" will come later up on Champlain. That there may be a "mighty gathering" at each place to warm their toes at the big camp-fire and help "roll the main down," is the toast of a—DOCK RAT.

WESTERN CANOE ASSOCIATION.—A circular containing the following notice has been sent out by the W. C. A. to all its members: "On the second page of this sheet will be found a copy of the resolutions recently received from the American Canoe Association. The executive committee has not yet taken any action regarding them. They are of the opinion that a vote should be taken on the chief question, that of becoming the Western Division of the A. C. A. at once. Please let me know your opinion by answering yes or no with your views on the question. Under the new arrangement the annual expenses will be one dollar, a small part of which will be given to the A. C. A. and the balance retained by the Division. There will be no further dues nor assessments of any kind. Of course all new members joining after the Division is formed will pay an initiation fee of one dollar to the A. C. A. as usual. Yours truly, JAMES O. SHIRAS, Secretary and Treasurer."

SQUARE STERNS VS. COUNTERS.—*Editor Forest and Stream:* As to the merits of counter stern vs. sharp stern boats, I can say from a limited experience on Seneca Lake, that I think a following sea does not get "the heave and scend" on a sharp stern that it gets on a counter stern boat; and while the lines might, perhaps, be made so fine as to leave the water as easily, a counter stern before a wind would steer harder, especially if a light draft, and would be more apt to broach to. A neighbor of mine recently received a letter from his brother, an officer on the U. S. Steamer Yantic, in which he states that on their late cruise from Colon to Key West, when near the latter place about fifty miles at sea, the coal in the bunker was discovered to be on fire. After fruitless attempts with the pumps to extinguish the combustion, some hand fire grenades were thrown into the coal and the flames were at once extinguished.—S.

RONDOUT C. C. OFFICERS.—Commodore, C. V. A. Decker; Vice-Commodore, J. S. Paynter; Secretary, F. B. Hibbard; Treasurer, Guilford Hasbrouck; House Committee, W. A. Stephens, H. B. Snyder and H. S. Crispell; Auditing Committee, C.V. A.Decker, F. B. Hibbard, J. S. Paynter and G. Hasbrouck.

ST. LAWRENCE C. C. OFFICERS.—Commodore, J. S. Ellsworth; Vice-Commodore, J. L. Jackson; Secretary and Treasurer, W. F. Kip.

THE START FOR THE OCEAN RACE.

AT last, after many delays, the start for the ocean race has been made, and the two yachts are now well on their course across the Atlantic. On Saturday morning the Dauntless and Coronet were both under way and flying about the upper Bay with a fine N. W. wind, cold and piercing in spite of the warm sunlight, but just what was desired to insure the most favorable start. The Coronet had been off Tompkinsville since Tuesday, but the Dauntless had lain at the foot of Twenty-fourth street, out of the way of the ice, until Saturday morning, when she towed down, casting off from the tug below Governor's Island. By noon there were on hand at the starting point, off Buoy 18, a number of tugs and steamers, besides the steam yachts Meteor and Loretta, and the revenue cutter Grant. The tug Luckenbach was, of course, on hand, with Messrs. Taylor and Peabody of the regatta committee in charge, and at 1 P. M. she blew the first whistle, the Coronet and Dauntless being both up the Bay under lower sails only. At 1:10 P. M. the starting signal was given and both came for the line, the Coronet being some distance ahead. In spite of the strong wind and the swift-running ebb tide it was 1:12:17 before the Coronet crossed, with square sail set and the topsails being sheeted home as she went over. Meanwhile the Dauntless had set her squaresail further up the Bay and came down under it, crossing at 1:16:45, the topsails going on her at once. Everything was in their favor and both were soon clear of the Narrows, and now the kites came out of the lockers. Maintopmast staysails and jibtopsails were tried for a time, until well down the Bay, when they and the squaresails came in and the racers settled down to the hard and continuous work that will last for the next two or three weeks. One by one the boats dropped out of the attendant fleet until only the Luckenbach and a few others were left, and these were astern of the yachts. At last even these saluted and turned back, and the two were left to continue their long voyage alone, the Coronet, when last seen, being still well in advance. The two were sighted about 10 P. M. by an inbound steamer, the Dauntless being ahead apparently, and the pilot boat David Carll reported the two off Fire Island at 5 P. M. with Dauntless 1½ miles ahead. When last seen they were both reefed down.

THE SECOND CRUISE OF THE PILGRIM.

PART I.

THE little Pilgrim was refitted during July, 1886, and furnished with a long housing topmast, jibtopsail and all the fixings of a genuine American cutter. Remembering the heavy blows and seas she had encountered in the cruise of last year, I had 600lbs. of Babbit lead packed along the keel in the chinks of the cast iron to balance the topmast and give her more stability. Then I concluded she could stand anything, and one might be a little reckless in carrying sail. Before her bottom had been smoothed and her trim found, the Hull Open Regatta was sailed and the race lost by an error of judgment upon the part of Boston advisers, and this is how it happened:

It was an ugly day. The classes started under housed topmasts or reefs, with a gale and a sky that boded mischief. I think the numerous capsizes and drowning of men along the coast made every captain cautious. In half an hour it was calm, but the sky continued ominous, and deterred all from making sail. So we fumed at the zephyrs and dreaded the sky, till we had gone around and got under Fort Independence out of the strong ebb tide. We were ahead of the Witch that took a prize, and bid fair to come in among the first; but there was only a breath of wind here and upon the opposite shore the water was black with it. Then it was advised to stand over and to get that breeze and reach the finish. The cutter was headed across and the strong ebb sent her broad side to seaward. When half way over the wind came out from behind the fort strong and gusty, our competitors who had hung on under the fort were now to windward a quarter of a mile and ran directly to the finish, while we had to make four tacks to get around the stake boat. The tide and foolishness lost us a prize, and we came in sixth. Then we loafed home and anchored off the Point.

On Aug. 21 the Pilgrim was at the South Boston Y. C. stage, getting water and stores aboard and being admired by ladies and gentlemen who had come down to see her off. The lines were cast off at 4 P. M., sail was made, and with adieux, shaking of hats, handkerchiefs and parasols, the little cruiser started upon another adventurous cruise eastward. We passed several sloops and one large cutter on the way and dropped anchor in Marblehead exactly at 7 P. M. After a hearty supper the shore was visited for papers, the boys rowed around the harbor, and we remained upon deck for hours, smoking, talking and enjoying the surroundings. It was a perfect moonlight night; the yachts were thick and full of merrymakers; there were many boats loaded with sweet singers abroad; the wavelets and the windows and roofs of the Neck cottages glinted in the lunar rays; the club house was brilliant with colored lanterns and bursting with music, and the roar of the breakers outside came soft and low like the humming of bees in a drowsy summer's day. "It was just too sweet for anything," as a young lady would say; but the songs and laughter ended, the lights began to go out along shore, the air was becoming rude and raw, and we rolled out our bedding upon the transoms and sought repose.

There was a strong breeze and a good sea from the eastward when we poked the Pilgrim's nosepole outside the next morning, and we ran over to and along the Beverly shore and had good views of the Shona and Clara. The general impression made by them was that they were good racing machines, but not suitable for cheap and comfortable cruising. We carried whole mainsail, staysail and jib, though the wind was squally and the bowsprit was under often, but the exhilaration of being once more afloat upon the open sea and the beautiful scenery of the north shore made us too happy to care for the rough pitching and the gentle showers of spray. Several yachts had started out with us, but all except a 30ft. sloop and the America turned back when they found it was work outside. We went out between House Island and the Spindle upon Whale Back Ledge and had a rough thrash to windward until we got inside Eastern Point. We had been watching a trim craft coming from off the point before the wind, and as she passed us off Kettle Island we were greatly surprised to see that it was the Shona that we had left quiet at anchor at Beverly. She had made two long legs to windward outside, escaping our notice, and was now running home. Surely she had sailed all around us and could have given us much time allowance. So much for size and excessive narrow beam. We beat the sloop, however, handsomely, passing her near Manchester and found the America at anchor in Southeast harbor as we sailed in and anchored among the smells and fishing craft of Gloucester.

The next day Williams and Howe left us and returned to Boston, sad at heart that they could not go along, and my crew was reduced to C. G. King, of South Boston, an amateur sailor of the harbor, who had never been to sea except as a passenger on a steamer, and my youngest son Jack, sixteen years old, occasionally seasick. But the craft was a single-hand yacht and one man is supposed to handle a single-hander. So he can in a light wind, except when the sheets get foul, the gafftopsail halliards kink, the spinaker boom goes adrift, the boat chases up to thump the stern, the sails have to be reduced, the wind shifts suddenly, or a mermaid holds the anchor down in the mud. Then she becomes a four, six or eight hander, and often requires a few sheaves to augment the hand-power. It is not advisable to go out to sea in a single-hander with less than two good men and a cook.

A fine southwest breeze was blowing, and we cleared upon the starboard tack Webber's Rock Buoy, off Eastern Point, uncovered Thatcher's Island from Milk Island, raced, with spinaker set, a down east schooner through the channel past Straitsmouth, and left the bold promontories of Cape Ann behind and pointed for the Isles of Shoals. The spinaker was taken in, as the wind drew more off shore, when the wind fell very light and the swell made the main boom slat in a distressing way.

I don't know anything more aggravating in a small craft than a calm and a main boom. In it comes on the home roll, and one must get banged, catch it and push it outward, or dodge it; then it goes out and drags the weary rope off the deck or out of the water, gives a vicious twitch at the traveler as the sheet straightens, dips its outer end and a part of the mainsail into the next sea, and strikes against the backstay with a shock that runs up the mast and sail and expends itself upon the jaws of the gaff and masthead as if it would twist the spar off. It goes through the same performance over and over again until you worry over the chafes and the strains, and feel as if the boom was jerking at your heart strings, and then you get mad and bridle the boom, only to find head sails trying their very best to wear themselves out across the stays and the sheet blocks gnawing a hole through into the forecastle.

We had lunch and a smoke, and studied with the glasses the numerous sails in the distance. The boys went to sleep upon the house and I was trying to light my cigar, when I received a heavy blow upon my nose and frontal protuberances that tore off the bark, made blood run, sent stars across my vision, knocked the cigar, match and ashes all over me, and nearly dumped me senseless into the sea. A catspaw from southeast had crept up suddenly, jibed the boom and nearly finished my cruise. When I found I was neither struck by lightning, killed nor overboard, I brushed the debris out of my eyes and shouted to the boys to draw the head sheets while I payed off the main sheet. Then I sent the boat after my hat, hunted up and lighted the cigar stump, keeping my weather eye open and reflected upon the many dangers in the use of tobacco. The new breeze grew fresher and the sea rose rapidly, as we went cutting through the bright blue crests and rolling gracefully to the more important billows. The wind was upon the quarter—just where the Pilgrim and I like it—every sail bellied out without a wrinkle, and the gafftopsail pushed forward so strongly and bent the topmast so that I had the preventer backstay taken back and hooked.

While scanning the horizon we saw upon the weather bow what seemed a long row of gray gulls upon the water, and, questioning them with the glass, found they were the Isles of Shoals. So I kept up a little and soon could make out the rugged outlines of the islands, the summer hotels and White Island Lighthouse upon its lonely, barren promontory of adamant. I had never been there before and felt the necessity of caution and slower progress until I learned the bearings of the channels. My boy was too sick to come up on deck, I could not leave the helm, and it devolved upon Charlie to take in the gafftopsail. I luffed her until everything was shaking, and he hauled it down with much trouble and without mishap, though the cutter tumbled around in a lively way and the wind blew very fresh.

It is astonishing how soon a pleasant wind aft the beam becomes a mild gale when one hauls upon the wind. We found it so in this case, with the wind abeam there was as much as the cutter with her three lower sails could stagger under, but the chart indicated good weather near to White Island—we had passed well to windward of White Island Ledge—and we ran along close in and had a fine view of the pinnacles, cliffs and buttresses of granite that threw back disdainfully in spray, foam and surge, the bold advances of the ocean swell. Lounging and Star Islands were soon abeam, the buoy upon Half-Way Rock was easily seen ahead, and the course was clear. The former island is a series of outcropping ledges with a rough board shanty upon the highest part and scarcely a show for vegetation anywhere. If it is used for lounging, as its name might suggest, one ought to carry a plank to rest upon. I would as soon lie down upon a New England stone wall.

We hauled to after passing the buoy, headed into the harbor, where two fishing schooners and three or four sailboats were lying, hauled down head sails and anchored not far from the wharf upon Star Island. Ten fathoms were payed out and the anchor struck bottom, five, ten, fifteen, twenty were given and an attempt made to snub her. The sea sweeping over the bar between Star and Cedar islands drove us steadily astern, more cable was given to bring her up, and more again, till the thirty fathoms and the end around the mast were reached, but the Pilgrim did not like the neighborhood and would not stop. She continued to drag until I thought the sea room between her and Smutty Nose was becoming too small. Then we took hold and hauled in that thirty fathoms and 35lbs. anchor, coiled it all over everything, got wet, swore a little about the harbor, put the sail on her just in time to clear the rocks along shore and sat down breathless and indignant.

I ran her up to the fishermen and asked what kind of anchor it was necessary to have in those waters, as I had a notion it would be necessary to tie on our 3,300lbs. keel and both anchors to hold.

"Rocky bottom and bad holding ground with wind this way. You must have a heavy anchor and much scope. If you catch on a rock you'll hold so long and so strong you'll wish you'd never anchored at all. Better go in close and catch a mooring. All the small craft do that."

We saw about a dozen persons wrapped in mufflers and appearing half frozen around the hotels of Star and Hog islands; they manifested such entire indifference at our arrival, the islands looked so desolate, cheerless and unattractive, and the prospect of rail under all night at one of the moorings was so probable, that we contented ourselves with close inspection of the shores of the group, sailed past a little steamer going into bankruptcy on account of a small passenger list, that tooted up to Hog Island wharf, made a leg over toward Duck Island to see the gulls that cloud its horizon, then jibed over and turned our backs upon Gosport Harbor forever.

I was disappointed, for I thought to find a safe place for my yacht and enough of land and forest to relieve the tedium of so much salt water. It is barren enough and far enough removed from the mainland to be free from the fever spores, but a victim of the August pest wrote me that he spent the season there and suffered much from hay asthma. Spores or not, I would brave anything rather than be tied for a season to the shoals and that dismal, bottomless sea-swept harbor.

The Pilgrim passed the bell buoy and Whaleback at 6 o'clock, and it took an hour to get up to the anchorage at Newcastle, as the wind died out at sunset and the tide had begun to run out. After supper we were surprised by a most brilliant aurora borealis. The sky was bright with stars, the wind light from southwest, and a heavy bank of clouds filled the northern sky. The aurora extended from northeast to southwest, and the finger-like streams of light were close together; numerous, brilliant, and often extending nearly to the zenith. Flash after flash of silvery light made the stars pale and the bank of storm-clouds black as Erebus. The duration of this magnetic storm was over an hour, the display the most striking I had ever seen, and we remained on deck until the night air grew cold and the splendor had departed. Then the boys were not long getting to sleep, but I lay back and read a home paper with the cabin lamp brightly burning.

About 10:30 I was annoyed by the tap of a rope, as I thought, upon the starboard side of the house. I endured it for some time, then, having finished my paper, I sprang up the steps, bursk open the door and stepped into the cockpit. I was startled to find a man's hand upon the rail, and a dory alongside. I could see across the bright river quite a distance, but nearly to us extended the very dark shadows of the shore, fish-house and wharf. "What are you doing here?" I asked in a peremptory tone.

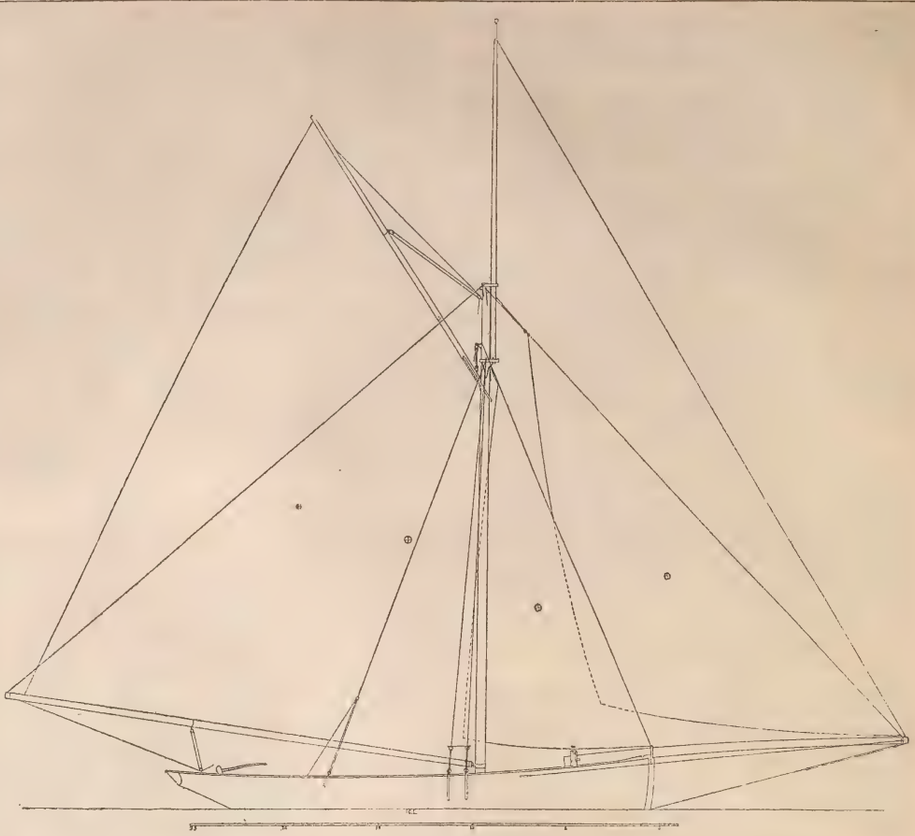
The man was evidently taken aback by my sudden appearance when all had been so quiet, he let go his hold, pushed off, muttered and mumbled something unintelligible and, finally, when six fathoms away, said: "Is Ned Baker aboard?"

"Who is Ned Baker?" I asked.

"A friend of mine who is coming from Boston in a yacht."

"What yacht?"

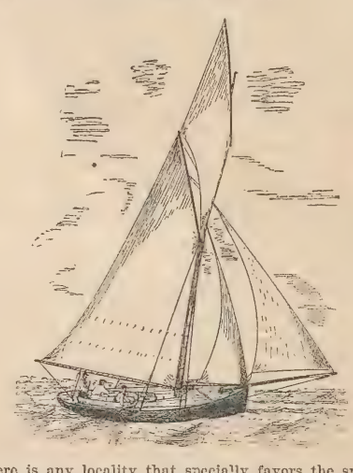
"The—a—Mary Stover," bewildered.



"There is no Ned Baker aboard, this is not the Mary Stover, but the Pilgrim, and you have no right to be alongside of my craft at this time of night," said I.

"I hope you won't have any hard feeling," said the stranger, as he shipped his oars and began to pull away.

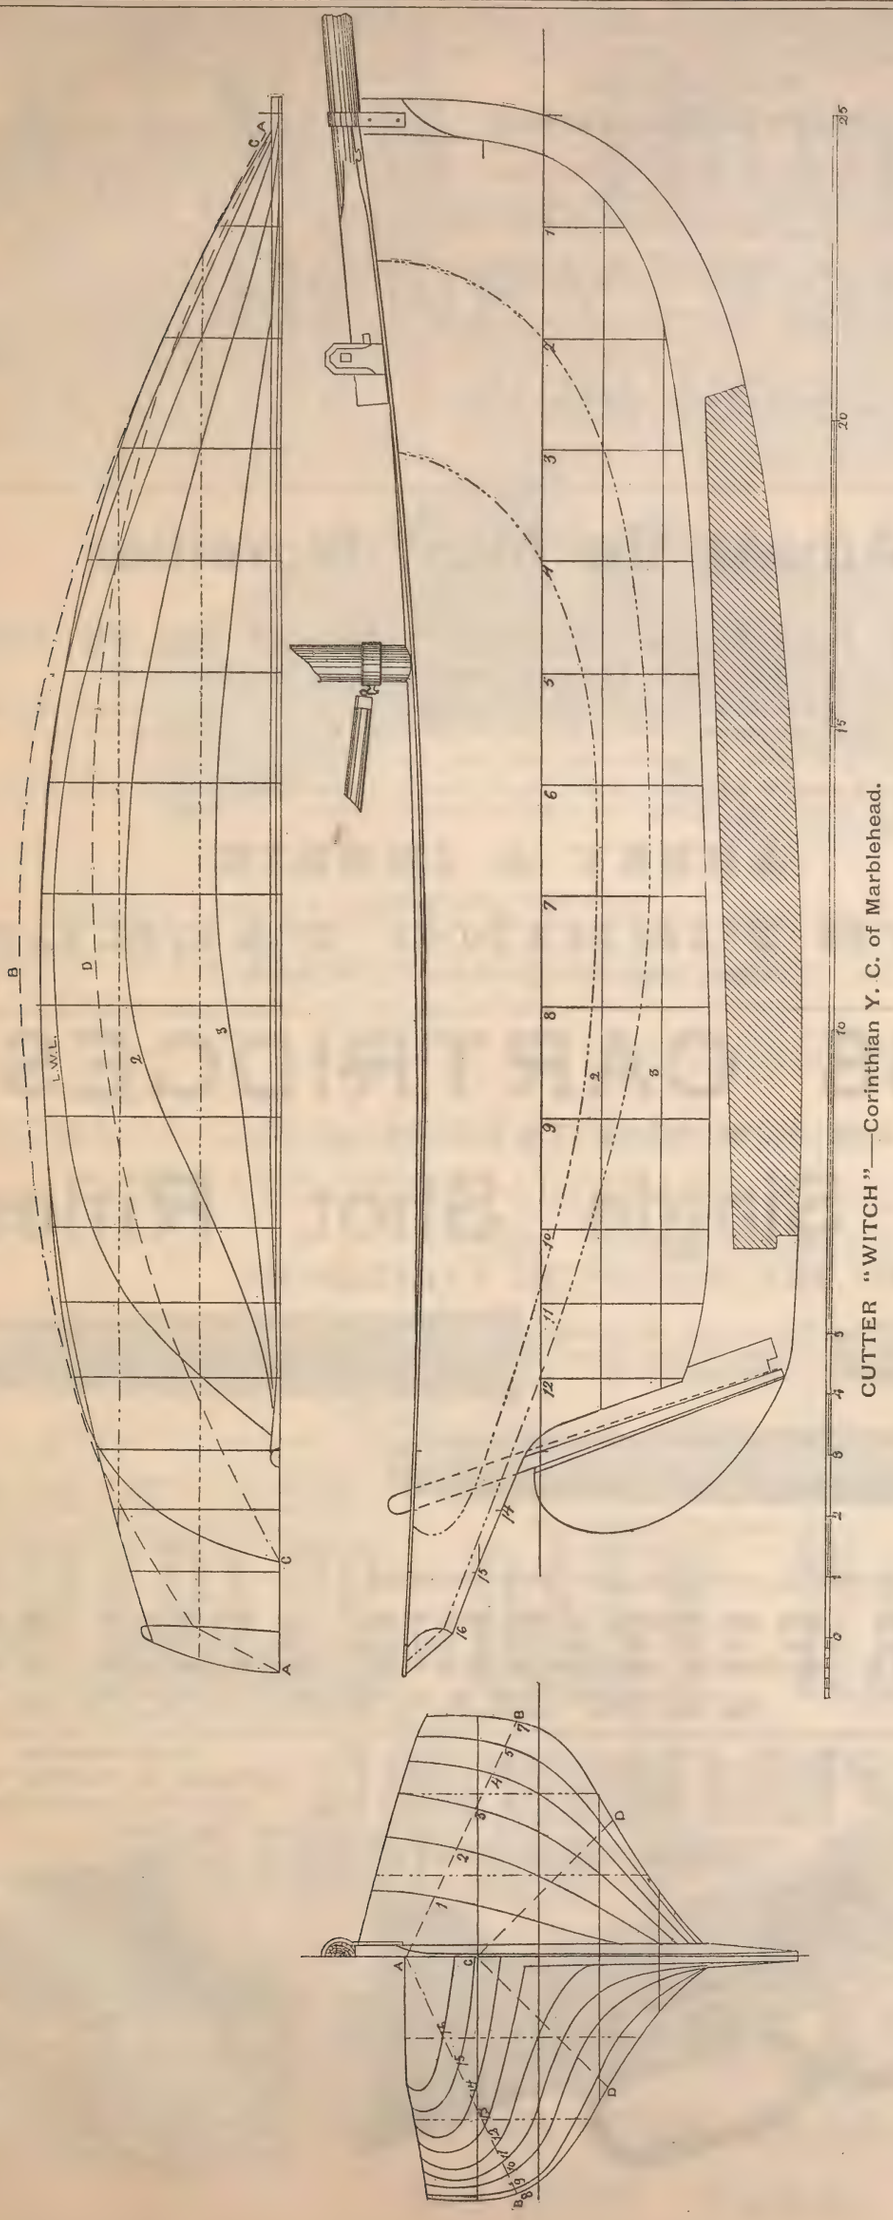
"Hard feelings? I thought you were all honest people about here. If you come round my vessel again in this manner you'll get hurt. Do you hear?" I shouted. Then I ran below, got my revolver, rushed upon deck and fired a bullet over the fast disappearing boat, which greatly accelerated its movements until it disappeared in the deep shadows near Fort Point. The remainder of the night passed without any further piratical adventures. There was shouting and whistling along the shore, and the occasional passage of a dory down the middle of the river, which served to break the monotony of the watch.



I have thought much over this affair and have not yet made up my mind whether I had to deal with a harbor thief or a poor innocent fisherman. There was just one thing that takes away the blood curdling aspect of the case, "I hope you won't have any hard feelings." If the night prowler had not said that, I should relegate him to the bad, but somehow it seems so innocent a remark, so full of real sense of injury done and desire for forgiveness, that I can't swell around in war paint and feathers. I shall always keep watch at Newcastle, but I leave it to those who know the place and its inhabitants to pass judgment upon the adventure.

CARESWELL.

SAILPLAN OF "WITCH."



THE CUTTER WITCH.

IF there is any locality that specially favors the small keel classes it is Marblehead Harbor and the adjoining bays, and it is no wonder that with such waters close at hand, the Corinthian Y. C. has met with such great success in a short time; nor that its list of keel boats contains the names of some of the best of their size, both as racers and cruisers. Among them all the Witch, whose lines we give this week, is very favorably known for her speed, while she is no less interesting as a study of what may be done in the way of a staunch little keel boat, at a moderate cost. The Witch was designed by Mr. William Eddy, of Marblehead, a builder very favorably known both for the general excellence of his workmanship and for the successful craft that he has modeled. She is owned by Com. Crowninshield, of the Corinthian Y. C., an enthusiastic yachtsman of Marblehead. The dimensions of the Witch are as follows:

Length on deck	26ft.	
l. w. l.	22ft.	
Beam, extreme	8ft.	
Draft, extreme	4ft.	10in.
aft	4ft.	8in.
Depth of keel below rabbet	1ft.	6in.
Ballast, keel, lead, tons	2	
inside, lead, tons	10	
total	2.10	
Mast, from fore side of stem	9ft.	
diameter, deck		7in.
diameter, head		5in.
deck to hounds	21ft.	10in.
Topmast, fid to hounds	17ft.	10in.
diameter		3¾in.
Bowsprit, heel to cranse	18ft.	6in.
outside gammon iron	13ft.	6in.
diameter at stem		6in.
Boom, length	25ft.	
diameter		4½in.
Gaff, length	17ft.	
diameter		3½in.
Topsail yard, length	19ft.	
diameter		3in.
Mainsail, luff	19ft.	10in.
foot	24ft.	
head	16ft.	9in.
leach	34ft.	
tack to peak	35ft.	
clew to throat	29ft.	
Staysail, luff	21ft.	
leach	19ft.	
foot	10ft.	
Jib, luff	29ft.	
leach	20ft.	
foot	16ft.	
Area mainsail, square feet	479	
Area staysail	95	
Area jib	152	
Total area, lower sails	726	
Center of effort from stem	12ft.	10in.

The keel is sided 4¼in., stem 4in. and sternpost 4in. at tuck and 2⅝in. at heel. The frames are sided 2½in., moulded 2¼in. at heels and 1¾in. at heads; spaced 12in. each with an iron floor. The keel bolts are ⅞in. diameter, the planking is 1⅛in. and deck 1¼in. The

sails are of 10oz. duck, the halliards of 1¼in. manilla, and the sheets of 1½in.

The Witch is used mainly for sailing and racing about Marblehead, and is fitted accordingly, having a flush deck and a large cockpit aft. As her depth of hull is only moderate she has little cabin room without a trunk of any kind; but such a boat can have very good accommodations, if desired. The draft of the Witch is now as given above, but the draft as shown in the plan is as originally designed; she has since been trimmed to draw 4ft. 10in. She has raced in the Beverly, Corinthian and other clubs since she first came out in 1884, her record being: 1884, 8 starts, 3 firsts, 1 second; 1885, 12 starts, 3 firsts, 1 second and 1 third; 1886, 12 starts, 8 firsts. The cost of the Witch was about $1,200 complete.

LAKE ONTARIO.

Editor Forest and Stream:

I was much amused by reading the following in a recent issue of the New York *Herald*:

"Mr. J. Snelling, of this city, is fitting out the racing sloop Norah, of Belleville, Ont. The Norah will be remembered as an antagonist of the sloop Atalanta on the lakes. She has been lengthened some 5ft. on the waterline by Capt. Cuthbert, who threatens to bring her here next summer as a competitor of the challenging yacht Thistle."

If this jolly captain, who is an excellent talker, made the statement attributed to him, he must have been in a a facetious mood; but lest some of the "sloop cranks" might fear another descent upon the custodians of the Cup by a sloop engineered by Captain Cuthbert, let me assure them that there is no such danger in store for them, and for these reasons: First, Capt. Cuthbert does not now, and never will control the Norah. Secondly, the yacht is too small to race with the slightest chance of success against such craft as have defended the Cup, being under 60ft. waterline; and finally, the owner of the Norah is not a racing man, but keeps his yacht for the pleasure and use of his family and himself, and only allows her to race at home and at Kingston. The Norah will, however, be a very handsome and very speedy craft this season, and I shall not be surprised to see her win whenever she races.

The second class boat which ex-Commodore Roy had under way and which he sold, when obliged to remove to an inland town, to Montreal parties, is rapidly nearing completion; but as her outfit will be poor she will not do justice to herself until a better is given to her.

A deep draft sloop of about 22ft. waterline is being built at Hamilton for Mr. Geo. Webster, of that city, an old and experienced yachtsman. She is to be named St. Elmo. The cutter Whistlewing, of Hamilton, is having two tons of ballast transferred from inside to outside, which change will make an improvement in her.

The change in classification proposed by a Toronto correspondent of your journal, namely, to put the largest of the first class yachts on the lakes into a class by themselves, drawing the line at say 50ft. sailing length, is a good one, and the reasons which he advanced in support of it are undeniable; but if the smaller boats in the first class, such as White Wings, Cygnet, Whistlewing, Verve, Gen. Garfield, and others, were to be formed into a second class, and our present second class reduced to third class, thus forming an additional class, the difficulty with some of the classes would be in raising a sufficient sum of money to divide up among so many classes.

The result would assuredly be smaller prizes and fewer of them, and probably fewer entries. However, as our yachtsmen generally race more for the love of sport than for the money that they win—which, at the best, usually falls short of paying their expenses—the experiment ought, in justice to all concerned, to be given a trial.

The rumor has been received that the famous iron sloop Mischief, which successfully defended the America's Cup in 1881, has been purchased by Messrs. Sackett, of Cape Vincent, and will be brought to Lake Ontario. I doubt the truth of the report. Many there are among our lake yachtsmen, however, who would go a long way to see the Atalanta fight her battle over again with "the iron pot."

If the little Puritan, which is being built for Mr. A. Ames, of Oswego, at Boston, is not a tub in model she ought to beat the light weights Iolanthe and Laura, which are very close together in point of speed, and win the championship of the second class, as it at present exists.

PORT TACK.

BELLEVILLE, Ont., March 11.

BUILDING NOTES.

LAWLEY & SON have the keel boat for Mr. C. F. Adams all caulked and finished outside and the decks laid. She is to be cutter-rigged with 10½ tons of lead on her keel. The frames are of oak, sided 2in. and spaced 12in. with galvanized floors at every frame. The planking is 1⅜in. yellow pine. Mr. Ames's centerboard boat is also planked, with 1¾in. yellow pine, and the deck beams are laid. The frames are moulded 3 1-5 and 1⅞in. and sided 2in., the spacing being 13¾in. She will have a lead keel of about 4½ tons. The firm are also at work on a new catboat from Mr. Burgess's design, for Mr. W. G. Saltonstall, a centerboard boat with a lead keel; 26ft. l.w.l., 9ft. beam, and with an overhang aft of 3ft. 6in. Mr. Mowry's steam yacht is nearly completed and the boiler is at hand ready to go in place.

Mr. Martin is busy with the cutter for Mr. Wilbur E. Cummings, 29ft. over all, 25ft. l.w.l., 9ft. beam and 5ft. 2in. draft, with 5,700lbs. of iron in the keel.

Wood Bros. have finished for Mr. George E. Whitney an open launch 37ft. 5in. long and 8ft. beam, and are at work on another.

W. B. Smith has nearly finished the cutter for Mr. Holt, and has laid down a catboat from a model by Captain Crocker.

Mr. J. Borden, Jr., of the Boston Yacht Agency, has lately designed a cruising boat for Dr. F. C. Reilly, of New York, to be 21ft. over all, 18ft. 6in. l.w.l., 8ft. beam and 2ft. 6in. draft. She will be yawl rigged, with a large mainsail and a small mizzen and a jib on a steel bowsprit. Mr. Borden has also designed a catboat for Mr. W. H. Beserick, which will be built by Nichols, of South Boston. She will be 21ft. over all, 9ft. beam, and 2ft. draft.

Mr. Wm. Eddy, of Marblehead, builder of the Witch, whose lines are given this week, will build a similar yacht of his own design for Mr. Jas. Mullett. She will be 27ft. over all, 22ft. 6in. l.w.l., and 5ft. 2in. draft. Mr. Eddy is also at work refitting the Eugenia.

About New York the Titania is in frame and three streaks of plating are laid, and work is going on rapidly with the Shamrock. ....Messrs. Poillon will soon begin a sloop for Commodore Henry Pierson, Jersey City Y. C., from a model by Mr. Phillip Ellsworth. She will be 40ft. over all, 35ft. 6in. l.w.l., 14ft. beam and 4ft. 3in. draft, with 6 tons of inside ballast. It is also reported that Mr. J. G. Prague will build a sloop from Mr. Ellsworth's model, for the Clara class. ...At Islip, L. I., Mr. Alonzo E. Smith is building a centerboard sloop for the second class, for Mr. C. A. Cuppia, of New York.

CRUISING.—Magnolia, steam yacht, was last reported at Nassau, on Feb. 27, from Key West....Lurline, steam yacht, Mr. J. M. Waterbury, called at Savannah, Ga., on March 5, on her way to Florida....Meteor, steam yacht, Mr. A. E. Bateman, arrived at New York from her southern cruise, on March 8....Alva, steam yacht, Mr. W. K. Vanderbilt, left Cienfuegos on Feb. 26, for Kingston, Ja., arriving on Feb. 28 and sailing the same day for Cuba. She arrived at Santiago de Cuba on March 1, having called at Port Royal on the way. Shortly after her arrival a boat from a Spanish gunboat capsized in the harbor and her crew were rescued by a boat from the Alva. On March 10 she arrived at Nassau, sailing on March 14, for Brunswick, Ga. ...Rena, steam yacht, Mr. P. Lorrillard, left Key West on March 8, and arrived at Jacksonville on March 12....Gleam, steam yacht, Mr. T. H. Garrett, was at New York on March 8, on her way from Newport to Baltimore. She will have a new boiler before the season opens. Namouna, steam yacht, Mr. J. G. Bennett, arrived at Calcutta from Bombay on Feb. 24.

ATLANTIC Y.C.—At the annual meeting of the Atlantic Y.C. on March 14, the following officers were elected: Com., F. C. Swan; Vice-Com., John Cartlidge; Rear-Com., N. D. Lawton; Recording Secretary, Paul H. Jeannot; Corresponding Secretary, J. L. Marcellus; Measurer, George W. McNulty; Treasurer, Richard C. Field; Trustees, Stephen Loines, Chairman, and J. R. Maxwell, William Peet, N. D. Lawton, A. H. Parrington and W. H. Thomas, Jr.; Committee on Membership, William W. Richards, Thomas L. Arnold and Henry Earl; Regatta Committee, Charles F. Price, George W. Chauncey and Henry B. Howell. The Sailing Regulations were amended, by the adoption of the classification lately proposed by the FOREST AND STREAM for single stick yachts 75ft. and over, 65, 56, 48, 41, 35, 30 and 26. The schooners were divided at under and over 75ft. The courses were also changed, the finish being at Buoy 15 instead of at Bay Ridge. Five members were elected.

MAYFLOWER AND SACHEM.—Mr. Burgess will probably arrange to have Mayflower sail for England about June 1, which will make her too late for the Jubilee race. It is now probable that Sachem will also go across and will race in British waters this season.

CHANGES OF OWNERSHIP.—The cutter Thelga, of Boston, formerly owned by A. P. Thayer and sold by him to Mr. B. J. Hall, is now owned by the latter and Mr. H. L. Johnson, who will race her this season. Dr. W. H. Litchfield, who has long been a part owner in the Echo with Mr. Burwell, has sold his interest to Mr. H. N. Ispham. The famous Tom Cat, built by Smith last year for Dr. Weld, and so successful as a racer, has been sold to Mr. Lockhart, of Lynn, the price being reported as about $450. The catboat Mabel has been sold by Mr. G. R. Howe to a yachtsman whose name is not yet made known. Mystery, sloop, has been sold to Mr. Wm. F. Burden, of Troy, by Mr. W. B. Parsons, for whom she was built. She will be refitted below by her builder, A. E. Smith of Islip.

SAVANNAH Y. C.—We have received a neat club book from the Savannah Y. C., containing a list of officers and yachts, the constitution, etc. The number of members is now 211, while the fleet includes six cabin yachts and eighteen open boats. The officers are: Com., Wm. Hone; Vice-Com., John N. Johnson; Rear-Com., Thos. P. Bond; Sec., W. D. Johnson; Treas., M. A. Cohen; Meas., W. G. Morrell.

A RACE AT JACKSONVILLE.—A race was sailed on March 12 over a 20 mile course for $10 a side between the Hero, J. V. Weightman, and the Katie B., C. Burchfield; the Hero winning in 2h. 25m., with Katie B. in 2h. 32m. 4s.

A FAST FISHERMAN.—Mr. Burgess has completed the design for a fast fishing schooner for Boston parties, and the lines are being laid down. She will be 93ft. l.w.l., with a pilot boat stem and overhanging stern. Her ballast, all iron, will be partly on keel.

FEDALMA, steam yacht, ex-Com. E. M. Brown, is having a bridge added on which her steering gear will be placed. The work is being done at Port Jefferson.

MOHICAN, schooner, has had her masts reduced in diameter and also shortened 3ft., topmasts being increased in proportion.

OCTOPUS.—This little yawl is being fitted with new and longer mast, a deeper keel with some lead, and a steel centerboard.

SYLPH, schooner, is at Port Jefferson, where she is having a modern stern added and a new outfit of spars and sails.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

F. H., Philadelphia.—Will you please explain what is meant by pedigree? Ans. Webster's Dictionary defines it as "Line of ancestors; descent; lineage; genealogy; strain; an account or register of a line of ancestors."

J. P. H. B., Gainesville, Fla.—Please give me through your columns, the address of some houses who will purchase bird skins, Florida birds especially? Ans. We know no houses engaged in the Florida bird skin trade.

H. H., Rotherfield, Sussex, England.—1. Are there any inclosed deer parks in any part of America? 2. What is the average weight of a full grown elk? Ans. 1. We believe there is a deer park at the Druid Hill Park, Baltimore, Md., and another at Belle Meade, Nashville, Tenn. 2. Average weight of elk, 800lbs.; large ones run up to 1,200lbs. and 1,500lbs.

J. B. I.—Please give me the names of persons who raise brook trout for market on Long Island or other points in New York State. Ans. The South Side Sportsman's Club, Oakdale, L. I., probably send more trout to market than any individual; A. Racow, Foster's Meadows; E. B. Sutton, Babylon, and N. C. Miller, Brookhaven, all of Long Island, send trout to market.

F. M. H., Timberline, Mont.—Please tell me in what waters of Idaho the "redfish of Idaho" is caught and with what lure? Ans. They are found in Payette Lake, about 100 miles north of Idaho City. Capt. Charles Bendire, U. S. A., took them in Wallowa Lake on a bar near the head of the lake. They have been taken with bait, but we do not know that any have been captured with the fly.

H. B., White House, N. J.—I have a place on my farm for a good fish pond. By building a dam one hundred feet in length or less I can have a half-acre pond with depth of 1ft. to 4ft. It will be mostly spring water, except in time of heavy rains, when a good deal of surface water will flow in and over the dam. The bottom is swampy now and too wet for cultivation. 1. What kind of fish shall I stock with? 2. Does the Government furnish fish? 3. To whom shall I apply? 4. Will the fish go over the dam with the overflow of water in time of freshet? 5. When ought the fish to be placed in the pond? 6. Do they have to be fed when young, and with what? 7. Will trout and carp do well together? I propose making the dam of wood, 2in. oak plank slanting up and down, leaning against heavy timbers, the bottom ends resting in the earth. 8. Will such a dam answer the purpose? 9. If the Government does not furnish the fish, where can I purchase them? Ans. 1. If the stream supplying the pond is large enough, or there are large springs in the bottom, to keep the water in some parts below 70 degrees, stock with brook or brown trout. If the water is warm almost all over, stock with black bass if you want sport, or with carp if food is the object. 2. Carp only. For other fish apply to the State Commissioners of Fisheries. 3. Answered above. 4. Some probably will, but most fish run up stream in a freshet. 5. Whenever you can get them. 6. No, not if turned into the pond. 7. Yes, if the water is cold enough in parts for trout and has warm spots for carp. 8. Yes, if properly made and the plank slant enough to hold the bottom fast. 9. Tell us what fish you want and we will answer.

HUMPHREYS'
HOMEOPATHIC VETERINARY SPECIFICS

For Horses, Cattle, Sheep, Dogs, Hogs, Poultry.

For sale by the Forest and Stream Pub. Co.

Among the Many Novelties

Introduced by us last spring were the

Dead Finish, Waterproof, Braided Silk Fly Lines,
FOR SALMON, TROUT AND BLACK BASS.

These lines have given perfect satisfaction and stood the most severe tests. *They do not crack, chip or become sticky and stiff*, but remain soft and pliable. These lines are waterproofed through and through, not merely on the surface. They will not become tender in use or by age.

Also a new style **LANDING NET,** made of *waterproof braided linen line*, which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

ABBEY & IMBRIE,
Manufacturers of every description of
FINE FISHING TACKLE,
18 Vesey Street (Fourth door from the Astor House), **New York.**

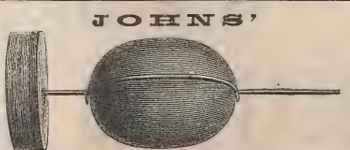
SCREW PLATES, TAPS, DIES, ETC., FOR gunsmiths and amateurs. Send for illustrated catalogue to S. W. CARD & CO., Mansfield, Mass.

THE NEW L. C. SMITH HAMMERLESS GUN.



This new gun embodies all the essential features of our hammer gun; together with a new oscillating cocking mechanism and automatic and independent safety combined. This gun is not equalled in ease of manipulation, symmetry, durability and shooting qualities by any hammerless gun made.

Of the eleven gentlemen who broke 100 straight inanimate targets for a place in the Chamberlin Cartridge Tournament prizes, five of them used the "L. C. Smith" gun. The following are the gentlemen: D. C. Powers, Cleveland, O.; Andy Meaders, Nashville, Tenn.; H. McMurchy, Syracuse, N. Y.; Fred Erb, Jr., La Fayette, Ind.; J. C. Hendershot, Cleveland, O.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

THIRTY-TWO PAGES.

Four pages are added to the usual twenty-eight, and this issue of Forest and Stream consists of thirty-two pages.

BRIBERY AT FIELD TRIALS.

WE have patiently waited a long time for Mr. D. Bryson to furnish us with the proofs upon which his insinuations against the integrity of reporters were based. No gentleman would make such insinuations without possessing proofs to substantiate their truth, and we again call upon Mr. Bryson to furnish us these proofs for publication or else withdraw the statement and apologize for having made it. Not only will proof that "pay-me-handsomely" reporters have demanded hush-money or praise-money, be in order, but we will also undertake to publish any proofs which may be sent us of any instance of money or other valuable consideration being received by a field trial reporter for favorable or unfavorable criticism of any dog. We have no knowledge that such an instance has ever occurred. That it has not occurred, however, is not at all the fault of the owners of the Bryson dogs. That bribery has been attempted in at least one instance we have ample knowledge, and the chief actor in that case is so closely related to Mr. D. Bryson that the latter is smirched with the taint and should be the last person in the world to charge anybody with crookednes at field trials.

Here are the facts. At the field trials at Grand Junction last December, Mr. P. H. Bryson, brother and partner in dog affairs of Mr. D. Bryson, approached the reporter of the FOREST AND STREAM, and offered to make him a "handsome present" if he would favorably notice "our" (the Brysons') dogs. Considerably surprised by such a proposition from such a source, yet not at the moment comprehending Mr. Bryson's full meaning, our reporter responded that it was his invariable custom to give each dog such credit as its work deserved. Mr. Bryson rode away, but in a few moments, as if struck by an afterthought, returned and made clear his meaning by further stating that he did not wish our representative to say anything of the dogs that his conscience would not permit.

It was the immediately formed intention of our reporter to embody this interesting little incident in his regular reports of the day's proceedings, and on returning to the house that night the matter was discussed with Messrs. Briggs and Waters, the other reporters present; upon consideration, however, the incident was omitted from the report. It was related to us immediately upon our reporter's return, and is now given timely publication as our contribution to the history of attempted bribery at field trials. If Mr. D. Bryson knows of any successful attempts let him furnish the proofs in justification of his insinuations.

ACROSS LOTS TO THE MILLENNIUM.

THE meat of calves killed when less than three weeks old is called "bob" veal, and is so unwholesome that the law forbids its sale. The carcasses of "bob" veal unlawfully smuggled into this city are estimated at 10,000 each spring. The sanitary authorities intercept and destroy 50 per cent. of this stuff, but the rest is successfully foisted upon buyers and consumed. Inasmuch as the Board of Health can suppress only one-half of the "bob" veal traffic, the best thing to do is, of course, to repeal the partially enforced law and give the "bob" veal dealers full swing. Then everything will run smoothly.

The statute forbidding the sale of liquors in New York saloons on Sunday is to a large extent evaded; the saloons are on that day usually filled with customers, and do a big business. As the police do not succeed in enforcing the law, the proper remedy is, of course, to repeal it and throw open the saloons on Sunday. Then everything will run smoothly.

The law forbidding woodcock shooting in the month of July is set at naught by the pot-hunters, who kill birds for summer hotels and city restaurants and club houses. As the game protectors appear to be incapable of enforcing this law the sensible thing to do is to repeal it altogether. Then everything will run smoothly.

"FOREST RUNES."

THE volume of "Nessmuk's" poems, with the above title, is now being sent out to all subscribers. It is a handsome large octavo volume bound in cloth and gold, and its outside appearance corresponds well with its literary excellence. With a few of the poems which it contains the readers of FOREST AND STREAM are familiar, and those which have seen the light give a rich promise of the contents of the book.

It will take some time to wrap and send out all the copies which have been ordered in advance. Notification has been sent to all subscribers that the books are ready for delivery, and all should complete their subscription at once, so as to receive their copies as early as possible. Volumes will be sent out in the order in which the advices are received.

SNAP SHOTS.

THE tinkering with the game laws of New York State which is going on at Albany this year is far in excess of what usually takes place. There seems to be a concerted attack on protective laws all along the line. The game laws are already so intricate and confused, so contradictory and mixed up with special provisions and exceptions, that it takes a Philadelphia lawyer, or a man who has followed the subject with the utmost watchfulness, to determine what the law is in any given section of the State. As if this were not enough, however, a perfect avalanche of bills affecting game and fish have been introduced at this session. These are backed by all sorts of people, with all sorts of motives. Some of the bills contain good provisions, but these are fairly smothered by the bad ones in the same bills.

A provision of the present law that is most bitterly attacked is that relating to the preservation of song birds. A tool of the milliners, one C. Smith, has introduced a bill exempting from the provisions of the small bird act any corporation or individual dealing in ornamental plumage which has not been collected within the State. This measure in effect would abrogate the bird protective law, and would be productive of a vast amount of harm. The act for the preservation of small birds passed in this State last May was by far the most intelligent law on this subject that has yet been enacted in any of the States of the Union, and it will be very unfortunate if the State Legislature shall rescind it after it has been in operation for only one year.

The Maine Legislature has adjourned after declining to materially alter the laws of that State which affect fish and game. It was hoped that the penalties for violation of this law would have been made somewhat more severe, and that it would have been made a penal offense to kill a cow moose. This was not done. However, a more liberal appropriation than ever before was voted to the Commissioners, and in the face of the shameful abuses to which these gentlemen have been subjected, and the fact that charges have been brought against them for failure to do their duty, this vote of confidence by the Legislature is gratifying to all those who know the Commissioners, and is, perhaps, the highest compliment which could have been paid to them.

We have further advices from our midwinter Yellowstone Park Explorer. He has safely made the tour of the Park, journeying through it as no man ever did before, and seeing sights on which no other mortal eyes have ever looked. A part of his graphic report is already in our hands, and before long we hope to have it all, and to present it to our readers. It will be interesting to those who are watching the rapid extermination of the large game in the West to learn that for several days during his journey our Commissioner was constantly in sight of elk, and that he saw some bison in the Park. Our readers will find this tale of a journey of 200 miles on Norwegian skeys—the narrow wooden snow shoes—very entertaining reading.

The past winter has been the severest experienced in the West for years. The papers have been full of accounts of the heavy losses of cattle on the range, and of the deep snows on the mountains. These snows have been so heavy in many places as to drive the game down from their ordinary winter ranges to the foothills, where feed could be obtained by the hard-pressed animals. The weather must be very severe when hardy animals like the elk suffer, but we have heard of more than one case recently in which a band of these animals came near starving.

Finn's free lunch short lobster bill has been passed by the New York Assembly. As already explained lobsters are now protected by statute until they are ten and one-half inches in length, this being the size at which they spawn. Lobsters under this size are desired by restaurant people and by the proprietors of liquor saloons who set out the immature crustaceans as alluring free lunch. Finn is a New York saloon keeper, and in seeking the repeal of the very wise law is presumably working for himself and fellows of his ilk.

Your born sportsman will undergo a vast amount of hardship before giving up his favorite pastime. Physical injury and maiming do not quench his ardor. There are numerous one-armed shots whose skill amply demonstrates that pluck must win. We have known a grouse shooter, temporarily blinded in one bandaged eye, pursue his game in the cover with no whit less of skill than before; and more than one gunner who has totally lost the sight of one eye has found his aim no less certain than when both eyes were bright and true.

Have any of our fox-hunting friends ever tried their hounds with foxes that live upon the eastern shore of Virginia? We have heard grand stories of the runs to be had on those level beaches and among those low sand hills. Some one ought to take a pack of good hounds down there and give the foxes a trial. They are plenty and the running is good.

In New Jersey a bill has been introduced which does away with spring shooting in the northern portion, but curiously enough divides the State into two sections and establishes different close times for each. It is difficult to understand why this should have been done, but we presume that it may have its cause in local jealousies.

We think it would be well if the true friends of game protection in New York State would unite to prevent any game and fish legislation this season. This constant tinkering with the laws destroys all respect for them and makes them so unintelligible that they lose their effect even with those who wish to obey them.

The Sportsman Tourist.

UNOFFICIAL LOG OF THE STELLA.—IV.

IF YOU ever happen to visit St. Augustine, in doing the ancient city do not fail to put in an hour in the curiosity shop of Doctor John Vedder, near the club house and wharf of the yacht club. I do not know if the Doctor be a regular M.D., but I know that he is a most enthusiastic naturalist, and his collection is a marvel of curiosities, gleaned mainly from the animal kingdom, though the botanist may find much that will interest and amuse him. The scribe, being only an enthusiast on reptiles, and caring little for any reptile even unless it were very poisonous, turned his attention largely to snakes, of which the collection had an ample stock, dead and alive. It was here that he found a stuffed specimen of the diamond rattler 8ft. long, which, being the longest he had ever seen, and well preserved withal, interested him greatly. *En passant*, he takes this opportunity to say to the Florida friends who have entertained him with stories of rattlers 13, 14, and even 15ft. in length, that he considers such snakes unauthentic and nearly impossible, while the snake-liar is a constant quantity, before whom the stoutest trout-liar weakens. And he would further remark that, while listening to their yarns with apparent credulity, he was mentally logging them as a set of ophidian Munchausens whom it would be flattery to call liars.

Doctor Vedder, finding the scribe something of a naturalist, was unwearied in showing and explaining his treasures. He fed his menagerie, stirred up the rattlers, provoked the moccasins, got a box of untamed wildcats in a rage, fondled his pet otters, and explained the peculiarities of a box of glass snakes, the first the scribe had ever seen in a state of confinement. One of these had met with a little accident, and was on the dry dock, so to speak, repairing damages. He had broken himself in two and was mending the break by bringing the broken parts together and keeping quiet until the break was healed. The accident had happened less than three days before, and he was already able to crawl about his cage, though the tail end of him was evidently a little sore and stiff as yet, and his owner spoke of him as being on the invalid list. This incident is mentioned more especially for the benefit of people who have disputed the writer flatly as to the existence of a serpent which could be easily broken in two by a light blow, and, if left to itself, would contrive to unite the broken parts in two or three days. I have known the common blacksnake when cut in two with a sharp scythe, to do the same thing.

There was a good show of live aquatic birds, and the Doctor fed them with fresh fish for the entertainment of his visitors, and to show the difference in their manner of feeding. The cormorants and several varieties of cranes, as well as the ibises, gobbled their fish at once, though in the case of the cranes, the fish looked three times as large as the bird's neck. The pelican pouched a large mullet in an instant, and settled himself back open-mouthed for another. But the sandhill crane refused fish; and, when fed a piece of fresh beef, took it to a bucket of water and rinsed it clean before eating it, which he did leisurely, neatly, and like a gentleman. He was not to be hurried, and when the others tried, as they did, to snatch his dinner, they paid dearly for their temerity.

I never have and never shall recognize this bird as properly a crane or heron at all. To me he is king of the curlew tribe, and always has been since my first acquaintance with him. Majestic in flight, even beyond that bullying robber the bald eagle, cleanly in his habits and feeding, always preferring corn to fish and frogs, always a high-land bird, excellent on the table—why call him a crane, and relegate him to the ranks of the frog-eating waders on an arbitrary point of structural similarity? To me he is king of the curlews.

A notable feature of the Bay of St. Augustine, and one that tended much to relieve the tedium of our stay there, was the fleet of white-winged yachts, mostly owned by the St. Augustine Yacht Club, which daily made the bay lively with sailing matches, amateur practice, and parties of winter tourists from the hotels sailing for pleasure. Most of the yachts were catrigged, and of the extreme skimming dish type to an extent that would drive your yachting editor to the verge of insanity. If they were death traps they were not successful ones, as I could not learn that any man had ever been fatally caught in one of them. Speedy they were, and they stood up stiffly in a strong breeze. Also, their owners claimed for them ability to "go outside." One thing is certain, they were excellently adapted to cruise in the waters for which they were intended. A cutter is of no use on the Florida coast, and any craft drawing more than 30in. is virtually barred out here as regards inland cruising. And that is just what's the matter with the Stella. She had won our admiration as a sea boat, and all admitted that her cabin accommodations were equal to most yachts of three times her size. But when we took an Indian River pilot at St. Augustine, who promised to take us through Mosquito Inlet to the Lagoon, and all over the Lagoon, through the Haulover to Indian River, and anywhere on the river that we chose, we got badly left.

Joe, the pilot, did his best; he wanted a job; but the Stella needs an honest 5ft. of water to float her, and Joe found it impossible to get her over sand bars where there was only 4ft. of water at high tide. But he could and did buck at them manfully, whereby it has happened that we have had an excellent chance to become familiar with the topography of the country while being, in the parlance of this watery land, "hung up" on oyster bars, sand bars and p'ints. This gives Joe an opportunity for explanation. "The last time I was here we carried a fathom o' water over this bar. But the river is all the time changin' so. The 'Coast Pilot' tells you so." Which is true; but Joe forgets that it is his business to know it, and also to know the channels and the depth of water in them. So the Skipper decides to board the Clara and go to Titusville on the Indian River prospecting. Now the Clara is a neat passenger boat drawing only 32in., and has been brought here because of her light draft, to run from Daytona, on the Halifax, to Titusville. The distance is only forty-five miles, and as she is only required to go down one day and back the next, she ought to make connections, but she doesn't. The Skipper is absent three days and returns disgusted. He reports the Indian River impossible for us. There is only 3ft. of water in the Haulover, and the Clara has been "hung up" on shoals for twenty-four hours. As she was only meant for a day boat the passengers had to hang up also, as best they could, on chairs, settees, tables, or on the cabin floor.

And thus what with one delay after another the time goes by like a dream, and the Skipper wakes up to the fact that it is too late for rounding the Florida capes and devoting a month to the Ten Thousand Islands, Punta Rassa and Charlotte Harbor. What, though? We came away from the frigid North for an outing; to find summer weather, orange groves, mocking birds and a fair amount of fishing and shooting; and we have found each and all to a satisfactory extent—except the shooting, which is very poor. It is small comfort to be assured that up to the "big freeze" of January, 1886, the shores were fairly alive with beach birds. There are very few to be found this winter; and the scattering flocks are wonderfully shy and wary. And quail, which ought to be abundant, are almost as scarce. There are plenty of fish, however; the Skipper, who is an ardent angler, catches sheepshead, sea bass, sailor's choice, etc., to his heart's content, while the yacht has a pretty constant supply of oysters, clams and crabs, all of good quality. Fruit, too, is plenty; oranges for the asking, strawberries, fine and well flavored, at twenty-five cents per quart, Japanese plums, limes, etc. But of game we have not been able to keep up a supply. Even ducks, which in this wilderness of waters and mangrove keys ought to be plenty, are surprisingly scarce, and we have not had a taste of venison or wild turkey on the cruise; also, I regret to say, beef and mutton are equally scarce, and poultry is not to be had at any price. There is some compensation in the fact that eggs are abundant and fresh.

As to losing our trip to the Ten Thousand Islands, we have come to care nothing for that. We have seen a score of men who have been there, but no one who cares to go there a second time. A naval officer, who once headed an exploring expedition among these islands, gave us substantially the following account of the region. Taking a late map of Florida he called our attention to the everglades, where, in the lower parts of Dade and Munroe counties, instead of the usual township lines appears a blank, with an explanatory note which reads as follows:

"This unsurveyed and but partly explored region is nearly level and only a few feet above the sea. It contains a network of narrow water channels and shallow lakes, with numerous sandy islets, covered with vegetation and capable of cultivation."

"Now," said our informant, "the Ten Thousand Islands are a muddy continuation of that same region, where the tide overflows. It is really a desolate stretch of mud flats and mangrove swamps, with scarcely an interesting feature and very little game. About the only animal life to be found there is comprised in the list of waders and alligators, though we saw one manatee. We were obliged to leave the ship's launch four or five miles from the islands, while a party of three of us worked our way in with a flat-bottomed skiff to reconnoitre. It was dreary work, and three weeks of it convinced me that no survey of the region could be made by any ordinary means, or would be of any use whatever when made."

As all the conchs, coasters, wreckers and tourists confirmed this view of the region, we rather lost all desire to go there, and gradually fell into the easy, lazy, semi-tropical life of the native cracker. We still promised ourselves a cruise to the capes and Key West, but the warm days and clear, starlit nights came and went, we ate and slept or fished and visited, we wrote some and read more, but somehow we did not make a start, and the last days of February found us loitering and loafing about the waters of the Hillsboro and Halifax rivers, or among the interminable channels and mangrove keys of Mosquito Lagoon, Spruce Creek and other puzzling places, where the scribe found all the canoeing he wanted and where he contrived to lose himself about every other day, until he was constrained to admit that a reasonable canoeist could find all the crooked channels and mangrove keys he wanted without going so far as the Ten Thousand Islands.

NESSMUK.

WINTER NOTES.

BY THE OLD MAN OF THE HILL.

SO FAR from neighbors of the human kind, one is constrained to seek friendships of another sort till all inanimate nature has a place in our affections, and the passing seasons, with even Winter himself and his frigid disposition, are welcomed like returning friends. His present visit is a long one. He has shown us all sides of his character.

We are early warned of his approach by that herald, Jack Frost, who at once set out to maintain his reputation as a wanton sprite, a very Puck for mischief, by bursting the gude wife's water-bucket, perching on the old man's ears, and riding to town in the gray of the morning, and then slyly congealing a glassy surface in the path of the unwary pedestrian to disconcert his flying feet. These are only a few of the serious catalogue of offenses, mostly under the head of Assault and Battery, or Malicious Destruction of Property, but no Habeas Corpus seems to apprehend him.

There are those, however, who will say that we are maligning the character of one of Nature's most earnest and useful craftsmen. Suppose he did trail his robes over our tomato patch on his way to the woods! We knew he was about; we might have seen his footprints in the low meadow several days before, and his autograph on our bedroom window.

Immediately upon arrival he commenced operations on the landscape, and soon, by means of a wonderful assortment of pigments, known only to his mysterious alchemy, the woods were all a conflagration. His chief delight was in a solitary stem at the foot of a rugged hill, till he had brought out all his beauties against the dark background of rocks and pines. Every movement was a phenomenon. Was there a brooklet in his path? A magic breath, and little crystal spears and arrowlets were darting out from underneath the bank to join forces for a swaying, scintillating raft, and before morning the meadow mice were out on the moonlit surface contemplating the astronomy reflected in its depths.

As the mood of Winter became harsher, the warmth of earth shrank deeper and deeper, the surface grew rigid, and footprints and other indentations were petrified. Then the aspect was dreary. All a waste of broken stalks; the neglected corners bereft of their charitable cloaks of foliage; the "skeletons in all the closets" exposed. The forests, too, are denuded, and the horizon only a black network of twigs against the sky; in short, the landscape that yesterday was painted in colors, now is only an etching. Then came the snow. At first in uncertain, struggling companies, but soon in silent shoals, moving straight to earth, until a frolicsome zephyr, darting among them, carried consternation in its wake, and sent them once more whirling heavenward. By nightfall, when landmarks had lost their identity, and outlines were obliterated, the whirlwinds came down from the mountain, each in pursuit of a flying avalanche of snow to hurl against the cottage. They tried all the doors. They rattled all the windows, and then drew back to despoil the woods of their newly-acquired foliage, never resting till all the remonstrating trees made obeisance at their slightest dictation. A moment later they were coursing toward us all blending in a weird, malevolent crescendo threatening to uplift the old house bodily. But it stood.

When morning dawned, cold and glittering, they were gone, but traces were visible in the smooth-swept courses among tumultuous heaps, with here and there a towering pinnacle with overhanging cornice and a thousand graceful feats of architecture.

JEFFERSON SCRIBB.

A NIGHT IN THE MOUNTAINS.

"WELL, Mr. Harry, this is about the hardest bit of walking I've had this many a year," said Will, as he stood wiping the perspiration from his sunburnt face.

"You're right, Will," I answered, "but we must go on until we find a good place to camp for the night."

"And I'm beginning to think we won't find any good place. This trough seems to have no end."

I was beginning to think the same thing myself. Will and I were on Clear Creek. We had left Old Barney's on Monday morning, crossed the Black Hills and Pine Ridge, and struck Clear Creek near its headwaters. We were now making our way down the creek, camping where night might find us. We were alone in the wilderness, not a house nor a human habitation within twenty miles of us. It was Wednesday evening, and our trout baskets being filled, we had quit fishing earlier than usual, and were looking for a place to camp. When we stopped fishing we were in a sort of cañon or gorge, between two mountains, that rose almost perpendicular from the creek.

Clear Creek was narrowed to one-half its usual width, and cut its way between the mountains. Always a wild stream, it here pitched and foamed and dashed among the rocks, until it was lashed into a perfect mass of foam. For nearly an hour we had been making our way down this gorge, hoping to find a suitable place to camp, and as yet had found none.

"What do you think about it, Mr. Harry?" inquired Will. "Why, I think our chances for a good night's sleep are not very promising, but we'll have to make that big hemlock yonder," I said, pointing to a hemlock a few hundred yards down the stream. It took us a half hour more to reach it. The sun had disappeared behind the mountains, and the gloom of twilight was settling down as we neared the big tree. The roar of falls became audible as we approached the hemlock, around which the creek made a sharp turn and was hid from sight. Will and I reached the tree side by side, and we both stopped in wonder. Before us lay a large pond or little lake into which Clear Creek pitched over a falls 10ft. high. It was wholly unexpected and took us both by surprise. In the middle of the pond was an island heavily covered with timber. On all sides the pond was surrounded by high mountains. On the western side there was a deep gorge between the mountains, and through this came the last rays of the setting sun lighting up a narrow strip of water across the pond to the island, but the full force of the sunlight seemed to strike upon the island itself, lighting it up until the trees seemed foliaged with burnished gold. A mist hung over and around the island, and the sunlight sifting through it, gave it the appearance of a golden halo surrounding the island. There was something strangely unnatural about the appearance of this island. The whole scene seemed unreal. The dark sombre mountains on all sides and the dull gray waters of the pond threw the island into such intense relief that it fairly dazzled the eyes with its brightness. Beautiful as the scene was it yet seemed weird and unnatural. We stood several minutes in silence viewing it.

"Will," I said, "where are we anyway?"

"I don't know," answered Will, with a very solemn look on his face, "unless this is what is called Mulkassett's Lake. I never was up here before, but I have often heard of this place. I think this is what they call the Devil's Bowl."

"Well, Devil's Bowl or not, here's a good place to camp and we'll stay here all night."

"If you'd just as leave, I'd rather go on, Mr. Harry," said Will, "they tell ugly stories about this place, and I'd rather not stay here all night."

"What stories do they tell?" I asked.

"Why, the people in the mountains say strange things are seen here at night, and they say that the island is haunted. Oh! look at it now," ejaculated Will, pointing to the island.

It certainly did look strange. The island was now dark as it had been before light. It stood out a black mass against the background of gray mountains beyond, but the strangest part of it was that over the island floated what looked at first like immense filmy wings. A moment's observation explained the singular appearance. The sun had sunk behind the mountains sufficiently to take its light off the island, but its rays still struck the streaks of fog that hovered above the island, and which had assumed a shape somewhat resembling huge wings.

"Well," I said, "that's nothing but fog. Don't mind it, kindle your fire here and we'll risk the haunted island and all the ghosts."

An hour later we had finished supper and fixed our beds of spruce branches. Lighting my pipe I sat down with my back against the big hemlock. I was facing the lake and the falls were a few feet in front of me. Will was sitting near me pulling away vigorously at his short pipe. The night was one of those sultry, oppressive nights common in June, even in these high latitudes. The moon was in the first quarter, and threw a pale, sickly light

over everything. The lake lay perfectly calm. The island seemed an inky cloud resting on the water. The sound of the falls came up dull and solemn. The hooting of an owl in the woods, the croaking of frogs in the lake, the cry of a wild animal far up the mountain side, all added to the weird, peculiar effect.

"Will," I said, "what do you know about this lake and what do people say about it?"

"I don't know anything but what I've heard."

"And what have you heard?"

"Why, I've often heard them talk of the Devil's Bowl and the Haunted Island."

"What do they say about it? Tell me the whole story."

The story Will told was much after the style of all Indian legends. In substance it was that in early days this island was the home of a great Indian chief known as Mulkassett. Here he had his wigwam and his council house, and here he lived with his daughter, Laughing Eyes. When Laughing Eyes grew up, she had numerous suitors among the chiefs of the neighboring tribes, but to all she turned a deaf ear, and lived contentedly on the island with her father until a white trapper appeared. This trapper came in the fall and spent the winter with the Indians, living among them as one of them. During the winter, unknown to Mulkassett, an intimacy sprung up between Laughing Eyes and the trapper, and in the early summer both disappeared. Mulkassett's rage was terrible when he heard that his daughter had gone away with the trapper. He dispatched his braves in every direction; he sent messages to all the different tribes, and in a few days the pair were captured and brought back to the island. Mulkassett called a council of all his tribe. On an evening in June the meeting was held, and at the council the trapper was condemned to death. No entreaties or prayers of Laughing Eyes availed to save him. He was taken from the council house and burned at the stake. The next morning the dead body of Laughing Eyes was found floating in the water at the foot of the falls. "And people say," concluded Will, "that if you are here in June you can see Laughing Eyes rising out of the falls, and see the canoes of the Indians crossing over the lake to the council house, and sometimes you can see a fire burning on the island."

"Why, Will, this is the month of June," I said.

"That's so, 'tis June. I didn't think of that before, and I'd just as leave be somewhere else to-night as here."

However, notwithstanding his fears, Will lay down on the spruce branches he had fixed for a bed, the fatigue of the day's tramp soon made itself felt and he slept soundly.

I sat still smoking my pipe. There was something weird and peculiar about my surroundings that made it facinating. I thought of Will's story, old Mulkasset, the Indian maiden, the spectral council held in the old council house in June. I gazed out on the lake. I tried to imagine those phantom boats flitting across to hold the ghostly conference. I was sitting facing the island. Suddenly I saw a black object leave the shore and glide out toward the island. I certainly could not be mistaken. I sat up and rubbed my eyes. Yes, there it was, plain and distinct in the faint moonlight, a little boat with one person in it gliding across the lake toward the island. I felt a cold chill come over me. Was Will's story true and did old Mulkasset hold nightly meetings on that island?

"Will," I said in a low voice.

In a moment I felt Will creep over and crouch at my side. "What is it, Mr. Harry?" he whispered.

"Look there, Will, what is that?" and I pointed to the dark object making its way across the lake.

"It's a boat and a man in it as sure as I'm here," answered Will. "Look there! look there!" ejaculates Will, "there's another." I looked in the direction Will pointed. Yes, there was another boat shooting out from the shadows and heading for the island. They were the old-fashioned Indian canoes, and they seemed to glide over rather than through the water. The figures in them sat erect, motionless. There was no sweep of paddle. No mortal hand gave the motion that urged them toward the island. Soon another boat shot out from the shadow of the trees at another part of the lakes, and another and another, until more than a dozen were on the lake.

"What does it mean, Will?" I said.

"It means, Mr. Harry," and Will's voice was low and solemn, "It means that them aint no real boats, nor real men; them are the ghosts of dead Indians, and they're going to hold one of their meetings on the haunted island."

We sat in silence watching them. The boats neared the island; one by one they entered the shadows of its trees and were lost to view. A deep, gloomy silence reigned over the whole valley. The moon was sinking until it approached the top of the mountains. There was something oppressive in the stillness. Suddenly the silence was broken by Will's voice close to my ear.

"Good Heavens! Look there."

I looked in the direction he pointed. There, rising from the mist of the falls, appeared a white figure. Plain and distinct it seemed to hover above the falls, its wild, black eyes fixed upon us with a look of entreaty. Suddenly the figure raised its right hand and pointed to the island. Slowly it turned and floated out toward the island, twice the head turned and the eyes looked back to see if we were following. Dimmer and dimmer grew the figure until it disappeared.

"Laughing Eyes," whispered Will. "She's gone to the council meeting on the island."

"Let us go, too," I said. I know not what impelled me to say it, an irresistible desire to go to the island seized me.

"Why, Mr. Harry, you don't mean to go over to the island!"

"Yes I do; let us go right away."

"Well, if you go I'll go too, but I'd a good deal rather not, and besides, how can we get there, we have no boat."

I hadn't thought of that before. How could we get to the island? I looked down at the edge of the pond; a dark object was sticking out from the bushes. "Why, Will, that looks like a boat," I said, pointing to it, "come let us see." It was a boat, an ordinary punt, such as is used by trappers or hunters. I didn't stop to think that it was strange our finding a boat ready for us when neither of us had seen it before. I was filled with the one idea of getting to the island. We loosed the boat and pushed out on the water. There was something fascinating about thus following the vanishing form of Laughing Eyes. Twice on the journey across the water I imagined I saw again that white figure beckoning us; twice it faded into light mist. Just as we reached the shore of the little island, a bright light burst up within a few yards of us, illuminating the trees and surrounding water. Crouching behind the bushes that lined the edge of the island we looked on the strangest sight my eyes had ever beheld. Beyond the bushes was an open spot, in the center of it stood a post around which the fire was blazing; through the fire could be seen distinctly the form of a man writhing and twisting in intense agony. The entire open space was filled with dusky forms dancing around with burning brands. But the most singular part of the whole scene was that not a sound came from all the vast crowd; everywhere was deep dead silence. Suddenly I felt an impulse to try and save the man. I jumped up with the intention of running into the crowd, when I felt Will's hand on my shoulder, and his voice said, "Hello, Mr. Harry, are you going to sleep all night sitting up against this hemlock?"

"Why, what, where, where are we?" I said, rubbing my eyes.

"We're right here, where we've been all evening."

"And where are the Indians and Laughing Eyes?"

"There are no Indians here; guess you've been dreaming."

"Blast your Indian stories!" I said, now fully awake. "You've had me going to the island and seeing Laughing Eyes, and no end of Indians."

Lighting my pipe I told Will of my dream. We then stretched out on our beds, and when next we looked on the haunted island the sun of a June morning was shining over it, turning it into an ordinary common place scene.

A LABORATORY FOR THE PARK.

Editor Forest and Stream:

In the issue of *Science* which appeared on the 18th ultimo, there was among the letters to the editor one of especial interest from Dr. D. D. Slade, published under the modest title of "Osteological Notes," wherein its author points out even that at this late day he has discovered a very important difference to exist both in the arrangement and character of the metacarpals of the buffalo and aurochs. Dr. Slade says that, "in passing through the exhibition rooms of the Museum of Comparative Zoology (at Cambridge, Mass.) not long since my attention was called to the fact that the skeleton of the *Bison bonasus* presented a rudimentary second metacarpal, while the *Bison americanus* at its side exhibited the customary fifth metacarpal; in other words, that the splint-bone which was present on each skeleton occupied exactly opposite positions, that of the American bison being on the outer, while that of the aurochs was on the inner side of the limb." About a year ago Mr. F. W. True, the Curator of the Department of Mammals in the Smithsonian Institution, entered a plea in *Science* for a more thorough study both of the habits, and especially the structure, on the part of our zoologists and morphologists, of our larger animals, and the writer in the same journal, at a later date, did his best to urgently call attention to the same important question in a letter to its editor. The point that I made is now amply illustrated by the discovery of Dr. Slade, and that is, there are a great many animals, once abundant and easily obtained, now rare and rapidly becoming extinct under our very eyes, to whose structure we are guilty of not having given our full attention and study, while in many cases we are absolutely ignorant of the commonest facts of their natural history. Among some of our zoologists I fear there exists a sort of a notion that now, since the establishment of the law of organic evolution, the fields of morphology are quite out of fashion, and the study of the structure of our commonest animals rather an unprofitable expenditure of time, as it is but pretty sure to bring little more, as a reward, than a sort of a "I told you so" from the evolutionists. You are simply proving what we already have abundant evidence of, and you better turn your attention to psychics or astronomy. To those who hold such opinions, I can but reiterate my former words, and say that many of the laws of physiology; of the fundamental laws of life itself, and the accurate knowledge of the true relations of many existing forms to each other, are as yet totally and absolutely unknown to us. So far as zoology is concerned, these will constitute the problems to be solved in the immediate future, and let me assure you that unless we more fully turn our attention to the structure of all those animals of our own fauna, which are being so rapidly exterminated, and render exhaustive monographs upon the same, we will fully merit the very worst denunciations that the coming race of zoologists can heap upon our heads. For these very problems in biology, to which I have just alluded, will demand all the accurate knowledge of the structure of animals that can be brought to bear upon them. The buffalo are nearly extinct, when, only a few years ago, there were thousands of them in this country—and now in these very last days of their existence upon earth, it is discovered that differences of the most vital importance to science are found to exist in the skeletal structure of the foot as compared with the same parts in a related form. There must have been some cause for this, and who can answer the question but that other important differences may exist in other parts of the economy of these animals, which differences might be the cause of shedding a powerful light, were they known, upon some of the fundamental laws of biology, incomprehensible to us, without such aid.

Our elk are sure to go just exactly in the same manner as the buffalo have, and the day is not far distant for the fulfillment of such a prophecy in the history of our mammals, either; and where can we find an exhaustive treatise upon their anatomy? Elk are not the only animals, either, for our antelope are disappearing with marvelous rapidity, and they are, if anything, a still more important form, so far as morphology is concerned.

I can easily imagine some anatomist in the dim future, who perchance has exhaustively examined the structure of some allied type, which has persisted for a much longer time in existence, wringing his hands with despair, and exclaiming, "O! what would I give to know how such and such a structure was found in *Antilocapra!*"—and a treatise upon such a subject *non est.*

Now, I have a plan to propose, which, I must believe, if put into execution, will act as a powerful aid to the progress and encouragement of such studies and pursuits.

This plan consists in establishing a national laboratory in some suitable location within the limits of the Yellowstone Park. Such a laboratory could be built for something like fifteen or twenty thousand dollars, which moneys could either be appropriated outright by Congress, or gotten up through private subscription. Mr. P. T. Barnum, about a year ago, promised to give the city of Washington $200,000 to start a zoological garden there, but, so far as I know, the offer was never accepted. Now, if Mr. Barnum still has it in mind to leave a monument behind him that will have as its aim the perpetual care and study of our native animals, I can devise for him no better scheme than to put one-half of that amount into a national biological laboratory in the Yellowstone Park.

A building of this kind should be constructed so as to offer complete accommodations for the prosecution of biological work in all of its departments. There should be dissecting-rooms properly fitted up, with apartments for draughting work, and quiet nooks to write in. There should be a commodious library, containing essentially such books as have been found of particular service for use in the field, in every branch of biological research, together with such periodicals as report regularly the advances made from time to time of our knowledge of the life-history of animals in their native haunts, and of morphology.

There should be rooms, and spare rooms, for the use of students and the permanent staff. The proper arrangements should be made whereby all manner of observations could be facilitated and recorded, as the migration of birds; meteorological observations; the breeding habits of mammals; the botanical data of the entire region, and exhaustive investigations upon the geology and invertebrates, etc., etc.

Then, if such a laboratory were located near the center of the Park, there could be erected near it suitable quarters for the regular police of this valuable reservation, and owing to the fact that the government held an institution of that kind there, in addition to the presence of a good police, there would probably be far less effort made to encroach upon the domain by ruthless speculators, or by those who are poachers. It would be an excellent center for both government and private scientific parties in the field to have as a base of operations. Another advantage would be in having a good point to gather all manner of material and have it properly packed, arranged and assorted, before shipping to the museums. By far its greatest advantage, however, would be in having such a scientific center in the very midst of material which now demands our most exhaustive study before it is swept off the face of the earth. Then we could investigate, in the most satisfactory manner possible, the life-histories of a great many animals that at this very moment are rapidly disappearing before the relentless march of civilization in this country; there, too, could the fresh bodies of our largest animals be placed directly upon the dissecting tables, where with scalpel, crayon and camera, their structure could be exhaustively investigated, and, away from all annoyances, their describers could make full record of such researches.

R. W. SHUFELDT.

FORT WINGATE, New Mexico, March 10.

MY OLD JIM.

DURING the month of July past I wing-tipped a solitary crow, whose dusky feathers glistening in the morning sun made too tempting a mark for a lone and disappointed woodcock hunter.

My dog ran him into a bush where he made no little resistance, but soon yielded to the darkening influence which my handkerchief had over his eyes, and as I eagerly folded him to my breast he succeeded in entwining his claws into my flannel shirt front with a grip not easily disengaged.

Taking him with me to the farmhouse at which I was stopping and examining his wounds, I found that he had been struck by only a single pellet, which took effect in the third joint of the left wing and amounted only to an ugly bruise which would probably cause the injured member to drop a little.

This being the first live crow that I had ever seen at close range (probably from the fact that I am a city-bred boy) I decided to keep the bird and if possible make a pet of him.

By washing and dressing the wound daily and feeding him out of my hand we soon became on very friendly terms. I built a spacious cage for his accommodation, but on the approach of autumn, as the nights grew cold and long and the native birds began to migrate, my heart softened as I thought of the possible happiness of which I was depriving my crow, so one beautiful morning in October I threw open the cage door with a "Good-bye, old Jim!" and left him to his own inclinations.

Imagine my surprise on arriving home at noon when I was greeted with the familiar caw! caw! and glancing up into the drooping branches of a willow I beheld, quietly devouring an apple, my Jim, whom I supposed many miles away by that time.

Well, here it is the middle of February and still he stays with me, diligently eluding all my efforts to keep him housed, seeming to prefer taking odds with the sparrows with the thermometer at zero, to a comfortable perch indoors. So much for natural instinct.

Nor does he confine himself to the narrow limits of the few trees in the yard, as I hear reports of his visiting various places within a radius of a mile or more from home, while on two or three occasions he has spent several days away, but with these exceptions he never fails to turn up and "caw" for his beefsteak and buckwheat cakes. Corn and "sich" having long since fallen beneath his epicurean tastes. Even as I write he is perched among the bare branches of a large birch, with a piece of meat in one fist and apple in the other, suspiciously eyeing a group of open-mouthed small boys, who are watching him from the sidewalk.

Such is my attachment for him, that if he stays with me until spring I shall endeavor to secure a mate for him.

CLEVELAND, Ohio. WATT.

THE JACK SNIPE AS A RUSTLER.

Editor Forest and Stream:

I desire to put on record facts showing the hardships that can be undergone by this favorite game bird when put to the test; the common sense he shows in taking care of himself; in other words, his characteristics as a "rustler."

I will premise that my locality this winter is near the intersection of 109½° west longitude, and 44° 8′ north latitude, in the foothills of the Shoshone Mountains, at an elevation of about 6,500 feet above tide. I will also premise that a daily record (three times per day) is kept of the barometer and thermometer indications with reliable instruments (this having been my practice for five years). Let it be further premised that this winter set in unusually early and has been unusually cold, with the maximum amount of snowfall for this locality. There have been cold snaps with a minimum depression of the glass, as follows (the cold snap lasting from a few days to a week): Nov. 16, —12° Fahrenheit; Nov. 23, —21°; Dec. 22, —8°; Dec. 26, —21°; Jan. 8, —27°; Dec. 17.—11½°; Feb. 2, —35°; Feb. 10, —20°; Feb. 21, —16°. These figures are all so many degrees below zero. Though the weather has been unusually cold (average cold is meant); the barometer has ranged unusually low. This has been noted in the New York *Herald* in its weather reports for the Northwest, so it is presumed there has been a general low pressure in that region.

During the summer there has been occasionally seen a pair or so of jack snipe (*Gallinago wilsoni*) in my meadows, always well irrigated at that time. On Dec. 25, in passing an open spring in my upper meadow, I was surprised to note a pair of jack snipe fly up, one of them giving tongue to their well-known "scaipe," and appearing to have as vigorous a flight as those so often seen in the marshes of Missouri and Illinois, where I was long familiar with this favorite game bird. Since then I have always been on the lookout for these two birds, taking a deep interest in their welfare. On Jan. 8 saw one jack snipe; on 17th saw a pair of jack snipe; on Jan. 31 saw one snipe; on Feb. 2 saw one snipe; Feb. 7 saw one snipe; Feb. 23 saw one snipe; Feb. 28 saw one snipe.

I should have premised that all the rivers and creeks are frozen solid in all this region, and the only open water is a few springs that are sufficiently flush to prevent freezing. There are in my meadows three springs that have remained open, running 10 or 12yds. before becoming frozen, the bottom of branches consisting of small boulders and mud, are frozen. In these springs are tender water plants that doubtless furnish food for jack. A short distance from two of the springs is a small branch fed by springs running through a willow thicket, which occasionally has an open place in the drifted snow. When flushed at the springs he usually alights immediately in this thicket where he is protected from the cold winds, and by getting under the overhanging snow drifts and putting his feet in the warm water, manages, doubtless, to keep comfortable.

On our coldest day, Feb. 2, with a minimum of —35°, and during the day the glass varying from —30° to —25°, depending upon the sun shining out, I went out to look after my pet, taking a roll of bread for food. He was flushed in one spring, but flew a short distance, alighting in another spring. Placing the bread in a favorable place, I went around with the object of driving him back to the food. After waiting a sufficient time for him to settle down to feeding, he was approached cautiously, and at last he was discovered sitting motionless in the water. Getting near enough to see his eyes, he was carefully observed. He was sitting among some water plants in the shallow water, his legs entirely covered by water, his feathers ruffled up and head drawn back to the body with bill to the front. Almost any other waterfowl would have had the bill tucked under the wing, but not so with Jack. It must be confessed, however, that Jack looked woe-begone and disconsolate in the extreme. On approaching him, however, he flew up as vigorously, with his well-known "scaipe," as if he took every thing as a matter of course. I felt, however, that as he knew how to protect himself from the cold by putting his exposed legs in warm water, if his food held out he was all right for the balance of the winter. I should have said that the temperature of this spring, judging from that of one about 200yds. off, was that day 41° F.

At the time Jack was making himself comfortable in the warm spring branch with the temperature alternating between 25° and 30° below zero, about forty miles away a man was slowly succumbing to the cold. Though he had matches with him and had prepared to start a fire at a vacant cabin, he succumbed to the Ice King before it was lit, and was found frozen to death. The evening before two men had started across the prairie. The one got in, but the other froze to death the same evening, though showing every evidence of having fought the cold with all his might. If half the stories were to be believed that are repeated, there were at the same time hundreds of cattle dying on the range from a combination of cold and starvation. Yet this jacksnipe passed through all; and as the historical and far-famed backbone of winter has again been broken, it is fair to presume that at least one of these snipe will be all right in the spring. I have not seen the pair together since Jan. 17. If only the males "scaipe" on flying up, they are probably both all right, as sometimes it does not give out its well-known note on being flushed.

It must be remembered that these birds are not prepared with the winter underclothing with which all birds that winter in this climate are provided; the eagle, owl, two species of gray jays, chickadee, the magpie and the three species of grouse and probably a few others. These birds, as is well known, have a feather of down attached to the underside of the root of the ordinary feather, which makes a very complete protection against the cold.

In the middle of October, 1880, after the ground was frozen, but streams not yet frozen, the writer flushed on the trail on the head of the Stinking River, Wyoming, a pair of these birds. The valley at that point occupied a gorge in the mountains 4,000ft. to 6,000ft. below the mountain on each side, but was devoid of marshes. They appeared to be feeding in a sage flat in the narrow valley. My shotgun being convenient they were flushed and killed; were found to be fat and proved delicious eating.

This bird did not remain in this locality through choice, but was doubtless caught by the early winter and was afraid to attempt the journey to a warmer climate, as every stream was frozen up early and the ground covered with snow. Had he attempted it his legs would doubtless have become frozen in flight in the high altitude above the earth, in which their journey is made, and of course death would soon have followed. On Feb. 7 a mallard duck (drake) flew overhead up the river, evidently seeking for open water. His experience was doubtless like that of Noah's dove turned loose from the Ark. A few miles away on the same day were seen several other ducks. This reminds me that before the advent of the railroad, it was stated to be not unusual for wild geese and ducks to winter in Montana, where there were large springs that remained open. A few miles above Livingston on the Yellowstone River, on the ranch formerly owned by Major Pease, there is a large spring and on the opposite side of the river there were other open springs. This used to be a favorite winter resort for these wildfowl in mild winters. These birds are, however, better clothed than the jack snipe. P.

MOTHER CARE.

IN your issue of Jan. 20, "Uncle Fuller" relates his observations of a great northern diver's care for her young. In 1881, on my homestead farm on Long Lake, Manitoba, I had the opportunity to observe the nesting and rearing habits of the same bird. A pair had built their nest on the surface of the lake, attaching it securely to a bunch of reeds, 30ft. from the shore in such a manner that it would rise and fall with the water of the lake without disturbing the nest or the process of incubating the eggs. I watched it closely from day to day, sometimes taking a book or paper and sitting on the bank for hours reading and watching the birds and their nest. On the third day I saw that an egg had been laid and also thought that on my approach I saw the bird jump quickly from the nest into and under the water. To satisfy myself about it I returned in about two hours, and approaching very cautiously saw the bird again repeat the same maneuver. This she continued to do for several days on my nearing her nest. She laid five eggs at intervals of a day or two each and then began sitting, by which time, finding that I did not molest her, she seemed to become reconciled to my daily visits. She did not move from her nest at all nor show that she apprehended any danger from me. The second day after she had been setting and while I was watching from the shore, the male bird (I supposed it to be) put in his appearance and went to work diving to the bottom of the lake, bringing up a kind of dark weed or root, which he would take to the nest and feed to his mate, she taking it from his bill as he held it up to her. This he would continue industriously until she seemed to be content. He, too, became quite accustomed to seeing me, and appeared not afraid of me, but should my wife go with me, which she often did, then one or both birds, were they present, would instantly disappear under water.

After fourteen or fifteen days I found that a little bird had been hatched, and was sitting between or under the back feathers of the mother with its head only visible. On the following day I found the male was hovering or swimming about the nest with the little one on its back, and it would at times dive down leaving the little one sitting on the surface of the water, and would then return and feed the young one with something similar in appearance to what I had seen it feed to the mother bird. The mother bird had now another little one on her back while sitting on her eggs, and two days after the male had two little ones sitting on either side of his back between or under the feathers at the junction of his wings and back, with only their little heads visible, giving them a very cunning appearance, more particularly so when, two days after, the cock bird was swimming about with three little ones on his back, two sitting as before described and one at the root of his tail. The mother bird still had one on her back, the youngest, I presume, which was given to the father after gaining strength, he during this time having to support or find food for the mother and little ones. When the fourth little one was given to the father, the oldest one was sufficiently strong to swim about by itself, and would at times dive and I suppose find its own food. When the last one was hatched, the mother remained one day on the nest with it, but on the next day I found her swimming about with two little ones on her back in company with her mate, which also had two young ones on his back. They had divided their cares and labors between them. Each parent carried its little ones on its back and dived and procured food for them. A portion would sometimes be given the eldest one, after the others appeared to be satisfied, but he now seemed to be able to provide for himself.

This family of birds I felt very great interest in, and used to look for them daily until the young ones were quite grown up. They would come quite near the shore where I stood, apparently having the greatest confidence in my friendly feeling. On hearing the report of a gun by the lake one day, before the opening of the season, I went down to know the cause of it, when to my great grief and anger I found that a vandal half breed had shot three of my young family of birds. H. A. C.

RUFFED GROUSE FOR PRUSSIA.—Wilkesbarre, Luzerne County, Pa., March 17.—In your issue of March 10, 1887, under the head of "Black Game," you refer to a letter from Baron von Seidlitz, of Pommern, Prussia, wherein he expresses a desire to import into his covers the American ruffed grouse. While at a fair in this country last fall I saw three live ruffed grouse, one cock and two hens, sitting very contentedly on their perch in an ordinary drygoods box, about 4½ft. long, 20in. high and 18in. deep. Slats 2in. apart in front admitted air and light. They manifested no desire whatever to be liberated from their confinement, nor were they frightened or disturbed by the presence of spectators. I did not see the exhibitor, but have since been credibly informed that the owner has had the male bird over two years and the hens over a year. I should like very much to have the experiment tried, whether inland ruffed grouse could stand the salt air and rolling motion of the vessel during a trip across the ocean. At present I am unable to state whether the owner of these birds would sell, and if so what price he would put upon them; but if he would, and the price being reasonable, I would feel inclined to present them to the Baron, provided he would pay all the expenses of transportation and see that the birds were properly taken care of during the voyage.—LAWYER.

"IS THE SHRIKE A MIMIC?"—On Feb. 7, 1880, my son called my attention to a bird singing in the top of a small tree, which he said sounded like a mockingbird. I examined it with a field glass and told him that it also looked like one, but it could not be, as we have no mockingbird here even in the summer. After watching it for some time he secured it and it proved to be a great northern shrike (*Lanius borealis*), which he still has in his collection of mounted birds. I have often thought that I would report the observation, but I was a little skeptical about doing so, as I had never heard of the shrike being an imitator. But now that "A. H. G." has opened the way I think that I am duty bound to do so. I was asked by a lady (who wrs a close observer of birds and who had lived in Virginia) what bird we had here that looked like a mockingbird and that tried to imitate the song of other birds. When shown the great northern shrike she recognized it as the bird she had seen and heard. Since writing the above I have found in Coues' "Birds of the Colorado Valley," p. 555, this quotation from Audubon: "This valiant little warrior possesses the faculty of imitating the notes of other birds, especially such as are indicative of pain. Thus it will often mimic the cries of sparrows and other small birds, so as to make you believe you hear them screaming in the claws of a hawk; and I strongly suspect this is done for the purpose of inducing others to come out from their coverts to the rescue of their suffering brethren. On several occasions I have seen it in the act of screaming in this manner, when it would suddenly dart from its perch into a thicket, from which there would immediately issue the real cries of a bird on which he had seized.—J. L. DAVISON (Lockport, N. Y., March 17).

FLYING SQUIRRELS IN A HOUSE.—Lockport, N. Y., March 14.—A few days since a servant in the employ of the family of H. F. Gaskill, of this city, reported that she had seen a queer-looking rat in the cellar, said it had wings and a bushy tail. A trap was set and the next morning it had an occupant, which proved to be a dead flying squirrel. On Friday night last Mr. Gaskill caught alive another one, which he thought was a young one; he allowed it to escape and it is still in the cellar. If the last was a young there probably was a whole family of them, and undoubtedly they found enough in Mr. G.'s cellar to live on through the winter. He thinks they must have entered the cellar during the fall, as the outside entrance has not been opened since then. Is it not an unusual place to find flying squirrels in a house and in a city of 20,000 inhabitants?—J. L. DAVISON.

SPRING IN MICHIGAN.—Central Lake, Mich., March 15. —*Editor Forest and Stream:* The crows were first heard cawing hereabouts on March 11. They occupy themselves mainly with sitting upon the ice near the margins of the open water of the lake, where the current of the river has kept it free from ice. What they find there to subsist upon I could never learn. Robins were reported two weeks ago, but I did not see them.—KELPIE.

Game Bag and Gun.

HUNTING RIFLES AND BULLETS.

Editor Forest and Stream:

I have read over and over again with great interest, the letter of Mr Wilcox in your paper of Nov. 18, 1886, on the use of rifles of very small bore for large game shooting. He imagines that Jules Gérard, of the French army, had small caliber rifles in his lion hunting expeditions. I had formed a different opinion, having owned and parted with Gérard's book many years ago, so have been endeavoring to procure another copy of the work for some time past. I found one in a second-hand book shop a few days ago and now forward you Gérard's own description of his weapons:

He shot his first lion with a double barrel 16-gauge smooth-bore, lent by a French planter in Algeria. He was afterward presented with two double guns, one by a Captain Durand, in the French service, and the other by the Duc d'Aumale, but he does not mention the calibers of these, nor does he state what charges were used in either of the three guns. It is evident from his account of the effects of the bullets that the powder was not nearly enough, for the penetration was miserable. In one instance a bullet flattened against a lion's skull, and in another it hit the temple but did not reach the brain, for the animal walked away three miles before dying.

Strange to say, Gérard did not think of remedying this defect by increasing the powder, but substituted "iron ingots" for the lead bullets.

Sir Samuel Baker, when living in Ceylon, killed numbers of elephants with a 16-gauge shotgun of only 7lbs. weight. He used 4½ drams of powder, and found no difficulty in penetrating their brains. If I remember rightly, he states that in one instance the bullet entered one temple of an elephant and came out at the other.

After bagging ten lions, Gérard paid a visit to Paris in 1848, and was there presented with two double-barreled rifles, of which he gives the following details:

One was "a superb carbine," by Devisme, with "a caliber of 17 millimetres in diameter" (.669 gauge) and "65 centimetres" long in the barrels (slightly over 25½in.). The rifling was "progressive, according to the principles adopted for the carbine of the Chasseurs de Vincennes." Weight of bullet 55 grammes (or slightly under 848 grains). It was conical, with "a stut point forming all the upper half of the cone." Weight of rifle, 3½ kilogrammes (slightly less than 7lbs. 11½oz.).

The other weapon was by Moutier Lepage, with barrels "55 centimetres" long (slightly over 21½in.). Caliber, "11 millimetres" (.433). Nine grooves making one turn in "70 centimetres" (27½in.). Bullet cylindro-conical, weighing 15 grammes (slightly less than 231 grains). Weight of rifle 3 kilogrammes (or a trifle under 6lbs. 10oz.).

On testing the penetration Gérard found that the steel-pointed ball went through a cast-iron plate one centimetre thick (.39371in.), and the bullet of the other rifle through an oak plank "twenty-five centimetres deep." The charges of powder are not given, but in describing the death of a lion killed with the Devisme rifle, Gérard says that it was loaded with 60grs. Although a very light

charge for a bullet of 848grs. it was probably as much as such a light weapon could take without too great a recoil. I once possessed a rifle of 9½lbs. weight, which had a conical bullet weighing 875grs. It began to kick severely when fired with more than 60grs. of powder, but I used it with perfect comfort when loaded with a round bullet of thirteen to the pound and 90grs. of powder.

Gérard speaks with astonishment of the penetration of the Devisme rifle, because, when fired into a lion's mouth at fifteen paces distance, the bullet passed through the body and came out near the hip. It is impossible to find out from his narrative whether he ever used the Lepage small-bore rifle for the first shots. Nearly all the lions appear to have been killed at night and within distances of between three and fifteen paces. When there was a good opportunity the brain was always the object of aim.

Mr. Wilcox's letter is very interesting, as showing what excellent work may be done with a very small-bore rifle properly loaded, when in the hands of an experienced hunter and good shot; but I strongly suspect that even he would have done better with a larger weapon. When living in Canada twenty years ago I was often in the bush with professional hunters, using round bullets of about 70 to the pound, and certainly thought that they often wounded deer which ran off without leaving any blood by which they could be tracked.

The Hon. C. A. Murray, who passed a long time in the bush and prairies of the States, about 50 years ago, particularly remarks in his narrative, that while with a hunting party in the Alleghanies, his friends, who used bullets of 60 or 80 to the pound, lost a large proportion of wounded deer compared with those hit by his 16-bore rifle.

In an account of an exploring expedition made in the Hudson's Bay Territory some years ago, written by A. Ross, an employe, I think of the company, the following passage occurs: "In observing the effect produced by guns of different calibers, it was found that the rifles taking from 60 to 70 to the pound very frequently did not kill, although they might hit, while rifles taking from 30 to 40 to the pound seldom missed killing on the spot. The former out of twenty shots seldom kill more than seven or eight animals, whereas of the latter, if twenty shots are fired, fifteen are generally deadly."

I myself have seen extraordinary instances of tenacity of life when using bullets of a large size, and that, too, among animals, some of which were smaller than the Virginian deer. I willingly admit that a small bullet in the right place is much better than a large bullet in the wrong place; that most men can hit the right place with more certainty when using a rifle that does not kick; that a bullet of 100 grains or less can be driven with plenty of force (I have seen one pass through a deer, smashing the large thick bone, the humerus of both shoulders); that such a bullet striking the brain, spine, heart or any large blood vessel will kill quickly. It will generally do so if it pass through the thick part of the lungs near the shoulder, in consequence of their filling with blood and choking the animal. On the other hand every hunter of much experience will admit—

First—That the very best shots, even at standing deer and within 100yds., will not infrequently hit several inches from the spot aimed at, sending the bullet through the back ribs, the liver or the stomach.

Second—That the very best shots will do the same at deer galloping within 50yds.

Third—That the right place cannot always be distinguished in thick brush, and the temptation is great to fire in such places at any piece of hide that can be seen.

Fourth—That when the bullet does not hit the brain, spine, heart or some large blood vessel, an animal can and often does run until weakened by gradual loss of blood.

Fifth—That of two bullets striking the same place and penetrating an equal depth, the one with the larger striking surface must necessarily cut through the greater number of blood vessels and thus cause an animal to drop the more rapidly. It must also be likely to include in its course a blood vessel which a smaller bullet might pass by untouched.

In my own shooting the following instances of tenacity of life have occurred when the bullets have gone as closely to the right spot as they can be depended upon doing with the most accurate rifles in the hands of good shots:

First—A gazelle (*Gazella bennetti*) shot at 100yds. through both shoulders, an inch behind the center, with an ounce round bullet, galloped 100yds. before falling.

Second—A black buck antelope (*Antilope cervicapra*), at 200yds., was hit in the same place by a round bullet of 17 to the pound, which passed straight through, and it ran 200yds. before stopping.

Third—A black buck antelope, standing at 150yds., hit in the center of the breast by an ounce round bullet, which went clean through the body and came out through the hindquarters, turned around and ran through some thick buches. Found dead 80yds beyond.

Fourth—A buck antelope at 150yds., hit by an ounce round bullet too far back in the ribs, able to go at a slow trot so as to keep just out of shot; ran two or three miles, and finally escaped through my being threatened with symptoms of sunstroke (it was nearly mid-day in the month of July in India).

Fifth—A buck antelope stalked three times in succession to within 100yds., and hit each time with a round bullet of 17 to the pound, close to the center of the shoulder. The three wounds formed a triangle, each side of which was barely two inches long. The buck ran away, and was stalked again to within 90yds. Just as I was pulling the trigger he moved forward, so that the bullet passed through the loins just under the kidneys. He then cantered about half a mile and disappeared over a bank. I crept cautiously to within 20yds., and saw him reclining with his head up, and shot him in the back of the skull.

Sixth—A large bull nylghair (*Portax pictus*) standing obliquely at 100yds., shot with round bullet, fifteen to the pound, an inch behind point of shoulder in direction, going a little behind the heart, ran or walked through thick bushes for about two miles. I tracked him and got another shot as he was walking obliquely away at 70yds. The most direct line to the heart was through the back ribs. The bullet went straight, but rather too high and the bull ran out of sight. After searching for half an hour I found him dying about 200yds. away in the middle of some thick bushes.

Seventh—A barking deer (*Cervus muntjac*) shot through the liver at 150yds., with round bullet, thirteen to the pound and 90 grains of powder, went a few steps and dropped, apparently dead. He was on the opposite side of a deep narrow valley in the Himalayas. I sent a native to bring him across, when the little animal galloped about 200yds. down the hill and went past a friend standing in the valley, who sent a bullet from his 12-bore rifle through the abdomen. This had no apparent effect. The deer ran along the valley into some bushes, and on following the trail for some distance, f found him standing in a shallow stream and shot him before he had time to run again.

Eighth—A large buck spotted deer (*Axis maculatus*), standing at 160yds. in the Terai jungles near the foot of the Himalayas, shot with a .45 Express rifle carrying hollow bullets of 270 grains and 110 grains of powder. The bullet struck behind the shoulder rather low, went through both lungs, grazing the heart and broke into fragments, the solid base remaining under the skin on the opposite side of the chest. The deer ran away through grass 6 or 8ft. high. I followed the tracks and found him dead about 80yds. distant.

Ninth—A black bear in the Himalayas, struck at 40yds. behind the shoulder with the same rifle. The shock of the bullet knocked him clean off his legs on to his side, but before I could reload (it was a single barrel) the bear jumped up and disappeared in the bushes. At every few yards there were large spots of blood and I followed the track along the side of the mountain, over boulders and through dense masses of stinging nettles far higher than my head, for fully a mile, when it became too dark to see the blood. The next morning I rose at daybreak and returned to the search, but was unable to find any further trace of the animal. It was almost impossible to mark any particular spot, as the side of the mountain was a mass of loose stones from the size of a man's head to 10 or 12ft. in height, with nettles growing between them.

Of course the above cases were exceptional, for almost all animals hit in similar places by the same rifles dropped on the spot or within a few yards, but those hit several inches away from the right place often went long distances and had to be stalked and shot again, or occasionally escaped altogether.

It seems to me perfectly evident that if very small-bore rifles had been used the number of similar cases would have been greatly increased and that a far larger proportion of the game would have been lost, to die uselessly after hours or days of torture from their wounds.

Is it not quite clear that an animal which, after being shot through with a .45 express or a round bullet from .66 to .74 of a inch in diameter, can run 80yds., would run many hundreds of yards after being hit in the same place with a little bullet, which, as Mr. Wilcox says, makes a hole about ¼in. (.25) in diameter? He would do so simply because the smaller hole must let out the blood far more slowly. Is it not also certain that an animal hit several inches from the right spot with such a small bullet would very commonly escape because the bleeding would be too trifling to stop him for miles? A hunter, with whom I lived two months in the Canadian backwoods, told me that he once sent his 70 to the pound bullet completely through a deer lengthwise. The animal ran away and could not be tracked, but a few days afterward the hunter found his carcass a long distance (I think he said three miles) from where it was shot, and the flesh was actually light in color from the quantity of blood gradually lost while it was running.

I have never for an instant doubted Mr. Wilcox's good faith in all that his letter contains, but I do believe that he has frequently imagined that deer were missed when they escaped, wounded by his little rifle. After seeing as I have, a man, who had regularly hunted deer for 30 years, fire four or five times in one day calmly and deliberately at short range without any apparent result, and then kill a deer almost on the spot when the little bullet cut through a large blood vessel, I cannot help believing that one or two of the others had been hit. It is not an uncommon thing when tracking a fatally wounded deer on snow to find no blood for a considerable distance from where they start.

The fact of Mr. Wilcox bagging as many as those who used longer rifles may be accounted for by his being a better shot or better stalker. I think he points out the great defect of his rifle in saying, "no matter if the game takes a run, let it do so; do not crowd it, and after a while proceed on the trail." In other words, wait for some time to let it bleed well for fear it should run away altogether. But it is often very inconvenient to wait—when, for instance, a snowstorm is commencing, or when a shot has been made in evening and camp is a long way off. The spotted deer I mentioned as killed with the .45 express, was four miles from my tent and shot just after sunset. If I had waited half an hour it would have been too dark to see the tracks, and to have left the deer out all night would have almost insured his being eaten by jackals.

The saving in weight of ammunition by using an extremely small bore is hardly worth mentioning. A dozen cartridges are an ample allowance for a whole day's hunting when after deer. For shooting ducks or other small game, the shells can be loaded with round bullets, which, in a .40 rifle, weigh only 70 to a pound. Such bullets go very straight if a thick felt wad between them and the powder, and if spermaciti or tallow be poured all round the angle between the upper half of the bullet and the upper side of the shell. If very delicate accuracy be desired up to 100yds. or more, it is better to close the mouth of the shell with a thick felt wad, and drive down the bullet, with a greased patch, from the muzzle.

J. J. MEYRICK.

DUBLIN, March 11.

COWEENS ON THE NIAGARA.—Buffalo, N. Y., March 14.—There seems to be no increase in the number of coweens on the Niagara River this spring. Large bags have been obtained during the past month by the river men, one of whom informed me that he sold them at the hotels and markets, usually getting from thirty to fifty cents per pair for them. I shot twenty-eight coweens one morning last week by drifting for them in white suits and white boat, with three decoys tied with long strings to the stern of the skiff. The fishing promises to open early this spring, as the ice in the lake is weak and with little of it.—W. A. A.

WHARTON, Tex., March 9.—Hunting has been poor this season. Scarcely any chickens, and no other game of any account.—R. M. B.

NEW YORK GAME LEGISLATION.

ALBANY, March 22.—The game bills that have been introduced during the past week are as follows:

Assemblyman Brundage's bill (No. 1,219) is as follows:

SEC. 1. It shall be unlawful for any person to catch, kill, or expose for sale or have in possession after the same has been caught or killed, any speckled trout, brook trout or California, in the county of Steuben only from the 1st day of May to the 1st day of August in each year.

SEC. 2. No person shall shoot or spear any fish in the Cohocton River or any of its tributaries within the county of Steuben from the 1st day of April to the 1st day of July in each year.

SEC. 3. This act shall take effect immediately.

Assemblyman Ainsworth's bill (No. 1,160) amends Sec. 1 of Chap. 104 of the laws of 1886 (amendatory of the law of 1879) so that the time for hunting deer is extended from Nov. 1 to Dec. 18, and the time for having in possession from Nov. 15 to Dec. 1, and the time for selling from Nov. 1 to Dec. 1, and the time for transportation from Nov. 15 to Dec. 1.

Assemblyman White's bill (No. 1,129) provides that it shall not be lawful to shoot or kill any wild duck or ducks between the 1st day of January and the 1st day of September in each year. The violation is liable to a fine of $25.

Assemblyman Reeves' bill (No. 1,222) is as follows:

SEC. 1. Chap. 534 of the laws of 1870, entitled "An act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended by adding at the end thereof a section to read as follows: Sec. 42. All persons are hereby forbidden to take up, molest, interfere with or in any wise disturb, without the consent of the owner or owners thereof, any net, pound, dyke, weir, seine, pot, or other device for taking any swimming or shellfish wi hin the waters of this State wherein it is lawful for such net, pound, fyke, weir, seine, pot or other device to be set, put, placed or arranged for the purpose of taking such swimming or shellfish. Every violation of this section is hereby declared a misdemeanor, and any person or persons guilty of such violation shall, on conviction thereof, be punishable by a fine not exceeding $50, or by imprisonment for a term not exceeding 60 days, or by both fine and imprisonment, in the discretion of the court having jurisdiction of offenses under this act.

SEC. 2. This act shall take effect immediately.

Assemblyman Winne's bill (No. 1,225) is as follows:

SEC. 1 The Forest Commission is hereby authorized and directed to set apart such quantity of land belonging to the State in the Catskill region, now constituting a part of the forest preserve, for the purpose of a park or parks, not to exceed three in number, of such size as they may deem proper.

SEC. 2. Said Forest Commission may establish all proper rules for the protection of said parks and the game therein.

SEC. 3. Said Commission are authorized to purchase and turn out in such parks such deer or other game as they may think proper.

SEC. 4. No game shall be killed or pursued, trapped or in any way destroyed within the limits of said parks for a period of three years.

SEC. 5. The sum of $5,000 is hereby appropriated to be paid by the Comptroller, at such time and such amount as the Commissioners may desire for the purpose of this act and the Commission is authorized to receive private subscriptions for such purposes.

SEC. 6. This act shall take effect immediately.

Assemblyman Chas. Smith, of New York, has introduced the following bill (amendments in brackets [ ]) which has been printed and recommitted to the committee on general laws without retaining its place on the order of third reading.

SEC. 1. Sec. 1, of Chap. 427 of the laws of 1886, is hereby amended so as to read as follows: No person in any of the counties of this State shall kill, wound, trap, net, snare, catch with bird lime or any other similar substance, poison or drug, any bird of song, or any linnet, bluebird, yellowhammer, yellowbird, thrush, woodpecker, catbird, pewee, swallow, martin, bluejay, oriole, kildee, snowbird, grassbird, grossbeak, bobolink, phœbe bird, hummingbird, wren, robin, meadowlark and starling, or any wild bird other than a game bird; nor shall any person purchase or have in possession, or expose for sale any such song or wild bird, or any part thereof after the same has been killed; [but this act shall not apply to or affect any person, company or corporation within this State, engaged in the regular business of buying, selling or manufacturing hats, bonnets and other wearing apparel upon which dead birds or parts of dead birds are used or attached for trimming or ornament; nor shall this act apply to or affect any person, company or corporation within this State, engaged in the business of buying or selling dead birds or parts of dead birds, to be used for the trimming or ornamentation of such wearing apparel.] For the purposes of this act the following only shall be considered game birds: The antidæ, commonly known as swan, geese, brant, and river and sea ducks; the rallidæ, commonly known as rails, coots, mudhens and gallinules; the limicolæ, commonly known as shorebirds, plovers, surfbirds, snipe, woodcock, sandpipers, tatlers, and curlews; the gallinæ, commonly known as wild turkeys, grouse prairie-chickens, pheasants, partridges and quails.

SEC. 2. This act shall take effect immediately.

Assemblyman Hadley's Adirondack survey bill (No. 1,177) is as follows:

SEC. 1. The superintendent of State Land Surveys, organized by Chap. 499 of the laws of 1883, is hereby directed to proceed with the work of said surveys, in accordance with requirements of said laws, and the sum of $15,000 is hereby appropriated out of any money in the treasury not otherwise appropriated for the necessary field and office expenses of said work.

SEC. 2. Before the field work shall be entered upon, it shall be the duty of the superintendent of the State Land Surveys to prepare a plan which shall be submitted to the governor and State engineer by the said superintendent, and when the said plan shall have received the approval of the governor, the work shall be carried forward at the earliest practical date, and the salary of the said superintendent is hereby fixed at the same amount as that paid to the deputy State engineer and surveyor.

SEC 3. This act shall take effect immediately.

ALBANY.

THE TRAVELERS, of Hartford, sells insurance, not dividends nor assessments.—*Adv.*

HUNTING IN THE ROCKIES.

BERTHOUD, Colorado, Nov. 22, 1886.—Bob L., Jay H. and myself left home on Oct. 14 for a month's hunt on the Continental Divide, or the "range," as we call it here. Our road was up through North Park, then Big Creek Park to the Hans Peak Cabin. There we left one wagon, put all our load on the other wagon, and hitching on the four horses, pulled up over the Park Range a distance of five miles to the summit, where we found the snow over a foot deep. Then our road started down the mountain. Talk about roads. These were the worst in all my mountain trips I ever attempted to drive a team over. About 4 P. M. we crossed a beautiful mountain stream called the Grand Encampment, and just at dark pulled into Camp Coe, and camped by the side of John Coe's camp. Coe is an old hunter and guide from North Park, and an old acquaintance of ours. There were also four or five other hunting parties camped near by. Camp Coe is situated in a beautiful little park known by the hunters here as Hog Park. Two miles from our camp is the summit of the range, then some three or four miles down the western slope bring us to the Snake River, where the elk were to be found now, as the deep snows had driven them all over and down off from the range, except a few straggling bulls.

Oct. 21.—Had a hard trip to-day; arrived in camp at dark; and it is now snowing like fun.

Oct. 22.—We have been snow-bound in camp all day; rather dry fun.

Oct. 23.—Jay and I started out for a hunt on foot; found the snow knee deep and fearfully hard traveling. Found the fresh trail of a band of deer, but could not overtake them in the deep snow. Saw one elk, but did not get a shot. Arrived in camp at dark, about played out. Bob soon had a hot oyster stew for us which brought us around all right.

Oct. 24.—Jay stayed in camp while Bob and I took the saddle horses and rode over the range to see if we could find where the elk were feeding. Saw one old bull, but no fresh trail of the herd. Returned to camp early.

Oct. 25.—Jay and I mounted our horses early and struck out over the range, bound to find elk if there were any. After a long ride over the range, and down on the Snake among the low hills, we got entirely out of the snow except on the north hillsides. Here we found a fine bunch of blacktail deer feeding. After about an hour's skulking, creeping and dodging, Jay got within gunshot, fired and scored a miss. The deer ran around the south side of the mountain out of my sight, until they were some 300yds. off. I then opened fire with my Winuhester (.45-75) and succeeded in breaking the hindleg of one and shooting another in the body, but they both took to the willows and red brush along the creek below, and as there was no snow, they gave us the slip, greatly to our disappointment, for of all things I do dislike is to wound game and not get it. Somewhat crestfallen we turned our horses toward camp, as it was now sundown, and camp a long way off, and strange mountains lay between. We had gone but a short distance when we discovered a band of about 100 elk feeding on a high ridge, some two miles away. We started for them, but by the time we arrived where we saw them it was too dark to shoot, so we proposed to go to camp and return on the following morning and bring Bob and have some fine sport. But alas! "man proposes." At about 11 o'clock that night we found ourselves some ten miles from camp, sitting by a roaring camp-fire, with our horses tied near by, snow a foot deep all around us, and the murmur of a little brook trying to lull us to sleep. By taking turns one could get a little sleep while the other kept up the fire. At daybreak we discovered some patches of grass near by, on which we put our horses, while we prepared our breakfast of elk tracks and wind pudding. We arrived in camp at 11 A. M. (Oct. 26) as hungry as a pair of mountain lions. Jay and I lay in camp the rest of the day. Bob went out but got nothing.

Oct. 27.—Bob, Jay and I started out early in the morning for the band of elk we saw on the 25th; but found they had left and gone down the Snake too far for us to follow, so late in the afternoon we started for camp. As we rode over a ridge near the top of the range, I discovered two fine bull elk, standing on a point some 300 yds. distant. I dismounted and began firing. This soon brought the boys to my side. A few more random shots from us and they were around the point. I jumped on my horse and put him on the run up the next ridge. Here I got one good shot at the largest bull at about 250 yds., and broke his shoulder. The boys then came up and a general fusilade began, as the elk made off for some thick green timber on the mountain side. Some one, I think it was Jay, broke the shoulder of the other bull, and they disappeared in the pines. I sprang on my horse again, which had stood near by bobbing his head at every shot, and was soon down in the timber. Here I again left my horse and started on foot after the elk. They soon parted, the smallest one going down the mountain, while the big fellow kept on around the side. The boys soon found the other elk lying down, and a ball through the head finished him. After a chase of a mile I caught sight of the big fellow and gave him a ball that brought him down. It was now too dark to see my sights, so I had to guess it: but guessing is as good as seeing, if it hits, and I soon had my elk lying on his back against a big pine tree. I could hear the boys' loud "Hallo," and I answered, telling them to bring my horse. It was some time after dark when we had our elk dressed and were on the trail for camp, where we arrived rather late.

We continued to hunt when it was not snowing until Nov. 4, with no success, as the deep snows had driven the game all out. The other hunting parties had all gone out and left us alone in our glory. Two bear hunters camped with us two days, and they killed one very large range grizzly near our camp.

Nov. 4.—Broke camp to-day; saw a large fresh bear track near camp this morning. Camped near the Grand Encampment to-night.

Nov. 5.—Drove over the Park Range to-day. Saw another bear track and the fresh trail of two elk. Bob shot a grouse. Camped in Big Creek Park, where there is good grass for our horses, the first we have had for a long time.

Nov. 6.—Went antelope hunting to-day, but only found a small band and did not get a shot at them. Broke camp at noon and camped in a beautiful little valley, just down out of Big Creek Park.

Nov. 7.—Our horses started for home to-day (Sunday) and gave us a good tramp to overtake them.

Nov. 8.—This morning while looking at the mountain sides and discussing which way to go for a day's hunt, Bob discovered a band of ten blacktail deer coming down the mountain on the west side of the valley; he grabbed his gun and started up the creek keeping behind the willows. After watching him a short time I told Jay that I thought we had better go up the mountain and get on their trail as Bob was going to drive them back. This we soon accomplished, and discovered the deer down in the valley drinking and Bob crawling over a ridge for a shot; about 300yds. being as near as he could get he fired, but missed, and the deer came bounding back for the mountain side and soon disappeared in some green pines below us. Jay had gone down toward the pines, while I had hurried over into a thicket of aspens. Hearing several shots in rapid succession before me, I turned back and saw the deer bounding up the mountain not more more than 50yds. distant. I dropped my Winchester on them and killed three in rapid succession, shooting one of them twice. I then missed three shots as they went tearing through the brush. At this moment a four-point buck stopped about 50yds. from me. I took extra pains to get him, but my gun failed to respond, and on looking I found the magazine was empty, and my fine buck went bounding away unhurt. Calling down to Jay I found he had killed two, making five out of a bunch of ten, which we thought was good enough. Late this evening Bob killed an antelope near camp, and our five deer can be seen hanging in the aspen trees as we stand at the tent door.

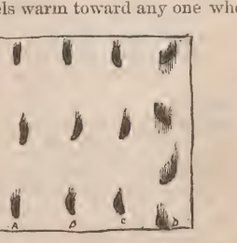
Nov. 9.—Loaded up our game this morning and broke camp again, but got snowbound at Scribner's ranch.

Nov. 10.—Arrived at Coe's ranch to-day. Saw plenty of fresh antelepe trails, but no antelope.

Nov. 14.—Arrived home to-night. Had a cold disagreeable trip of four days through the hills and over Laramie plains.

For the benefit of the readers of FOREST AND STREAM I will add that by actual count by me while in camp at Camp Coe, there were 50 dead elk and quite a large number of deer taken out by the different hunting parties; mostly for the market. When will our Legislature stop this slaughter for the market? A. A. K.

A RECORD OF FAILURES—I.



AS I take up the recent numbers of FOREST AND STREAM, I am interested to note recitals of one hunt after another, and all successful, bear, deer, coon, turkey and grouse, right down to sparrow hunts. Now the immortal philosopher, Artemus Ward, of blessed memory, says: "Thar aint no fun in a steddy streke of luck, an' the beauty of huntin' is its mity onsartainty," or words or sentiments which, if not to that effect, embody the same principle.

Now you have a vast army of subscribers who do all their hunting in your columns (I know it, for I have been there myself), that is to say, for example, in your issue of Feb. 10 is a most amusing account of a hunt in which Mr. Foote covered himself with glory by the slaughter of a bear. A type of the above-mentioned army reads this article, enters fully into it, actively takes part, in imagination, figuring, of course, as the hero, and in spirit and in fact is right with the hunt from first to last, and finally and actually he killed that bear himself. And here is where I wish to apply the philosopher's aphorism and give that same reader a keener relish for his next exploit by thoroughly wet-blanketing him in this column.

The fall of 1886 was exceptionally fine in Manitoba all through October and most of November, it was like summer, there was neither rain nor snow, nor was it until well on in December that "the beautiful" came down in sufficient quantity to make tracking possible.

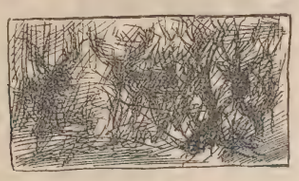
Soon after the ground was fairly whitened I chanced in the post office late one Saturday night to hear one of the section men telling of a herd of seven deer which had stood and watched him at work that same evening, at a lake about three miles from the village; two he described as magnificent bucks and the rest as does and yearlings. Mentally resolving to prove the truth of the account as soon as possible, I went home and early on Monday morning drove to the lake with two friends. We soon found the track of the band; they had gone southward, and by their leisurely manner showed that they had not been alarmed by any hunters. We drove along on their trail through the sandhills, knowing that they were two nights and a day ahead, and so we took no precautions at first and found nothing very interesting to note until at length two fresh moccasin tracks joined on, showing that we were not the only pursuers. It was very disheartening, but a second glance showed that they were the tracks of white men, and from what I knew of jumping deer (*Cariacus macrotis*) and of the white hunters of this neighborhood, I was able to assure my companions that our chances of success were not materially lessened.

Now for the benefit of the paper-chaser that I have in my mind (in my heart, too, for a would-be orator or writer always feels warm toward any one who will hear

him) I will add a sketch of the tracks of various hunters. In this diagram, A is the track of an Indian, just about straight and with a long stride. D is the track of a boot-wearing Englishman, B and C are tracks of whites used to moccasins; here all are in moccasins. B is one of the tracks that were ahead of us—white, because his toes were turned out; and green, because he followed the track of the deer across a very rough piece of plowed land, for at this place the herd had crossed a plain that was partly settled. He should have known the deer would not long travel there but would strike for the wooded country a couple of miles to the south. Presently we found the place where the deer had slept on Saturday night. All day Sunday they had continued about the same place and again slept there on Sunday night. They had turned northward again this morning. We camped, dined, fed our horses, and followed hard until late in the afternoon, still seeing the two moccasin trails ahead of us. Then, later, the number increased to three at a place where the herd had passed near a farm-house. Presently we met the third hunter returning and learned from him that the herd had gone back to the small lake from whence we had tracked them in the morning. We also learned that the other two men were neighbors, that they had had two or three shots, and that they had pursued the herd to a creek some miles to the north. We immediately left the trail and drove straight toward this creek. Drove, mind you; we had found that it was quite easy to do most of the hard following in this way as the hills are readily crossed in any direction by sleighs, and the timber is found chiefly in small groves. It was late at night when we got there, but we put up at a near house and flattered ourselves that now, at length, we had the chase to ourselves. But at dawn of next day just as we started off on the seven-fold trail, we were joined by one of the hunters of the previous day. His first hunt had not been successful, so he had resolved to set out with a full equipment this time. His outfit consisted of a rifle, a toboggan, and an Indian pony, known here as cayuse, or schaggineppi. On the toboggan was a small barrel of provisions, and on the barrel sat Bill, holding a double-barreled rifle in one hand and the reins in the other. As the toboggan was but a foot broad and the road continuously up, down and along hillsides, the number of complete upsets was very considerable and the amount of dexterity required to maintain a seat at all was worthy of a circus rides. At the tail of the toboggan were two collie dogs; they belonged to the come-at-any-price breed; nothing but a ball would have kept them

at home, so they had their way. Doubtless, already, my imaginary comrade begins to catch on to some of the mistakes and causes of failure.

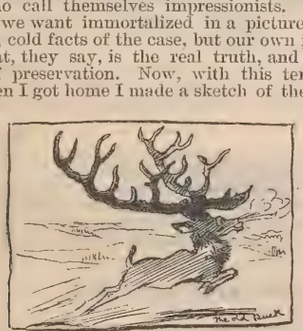
All morning we followed the trail with a certain amount of caution, but still not hesitating to shoot a few prairie chickens (*Pediœcetes*) now and then when they went the length of tempting Providence by gazing at us in flocks from a hillside some thirty yards away. Several times the trail seemed to warm up, whereupon we tied up our horses and proceeded on foot in skirmishing order, but without results, until near noon, when we had gone ahead on foot once more to inspect a long dark slough. After slowly beating around it, we again found the track out, but it led into a second slough, and we were just beginning to stalk around this when one of my comrades, Mr. Oliver, more commonly addressed as Jack, gave the signal that he heard branches moving, then in another moment he saw three deer sixty yards away. His weapon was a shotgun; I was twenty yards behind with a rifle, but before I could get sight the wary animals had taken alarm and were already bounding away with the speed of the wind and the ease of a swing. Of course I fired on the run. "There's no luck unless there's lead a flying," but the only effect of the ball, as I afterward learned, was to scatter the herd, three went one way and four another. As soon as they were gone, and I had not long to wait, I, as is my wont, aimed at a mark on a tree, which was just where I saw the deer, and the ball struck within an inch of the spot. After dining we followed the four until evening, then again tied up and set out to skirmish. Bill came on the herd again and had four shots at long range without results. We slept that night by Pine Creek in a great gorge, with which it has here gashed the level country to the depth of a hundred feet. Many scores of nights have I slept under the willows, but I do not remember ever before making my fire in such an utterly desolate looking glen, the hills all around were steep and bare, everything was white, and from the time when first we lay down by the fire until early dawn we were incessantly disturbed by the howling of wolves and the furious answering bays of our dogs. But wolves, dogs and owls were hushed by dawn and again we took up the trail. By noon we were brought right back to our starting point of the previous day, and here we read in the snow that our close pursuit had broken up the remainder of the band. Each of us now took a track, the one that I followed being that of a large buck. I had proceeded cautiously for half a mile, when to my delight I saw him break cover 300yds. ahead and slowly move along feeding. I could not get near without exposing myself, so I got a rest across a tree and when ready gave a low whistle. Instantly he struck the well-known Landseerian attitude. How I did admire his round glossy form, his great upright neck, and above all his beautiful head and wide spreading antlers. But admiration engenders covetousness and covetousness pulled the trigger. But alas! for my aim, the ball struck the snow at his feet, and in a second he was 50yds. further away, but again stopped to gaze. Slowly and carefully I covered him and again splashed the snow up under his belly. Away he went this time, but not before I sent a third messenger after him. I then examined my rifle, a new Winchester, I had been shooting with the sight at the third notch, and it was not until two weeks later I found that each of these notches did not stand for 100yds. So much for shooting with a strange gun. I followed until evening and then was obliged to return home.



Two days afterward I reappeared on the scene with Mr. Oliver and my old friends Messrs. Wright and Duff. We had hardly reached the hills before four deer ran across the track 200yds. ahead and disappeared down a valley. We ran on foot to intercept them, and I had a standing shot at 300yds. and scored failure No. 3. We now tied up the horses and set out in pairs, Jim Duff, my old hunting comrade and I going together. Jim and I always preferred hunting together; we were alike in staying powers, perseverance and hunter's enthusiasm, but so diverse in other ways that we suited each other well. I always had a knack of keeping a trail and following it fast and far through all sorts of mazy wanderings, while my eyesight is not very good. Jim, on the other hand, cannot be bothered with trailing, while his wonderful powers of vision were continually calling forth my ad-

miration. Thus we worked together with mutual and implicit confidence, Jim roamed at will and scanned the hilly landscape, confident that where I was there would the trail be also, while I left him to follow his own devices, knowing right well that not so much as a tomtit could shake his tail within half a mile but my hawk-eyed chum would see it and know the reason why. Thus it was that all day Jim and I kept sight of the deer, now closing on them and once or twice getting long shots, but still without any sanguinary results, for they were too thoroughly alarmed and on the alert to permit a near approach in the open country through which they led us.

Now, lest my patient hearer should think as I once did, judging from pictures, that it is an easy enough thing to see a deer a quarter of a mile away, I must remind him that the animal itself is just as careful to keep among the scrub which it so closely resembles in color as the artist is usually to depict it in startling black on a snowy background. My original idea of a buck 300yds. away was



something like this, while the real thing may be faintly suggested by the second rough sketch. It may be well to

explain here that the deer is in the center. The antlered thing to the right being an oak tree.

The next day, No. 5, Jim could not come, but we had the luck to start my old buck, almost immediately. What a grand old fellow he was, his antlers spread abroad like a grove of oaks, or in the homelier words of a settler, "like a rocking chair." He was wild and cunning, too, but he was not by any means an athlete. I stepped his bounds at twenty different places and always found them 5yds., very small for an adult "jumping deer," for I have frequently known does to bound 7, 8, 9, or even 10yds. But what this old monarch lacked in speed he made up in cunning. We followed until noon without again seeing him; my comrades then camped for dinner; I, however, felt the spirit of unrest and pushed on, hoping to get a chance, for I could see that the buck was very fat and, in consequence, short-winded. He had already run several miles and would, doubtless, soon lie down to rest on a hillside, as is usual with the species. In several places I saw where he had climbed a high hill to scan the landscape for his foes and thereby I knew that he was about to rest very soon. I avoided following his track over these hills, always going round and taking it up again in the hollows; at length it led me to a dense bed of saplings, in traversing which it was impossible to move without some noise. After crawling through a quarter of a mile of it I came on his "bed," and also the tracks which showed unmistakably that he had heard me and had bounded away in alarm some minutes before. I went back to camp, but afterward Oliver and I followed him till dark, seeing him once only, when we had an opportunity of noting his fat sides shake as with his heavy short bounds, he made over the hills again to seek safety in a combination of speed and stratagem.

There is in Europe now a very prominent school of artists who call themselves impressionists. They hold that what we want immortalized in a picture is not the bare, bald, cold facts of the case, but our own impression of it. That, they say, is the real truth, and it alone is worthy of preservation. Now, with this tenet in my mind, when I got home I made a sketch of the old buck,

and feel very sure that the reader will find in it far more newness and interest than any cold matter-of-fact representation possibly could offer.

Next day we took up the trail where we left off, and found that at the place where we had gone astray the night before, the deer had stopped suddenly, then carefully had gone backward, stepping in his own tracks for twenty yards, after which he had bounded off to one side. This trick he had played thrice, and several times he watched from a high hill before he lay down for the night, and when he did so he selected for his bed the top of a hill so situated that any hunter following his trail would be obliged to pass within hearing long before coming near him. After lying here for an hour or so he had evidently gone further and finished his resting in a tract of woods. After leaving this in the morning he stepped exactly in the stale tracks of another deer for some distance and then at length bounded to one side. All of these doublings were patiently unravelled, but at length, aided by a driving snowstorm, he gave us the slip on a hard trodden runway, and I was grieved indeed to own up that I was beaten entirely by "the buck with the rocking chair." I had coveted his head with my whole heart, for never before had I seen such antlers on a mule deer.

Two days after, in company with two of them, I scoured the whole of this region, without seeing even one fresh track. We slept out though it was 14° below zero, and passed another day in fruitless searching. This damped the ardor of my companions to such an extent that they decided to give it up, and I returned with them to prepare for a more extended expedition.

ERNEST E. THOMPSON.

BRUIN IN THE CANEBRAKE.

A SHORT time ago I spent a night in the same house with Mr. R. E. Bobo, the famous bear hunter of Coahoma county, Mississippi. I had long desired an opportunity to hear him recount some of his bear-hunting adventures, and though I had written to him on the subject could never get any response. Mr. Bobo is inclined to be reticent about his hunting exploits, as he is frequently questioned by newspaper men and others upon the subject, and disliking to incur the suspicion of "drawing the long bow" in hunting yarns, is hard to draw out. On the occasion mentioned, knowing me to be one of the "brotherhood," and under the relaxing influence of a moderate horn of "Nelson county," or some similar vintage, he related some interesting reminiscences.

Mr. Bobo was the first white child born in Coahoma county. He is now forty years old, was born in the canebrakes and has lived in them nearly all his life. He is a man of fine physique and capable of encountering any degree of exposure and physical exercise. He is a prosperous planter and owns many acres of rich cane lands. The Mississippi Valley Railroad was built three years ago through his plantation, and the new railroad station called Bobo is near his residence. His hospitable roof gives shelter alike to friend and stranger, to hunter and wayfarer, and there is always room for one more, no matter how many have arrived before. Mrs. Bobo, a charming matron, in the absence of the great bear hunter, dispenses the hospitalities of her home with a graceful and bounteous hand, as this writer can testify from personal experience. When I stopped at his house last fall, on a professional tour, the genial host was 20 miles away in the Hushpuckana swamp, with a party of gentlemen from the North, whom he was entertaining and whom he was initiating into the mysteries of bear hunting in the Mississippi canebrakes. There is a fine photograph in his parlor, sent by some Northern sportsman who had been down on a bear hunt. The hunters are leaning on their rifles around a dead bear, which the negro cook is about to dissect with his butcher knife.

Mr. Bobo ran away from home at the age of 16 to join the Southern army. He was one of Forest's cavalrymen, and was one of the boldest followers of a bold leader. He served four years, and came out of the war still almost a boy, with the scars of several wounds.

But for the hunting reminiscences. Having gotten his tongue loosened Mr. Bobo gave me several. I asked him how many bears he had really killed in one day. I had heard various statements of the number, and a newspaper had said twenty-seven. Said he, "The way that was, the editor asked me the question and Ru Page, who was standing by, said, 'Tell him anything, say twenty-seven,' and so he printed it." "But how many did you kill, Mr. Bobo?" I asked. He said, "There were nine bears killed in one day before my dogs. I did not kill them all, as I gave most of the shots to others." "Were there any cubs among them?" I asked. "No, they were all good-sized bears," he said. "I have seen many contradictory statements about the weight of bears. How heavy was the largest bear you ever killed?" "I killed one which, without the entrails, weighed 711lbs. I killed him at night in the cornfield about half a mile from the house. We took down the express wagon to bring him home, but four of us couldn't put him in, so we tied him to the hind axle and dragged him to the house. How much do you suppose she bears will average in weight?" "About 300lbs.," I ventured. "They won't average over 150," he said.

Mr. Bobo said: "I have a stepbrother whose name is Curt Clark. We are about the same age. My father married his mother when we were very young and we have always been exactly as brothers. We have been in the woods together all our lives. One year, I think in 1869, we had rented out a farm and spent nearly the entire time out in the swamp. We didn't come out for three months at a time, but had a couple of negroes with us, and sent them out for what we needed. We kept a memorandum of the game we killed and the score stood thus: Bears, 304; deer, 54; wildcats, 47; panthers, 9. One season I killed 150 bears before my dogs and lost only two runs.

"I will tell you a thing I don't like to tell because it seems improbable. But there were plenty of witnesses, and it was a very simple thing the way we managed. It was Christmas time, and Curt Clark and I went out into the woods with half a dozen negroes on a kind of a lark. The dogs treed a large panther. When we came to the tree I remarked: 'Let's catch him alive and tie him.' I explained my design and made one of the men cut a long stout pole. One of the negroes, a strong fellow, agreed to manage one end of the pole if I would the other. I then directed one of the men, who had a shotgun, to shoot the panther in the end of the tail, which he did. The animal sprang out of the tree and the moment he struck the ground all the dogs were on him. I had the pole ready and laid it across his neck. The negro was in position and promptly sat down on the other end. We held him down without difficulty, while the others tied his legs together. Curt Clark had his hands badly clawed in the operation. We placed a rope around his neck with a noose and tied him to a tree. He became sullen and wouldn't show off at all, as we had hoped. When we poked the side of his head, he would turn it the other way. Two of the negroes volunteered to carry him home, several miles distant. A pole was passed between his legs, which were all four tied together, and they carried him about a mile, when one of his feet got loose. They dropped him in alarm, and he made such savage demonstrations that we killed him.

"On one occasion Curt and I went into the woods, taking two negroes with us, to cut a hack (a blazed line) as a guide in hunting. We agreed not to take our guns as they would be in the way, and probably divert us from the business we were upon. After a while one of my dogs came to us. Then another, and another, until there were half a dozen. As we proceeded with our hack, we crossed a fresh bear track, and the dogs gave chase. They treed the bear quite near us. We went to the tree and saw that it was a large bear. The sun was only two hours high and we were five or six miles from home. Curt Clark, who was a regular dare-devil, said, 'Bob, let's kill him with our knives.' I was a much younger man than, and equal to anything, so I agreed. The negroes promised to stand by with their axes. We pulled a grapevine, which caused him to come down the tree. I expected to kill him at the first blow, standing behind his back as his hindfeet touched the ground. But my knife struck a rib and did not penetrate. Instantly we were all in a promiscuous pile. Curt and I, the dogs and bear, in a rough-and-tumble fight. The negroes ran away. Curt and I used our knives for all that was in them. Curt tripped and fell on his back. The bear was on top of him. He gave me a look which said, 'it all depends on you, now.' I would rather the bear had killed me than Curt. I made a desperate lunge and struck his heart with my knife. He was already badly wounded, and sank down dead upon Curt.

"On another occasion the dogs brought to bay a she bear, which we killed. From her condition we saw that she had cubs somewhere around, and proceeded to look for them. After some search they were discovered, three of them, up an ash tree. We had a man in the party named John Warren, who agreed to climb the tree and shake them out, as we wished to capture them alive. As he ascended the tree he began to get uneasy and said: 'Look here, boys, these cubs are a blamed sight bigger than they look like down there; that's the way it looks to a man up a tree!' I encouraged him to go on and told him that cubs didn't have any teeth until they quit sucking. As he climbed higher the cubs crawled out on the ends of the limbs where he couldn't follow them nor shake them off. So we hit upon the expedient of shooting off the limbs, by which process we let them all down successively, and as each would hit the ground one of us would throw himself full length upon him to keep the dogs from killing him. When we had secured all three of the cubs Warren came down from the tree, and while fondling one of the cubs his hand was severely bitten. 'Why,' he exclaimed, 'you said they didn't have any teeth.'

"At one time I did not use a gun in bear hunting, but killed them with a Colt's army pistol. But I found this very demoralizing to the dogs, for the pistol was placed near the bear, and its discharge, being near the dogs' heads, shocked them, and after, when they saw the pistol presented, they invariably let go of the bear and backed off, which was embarrassing to the shooter. On one occasion the bear got my knife hand into his mouth, but the guard was crossways, so he could only penetrate my hand with his teeth enough to prevent its withdrawal. I drew a pistol from my belt with the left hand and shot him through the brain. He had already been mortally wounded."

I could relate other exploits of Mr. Bobo, but this article is long enough. Mr. Bobo is a thorough gentleman, genial and hospitable, a very fine shot, and imbued with all the generous qualities of a true sportsman.

MEMPHIS, Tenn. COAHOMA.

WORK OF THE MAINE LEGISLATURE.

THE Maine Legislature has adjourned, leaving the laws for the protection of fish and game practically as they were before, though a few special acts concerning the protection of fish in particular rivers were passed. These laws are of minor importance to the general sportsman. A more liberal appropriation than ever before has been made for the protection of the game and the protection and propagation of fish in that State. For the two years, 1887 and 1888, the sum of $20,000 has been voted. This was done at the recommendation of the Commissioners, as the FOREST AND STREAM noted before the session of the Legislature opened. But the salaries of the Commissioners are left at a ridiculously low figure—only $500 per annum. How the wisdom of Maine expects to obtain the undivided attention of men fit for the position for a price so meager is a puzzle to the rest of the world. The best measures of the session were killed. The poachers and hotel keepers, finding their proposition to permit the hounding of deer sat down on with a will that took the courage all out of them, rallied their forces against the proposition to add imprisonment to fines for the killing of moose or deer out of season; and also to make it an offense punishable with a fine of $500 and imprisonment to kill a cow moose at ony time. Consequently the moose law remains just as it was before the session, and must remain so till the end of another two years. In the meantime, if the work of destruction goes on as the poachers of some sections of the State desire, the work of annihilation of the next noble game animal to the bison will have progressed too far for recovery.

The bill to add September to the open season on deer was killed near the end of the session by the proprietors of timber lands, who are desirous of keeping the hunters away as long as possible. Perhaps this is as it should be, after all, for the opening of as warm a month as September to jack-shooting might have proved harmful to the increase of the deer. But there is a struggle yet to come with the lumbermen. I have heard it suggested, by men who should know what they are talking about—citizens of Maine—that these men helped kill the September open season bill, for the reason that they prefer that the deer should be left for the use of their camps in winter. I have also heard it from good authority, within a couple of days, that these lumber camps in some parts of the State have been well supplied with venison this winter, and that the timberland interest threatens that it will combine for the overthrow of the whole list of game laws, if any trouble is made for these lumber camp proprietors for feeding their men on deer this winter. Now this is only the first part of a very bad story that has come to my ears lately, and I am not yet ready to believe it. If it is true, even in the smallest measure, why, the Commissioners have more money to use for the purpose than ever before, and war must be commenced on these lumber camps.

Some excellent changes have been made in the lobster law, the points of which the FOREST AND STREAM has already had. The hearing of the charges against the Commissioners before the Governor and Council is to be on March 29th, instead of the 28th, as at first published. There is not a doubt but what Mr. Stillwell is gaining in public favor as his case is becoming better understood. His defense, as seized upon by the FOREST AND STREAM, is being widely copied into the Maine papers. The adjournment of the Legislature before the hearing came off was not expected by the enemies of Mr. Stillwell, and it has served to scatter their forces. SPECIAL.

NEW JERSEY GAME LAWS.

Editor Forest and Stream:

I was not a great deal surprised in looking over my morning paper recently to see that our solons at Trenton were again tinkering with our game laws. Without commenting on the several bills introduced I will state that one bill prohibited English snipe shooting between May and October. Another allowed boys under 15 years to trap rabbits; another created three open seasons for woodcock—July, the first 15 days in October, and from November 4 to December 16. These several intelligent (?) bills created no little excitement among our shooting fraternity in this section. I wrote at once to our representative from this district, Mr. John Pearson, a fellow sportsman and shooting chum. Knowing that his ideas and mine were very similar on game protection, I had but little trouble in persuading him to introduce a bill at once "To prohibit spring shooting and to have a general open date on all game from Oct. 15 to Dec. 15 only. Knowing from previous experience that the south Jerseymen would "raise a great kick," we had but little faith in having such a bill passed. "If the bill raises too many objections I will make the best compromise I can," were John's words on leaving me. The bill went to the Committee on Fisheries with recommendations of combining the several bills suitable for different sections. Inclosed please find the compromise bill as now before the House. Although I cannot see the sense of dividing this State in sections and having different laws for different parts, it no doubt is a great improvement on our present law. G. L. W.

JERSEY CITY, March 21.

The bill is as follows:

AN Act entitled "An act to divide the counties of this State into two sections, to be known as game sections, and to fix the time for shooting certain game birds and animals therein."

SEC. 1. Be it enacted by the Senate and General Assembly of the State of New Jersey, That the several counties of this State be and the same are hereby divided into two sections, to be known as the northern and southern game sections."

SEC. 2. And be it enacted, That the northern game section shall comprise the counties of Bergen, Essex, Hudson, Hunterdon, Middlesex, Morris, Passaic, Somerset, Sussex, Union and Warren; in the counties comprising the northern game section as named in this act, it shall be unlawful for any person or persons to take, kill, or have in his, her or their possession after the same has been killed, any woodcock, quail, gray squirrels or hare, commonly called rabbit, except only between the fifteenth day of October and the first day of December of any year, under a penalty of ten dollars for each and every game bird or animal so unlawfully killed, taken or had in possession.

SEC. 3. And be it enacted, That it shall be unlawful for any person or persons in the counties comprising the first game section in this State as named in this act, to kill, take or have in their possession after the same has been killed, any American pheasant or ruffed grouse, except only between the fifteenth day of October and the first day of January of any year, under a penalty of ten dollars for each and every bird so taken, killed, or had in their possession after the same has been killed.

SEC. 4. And be it enacted, That it be unlawful for any person or persons in any of the counties comprising the northern game section of this State, to take, kill, or have unlawfully in their possession, any English snipe, except only between the thirty-first day of August and the first day of December, under a penalty of ten dollars for each and every bird so taken, killed, or unlawfully had in possession after the same has been killed.

SEC. 5. And be it enacted, That the section to be known as the southern game section shall comprise the counties of Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Mercer, Monmouth, Ocean and Salem; in the counties comprising the southern game section as named in this act, it shall be unlawful for any person or persons to take, kill, or have in his, her or their possession, any American pheasant or ruffed grouse, woodcock, quail, gray squirrel, or hare, commonly called rabbit, except only between the fifteenth day of November and the first day of January of any year, under a penalty of ten dollars for each and every bird or animal so taken, killed, or unlawfully had in possession after the same has been killed.

SEC. 6. And be it enacted, That all acts and parts of acts inconsistent with the provisions of this act, be and the same are hereby repealed, and this act shall take effect immediately.

It is possible that Middlesex and Somerset may be added to the southern section.

FACTS IN THE HARMON CASE.

ON Sunday, June 15, 1884, a deer was seen swimming the Rangeley Lake near the Mountain View House. George M. Harmon, of New Haven, Conn., got into his boat with George Thrasher (his last guide), and pursued the deer, followed by several other boats. Harmon and Thrasher came up with the deer first; Thrasher struck the deer on the head with an oar, stunning him. Harmon then ordered Thrasher to cut his throat, which was done. The deer was then boxed up by Harmon's direction and sent to Boston. To settle for the deer Harmon then found Geo. D. Huntoon (who had been a warden, but whose time had expired a short time before), and wanted to settle for killing the deer. Huntoon objected; said he had no authority for so doing. Harmon urged the matter; Huntoon finally said the only way to arrange it would be for Harmon to go with him before a trial justice and plead guilty to the offense, etc. It was finally arranged that Harmon should select the day to suit his convenience when he was on his way out for home. Huntoon was to meet him at Phillips, go before Trial Justice Butterfield, and make the complaint. This was done; Harmon paid Huntoon the $40, but no costs. Some time after Huntoon paid over one-half the penalty to the Commissioners, and by them it was paid into the State Treasury where it now is. Out of the other half he paid the costs and retained the balance, under the law.

A few weeks after this was all over, the Commissioners were at Rangeley and for the first time heard of the occurrence. It was represented to them as an aggravated case; that the deer was hunted maliciously, with the intent to kill; knocked on the head in the water; its throat cut; it was then boxed and sent to Boston; that Harmon was a rich man and that if no further notice were taken of the act the public would infer that rich men were permitted to come into our State and poach at pleasure, by paying the fine when caught; in other words could buy a license to hunt, kill or destroy fish and game. This idea was communicated to the Commissioners by the clerk of the Mountain View House and several others. The Commissioners, anxious to do their duty in the premises, and after due consideration of the case as represented to them concluded to prosecute further, and Mr. Stillwell, on his return to Bangor, wrote Huntoon (who in the meantime had been appointed and qualified a fish and game warden) so to do. Thereupon Mr. Huntoon consulted counsel at Phillips and was instructed that the hunting and killing on Sunday was an offense against the law, additional to the one for which Harmon had been arraigned and plead guilty; and the warden, acting upon such advice, made a complaint, took a warrant from the same magistrate, notified Mr. Harmon and requested him to set a day when it would be convenient for him to be at Phillips and have the hearing. Mr. Harmon did so, and on the day so fixed came out in style with a large party of ladies and gentlemen, and with counsel, appeared before Mr. Trial Justice Butterfield, and there plead a former conviction and was discharged, the Justice deciding that every day in June and every Sunday in the year were close times. Up to this time, and not until January, 1886, did Mr. Stillwell see Mr. Harmon, and only then as adverse parties in the suit Harmon vs. Stillwell and Huntoon for a malicious prosecution, begun in December, 1884, and tried in January, 1886. But he had seen some of the correspondence of Harmon with Huntoon of a somewhat blustering and threatening character, in one of which is found this expression, "So far as Mr. Stillwell is concerned I will find means to deal with him through the next Legislature," to which Mr. Stillwell in his reply to Huntoon, said: "Harmon's letter is only silly brag. He has broken the law and he must pay for it just the same as you would make the humblest citizen of Rangeley pay. If any one is to be favored it would be our own Maine men, who own the game and pay for taking care of it. Any trouble you are threatened with for doing your duty will be taken care of by the Commissioners." It is probable that Mr. Harmon saw Mr. Stillwell's correspondence with Huntoon, for on Aug. 20, 1884, he wrote Mr. Stillwell a letter in which was the following, "By the time I am through with you I will try to show you that my letter to Mr. Huntoon was not 'brag,'" to which Mr. S. made no reply.

There the case would have ended had not Mr. Harmon commenced his action in Bangor against Messrs. Stillwell and Huntoon, as above stated, for which, after traveling from New Haven, Conn., to Bangor, and paying counsel fees, etc., he recovered a judgment for damages and costs of $1.25.

Apparently not pleased with this result he again sued Messrs. Stillwell and Huntoon in Farmington to recover back the $40 he had voluntarily thrust upon Huntoon in June, 1884, and a verdict was rendered two weeks since against Mr. Huntoon and in favor of Mr. Stillwell. For some purpose, just before the last trial, Mr. Harmon, probably to make good his threats, filed charges against Messrs. Stillwell and Stanley before the Governor and Council, which are to be heard the 29th inst.

The facts, then, are: Mr. Harmon violated the law by hunting and killing a deer in close time, by transporting a deer in close time, and also the Sunday law. He urged a citizen of the State to make a complaint against him for killing a deer; without arrest voluntarily went before a trial justice and plead guilty, paid his fine, $40, without costs, took the carcass out of the State as a trophy of his skill as a sportsman, and then comes back and cries "baby," and sues for his $40, on the ground of some irregularity in the proceedings, and still claims to be a high-toned gentleman who "has always lent his aid and influence to the proper enforcement of the fish and game laws of the State of Maine and to the propagation of fish and game in the Rangeley Lake region."

FISH AND GAME.

MAINE, March 19.

A DOUBLE SHOT.—Brooklyn, N. Y.—Seeing "Antler's" account of a carom on bruin, recalls to my mind the double shot I once made with a rifle. Early one morning F. and I started for a short row on one of the Adirondack lakes, taking a .44 Ballard, which I was very anxious to try at a longer range than our back yard in town afforded. We saw a flock of some 15 or 20 ducks paddling around a small pond about 300yds. ahead of us. F. immediately quickened his strokes and pulled around the point so as to partly intercept the flock, but they no sooner sighted us than they were off, flying along the surface of the water close into shore, fully 100yds. off. Hastily pulling up my rifle I blazed away, with the result of hearing the ball go crashing through the underbrush probably 20ft. over the flock. I hurriedly reloaded and fired a second time. The flock was now too far distant to try it again, so F. rowed leisurely toward shore in hopes of finding where the second ball had struck. We hauled the canoe up on the sand beach and started to examine the neighboring trees and rocks, when to our surprise upon looking at an old water-soaked log a few feet from shore, we saw two shelldrakes floating side by side, dead. Upon examining them we found that the ball had passed through both, and the distance from which they were shot was, well, I would not like to say for fear I would not be credited, but it was the luckiest as well as the longest shot that I ever made.—C. N. B.

ABOLISH SPRING SHOOTING.—Allow me as a subscriber and admirer of your paper to thank you for the straightforward course you are pursuing on the game questions. Spring shooting in this country is supposed no longer to exist. This season will show whether the law is to be upheld, or whether it will be a dead letter. Our fall shooting of duck last year was simply wretched, and I see by your paper reports are the same in many places; but it seems hard to persuade many hunters that the spring shooting makes a particle of difference.—J. G.

AUBURN, N. Y.—The officers of the Auburn Gun Club for 1887 are as follows: Chas. W. Tuttle, President; Geo. B. Wright, Jr., Secretary; Sam'l F. Rathbun, Treasurer.

GREAT SOUTH BAY.—New York, March 20.—Have just returned from a trip to the Great South Bay, Long Island. The brant are there by tens of thousands, and they literally fly in clouds. Geese, redheads and broadbills are also there in considerable numbers. I have it from my guide, Theodore Birch, that there are more brant in the bay than there have been for several years. The wind being well up to the northward yesterday we shot only about ten birds, mostly brant. One party, in a battery, shot twenty-seven brant there day before yesterday, and about a dozen yesterday, as nearly as we could make out from the number that fell to his gun; he was about a mile from the meadow where we were. The brant, in their flight yesterday, kept well into the middle of the bay, and when they saw our stool, they fell off a little, but could not come in because of the wind, which was too high up to the northward. When the wind shifts to the eastward or westward, there will be fine shooting then from the meadows.—J. W., Jr.

MY FIRST QUAIL.—It was the fourth day of November, 1886, and my first day out of school in the quail season. The place where I decided to go is known by the name of Ridgway Swamp. It was three miles distant, and but sand all the way, but with my new gun on my shoulder, and the picture of a plump little Bob White in my mind, I was on the bridge which crossed the swamp before I knew it. I was walking around the bend in the road, when I saw, not 30yds. distant, thirteen quail looking at Duke, my setter dog. I stepped forward; they were off like a flash, but with two loads of No. 8s after them. I saw something fall, but thought that it was only a wad, but on examining the huckleberry bushes, I found three little Bob Whites, all dead. About noon I killed another quail and two squirrels. I shot at several more bevies in the afternoon, but didn't get a feather. The four quail averaged 6¼oz., the largest weighed 7oz.—GEORGE G. WORSTALL.

PSEUDONYMS.—I can sympathize with your correspondent "Wells" in his annoyance at the appropriation of his pseudonym by some other fellow. I have written over various signatures for the press. Nowadays I generally sign as below, but when fancy gets the better of fact, or when I am foolish and "drop into poetry," I sometimes put it "K." I have done with that since I have seen the same signature both in your paper and the *Angler*. When I try to write "as funny as I can," I sign otherwise, lest the reader should meet the fate of Doctor Holmes's servant, and I be jerked up by the police. Singularly enough, I have as yet heard of no one taken with a fit on this account.—KELPIE. [Why is it not a sensible way to sign initials?]

MARYLAND.—The law forbinding transportation of game killed in Worcester county has been repealed, so that the present law permits those who kill woodcock or snipe to sell or ship them anywhere they choose. Prior to this repeal any person could kill them, but were not allowed to sell them in the city markets, where they brought 25 to 35 cents each, and could find no such market at home. The local delegate to the Legislature explains: "We thought the law operated injuriously to our people and hence repealod it." Worcester county is a great stronghold of pot-hunters, who ship game to Philadelphia and New York, and it is for their benefit that the change has been made.

WELLSVILLE, O., March 16.—A new sporting club bearing the title of Wellsville Recreation Club, has just been organized here, and starts out with flattering prospects. Its membership consists of twelve carefully selected sportsmen, who propose observing all game laws themselves, and making it unpleasant for those who do not. The Amateur Sporting Club of this place will work in conjunction with them in protecting the game interests in this section. The officers of the new club will be as follows: President, Chas. H. Kelly; Vice-President, H. Starrett; Secretary and Treasurer, James M. Moore.—JO.

THE WOGDEN PISTOLS.—In a note upon the Wogden pistols published a few weeks ago in your columns, I omitted to state that the barrels of these weapons were smooth-bored (which was to be expected) and that their material was "twist," probably, as the owner said, "stub-twist," a fact which was discovered by a gunsmith by whom they were put in thorough repair. This furnishes additional evidence of the excellence of their construction.—KELPIE.

COMPLAINTS have been made of the open violation of the game act in the vicinity of Casselman on the Canada Atlantic. A number of deer have been caught running on the crust and are held in captivity at Casselman, while a number of hounds owned there are permitted to run at large and have slaughtered several deer.—*Toronto Mail, March 8.*

THE NEW YORK LAW.

Editor Forest and Stream:

For a number of years I have been connected with an association for the protection of game and fish, and I am personally fond of a day's outing with either the rod or the gun, so that my sympathies are entirely with the effort to prevent the extermination of our game and fish.

In my opinion our game laws have been signally defective for their indefiniteness, unstability and want of consistence. Sportsmen are seldom good lawyers, and many of them are entirely uneducated in the "books made by men," and it is extremely difficult to understand just what is permitted and what is prohibited by law, and this is particularly true of the laws passed by the last session of our Legislature, and I have actually seen different interpretations placed upon some of these laws in different numbers of the FOREST AND STREAM, and if men of the rare intelligence and special training of your editors differ upon the construction of the law, it must be extremely hard for the ordinary man who wants a day's honest sport occasionally, to tell, for instance, whether or not he would transgress the law by shooting a crow.

Again, it is very bad policy to change the close season for game and fish every time the Legislature meets, for most people who desire to respect the law have to rely largely upon their memory, and when the law is changed so often they get confused about it and finally get so they don't care much about knowing what it is. I have heard this opinion expressed so often by guides and others who kill a great deal of game that I know it is a matter of much importance.

It is of still greater importance that the laws should be reasonably respected when they are clearly understood, and if the community generally do not approve the law, or think it absurd or unjust, the laws are worse than useless.

In this section of the State this seems to be the case with the recent law prohibiting the hounding of deer. The sporting community here favor the running of deer with dogs and one could

not notice any diminution of that kind of sport by reason of the law against it, and so intent were our people in running hounds that they even invented the absurd theory that deer increased by being killed before dogs as a lawn thickens under the knives of a mower.

Our game laws are too ideal, and if they are to be respected they must be made more practical. To illustrate, we should pass a law prohibiting the more flagrant violations of what all sportsmen would call a natural, common sense law that people in general would approve and then keep that a permanent law and not attempt to extend it until there was a public sentiment demanding it. Such a law would be the making of the winter, spring and summer months a close season for deer, and leave the hounding question for the future except in counties where the people ask for its passage.

The objection to it in this part of the Adirondacks is that it is not respected, and men who violate the law themselves by hounding deer in the fall have some delicacy or prudence restraining them from prosecuting the crust fiend in the winter and the pot-hunter who supplies our hotels with game in the spring and summer.

Notwithstanding the fact that our game protector is an efficient man, the violation of the game law has so rapidly increased under the demoralization caused by the anti-hounding bill that it is now the rule, and not the exception, for many of our hotels to have venison for their guests during all the spring and summer, and I noticed on the bill of fare for a dinner at one of our most prominent hotels, about the first of March, "haunch of roast venison and partridge pie." It seems that a law should be passed making it conclusive evidence that when a landlord placed unseasonable game upon his bill of fare that he had the game in his possession, and that such transparent subterfuges as "Adirondack mutton," "Adirondack goat," "spotted whitetish," and "short-billed woodcock," should not be allowed as an evasion.

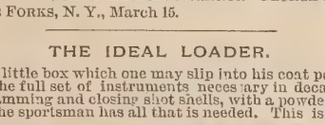
If the law was made generous enough so that nearly all of the men who hunt for sport would respect it, it would secure a strong ally in these men against the present pernicious practice of killing deer during the whole year. To those who believe it is wrong to run deer with dogs, and I am inclined to that opinion myself, I would seriously ask if it would not be better to let the hounding rest until we are able to nearly suppress the greater evil, and the evil upon which we are all united in opposing, than to have the two evils carried on by reason of the opposition caused by the unpopularity of the law prohibiting the lesser evil. It is notorious that the hounding of deer was not only not stopped, but was scarcely checked, in this section of the Adirondacks, by the law prohibiting it, and last fall the hounding was about as general after the open season expired as it was during its continuance. To say the least of it, this is very demoralizing to the community and must have a bad effect upon the respect paid to any game law, however reasonable it may be.

The law restricting the number of deer killed by one man to three was not respected. It is a foolish law and should be repealed because it is almost impossible to enforce it; for if a man was charged with its violation it would be necessary to absolutely prove the killing of four deer, and when one has seen the trouble attendant upon the proof of killing one deer unlawfully he will realize the almost impossibility of proving four against one man. If any guide is asked how many deer he killed last fall he is sure to smile and say three, at which all the bystanders laugh. This is also demoralizing.

The law restricting the transportation of venison seems reasonable and just as it can be enforced, for venison in transportation is likely to be seen, and shippers and express companies do not desire to take the necessary risks for violating this provision of our game laws. In this country the law was generally respected last fall and, I think, did considerable good.

Spring shooting seems to be an evil against a natural, common-sense law for the protection of game, and I think a law prohibiting the shooting of game birds in the spring would be generally respected and could be reasonably enforced, and in this law March and perhaps February should be included as prohibited months. If March were not included the feeling in this section of the State would be that it was unreasonable to allow the shooting of ducks as they came north all the way up until they reached us in April, and then close, giving everybody a chance but ourselves, and giving us no chance, for our lakes do not open until April.

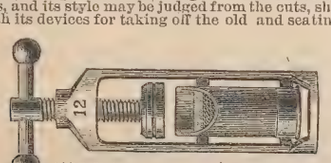
September has always been an open month for partridges (ruffed grouse) here, and since the birds are full grown at that time there is no good reason why they should not be shot if shooting is allowed at any time, and the proposal to make September a close month for partridges would be unpopular here, and would not be generally respected, and would lead to further demoralization of the law.



Woodcock have always been shot as early as the first of August, and they are full grown at that time, and there does not seem to be any reason why the time should be changed.

There seems to be no reason why rabbits should not be shot in October in the northern part of the State, and since rabbits are not migratory there can be but little objection to have the close season for them differ in different localities. GEORGE CHAHOON.

AUSABLE FORKS, N. Y., March 15.



THE IDEAL LOADER.

A SNUG little box which one may slip into his coat pocket contains the full set of instruments necessary in decapping, recapping, ramming and closing shot shells, with a powder and shot measure, the sportsman has all that is needed. This is the outfit

"IDEAL" LOADER.

that is made by the Ideal Manufacturing Company, of New Haven, under the Barlow patents. The weight of the entire set is only ten ounces, and its style may be judged from the cuts, showing the loader with its devices for taking off the old and seating the new

"IDEAL" HAND CLOSER.

primer to the smooth cylinder for placing the wads snugly for the charge and shot. The closer is simplicity itself, and there is no necessity for a table or other fixture from which to work it, so that in boat or wagon even the closer may be worked, either on paper or brass shells. The cost is slight and the large sale reported indicates that they have found a popular approval.

BOOKS RECEIVED.

Messrs. Lee & Shepard have a well deserved reputation for publishing in most attractive form and with all the accompaniments which good taste can suggest, familiar gems of sacred song. Two new series of these have just been issued. The first consists of the four well-known hymns, "Rock of Ages," "Abide with Me," "My Faith Looks Up to Thee" and "Nearer my God to Thee." These are dainty little tracts printed on heavy paper, vellum bound, tied with white ribbon and very fully illustrated. Price 35 cents each. Much more imposing are four others, "Arise my Soul," "See the Land," Kingsleys "Gladness of Easter" and "The Message of the Bluebird." These are similar in character to the preceding, but much larger, are bound in heavy tinted stamped paper tied with ribbon and are lettered in gold. The illustrations are very numerous.

Two useful little books come to us from Lee & Shepard of Boston. The first is a new edition of Whatley's "English Synonyms Discriminated." This is a work which is so well known that it needs no special comment, further than to say it is one of the most useful books that can be put into the hands of the young writer who desires to write good English and to avoid the slovenly style which is so common. Price, 50 cents.

Col. Higginson's "Hints on Writing and Speech Making" is an unpretentious little handbook, but is a useful manual of literary composition. The first chapter, "A Letter to a Young Contributor," is a reprint of some matter which appeared originally in the *Atlantic Monthly*, and afterward in the author's volume entitled, "Atlantic Essays." The second, "Hints on Speech Making," appeared in *Harper's Magazine* in 1886. This little volume is sure to do a good work. Price, 50 cents.

Camp-Fire Flickerings.

"That reminds me."

206.

SOME years ago there was an old pot-hunter in Nova Scotia, whose custom it was to wait out over night on the seashore for a shot at the ducks as they passed in the morning. He used an old musket, which he was in the habit of loading almost to the muzzle. The recoil, as may be imagined, was something terrific. He was always accompanied on his excursions by a small boy. They lay down on the beach and covered themselves with seaweed. When the old man saw the ducks coming, he would point well on the leader and "let go." The destruction was, as a rule, terrific; but the kick invariably knocked him senseless. Then the small boy's work came in. He would mop the old man's face with wet seaweed until he came to, when his first question always was, "How many d' I git?" M.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

SPORT ON LAKE PEND D'OREILLE.

HOPE, Idaho, is a pretty little hamlet situated on the banks of Lake Pend d'Oreille, in the heart of the mountains. The Dining Car Department of the Northern Pacific R. R. Co. have erected a fine hotel here, open for tourists during the spring, summer and fall months. Good boats are at the disposal of the guests, and good guides are obtainable at reasonable rates. Game of all kinds is plenty. Fishing is of the best except during the month of July and part of August. At all other times the angler will have grand sport, that is, if he considers a hard battle with an 8 or 12lbs. char, or the quick, bold fight of a 3lbs. mountain trout sport. If fishing does not satisfy his ambition, the guides will take him to where the deer are plenty, and if after tiring of this he yearns for more worlds to conquer, the guide will easily put him on the wake of the monarch of the mountains, a grizzly. Besides deer and bear there are caribou and mountain goats in small numbers, and of the many guests last season not one went away dissatisfied. The railroad company, it is said, intend issuing a ticket in connection with the National Park tickets, so that those desiring to do so can visit this lake at little expense above the Park trip.

As the gentle Chinook breeze comes across the lake, making sad havoc with our pyramids of snow, I am reminded that I will soon be seeking the deep pools and shady nooks for piscatorial pleasures. Fishing will soon be at its best in the lake, and already I am dreaming of many battles with the lake trout and other species. Some fine lake trout, or, as the natives call them, "char," are captured every season. The largest one I have caught weighed 8lbs., but after about fifteen minutes sharp work, and the line on my reel still growing beautifully less, I thought he must weigh about twenty. Mr. C. P. Frame, of New York, a true sportsman and one of the pleasantest gentlemen I ever met, outdid me last summer, for among a catch of about fifty he had two weighing over 8lbs. I willingly yield to such a man, but oh how exasperating to have some naked Indian with a long pole, a bait of deer meet tied on to a hook to save the labor of rebaiting, come in with a 12 or 15lbs. laker, and with a sardonic grin say "Hi-yu pish. White man allee samee Boston. No good. Indian sabee pish?"

Hunting has been of the best this winter. I have killed twelve deer myself this winter, and as my time has been so employed that an hour or two occasionally is all I could give to sport, I think I have done well. The hotel here will be opened about the first of May, and they anticipate a large crowd of tourists next season. F. T. A.

HOPE, Idaho.

A GIANT CHUB.

WE are accustomed to associate the fresh water chub with the scenes of our childhood; an alder pole, pin hook, cotton string, worm and a croaking, wriggling fish, which, although seldom over 8in. long, in the halcyon days gave satisfaction to our early attempts at angling. The largest of the Eastern chubs, the fall fish, grows occasionally to 18in. But it has been reserved for the West to produce an allied species, a veritable monster, which reaches 5ft.

Belonging to the family *Cyprinidæ*, genus *Ptychochilus*, it was first found in the Sacramento River, where it is known as the Sacramento pike, *Ptychochilus oregonensis*. Another species, found in the Colorado and its lower tributaries, and called the Colorado pike (*Ptychochilus lucius*) is authentically stated to reach a length of 6ft. All the species of this genus have a remarkably pike-like appearance in outline, especially about the head. There is a good drawing of the Sacramento species published in the "Report of the U. S. Fisheries Commission," 1884, plate 227. I believe the Colorado species has not been figured. It is similar in appearance to the former, but has a still more striking pike-like aspect. Its head would appear at first glance to be that of its namesake, *Esox lucius*, the Northern pike. It is a handsome species when first taken, with sides like burnished silver.

Like all *Cyprinidæ*, they thrive in warm and muddy water; their flesh being soft and bony and of little value as a food fish. They readily take a bait; preferring grubs, grasshoppers, salt pork, codfish, beef, in the order named; fight hard for a short time, and suddenly give up. The larger ones usually wreck the tackle and escape, leaving the astonished fisherman under the impression that he has hooked some unknown marine monster.

The writer has observed them on the upper Gila River, Arizona, and having secured a series ranging from four inches up to two feet, offers the following description, which it is thought will supply the means of identification:

Ptychochilus lucius Girard. — Body elongate, depth usually almost 5; back not arched; head long, facies pike-like; subconical; nearly straight, cranial depression slight; 3¼ to 3¾ in length. Interorbital space broad. Isthmus rather broad. Gula well developed in the adult. Mouth large, terminal, oblique, not reaching eye. Upper jaw hardly longer than lower; mandible reaching beyond orbit. Eye subcranial, about 13 in head; varies greatly with age; usually less than 11 in young. Lateral line complete; decurved anteriorily; nearly straight from extended pectorals. Color bright silvery; above darker, with steel colored reflection. Fins bright colored; dorsal and caudal darker. Caudal peduncle stout and symmetrical; width about 1⅛in. in depth in smallest part; its length (from posterior insertion of anal to middle of base of caudal) a little greater than from base of caudal to upper lobe. Caudal homocercal; its central ray about equal to length of anal. Dorsal inserted in highest part, posterior, slightly behind ventrals; when depressed, about reaching to anterior base of anal. Pectorals about equal to height of dorsal. Phyrangeal bone greatly elongated; subarcuate, with one deep foramen inferiorily. Teeth, phyrangeal, well separated; subaduncate toward angle of bone; subconical, grinding surface absent or obscure; 2, 4—5, 2. Branchiostegals, 3. Gills, 4. Peritoneum silvery. Vertebræ 45—46. Scales, 20, 84, 12. Dorsal, 9. Ventrals, 9. Anal, 9. Pectorals, 16. Length over 5ft. W. L. CARPENTER, U. S. Army.

FORT THOMAS, Ariz., March 10.

FLY-CASTING AT THE TOURNAMENT.

BALTIMORE, March 17.—*Editor Forest and Stream:* Will you kindly advise me what rules obtain in the amateur class of fly-casters in tournament in May? I would like to enter in a class simply as we cast on the stream. My friend Dresel, who took the first prize for bait-casting at the tournament last year, advises me that there are some changes in the manner of casting. If the rules have been published in the FOREST AND STREAM I have overlooked them, and I will thank you to give me reference thereto. Dresel says that under the new rules we can cast from a "gathered line" run from the reel, that is, we can pull our line out so much as we like, then cast and let the line follow out through the guides. If this is so it obviates the recovery of the line and it is not good stream casting, but I think I can do as much of that kind of casting as any man, and if it is the fact I will take it in that form. At the same time I beg to say that no man trout fishing thinks of lumbering his "tackle" with two or three yards of line in bags under his rod. It may be all right for casting for distance, but I don't think it is good for the determination of skill in settling your flies, and I am very sure it is not good for the success of the angler where trout are shy. To be sure, it may do on the lakes and large streams in the North, but it would not carry success in the streams of Maryland and Virginia, where we have to employ all the skill known to anglers to take the wary and wild brook trout. BALTIMORE.

[The proposed rules for the coming tournament were published in our issue of Jan. 13. In the issue of March 10 we gave the alterations and amendments as accepted, and in the next number we published a note on the clause allowing weight for metal reel plates. The rules of the first tournament required the line to be retrieved, but this was rescinded in order to allow of the style of casting known as the "switch cast" or "water cast," in which the line is reeled off into the water and is not retrieved. This cast is useful when trees or obstructions behind forbid retrieving. A contestant may therefore cast in either manner.]

LOAFING ON TIMBER CREEK.

WE have many glowing accounts by able writers week by week in FOREST AND STREAM, but to many the expenses of an excursion such as therein depicted would be too great to allow them to participate in the like, and doubtless there are many hundreds of business men like myself, and clerks, etc., in this city who, in the spring and summer time, spend their holidays, and especially their sabbaths, cooped up in town when, by the trifling outlay of at most $1, they could have what to me seems a glorious day in the country.

There are many creeks quite near to Philadelphia wherein white catfish, perch, etc., abound, and on the principle that half a loaf is better than none, I have on many a holiday taken the 8 A. M. train from Market Street Ferry to Westville, N. J. (return trip ticket 35c.), and as Timber Creek runs close by the depot there, I can be on the water by 8:45 A. M.

There are now quite a number of boat houses there, about twenty-two, I believe, and the shore of the creek near these houses is very pretty. A boat can be hired at Mr. Plum's hotel at a very low figure and bait easily obtained.

Timber Creek is a very picturesque sheet of water and the further from its mouth that one gets the prettier it appears. In nice summer days when all is quiet and still around, I ask for no greater enjoyment than to pull the boat in under the boughs of an old oak, and alternately fish and watch the actions of the pretty little migratory warblers which abound here.

I have often, too, taken some friend or other along with me and in almost every instance the same fascination for the place and its surroundings has been felt by him.

Here may be seen some urchins up to their knees in mud catching turtles, there come others birdnesting and occasionally a rowboat with two or three occupants will lazily drift by on the tide, apparently with no other object than to drink in the peace and quiet of the place, whiff the delicious odors of flowers and vegetation and listen to the notes of the thrush or robin.

As I said before there are plenty of white catfish to be caught, provided one understands how, for even these ungamy fish require a little skill in taking.

Should any of your readers, when unable to afford greater luxuries, determine to try Timber Creek, they will not regret it; although their ostensible purpose may be to catch fish and they may fail in this respect, yet I feel assured that they will often repeat their visit and feel delighted that they have at length found a way to spend a day's outing to a good advantage at a very nominal expense. A. W. B.

COLD CREEK.—Sandusky, O., March 16.—The Cold Creek Sporting Club Company, who control the greater portion of the trout stream at Castalia, this county, held its annual meeting at its club house to-day, the following members being present: Messrs. W. S. Robinson, G. A. Johnson, L. C. Carran, C. T. Hasbrouck, W. E. McKecknie, G. W. Baker, Joseph Ingersoll, Colonel Scoville, H.

E. Hill, and J. E. Climo, of Cleveland; J. A. Waite, G. W. Bills, Joseph M. Spencer and F. W. Oswald, of Toledo; Frank N. Beebe, of Columbus; J. C. Zollinger, Joseph F. Kilby, William Melville, Ira T. Davis, and T. L. Williams, of Sandusky. The club decided to have the large grist mill on its property sold and removed, and Messrs. Kilby, Williams, Johnson and Storey were appointed a committee to dispose of the building and machinery. The following officers were re-elected for the ensuing year: President, J. C. Zollinger; Vice-President, G. W. Bills; Secretary, B. F. Ferris; Treasurer, William Melville. A pleasant feature of the meeting was the presentation by the club to its efficient secretary, Mr. B. F. Ferris, of a magnificent Leonard split bamboo rod, case, reel, fly-book and landing net, an outfit which cost $200. The presentation speech was made by W. S. Robinson, and was happily responded to by Mr. Ferris. At a meeting of the Cold Creek Trout Club, held in the afternoon, W. S. Robinson, of Cleveland, was chosen president. The Cold Creek Sporting Club Company has just had a new stream, half a mile in length, cut through its property, and now has one of the best trout fishing grounds in the West. The capital stock of the company is $40,000. It has an elegant club house and a fine hatchery, in which there are now 30,000 well developed rainbow trout awaiting planting in its waters.

Size of Brown Trout.—That the brown trout, which is the common brook trout of Europe, recently introduced into this country, grows to large size is attested by the following from the London *Field:* "It may interest some of your readers to hear that I have just caught a brown trout on Lough Derg weighing 19lbs., length along side 2ft. 10in., over back 3ft., and girth 1ft. 8½in. It is not unusual at this season of the year to hook trout of from 8lbs. to 10lbs. in weight, but I have heard of only one larger than the above-mentioned being killed on this lake within the last twenty years.—Heber Koe (Feb. 28).

WEATHER AND THE MIGRATION OF FISH.

BY J. W. WILLIS BUND.

[From the Journal of the National Fish Culture Association.]

THE laws that govern the migration of fish have not hitherto received the attention their importance deserves. The migration of birds has been for some years a favorite study; but beyond ascertaining the fact that certain kinds of fish migrate to and from the sea, their movements have excited but little attention, except as to one kind, the salmon. But beyond the knowledge that salmon migrate to and from the sea at certain times of the year the legislature does not inquire into their habits before legislating.

The migration of fish is a fascinating subject to any one who cares to study it; partly because it is almost new ground an observer has to work out each fact for himself; partly because the more migration is studied the more complex the effort to trace the movement of the fish becomes.

At first everything appears so clear, *a priori*, it would seem that the same rules should apply to the migration of fish from the sea and their migration to the sea, yet observation tends to show that this is not the case and that the migration from and to salt water rests on totally different states of facts. I must premise by stating I have no wish or desire to dogmatize upon the subject. I know so little, and the facts upon which the conclusions are founded are so few, I feel I may be only stating coincidences and not results.

For the purpose of what I have to say, the migratory fish of the English waters may be said to be of five kinds: (1) The different kinds of migratory salmonidæ; (2) the eel; (3) the shad; (4) the lamprey; (5) the lampern. Nos. 3 and 4 resort to fresh water simply for breeding purposes, and this done return at once to the sea. The salmonidæ resort to the fresh water to breed, but whether only for breeding is a question. The eel breeds in the salt water and migrates there for that purpose. The lampern resorts to the fresh water to breed, but beyond that fact little definite seems known as to its movements.

It would appear to be a general rule that all these five kinds of fish, in migrating from the sea to the fresh water are, to a great extent, influenced by the presence or absence of the same condition of things in connection with the weather. A good year of one kind of migratory fish is usually a good year for the other kinds. While if it is a bad season for one kind it is usually a bad season for all. I say "usually," for it sometimes happens that there is a wonderful year for one of the sorts of fish, and a very bad year for the other sorts, but this is the exception, not the rule.

It therefore seems to follow that the same causes which lead to a large migration of one kind of fish will produce a large migration of the other kinds, always assuming that the stock of each kind of fish is kept up in the same proportion. An investigation of what these causes are should, therefore, throw some light on the subject of migration, and if it happens that the same results are produced by the same state of weather in other countries, the inference would be that we are on the right road toward forming some accurate conclusions on the matter.

I.—The first thing to be noticed in connection with migration is the effect of the tide. I believe that solitary migratory fish creep up on almost every tide, not only during the migratory period proper, but throughout the year. Yet it seems that the majority of the fish—the shoals—only migrate on spring tides, and mainly on the six or eight spring tides preceding and following the highest spring. At the very highest tide there seems to be a cessation, or partial cessation, of migration; at least this is my experience, but on the other rivers this is said not to be so, but at all events, just before and just after the highest tide the largest run of fish occurs, the largest being just before the highest tide. This is certainly the case with salmon, still more with eels, so much so that the fishermen, who fish for the young eels when they are on their upward journey, only fish the spring tides. At the present time the eel fishermen on the Severn are seeking an extension of the legal season for taking young eels, locally called "elvers," on their migration from the sea to the fresh water, and their proposal is not that a definite extension of the season should be granted, but that they should be allowed to fish the two periods of spring tide next after the 20th of April.

It may be said that the reasons for the migration of fish on the spring tides are obvious; the high water will carry the migratory fish over the lower obstructions in a river. While this explanation should not be lost sight of, it fails to explain everything. If the river is full of land water, so that there are practically no obstructions, and the tides are "neap," fewer fish will run up than if there was less land water, and the tides are spring. I believe I am correct; I am certainly so as far as my observations go, in saying that shad always run on a spring tide, hardly ever on a neap. Salmon run more frequently on a spring tide than on a neap. Eels invariably, and lamperns usually, do the same; thus, for some reason, the main migrations of fish take place on spring tides.

The next point is that the fish run more before the tides reach their maximum height than after they have done so. More fish run during the change from neap to spring than during the change from spring to neap. I am not asserting that fish do not run at both periods; they do; but more run during the first than at the second period, or, to put the statement into fishermen's language: "There are more fish about when spring tides are coming on than when they are going off."

The higher the tide the better the fish run. It is true exceptionally high tides do not seem to exceptionally affect the movements of fish, but a series of high spring tides generally give a larger run of fish than a series of moderate spring tides. This fact, if conclusively proved, should have an important bearing on the question of the migration of salmonidæ. It at once directs attention to the causes of high spring tides. The causes differ in different places. On one part of our coasts the causes which produce high tides have the contrary effect on other parts. If fish only migrate in considerable numbers on high spring tides, and these tides only occur under different circumstances at different places, it follows that the time of the migration of fish cannot be expected to be the same on different river; this is just what we find to be the case. I am not putting this fact forward as the true solution of "early and late" rivers, but it is a point to be taken into consideration in arriving at the solution of that question. The direction of the wind and the barometric pressure affect both the time and height of high water. In the North Sea a low barometer and a north-northwest gale will affect the surface rise of the tide some two or three feet, and on the east coast of England may delay the time of high water as much as half an hour. If it is an accurate conclusion* that fish run up with the flood tide and should they not reach fresh water with the flood tide on which they run, they drop backward with the ebb, and start up again on the next flood, it follows that the N. N. W. wind and a low barometer, by causing a longer flow of the tide, give the fish on the east coast a better opportunity for running up the rivers than any other state of weather, as they have a longer time to travel up the river on the flood to the fresh water. But while this state of the weather may help the east and north coast rivers, it has the opposite effect on rivers on the other parts of the coast. On the south coasts of Devon and Cornwall, southwest winds and a low barometer raise the surface height of the tide and cause it to flow longer than if the wind was northwest. This should, therefore, best suit the migration of fish on those rivers. Space will not allow a detailed examination of the different English rivers which are said to be early and late, with the effect of the tide upon the movements of the fish in them; but if the propositions are true that fish migrate most on high spring tides, that certain conditions of the wind and atmosphere bring about high spring tides, that these conditions vary in different places, it would seem to follow that the time of the migration of fish to the different rivers would depend, to some extent, on the presence and absence of these conditions. I would add that I am told that the experience of the Tyne does not bear out this reasoning, for on that river the best runs of fish are found to take place with a southwest wind.

II.—Passing from the tide, the next subject to be noticed in the connection between the weather and the movement of fish is the wind.

On the Severn, and, I believe, on all the Bristol Channel rivers, fish run best—that is, the migrations from the sea are the largest with a wind from the west or southwest. This bears out what has already been stated as to the tide, for wind from the southwest is from the quarter that produces the highest tide in the Bristol Channel. If further observations establish the proposition that the higher the tide and the longer it flows the better the run of fish, then, the wind from west or southwest being one of the causes that produce this, one of the elements for a run of fish in the Bristol Channel is a west or southwest wind. This seems to be generally recognized, and on the Usk it is said that a southwest wind brings a run of fish because they smell the rain.

III.—As to barometric pressure. The effect of pressure on the migration of fish does not seem to have been much studied, yet every angler knows how carefully he notes the barometer before going fishing. With a falling barometer fish usually will not raise, it may be because they are moving. I am convinced that one of the most important things to study in the migration of fish is the movement of the barometer. I regret to say that there are but one or two points on which there are any data to give in connection with it.

(*a*) If there is a gradual rise in the barometer from the west, it is often followed by a run of fish. If any one will take the trouble to study the weather reports in the *Times*, he will note that if after considerable fluctuations in movements of the barometer it is reported to be steadily, not rapidly, rising, either after a fall or long continued low readings, this is usually followed by a run of fish, and also that when the barometer has risen to a certain height, about twenty-nine degrees fifty minutes, and remains at that height or higher, the run of fish falls off.

I have tried, and so far in vain, to trace any result when a depression is telegraphed as coming from America, all that I have so far been able to trace is, that, as a rule, with very high or very low readings of the barometer, fish do not run; that they run best when the barometer is low, but rising.

(*b*) Again, referring to the daily weather charts published by the Meteorological Office, so far as I have been able to trace, fish run better when the barometer is lower on the west coast than on the east coast. This fact will be dealt with more fully presently, but it must be understood that the Severn is the only river from which I get regular reports of the movements of fish, so that this fact may, and very likely does not hold good with regard to rivers on the east coast. On the Severn and in the Bristol Channel fish run best when the barometer is lower in the Bristol Channel than in the North Sea. Here, also, it may be said, that as this is the usual state of things, it is thus to be accounted for. This may be an explanation or a partial explanation, but if the maps are studied week by week, and compared with observations as to the movements of fish, it will be found that whatever the weather, and however the fish migrate, fish run best at those times when on the left side of the map the readings of the barometer are lower than on the right.

(*c*) As to the height of the barometer at which fish run best, here again more observations are urgently needed, but so far as present results show, it seems that when the barometer ranges from twenty-nine degrees to twenty-nine degrees fifty minutes, fish run better than at any other height. This is also open to the objection that the barometer is more frequently about that height than any other; it can only be replied that fish run better in the usual rather than in an unusual state of the weather, and that they will not generally run with a barometer above twenty-nine degrees fifty minutes, but with a barometer steadily rising up to that height they do.

IV.—Temperature forms the next important element in the migration of fish, especially the respective temperatures of the river and the estuary. Sufficient data on which to base satisfactory conclusions are here also wanting. It is often said that the cold water of the sea induces the fish to seek the warm water of the river, and this theory is sometimes put forward as the reason why the east coast rivers in Scotland are, as a rule, early. I am inclined to believe that this is not the complete explanation. At some points of the coast the temperature of the estuary is at certain times of the year higher than the temperature of the rivers. On the Severn, in May, the estuary temperature varies from fifty to sixty degrees, while that of the river varies from forty to fifty degrees. It may well be that the effect of the high temperature in the estuary induces a too rapid development of the reproductive organs in fish that migrate, like salmon, and this may lead to an immediate upward movement. As far as present observations go, it seems clear that with a low temperature in the estuary the fish do not leave it so readily as with a high one. It is when the temperature rises the upward movement begins. A warm May generally produces a larger migration than a cold one, it may, therefore, well be that temperature will account for much that at present cannot be explained in the movements of fish. It often happens that in the case of rivers with a common estuary, the fish will resort to one more than the other, and fish will only resort to certain tributaries of the main river at certain times of the year. It may be well that with further observations on the comparative temperature of the different streams a reason may be found.

V.—The next important element, and, perhaps, the most important one in English rivers, is rainfall. Our rivers are now so obstructed and polluted that without a rise in the river-water fish cannot or will not pass up. It follows that the fish only run when there is a rise of land-water. I am, however, by no means certain that if our rivers were in their natural state, that this would be so much the case as it is at present. On this—do fish only migrate if there is a rise of land-water?—the experience of those who live on rivers as yet unobstructed and unpolluted—if there are any—would be valuable. It is now a general rule in England that no large migration of fish takes place without a rise in the land-water. This does not, however, apply to all the migratory fish. Elvers run up if the other conditions are suitable, without waiting for a rise of the river. It also does not apply to shad, for they will often run up, if they can, with the land-water low and clear. As to this fish, muddy water will often turn them back and prevent them ascending further. In saying that a fresh is necessary to bring up fish, it by no means follows that every fresh brings up fish. Frequently often what would appear to be just the water to induce fish to ascend, no fish can be seen; while when there has been no water, or next to none, the fish have run up. Indeed, on the Usk, it is said the first fresh after drought never brings up fish, but other freshes do. Rainfall is a very important element in migration, but I am not sure that too much attention has not been given to it, to the exclusion of other matters.

The different elements that, on the Severn, are required to bring about a good run of fish appear, therefore, to be the following:

(1) A spring tide.
(2) A southwest wind.
(3) A higher temperature of the water in the estuary than the land-water in the river.
(4) A low but steadily rising barometer to a height of 29 degrees 50 minutes.
(5) A moderate rise of land-water.

When all these conditions are combined, a good run of fish usually takes place, but if any of these are wanting, the run is either much smaller than it ought to be, or absent altogether. It is obvious that under the most favorable circumstances this combination can only take place occasionally, and hence the run of fish must, of necessity, be more or less intermittent.

Having, as far as I can at present ascertain, stated the conditions of weather required for a good run or fish, it remains to be seen if it is possible to lay down any rules as to when, if at all, these conditions are either likely or unlikely to occur. Meteorology has classified the different types of weather, and stated when their recurrence may be expected. Can this knowledge be applied in studying the migration of fish? Of the two great types of weather, the cyclonic, an area of low pressure with rains and strong winds circulating from west to east, is more favorable to the migration of fish than the anti-cyclonic, an area of high pressure and fine weather and light winds circulating from east to west; or in popular language, "changeable weather," is more conducive than settled weather to the migration of fish. It follows from this that the next point to ascertain is what is meant by "changeable weather."

There is a considerable variation of weather from day to day, and a considerable local variation in different localities, while the type of weather remains the same. Yet neither this daily or local variation can be said to be changeable weather so long as the same type exists for a more or less continuous period. Every one is familiar with this statement in popular language: "How long will the east winds last?" "When shall we get a spell of fine weather?" Particular types of weather recur at particular seasons—east winds in March, a cold period in May, a wet period in September—and it is a change from one of these types to another that is referred to when "changeable" or a change of weather is spoken of. These changes are most usually found to be from one to another of four distinct types, into which the weather may be roughly divided. It is therefore necessary to see which of the types are most favorable to the movement of fish, or in other words, in which type do we find the conditions mentioned above as those best suited to the migration of fish prevail the most. The four usual types of the weather are:

1. The Southerly.—If this type of weather prevails, on looking at a map of the British Isles, anti-cyclones lie to the east and southeast, while cyclones come from the Atlantic and beat up to the northeast.

2. The Westerly.—Here the anti-cyclone lies to the south, and cyclones from the central Atlantic pass over the British Isles to the east and northeast.

3. The Northerly.—Here the Atlantic anti-cyclones stretch to the west and northwest of Great Britain, cyclones form and move to some point of east.

4. The Easterly.—Here anti-cyclones appear in northeast Europe, and cyclones pass from the S. E., or are delayed by the anti-cyclones.

Of all these types the southerly is the one usually found in the winter, and upon its presence or absence the warmth of the winter depends. Its chief characteristics are high temperature, steady southerly winds, and a low barometer. Looking at a map of the British Isles from the south, if this type of weather prevails, the pressure is usually lower on the left hand than on the right, and as has been already stated, when this is the case fish migrate best; therefore, a continuance of the southerly type of weather is the best for a migration of fish.

The westerly is a very common type, something like 70 per cent. of our weather being of this type, as when a cyclone passes to the north of the British Isles with the wind south and southwest, and a moderate rain and average temperature. As a rule, when this type of weather prevails, on looking at a map of the British Isles, pressure is the highest in the British Channel, and gradually decreases toward the north. Fish generally run well while this type of weather lasts, but in the Bristol Channel not so well as during a continuance of the southerly type.

The northerly type gives practically the converse of the southerly type, pressure being higher on the east coast than on the west. While this type continues, there is usually a period of low temperature—northerly winds—a state of things never conducive to a good run of fish on the Severn. It will be important to ascertain if, during a continuance of weather of this type, fish run well on rivers flowing into the North Sea. From the very slight information I have been able to get, I should say they do not, but I have not yet got sufficient data to enable me to make any positive statement. The northerly is the common type of weather in winter and spring, especially in March.

The easterly type is a period of low temperature, black and bitter weather, with local rains. It usually occurs in the

*See "Salmon Problems," p. 172.

late autumn and spring, and while it lasts fish do not run well.

The result, therefore, of an examination of the four types of weather, with our present knowledge, leads to the conclusion that fish run better during weather of a southerly and westerly type than they do when it is of a northerly or easterly. Applying this result to the times of year when these types usually recur, we find that the inference is that February, when the easterly type is common, March, when the northerly type is most prevalent, May, October and November, when the northerly type also partially prevails, should not be good times for the migration of fish. To some extent this deduction is borne out by experience. February, March and May are sometimes very good, but more often very bad months for fish to run. Occasionally there are large runs of fish, but far more often no fish are moving. February is, however, a better month for fish to run than March. I cannot, with present knowledge, go further and say that if during these months a northerly type of weather prevails, they will be bad fishing months, while, if another type of weather prevails, they will be good. But some day it may be possible to do this.

SALMON FISHERIES IN CHALEUR BAY.

THE Bay of Chaleur is bounded by the counties of Gaspé and Bonaventure on its north or Quebec shore, and by the counties of Gloucester and Restigouche on its south or New Brunswick shore, it is some 200 miles from its entrance, to head of tidal water where it forms the Restigouche River. Gaspé has three salmon rivers of some size and two small ones, Bonaventure has the Grand Cascapedia, now well known, and two smaller streams; Gloucester has the Bathurst or "Nepisiguit," and Restigouche, one of the same name having two branches, and the small Jacquet, those rivers are the nurseries for the salmon now caught on its coasts, and which afford sport to the angler.

Fifty years ago the salmon taken in those rivers and at their mouths, were salted, barreled, sold to traders or sent to Halifax, one-half the quantity caught were taken with the spear, the Indian having free liberty to go where he choose, few if any restrictions were imposed on netters, and the writer has often seen nets near tide head extending from shore to shore, and the channels, where at all practicable, were barred. Netting was confined to the estuary of the Restigouche, very few nets were set below Dalhousie, and not over thirty-five netting salmon stations were in the counties of Restigouche and Bonaventure. The inhabitants living on the rivers used the drift net, few took more than necessary for winter use, as the low price, $6 to $8 per barrel, was not sufficient temptation. Such was the state of matters in 1837, as the writer, then a boy, took the winter's fish, and often heard men who had been on the rivers twenty years before, declare the salmon was gone, and they would brag of fights with the Indians over their seines and where they had hauled ashore 1,000 salmon at once; this was seventy-five or eighty years ago. At the time I speak of the catch fluctuated very much. Some years very few, others again better, and it was a general saying among the fishermen, "two bad years and one good." Some netters would get from twenty to thirty barrels, others as low as five barrels, and the best years from 1837 to 1857 would not yield over five hundred barrels.

Such was the general state of the fishery between those periods, fishery gradually decreasing, and some of the netters abandoning their stations when canning commenced at Athol House, near tide head, and using all the fish caught by the Indians as well as hauling them from the netters a distance of 20 miles, the quantity never reached 200,000lbs., oftener as low as 50,000, and I remember in 1864 Mr. Hoegg got nearly the whole produce, only amounting to 37,000lbs. The sale of salmon, fresh, was now an extra inducement to the Indian, and for ten years he paid every attention to it, and they swept the rivers away up to their head waters. Somewhat better regulations regarding netting were observable, and, of course, any person having a frontage could set if he chose; as yet it was not a paying business, although ten cents per pound was often paid. About this time it became known that salmon would rise to the fly in the river. In 1869 the Department of Fisheries took charge and the Fisheries Act came in force; a few anglers visited the rivers with some success. They were principally the officers of the 78th Regiment, and they were of much assistance in preventing poaching. The head waters had better protection from St. John River spearers, the Indians were curtailed to limits, and shortly after totally prohibited, and salmon gave signs of increasing. In 1871 the rivers were leased, and the protection given by the lessees was of great benefit, and in order to prevent the undue increase of netting in the estuary and coast sure to follow the increase of the salmon, the license system was adopted, and to show how necessary this regulation was, I have had to report on the applications of forty new stations asked for in one season. In 1873 pisciculture was started, but no fry of any consequence was deposited until 1875. In 1876 the opening of the I. C. R. gave another impetus to the fresh fish trade, and although not a very good year, one firm shipped in six days 80,000lbs. to New York. Freezers now began to be constructed, only two being in existence previous. Now there are thirteen, capable of holding 750,000lbs.

From 1876 to 1882 the yearly catches varied much, alternately from poor to good. Often the netters had a poor season while the river had a fair stock. This was owing to water remaining high late in spring, preventing nets from being set, sometimes a June freshet sweeping them away just while the fish were running up. As a rule here the heavy run of fish does not last longer than three weeks, and I have known the whole run pass in ten days. Since 1883 there has been a steady increase both in river and net catch, and I trust it will continue. "Let me give my reasons for this hope that is in me." It is known and admitted that very much of the natural laid salmon ova is yearly destroyed by the heavy ice jams and freshets tearing and washing away the beds in which the egg is lying just at the most critical stage of its existence, some seasons being much worse than others. To remedy this and assist nature, the artificially raised fry is planted, and as it requires from six to seven years for a salmon to come to the adult stage and return, I seriously ask those who are still unfriendly to pisciculture whether the last three years steady increase of salmon in the Restigouche is not attributable in a great measure to the assistance it has received from its hatchery. Four years ago it was seriously impressed upon the Minister of Fisheries that unless he abolished the hatchery there would be total extinction. What are the facts? In 1885 and 1886 fully 2,000 salmon have been taken in it with the rod, ladies running a score of from 30 to 50, gentlemen from 50 to 120 salmon, and last year a 23lb. average. True, Mr. Hallock writes FOREST AND STREAM, they have degenerated as to size and lost their fierceness and pluck owing to their artificial raising. Were you here, Charlie? If not you have been sold, for they break as many casting lines as ever. There have been very few new netting stations granted in estuary or coast lately, all suitable locations being filled, many of those now fishing do so at a loss, still the netter keeps on hoping for an increase next year. Since 1869 nets have increased in the counties of Bonaventure and Gloucester from 35 or 40 stations up to 150, and there must be now 250 netters in the whole bay. The figures for the commercial catch in the whole bay sum up $165,000.

In order to show the value placed by the netters in the estuary on their holdings, I was directed to ascertain the amount of money required by twenty-three of them, to give up and relinquish their claims, not for any purpose of reselling or profit, but simply by doing away with those nets to give a free pass to the salmon to enter the river. I found to do this would cost the modest sum of $130,000, an average of $5,650 to each netter. This is no assertion but hard facts, and surely goes far to show the estimation in which the netters hold the present and prospective increase of our salmon fisheries. Let us now look at our rivers. On the 30th March inst., the New Brunswick government offers to lease the rod fishing on the Main Restigouche river for five years at an upset price of $3,900 per annum. The same river was let in 1871 for nine years to Messrs. Fleming and Brydges at a yearly rental of $40. Does this show any improvement? Private properties with from ½ to 2½ miles frontage, and only on one side of the river at that, valued at from $15,000 to $25,000. Places I know which did not cost a few years ago over $400 or $500 have been sold for $5,000 and $8,000. Yearly rentals of from $50 to $150 are now given for a season's fishing on a single front of 50 rods wide. There are now three clubs on the river containing 60 members, whose expenditure last year amounted to $27,000. There are at least 20 guardians employed for the season at a cost of $40 per month. You will find the Indian in the little town of Campbellton, after a month's trip, sporting round with his white collar and $150 or more in his pocket. Not a chicken, lamb, pat of butter or quart of cream can be raised by the settler but what will sell as dear as in New York. These are facts, and are some of the results of increase of our salmon fisheries. I care not to what the increase may be imputed, it is there. I have also authority to refer to James Reid of Charlo, Andrew Wallace and Simon McGregor of Dalhousie; Alexander Chamberlain of Campbellton, who declare that there has been a very visible and steady increase in the fisheries during the last few years. I have also the written authority of M. Archibald, Government officer, and Alexander Robertson, superintendent of rivers for the R. S. C., to say that no living man of this generation ever saw anything approaching the numbers of salmon seen in the main Restigouche River last two years.

In conclusion, I hope this state of matters will long continue, and that both netters and anglers will keep alive this precious bird that is laying such a golden egg, and which has put many a dollar in the pocket of the poor man, who otherwise would never have seen it. JOHN MOWATT.

CAMPBELLTON, N. B., Feb. 10.

Fisheulture.

THE NEW YORK COMMISSION.

THE following shows the season's work at the two principal hatcheries:

CALEDONIA.

Eggs of different species have been sent as follows: Lake trout: 100,000 to Morehousville hatchery, Hamilton county; 100,000 to Ragged Lake hatchery, Franklin county; 450,000 to Fulton Chain hatchery; 300,000 to Lake Brandon hatchery, Essex county. Total, 1,050,000 eggs.

Brook Trout—20,000 to Morhousville hatchery; 50,000 Ragged Lake hatchery; 60,000 Fulton Chain hatchery; 5,000 P. A. M. Van Wyck, New Hamburg, Dutchess county; 90,000 Cold Spring Harbor hatchery, Suffolk county. Total, 225,000 eggs.

Brown Trout—65,000 Ragged Lake hatchery; 50,000 Fulton Chain hatchery; 10,000 Lake Brandon hatchery; 5,000 P. A. M. Van Wyck; 2,000 Wisconsin hatchery, Madison, Wis.; 10,000 Bisby Club, Oneida county. Total, 142,000 eggs.

Rainbow Trout—10,000 Cold Spring Harbor hatchery; 20,000 E. G. Blackford, Fulton Market. Total, 30,000 eggs.

The fry of different species that have been distributed to the waters are as follows:

Brook Trout—30,000 in Caneadea Creek and tributaries, Allegany county; 20,000 in Onandaga Creek, Onandaga county; 10,000 in White Creek, Livingston county; 18,000 in Long Pond, Lewis county; 2,000 in Spring Creek, Oneida county; 12,000 in Manlius, High Bridge and Todd's Brook, Onandaga county; 25,000 in Loon Lake, Franklin county; 20,000 in Sawmill, Peekskill and Canopis Brooks, Westchester county; 25,000 in Amber Lake, Jordan Lake and Otter Pond, St. Lawrence county; 12,000 in East Coy Streams, Wyoming county; 15,000 in Pine Creek, Allegany county; 30,000 in West Canada Creek and tributaries; 12,000 in Read Brook, Oneida county; 12,000 in Beaver Meadow and Broker Brooks, Oneida county; 4,000 in Dry Brook and Snider Brook, Monroe county; 15,000 in Woodhull Lake, Herkimer county; 30,000 in South and North branches of Alder Creek, Dory, Ritter and Shott Brooks, Oneida county; 30,000 in Crum's Creek, tributaries to Sprite Creeks, Herkimer county; 30,000 in tributaries to East Canada creek, Herkimer county; 20,000 in Pool's Brook, Onandaga county; 20,000 in Onondaga Creek and tributaries; 15,000 in West Branch Unadilla River, Oneida county; 25,000 in Crooked, Cold and Dayton Brooks, Chatauqua county. Total, 402,000 fry.

Lake Trout—260,000 in Lake Ontario; 50,000 Rye Lake, Westchester county; 25,000, Ravin Lake, Lewis county; 75,000 Hemlock Lake, Livingston county; 50,000 Loon Lake, Franklin county; 150,000 Lake George, Warren county; 100,000 Owasca Lake, Cayuga county; 25,000 Pine Lake, Oneida county; 36,000 Woodhull Lake, Herkimer county; 85,000 Silver Lake, St. Lawrence county; 85,000 Big Lake, St. Lawrence county; 85,000 Clear Lake, St. Lawrence county. Total, 1,026,000 fry.

Hybrids—Brook and lake trout, 1,702 fish from 3 to 6 years old, in Oatka Creek, Monroe county.

California Mountain Trout—770 fish, 3 to 6 years old, in Long Pond, Livingston county.

Whitefish—732,000 in Lake Ontario; 65,000 in Rye Lake, Westchester county; 50,000 in Hemlock Lake, Livingston county; 60,000 in Owasco Lake, Cayuga county; 103,000 to Lake Brandon hatchery. Total 1,000,000.

COLD SPRING HARBOR.

The distribution of fresh-water fishes has not begun yet. 4,200,000 tomcods have been hatched and turned into the harbor. The following are now in the hatching troughs:

Salmon—300,000 for the Hudson and salmon rivers of New York and 50,000 for the Housatonic.

Landlocked Salmon—65,000 for the Hudson and other waters.

Whitefish—1,000,000 for lakes in Dutchess and Suffolk counties.

Smelts—About 2,000,000 now in the hatchers and more expected.

Brook Trout—90,000 received from Caledonia, 30,000 taken at hatchery and 50,000 for private parties who bought them from Messrs. Annin and Gilbert. Total 170,000.

Lochleven Trout—20,000 received from Sir James Gibson Maitland, Bart., Howietown Fishery, Stirling, Scotland.

Brown Trout—20,000 taken on grounds and 8,000 from Herr von dem Borne, Berneuchen, Germany.

Saibling—20,000 eggs from the Deutschen Fischerei Verein.

Rainbow Trout—10,000 from the Caledonia hatchery.

Frostfish—150,000 from the Lake Brandon hatchery.

SOLES IN FRESH WATER.—It may interest our fish-culturists to know that the sole is said to live in fresh water in England and grows to great size there, at least a writer in the London *Field* makes this statement. The American form, a worthless little fish called "hog choker" in the Hudson, *Achirus lineatus*, is often found in fresh water as far up as Albany. Several shipments of the English sole have been received in this country by Prof. Baird and Mr. Blackford, and many are now kept at Woods Holl, Mass. A few were stored at Cold Spring Harbor a year or two ago, but the salt water pipes froze in the old buildings and they were lost. Had it been known that the fish would live in fresh water they would have been saved.

FIXTURES.

DOG SHOWS.

March 29 to April 1, 1887.—Inaugural Dog Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence. Entries close March 15.

April 5 to 8, 1887.—Third Annual Dog Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass. Entries close March 19.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 19 to 22.—Fourth Annual Dog Show of the Philadelphia Kennel Club. E. Comfort, President.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4827.**

THE BLISS OF IGNORANCE.

FOR any one who earns his bread honestly we must all feel a respect. Whether a man is president of a bank, or carries on a farm, or drives a horse car, or mends umbrellas—if he does his work honestly and well he is as good in this Republic as any of his fellows. But few men are expert in more than one direction. Thus we do not look for an exact knowledge of bricklaying from the bank president, nor an intimate acquaintance with the principles of shipbuilding from the farmer. We should hardly take an intricate problem in calculus to the driver of the horse car, nor, if we were sick, go to the umbrella mender for medical advice. A man may be a capital hand to replace a broken window pane, and yet know rather less than nothing about canine pathology and therapeutics. There is a wise old Latin proverb which says: *Ne sutor ultra crepidam.* Literally translated this means, "Let the cobbler stick to his last." It was freely rendered recently by one of our esteemed correspondents, "Stick to putty, old boy," a bit of advice which might have been followed with profit. But it was not, and so we are treated to a display of singular asininity.

Our contemporary who lives down-stairs is cruel. It is constantly devising traps for the embarrassment of another sheet which is hopelessly ill-informed, and though in setting these traps it usually writes itself down an ass, still this is nothing compared with the satisfaction which it derives from seeing the astonishing foolishness with which its victim permits himself to be deceived. So our neighbor prepares its bait and casts it forth, and in each succeeding issue of its putty-manipulating contemporary it appears painfully evident that the gudgeon has risen, taken the hook and is flopping woefully. The temerity of fools is proverbial, and the window mender never hesitates, at the bidding of his astute but cynical contemporary, to put himself on record on all sorts of subjects about which he knows nothing at all.

We had occasion recently to prescribe, for a dog troubled with twitching following distemper, "a pill of the citrate of iron and strychnine, 2grs. each, three times daily." This our neighbor down-stairs pretended to believe meant 6grs. of strychnine daily, and it said so. Upon this the cry of "Glass put in" was pretermitted for a while, and the victim of turfy wiles screamed with laughter at our supposed blunder:

"Give the dog a pill of the citrate of iron and strychnine, 2grs. each, three times daily."

Let us see what the worthy druggist will give the owner of the dog. The druggist, too, may be behind the age in his business; he may not know that the only officinal preparation of strychnine and iron is the citrate of iron and strychnine. But the druggist won't go off half cocked. He must have, to ply his calling with success, a certain knowledge of the drugs he puts in a prescription. He may have to turn to his Pharmacopœia; for the druggist, unlike the newspaper scribbler, must know what he does and says. The good druggist will find in his book as follows: When strychnine is called for it is written *strychnina sulphat.*, or the sulphate of strychnine; that the alkaloid is not used except in combination; that the salt, or sulphate, is. If the druggist is a driveling idiot he might be forced to look for the dose of *strychnin. sulph.*, when he would find that 2grs. of the salt would kill something over ten able-bodied men. His further investigations would lead him to assert that 2grs. of the citrate of iron given alone would not be more than a quarter of a dose. But light would dawn on the druggist in his effort to decipher what the prescription of "a pill of the citrate of iron and strychnine, 2grs. each," was designed to call for, when he turned to page 160 of the Pharmacopœia of the United States, sixth decennial revision, 1880, where stands recorded the following:

Ferri et Strychninæ citras (citrate of iron and strychnine)

Citrate of iron and ammonium	parts 98
Strychnine	parts 1
Citric acid	parts 1
	100

The druggist might not have a mathematical head, but his small boy would at once tell him that a two-grain pill of this excellent mixture would contain two one-hundredths, or one-fiftieth, of a grain of strychnine.

The FOREST AND STREAM successfully prescribes for several hundred sick dogs in the course of a year; its prescriptions are intelligent and reliable, being given by a regular physician; and as we happen to know from the numerous letters received, the value of this department of our kennel work is appreciated at its true worth; and it is not likely to be depreciated by the loud laugh that speaks the vacant mind

THE MASTIFFS OF THE PRESENT.

REVIEWING the mastiffs of the present, we seem entering upon an era of still greater improvement than that which has been accomplished within the last ten years even. Never before, perhaps, has such great size, combined with mastiff character, been obtained as possessed by some of our larger specimens of the present day—specimens which for size and weight would have surpassed Mr. Lukey's largest examples.

Reviewing such animals as Victor Hugo, Albert Victor, Maximilian and one or two others of rather less note, I feel justified in saying we need to have very little concern as to the means of keeping up size for the future; still, every breeder should bear in mind, before it is too late, that the mere possession of vast size is not everything in the mastiff, and it is to be hoped our English breeders will not "run the muck" (to borrow that forcible if not euphonious expression), which American breeders have done in their appreciation of vast size alone, owing to their ignorance of, and inability to understand true mastiff type, which to some writers or breeders of little experience may seem a sort of mysterious nihility, but which, nevertheless, meant a good deal in the eyes of such judges as Mr. Lukey or Mr. Thompson, and still means much with the experienced mastiff judge and breeder.

There is still a great amount of ignorance as to true mastiff character, still an ignorant craving for animals standing 33 or 34in. at shoulder, utterly regardless as to the proportionate weight and stoutness which should accompany such vast size, and unfortunately there are still too many animals approaching more nearly to the boarhound than the English mastiff in character. Few people are perhaps aware how much the English mastiff has been increased in height and weight owing to cultivation, and the introduction of the Great Dane, St. Bernard and other crosses with large breeds. Goldsmith, writing in 1769, states that at that time "our great breed of mastiffs" were seldom found to be above 24in. at shoulder, and some 56in. long." In 1800 the mastiff stood from 28 to 30in.; while Richardson, writing about 1850, gives the height of the mastiff Chicken as 29½in. Dr. John Brown, writing in 1858, gives 90lbs. as about the weight of the mastiff Rab; and as late as 1865 from 29 to 30in. was above the average height of the breed, and Mr. H. D. Kingdon rightly stated in Webb's book, that "We do not believe in the purity of mastiffs over 30in." Setting aside Mr. Lukey's Anglo-Alpine mastiff, the heaviest specimens hitherto on record have been Col. Tempest's Saxon, height 34in, weight 189lbs.; T. W. Boulton's Nero (St. Bernard and mastiff), 34in., weight 185lbs.; Vargue's L'Ami (Cuban mastiff), estimated at 200lbs.; Webb's Trusty (lineage doubtful), estimated at 185lbs., Lyme Hall mastiff bitch, belonging to Mr. Burgess, tanner, weighed before Manchester journalists, 187lbs., her full sister weighing 160lbs. These weights will show the unprecedented vast size of Albert Victor, who is stated to weigh over 220lbs., and bids fair to become one of the pillars of our Stud Book; and while he will possess all the advantages of a decided out-cross, breeders must bear in mind it does not follow for any certainty that his stock will be remarkable for size or weight above the average, for it is highly probable that much of his size and development is due to the manner in which he was fed and reared, viz., at a tan yard, and fed mostly on raw flesh. Before the appearance of Albert Victor, I pointed out in my work, "The History of the Mastiff" (pages 93 to 95), that mastiffs reared at tan yards, where they get plenty of raw flesh, often attain greater size than the average, and the development of their skull is frequently very powerful. I may point out that Bill George's Tiger, so noted for his fine head, was reared at a tan yard, so was Mr. Burgess's 187lbs. bitch. Victor Hugo is another dog likely to be made considerable use of to obtain size, and for which he will probably be successful, being very well descended from ancestors possessing plenty of size; he is too long in head, and has too much of the boarhound figure to come up to the *το καλον* of a perfect mastiff, in my opinion; still, his beautiful small ears and many other good points are calculated to make him a useful sire. It is very easy to pick out faults in good specimens, and to grumble at fashion without being able to breed anything worth being mentioned oneself. Still, there are good men breeding mastiffs, both in America and this country; men who are capable of seizing the light offered them, and, while eliminating defects, retain the good points; men capable of seeing mere height is a mistake, that it must be accompanied by proportionate weight and mastiff character; that good specimens standing not more than 30 inches, and weighing 170lbs., are about the ideal standard that should be aimed at. It is to be hoped now breeders have succeeded in restoring the true type of head, that they will devote more consideration to smaller ears, stronger hind quarters, darker eyes, and blacker ears, leaving the overgrown, unsymmetrical giant specimens to be drafted. I am glad to see the pug dog type of head, introduced through Mr. Rawlinson's Countess and Crown Prince, has gained the day, and now leads the fashion. Some large dogs are being bred and exhibited in America, where the interest in the breed seems very keen, and some of our best specimens have been imported there, notably Minting and Reine, yet few really good mastiffs have as yet been bred in America; the prize takers being generally imported specimens. Possibly equal improvement may be made in mastiff breeding in both countries, that has been made in this within the last ten years, yet, when we come to retrospect, the magnificent collection of mastiffs which faced the judges at Brighton, Warwick, the Royal Aquarium, and the Crystal Palace, January 1887, we doubt somewhat if much improvement in the best specimens is possible; such typical specimens as Beaufort, Orlando, Montgomery, Hotspur, and Boatswain will furnish us with sires possessing nearly all we can wish in character.

The most conspicuous faults are still the over-large ear introduced by that grand-headed little dog Sultan through his daughters, Duchess and Mrs. Rawlinson's Countess, whose short muzzles and heavy wrinkles have been transmitted, along with too much leather in the ear; smaller ears are a point which require the breeder's special attention. Color, both in eyes, ear and muzzle, is another matter. How few specimens at present equal Bamford's Wolf, Old King, Granby, Green's Monarch, or Beau in this respect. In making a review, it is not necessary to go through the various shows *seriatim;* my readers should go through the show reports for themselves in the back numbers of the *Field*. I merely strive to pick out the specimens most worthy of notice, leaving breeders to analyze for themselves, and then, by tracing out the pedigrees of the greatest winners, they may get at the winning blood for themselves.

The following specimens, given somewhat in order according to their merit, in my opinion comprise every, or nearly every, specimen worthy of particular mention:

1. Beaufort, too staring in eye and unsymmetrical in hind legs, like many specimens in which the dew-claw is developed; in other respects he is a very grand specimen, unquestionably the best all-round dog now before the public. 2. Victor Hugo, previously mentioned. 3. Hotspur, very good in head, fair in size, and fairly good all over. 4. Montgomery, far too large in ear, and dingy in color. 5. Albert Victor, previously mentioned. 6. Llewellyn, small in ear, good in muzzle, grand in color, short in head; a very perfect specimen. 7. Maximilian lacks character in head, and is defective slightly in one or two other points, yet he has really good blood, and Minting proved his value as a sire. 8. Spartacus, full in eye, and lacking mastiff character, expression in head in its fullest sense. He is also light in bone, yet possesses that muscular activity that the old English mastiff had, and has unfortunately lost to a great extent of late years. 9. Boatswain is too throaty and deficient in loin; still he has a most characteristic head, a head which those who do not understand type should study, for although shortness of head is a point—a long muzzle in a mastiff being altogether wrong and uncharacteristic—there are points as well as shortness which help to constitute a typical head. Boatswain has the heavy wrinkled brow causing that lowering expression peculiar to the old English mastiff. 10. Charley Wood, sold to go to Rotterdam, had all the appearance of growing into a grand specimen. 11. Lionel is about the best brindle male extant, has a good head and nice little ears, but is light in eye. 12. Minting's crooked forelegs will always be against him, and he was also somewhat hollow in the back, but he has great length of body and a superb head. 13. Rudolph, a very good mastiff, good in head, but light in color, and his small ears are much spoilt in many people's opinion by being semi-crest. 14. Clement is a fair dog, but only able to win when the cracks are absent. 15. Imperial Chancellor is houndy, showing the cone, and is too long and narrow in head, and too large in ear, still he is a fine-bodied dog, and possesses size. 16. Ilford Chancellor is too throaty, and shows too much wrinkle. 17. Wodan is too large in ears, narrow in loin and at present shows the cone, otherwise has a good head. 18. Pius is a well-bred dog, very fair all round, but terribly out of condition. 19. Brindle Sultan, a good old-fashioned mastiff, but of a bygone type. 20. Last, but not least, Prince of Wales, a good all-round dog, who should have carried off the champion prize at the Royal Aquarium, over the lame King Canute. In bitches, Cambrian Princess still holds the premier position; Lady Isabel begins to show signs of age; Lady Clare's large ears spoil her greatly; Reine, gone to America, was a very fine bitch; Hoda is very grand in body, but her head is nothing first rate; Rosa looks like breeding something very good if well mated. Mastiff bitches at the present time are decidedly improved in head within the last few years, and the puppies at the Crystal Palace showed there is no likelihood of any falling off in this respect, while the shortness of body and weak hindquarters, complained of so greatly, would appear more a fault in rearing than inherent.—*M. B. Wynn, in London Field.*

The editor of the *Field* adds the following note: "The Americans have not been fortunate in breeding good specimens, for the very reason that, as a rule, only second-rate animals were imported by them. Minting, of course, must be excepted, and he has not been there sufficiently long to make his mark. Goldsmith would scarcely be taken as an authority on the size of the mastiff in his day, and we do not believe any mastiff of the present time weighs anything like 220lbs."

INTESTINAL OBSTRUCTION IN DOGS.

VALUABLE and highly bred dogs are more numerous to-day in the United States than ever before. To their rearing and training and the development of their respective attributes is devoted much labor and expense. Celebrated stud dogs are held at enormous prices, and some of the more extensive kennels produce a considerable income annually. Surgical diseases of dogs have never been made a specialty, and probably never will be. At the same time they are very important to owners and breeders, and every surgeon is called upon from time to time to treat them. The principles of surgery as applied to man are similarly applicable to dogs. The enforcement of absolute rest in certain positions or for a considerable length of time is often impossible, and here is where veterinary surgery meets its greatest obstacles. The principles are applicable. The practice is sometimes difficult.

Intestinal obstruction in dogs is not rare. It is more common in puppies than in adult dogs. It is more common in well bred dogs than in mongrels. In adults it is caused, as a rule, by swallowing bones or foreign bodies, though it may occur from the growth of a tumor or adhesive inflammation, or, rarely, rupture. In young dogs it is invariably a foreign body or twisting or invagination of the gut.

Dogs whose diet is selected, and consists of little or no meat will, on the sly, eagerly devour what they may accidentally find. They are likely to bolt it without tearing the flesh or breaking the bone sufficiently. In this way large and jagged bits of bone may pass through the stomach without being digested, and may lodge at almost any point in the small intestine. When a bone or other foreign body becomes impacted in the intestinal canal, it naturally blocks the passage of fecal matter or semi-digested food, and, by this accumulation, the gut above the obstructed point is distended and below is collapsed. Congestion of the gut follows, and, where no relief is obtained, this congestion runs progressively into inflammation and perhaps gangrene. Death ends the trouble. The symptoms in their natural sequence would be as follows: Localized pain in some spot over the abdominal walls, indicated by palpating or pressing the fingers firmly inward at different points, and noticing whether the animal winces or whines; general pain and abdominal distention follows, due to peritonitis and the formation of gases in the gut from the fermentation of the food. This distention can be discovered by percussion, which consists in placing one or two fingers flat on the belly and tapping them firmly with one or two fingers of the other hand. The resonance will be hollow, or what is termed tympanitic.

The position that the dog takes at this stage is often characteristic. It is that of flexion, viz.: standing on the hind legs and resting the chest and foreparts on the ground, or when lying, curling up as much as possible. These positions tend to relax the abdominal muscles and relieve pain. Concomitant with these physical signs are some constitutional symptoms, which are almost diagnostic. Constipation is present, running into obstipation, which latter term signifies inability to pass anything per rectum. The animal is constantly straining, but the passages are merely of mucous and a little blood. At the same time vomiting is present and persistent. The vomited matter consists of contents of the stomach at first, then becomes slimy and greenish, and then follow the contents of the upper intestines, and finally the vomited matters will become feculoid, or having a distinct excrementitious odor and look. These are the principal symptoms observable to the layman. The surgeon would examine the pulse, temperature, respiration, and find the canine patient in collapse, with a rapid, feeble heart, the temperature subnormal, the respiration shallow and rapid, the extremities cold, the pupils dilated.

The duration of life after obstruction of the intestine has taken place, depends on the cause, age of dog, general health, etc. Generally they live anywhere from six to ten or twelve days.

The treatment of this trouble depends greatly on the cause. As this obstruction, if not relieved progresses steadily to a fatal end, the longer the delay the greater the chances of loss of our patient. In cases of young dogs, where invagination, hernia or twisting of the gut is suspected, inversion of the animal, holding it by the hindlegs, may be resorted to with the idea of loosening the coils of intestine. Injections are exceedingly useful and should be given in large quantity so that the fluid will reach as high as possible in the canal. This can be accomplished readily by using a rectal tube, well oiled, which can be passed gently into the gut as far as it will go without encountering marked resistance. A Davidson's syringe attached to this will soon fill the gut. Cathartics are contra-indicated and harmful, for they only serve to increase the difficulty. They are often given, however, under the impression that the animal suffers from intestinal colic or gastro-intestinal inflammation. Kneading the belly with the doubled up fingers may release an obstruction. We have lately heard of a case in which a dog after swallowing a piece of rope was enabled to pass it upon recovering from the administration of ether, the anesthetic relaxing the bowels sufficiently to allow the substance to find its way to the rectum.

If the animal is suffering great pain, opium, in the shape of morphine, given hypodermically, should be administered. For collapse and great failure of powers, give whisky or brandy in the same manner. Has the existence of obstruction been suspected from the first, and the progression of symptoms, as detailed above, confirmed the diagnosis, milder methods or treatment having failed, we see no reason why laparotomy or abdominal section should not be performed in man this operation is now, under the antiseptic precautions of modern surgery, devoid of the great dangers formerly ascribed to it. The obstacles in bringing such an operation to a successful issue in animals would be the difficulties in the after treatment. Still we think these can be overcome. The animal can be sewed in a canvas bag and so secured as to insure almost absolute quiet for a long enough period to accomplish the healing of the wound. We have verified this in the case of a valuable red Irish setter upon whom we performed tracheotomy for a foreign body in the windpipe. By securing the dog in a canvas bag previously arranged, suspended like a hammock, and keeping the animal under morphine, he was absolutely quiet for thirty-six hours, when he died of the trouble.

A dog is much less liable to peritonitis than man. We need not enter into the details of such an operation. Every surgeon is entirely familiar with them. It might, however, be well to say that the hair should be cleanly shaved from the region where the incision is to be made. The food should be entirely fluid for at least four days, and given per rectum. The nourishment should consist of peptonized milk, beef juice, a certain amount of brandy or whisky and laudanum. Opium may be given either in this shape or by hypodermics of morphine. The position of the dog should be changed for a little while each day in order to guard against what is termed hypostatic congestion, or the settling of the blood to the most dependent portions of the lungs, which is liable to occur where the heart is weak, and the patient remains on the back for some time.

We were called a few days since to make an autopsy upon the body of the fine prize winning two-year-old mastiff Bismarck, the property of Mr. C. P. Fraleigh of Summerville, N. J. The dog had suffered for ten days with almost the exact train of symptoms described above, passing nothing and vomiting constantly. The heart and lungs were healthy, giving evidence, however, that the dog had died of gradual heart failure and collapsed.

Upon opening the abdomen, however, the cause of death was instantly manifest. The alimentary canal from the stomach downward to the extent of about nine feet was enormously distended with fecal matter and undigested food. The gut was intensely congested, almost gangrenous. A certain amount of peritonitis was present. At this point, about nine feet from the stomach, a sharp, almost needle-like spicule of bone had perforated the gut and protruded into the abdominal cavity. Below this point the gut was collapsed, empty and normal. The liver was greatly congested, black and tarry looking on section. The kidneys were the seat of an acute diffused nephritis. The bladder was distended with decomposed ammoniacal urine. The perforation looked recent. The bone seemed to be part of the vertebra of a sheep, the two transverse processes being broken into sharp points, and the spinous process projecting between, but blunt. The bone was imbedded in what appeared to be fine hay or straw. It is reasonable to suppose that the dog, not being accustomed to being fed any meat and finding this bone, had half chewed it and swallowed it with the unfortunate result detailed. Had a diagnosis been made, which we acknowledge is always difficult, his life might have been saved by an operation. The nature of the foreign body, however, in this case, would have made it necessary to have opened the gut itself and to have extracted the bone, this being a much more dangerous operation than simple abdominal section and relief of obstruction by manipulation.

MORTON GRINNELL, M.D.

48 EAST TWENTY-SIXTH STREET, New York.

PREMIUM LISTS.

WE have received premium lists of the Philadelphia, Hartford and New York dog shows. Philadelphia offers a gold medal in champion classes and $20, $10 and silver medal in the more important open classes, with $10, $5 and silver medal in others and $10 and silver medal in nearly all of the remaining classes. Kennel prizes of $10 are offered for four or more, owned by one exhibitor, of mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, greyhounds, pointers, English setters, Irish setters, spaniels, beagles and collies. The best pack of foxhounds will receive $25; there is an entrance fee of $10 for this prize. A number of valuable special prizes are promised. Any breed not classified will receive $10 and silver medal if there are five entries

Hartford will give a champion cup for champion classes and $10 and $5 in the more important classes with 60 and 40 per cent. in the remainder and all the puppy classes. Kennel prizes of $15 will be given for four or more, owned by one exhibitor, to mastiffs, St. Bernards, pointers, English setters, Irish setters, spaniels, deerhounds, fox-terriers, beagles, bull-terriers, collies, and $10 to pugs.

The Apollo Stakes of the American Fox-Terrier Club will be decided at this show. The value to the winner will be $55 and a silver cup. The president of the American Fox-Terrier Club also offers $25 for the best exhibit of fox-terriers, to consist of not less than a grown dog and bitch and a dog and bitch puppy. The American English Beagle Club offer a silver cup for the best beagle dog and for the best bitch in the open classes. Other valuable specials are promised.

New York will give $20 in the more prominent champion classes, and $20, $10 and silver medal in the open. Some of the other classes have $15 in the champion and $10, $5 and silver medal in the open classes. A few classes have $10 in the champion, and $10, $5 and silver medal in the open classes. Some of the classes have no champion prize, receiving in the open class $10, $5 and silver medal, the remaining classes receiving $10 and silver medal. A silver club medal for the best kennel of four owned by one exhibitor to mastiffs, St. Bernards, pointers, English setters, Irish setters, black and tan setters, spaniels, fox-terriers, collies; best three deerhounds, greyhounds and pugs; best brace beagles; best pair bulldogs and bull-terriers. The Eastern Field Trials Club offer a club medal each to dogs and bitches that have been placed at an American field trial for pointers, English setters and Irish setters: also to black and tan setters, dog or bitch. The first Produce Stake of the American Fox-Terrier Club will be decided here. The president of the club will give $25 for the best exhibit of not less than a grown dog and bitch, and a dog and bitch puppy. Other special prizes for fox-terriers are: $20 for the best, $25 best dog, $15 best team of three and $10 each for best brace; best in champion classes, dog in open class, also bitch; dog puppy, also bitch, and best American bred whelped in 1886.

The American Mastiff Club offers the club's $150 challenge cup for the best American bred mastiff; the club's $100 challenge cup for best dog owned by a member, and the same for bitch, same conditions.

The American English Beagle Club offers a silver cup for the best beagle dog in open class and the same for bitch. There will be cash prizes of $50 for the best pointer dog in open class, $25 for best collie in open class, $25 for best four English setters and also for best four collies.

THE NEWARK DOG SHOW.

THE third annual dog show of the New Jersey Kennel Club began on Tuesday under rather unfavorable weather conditions, but notwithstanding the steady downpour of rain there was a very good attendance for a first day. There was a total of 537 entries, with but few absentees. The benching by Spratts Patent presents a very attractive appearance; the wire netting between the dogs allows almost unobstructed view of them. The partitions between the large dogs, however, are decidedly insufficient, and some plan must be devised to make them more secure. Those between the medium sized dogs should be at least a foot higher; with these alterations this system would give better satisfaction.

The quality of the dogs in many of the classes was above the average. This was notably the case in the collie and beagle classes. St. Bernards also made a good showing, although many of them were the property of the judge and not for competition. Pointers were a fair lot with only one newcomer of note Naso, of Kippen. English setters were few in number, but of good quality, first and second in the open dog class going to litter brothers, both winners in England. The judging began late and was not expedited as it should have been. All of the appointed judges were present except Mr. Martin Dennis, who was to have acted with Mr. A. S. Apgar in the collie classes. Mr. James Mortimer was selected to act in his place. Our comments upon the dogs will appear next week. Following is a list of awards up to Tuesday night:

AWARDS.

ST. BERNARDS.—ROUGH-COATED—CHAMPION.—*Dog:* Hermitage Kennels' Duke of Leeds. *Bitch:* Hermitage Kennels' Rhona. OPEN—*Dogs:* 1st, R. J. Sawyer's Sir Charles; 2d, Hermitage Kennels' Cyrus; 3d, Mrs. A. M. McGregor's Bosco II.; 4th, J. W. Burgess's Rene. Reserve, W. R. Watt's Hector II. High com., G. J. Geer's Jupiter of Clover Patch. *Bitches:* 1st, R. J. Sawyer's Beda; 2d, Dr. W. Young's Empress; 3d, Hermitage Kennels' St. Bride; 4th, withheld. Reserve, Associated Fanciers' Nora. Very high com., Mrs. J. Grant's Beda. PUPPIES—*Dogs:* 1st, G. J. Geer's Jupiter of Clover Patch; 2d, J. Meyer's Casius; 3d, Mrs. A. M. McGregor's Beppo. *Bitches:* Prizes withheld. High com., Dr. W. Young's Duchess.

ST. BERNARDS.—SMOOTH-COATED—CHAMPION.—*Dog:* Hermitage Kennels' Don II. *Bitch:* Hermitage Kennels' Lelia. OPEN—*Dogs:* 1st, J. W. Dunlop's Rigi; 2d, Hermitage Kennel's Erie; 3d, Miss M. H. Ludlum's Prince Eugene; 4th, C. A. Shriners' Bruno. *Bitches:* 1st, Hermitage Kennels' Thisbe; 2d, withheld; 3d, R. L. Steven's Flora II. PUPPIES—*Dogs:* 1st, O. Currier's Adonis; 2d, P. C. Ohl's Jupiter; 3d, F. Enos's Prince E. High com., L. F. Beckwith's King. *Bitches:* Not for competition.

MASTIFFS.—CHAMPION—No entries.—OPEN—*Dogs:* 1st, E. H. Moore's Ilford Caution, 2d, Wacouta Kennels' Wacouta Nap; 3d, A. Grant's Hildebert; 4th, withheld. *Bitches:* 1st, H. Scribner's Meg Merrilies; 2d, Wacouta Kennels' Wacouta Rose; 3d, withheld.—PUPPIES—*Dogs:* 1st, O. Brandt's Regulus; 2d, withheld. *Bitches:* 1st, withheld; 2d, B. Meyer's Irene.

NEWFOUNDLANDS.—1st, W. W. Silvey's Follie; 2d, W. H. Croselmor's Flora.

GREAT DANES.—1st, Osceola Kennels' Don Cæsar; 2d, W. W. Tucker's Rex.

GREYHOUNDS.—CHAMPION—C. D. Webber's Mother Demdike. —OPEN—*Dogs:* 1st, C. D. Webber's Pembroke; 2d, A. V. Beust's Hector. *Bitches:* 1st, C. D. Webber's Sister in Black. *Puppies:* 1st and 2d, C. D. Webber's St. Leger and Stormy Day; 3d, F. W. Buerch's Jumbo.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Chieftain. *Bitch:* Absent.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Bras and Highland Laddie. Bitches not judged.

POINTERS—LARGE—CHAMPION—*Dog:* Highland Kennels' Robert Le Diable. *Bitch:* Graphic Kennels' Mealy.—OPEN—*Dogs:* 1st and 2d, Naso Kennels' Nick of Naso and Jimmie; 3d, E. C. Sperry's Capt. Fred; 4th, F. R. Hitchcock's Tammany. Very high com., F. Smith's Joe. *Bitches:* 1st, S. J. Colt's Phyllis; 2d, Vail & Wilms's Lady Snow; 3d, Manhansatt Kennels' Temptation; 4th, Westminster Kennel Club's Kate VIII.—SMALL—CHAMPION—*Dog:* Graphic Kennels' Bracket. *Bitch:* No entries.—OPEN—*Dogs:* 1st, Westminster Kennel Club's Naso of Kippen; 2d, F. Vail's Naso of Devonshire; 3d, M. Mills's Naso Boy; 4th, W. H. Moller's Bon Ton. Very high com., H. O. Manger's Rip. High com., F. R. Hitchcock's Hector. *Bitches:* 1st, Westminster Kennel Club's Glauca; 2d and 3d, F. R. Hitchcock's Penelope and Modesty. Very high com. and com., Clifton Kennels' Drys, Queen Bow and Kent Queen.—PUPPIES—*Dogs:* 1st, F. Willrath's Jersey Bang Bang; 2d, Clifton Kennels' Pomnory Sec; 3d, F. Vail's Naso of Devonshire. KING CHARLES SPANIELS.—CHAMPION — W. Phillips's Rosius. OPEN—1st, withheld; 2d, W. Phillips's Princess.

BLENHEIM SPANIELS.—CHAMPION—W. Phillips's King Victor.—OPEN: 1st, Miss Mamie Phillips's King Pippin; 2d, W. Phillips's Lady.

KREHL—"PORCUPINE"—DALZIEL.

Editor Forest and Stream:

I do not know that I would feel called on to reply to Mr. Krehl's letter in your issue of March 10, had not "Porcupine" intimated that I would be occupying a position of malodorous and solitary eminence, did I not fall in with his opinion that Mr. Hugh Dalziel is worse than a skunk. What Mr. Krehl has to say as to dog poisoning is no business of mine, but I may say in passing that I do not see the drift of his remarks on this subject, for the *Turf, Field and Farm* is the only journal that I have seen that clears Mr. Krehl of the indefinite charge that Mr. Carter brought and that "Porcupine" corruscated about. But when he comes to Mr. Dalziel he makes a statement so evidently incorrect, and that every reader of FOREST AND STREAM should know is incorrect, that I cannot refrain from demolishing it. As near as I can boil down Mr. Krehl's charge against Mr. Dalziel, it is that Dalziel has always expressed an opinion that the famous "Anonymous Document" was a vile and cowardly libel, and the *Turf, Field and Farm* says that Dalziel wrote Mr. Krehl that the insinuations of the circular were but too true, etc. How far Mr. Krehl is from being correct is shown by the article "Corsincon" wrote FOREST AND STREAM over a year since, in which he says, referring to "Lillibulero," about to this effect: "He and I will not probably agree as to the merits of this circular, except in both denouncing the cowardice of an anonymous attack on men by name." How can Mr. Krehl's charge of duplicity be maintained in the face of this public declaration of Mr. Dalziel's? As I understand that Mr. Krehl is a regular reader of FOREST AND STREAM, I can only suppose he must have forgotten this explicit declaration.

Further, "Porcupine" has been constantly assailing Dalziel; charging him with lying, duplicity, crookedness, affiliating with "Wildfowler," etc. Tired of this, I at last wrote to personal friends of Mr. Dalziel's, those who have known him long and well, in every phase of his daily life, specifying all these charges made. Here are the replies:

LONDON, March 4, 1887.—*W. Wade, Esq.:* My Dear Sir—* * * As regards the charges which you say have been made against Mr. Hugh Dalziel, I can only say that I believe them to be most thoroughly unfounded * * * and I may say that I believe him to be one of the few thoroughly honorable and straightforward men connected with the doggy world. Yours, etc., L. UPCOTT GILL.

MANCHESTER, Vermont, Jan. 22, 1887.—* * * Dalziel's persistent and agressive honesty of purpose has stood in his way continually. No one in England dare impugn that one sterling characteristic of the man. I have been by his side in more than one fight for the truth, and know the ingrained, dogged tenacity of the man in what he believes to be just and fair. As to his being in collusion with little Clement, the idea is absurd. To my certain knowledge Dalziel threw up most lucrative offers from the London *Field* because he wouldn't act in the same street as the Frenchmen. * * * His drinking does not amount to so much; he is not a sot or slave to drink; with him it is simply an accident.—J. HARRINGTON KEENE.

Mark you, Mr. Krehl and "Porcupine," bitter personal enemies of Dalziel, say he is a liar and trickster; Mr. Gill, his publisher, long associated with him in business, money business, intimately acquainted with him in all respects; and Mr. Keene, an old associate, long side by side with him in the same office, have spoken above. I leave the case to the jury of your readers. W. WADE.

HULTON, Pa., March 15.

BESSIE'S PEDIGREE.—Chatham, Ont., March 18.—*Editor Forest and Stream:* I have been absent in the South for the last month quail shooting, and have not had a chance until lately to read my papers, which were not sent on to me. In your issue of Feb. 10 last, Mr. J. Tenney, of Haverhill, Mass., asks why Mr. Brown or myself did not dispute Bessie's pedigree when she was advertised for sale in FOREST AND STREAM in 1885. I can only answer for myself by saying I did not see the advertisement, as I was not a subscriber to FOREST AND STREAM at the time. In fact, the matter was brought to my notice by a gentleman in Massachusetts asking me if the pedigree was correct. Ruthven is a small place about forty miles from here, and I have been trying to find out who Mr. A. N. Harrington, who claims to have bred Bessie, is, but so far without success. I will say again that Fausta II. (Leicester—Rose), owned by Jas. Kime, V. S., of this place, was bred to Mingo once, and whelped, on July 10, 1884, seven, five dogs and two bitches, one bitch black and white and one lemon and white. The litter was bred on shares, and the black and white bitch came to me. She has only left my hands to be broken by Will Davidson, in Tennessee. I got her on my way south; shot over her while there and now have her with me. The other bitch, lemon and white, Mr. Kime disposed of to Mr. Jos. Cook, of Hillsdale, Mich. I do not know where she is now, but as she is lemon and white and Bessie is black and white ticked, they cannot be the same. I shall be only too glad to assist in any way in my power the purchaser of the bitch to recover from Harrington if there is such a man. There is fraud somewhere. —W. B. WELLS.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the 130 dogs entered in the March issue of the *American Kennel Register:*

BEAGLES.

4698. Bannerqueen, H. B. Nichol.
4699. Queen Bess, A. K. Fowler.
4700. Racket II., H. B. Nichol.
4701. Vocal, Herman B. Burr.

CHESAPEAKE BAY DOGS.

4702. Dundee, Osceola Kennels.
4703. LaPorte, Osceola Kennels.
4704. Miss Fortune, Osceola Ken.
4705. Traitress, Osceola Kennels.

COLLIES.

4706. Belle of Rosedale, Ira E. Whistler.
4707. Clifton Jo, Wm. P. Foster.
4708. Christine, Glencoe Collie Kennels.
4709. Don Clifton, C. W. Stoddard.
4710. Dundee, Miss Agnes M. Beach.
4711. Jubilee, Messrs. McEwen & Gibson.
4712. Loris, Jos. R. McAlpin.
4713. Mark Twain, S. S. Eldred.
4714. Midge, Glencoe Collie Kennels.
4715. Muff, Miles A. Hoffman.
4716. Pegg, S. S. Eldred.
4717. Phosa Belle, C. W. Stoddard.
4718. Rex III., C. V. Bemis.
4719. Roddy, Glencoe Collie Kennels.

DACHSHUNDE.

4720. Hecker, Ulrich Gerber.

DEERHOUNDS.

4721. Brandy, John E. Thayer, Hillside Kennels.
4722. Brasina, John E. Thayer, Hillside Kennels.
4723. Brazen, John E. Thayer, Hillside Kennels.
4724. Chieftain's Daughter, J. E. Thayer, Hillside Kennels.
4725. Fergus, A. G. Stoddard.
4726. Hillside Chieftain, John E. Thayer, Hillside Kennels.
4727. Phyllis, A. G. Stoddard.

FOXHOUNDS.

4728. Sis, L. N. Edwards.

GREAT DANES.

4729. Don Cæsar, Osceola Kennels.
4730. Donna Minka, Osceola Ken.
4731. Flora, Osceola Kennels.

MASTIFFS.

4732. Annette, Chas. E. Shaw.
4733. Ben Adam, J. W. Bullock.
4734. Lex, Edward A. Poyen.
4735. Miss Dorothy, N. Robinson.
4736. Prince, F. M. Johnson.
4737. Roger, J. M. Sheahan.
4738. Vixen, P. H. Mygall and P. H. Worth.

POINTERS.

4739. Ben Franklin, P. S. Odom.
4740. Bess, S. D. Reaves.
4741. Bow, Thos. S. Inglesby.
4742. Countess Flora K., Ad. J. Klofanda.
4743. Derby Duke, G. B. Talmage.
4744. Fleet, Detroit Kennel Club.
4745. Fly, Jas. P. Swain.
4746. Gordon, T. O. Hand.
4747. Governor, J. A. McGregor.
4748. Jersey, A. N. Stern.
4749. Jersey Bang Bang, Fred. Willrath.
4750. Sally, G. Albert Jones.
4751. Sue, Detroit Kennel Club.
4752. Trojan Snow, J. R. Draper.
4753. Vim, J. N. Martin.
4754. Westeru Bang Bang, Ad J. Klofanda.
4755. Wild Lilly, Geo. W. Lovell.
4756. Zura, W. F. Todd.

PUGS.

4757. Midge, W. B. Woodward.
4758. Sister, J. P. Davis.
4759. Talent, East Lake Kennels.

ST. BERNARDS—ROUGH-COATED.

4760. Beppo, A. Grant.
4761. Bismark, G. Grauer.
4762. Carlo, C. Wagner.
4763. Don Bonivard, L. Salinger.
4764. Flora, C. Wagner.
4765. Griff Bonivard, C. Bickford
4766. Hero, Welz & Zerweck.
4767. Madam, J. H. Sutcliffe.
4768. Major, C. Wagner.
4769. Minka, C. Essig.
4770. Monk Dietrich, C. Beach.
4771. Ned, H. Franz.
4772. Pasha, Welz & Zerweck.
4773. Pasha, Jr., G. Grauer.
4774. Pasha II., C. Wagner.
4775. Princess Karl, C. Bickford.
4776. Romeo, C. Wagner.
4777. Sultan, Welz & Zerweck.
4778. Wanda, Welz & Zerweck.

SMOOTH-COATED.

4779. Edna, R. Willmann.
4780. Gypsy T., S. Trask.
4781. Lex T., S. Trask.
4782. Prince E., F. Enos.
4783. Rex T., S. Trask.

SETTERS—ENGLISH SETTERS.

4784. Carrie W., R. L. Pond.
4785. Early Dawn, Detroit Kennel Club.
4786. Fannie.

HARTFORD DOG SHOW.—Hartford, Conn., March 17.—*Editor Forest and Stream:* The following gentlemen will judge at our show: James Mortimer, Esq., Babylon, L. I., mastiffs, St. Bernards, Newfoundlands, collies, bull-terriers, fox-terriers, dachshunde, pugs, Italian greyhounds, poodles, toy terriers, miscellaneous, and all classes not named below. John Davidson, Esq., Monroe, Mich., pointers, English and Irish setters, deerhounds, foxhounds and greyhounds. Dr. H. Clay Glover, New York city, black and tan setters. Ronald H. Barlow, Esq., Philadelphia, Pa., bulldogs. S. R. Hemingway, Esq., New Haven, Conn., spaniels. Norman Elmore, Esq., Granby, Conn., beagles and basset hounds. H. Clay Glover, V.S., will act as veterinarian. The Challenge dog food will be fed the dogs under the supervision of Mr. Wm. Tallman. The following railroads will carry dogs free in baggage car if in care of attendent: New York, New Haven & Hartford, Hartford & Connecticut Western, Hartford & Connecticut Valley. New York & New England R. R. will carry three dogs free if in care of owner or attendent, all over three will be charged for. Adams (Penn. N. Y. & N. E. Div.) Express will return dogs free where full charges have been made in shipping to show, and if the dogs are shipped back to the original owner and point. A certificate from the secretary of the club is required that the same have not changed hands. The Hartford & New York Transportation Co. will carry dogs boxed for 72 cents per 100lbs. each way. Dogs one to five leashed in care of man on deck, 50 cents each way. In care of baggage master, 75 cents each way. The company's steamers leave New York city, Pier 24 East River, each day (Sundays excepted) at 4 P. M., and arrive in Hartford the next morning about 7 A. M.—A. C. COLLINS, Secretary.

BEAGLES AT BUFFALO.—Mr. Chas. H. Mason requests us to state that he wrote of Ginger, winner of second prize at Buffalo in the open beagle dog class, "not a true beagle" instead of "but a true beagle."

DARKEY.

Editor Forest and Stream:

I have been smiling all the afternoon at Mr. Mason's description of my spaniel Darkey, exhibited at the Buffalo show. I always knew he was not a faultless dog, but if he is bad in all the places which Mr. Mason points out, I should say he is the very worst sort of dog that ever was on a chain, and, with all the faults which are pointed out by Mr. Mason, he missed the very worst, and that is, that his ears are placed too high and are not of sufficient length. I hope Mr. M. will correct this in his book.

The description reads thus:

First—"Skull too short and full and cheeky" (for size of dog I think he has length enough of head).

Second—"Muzzle lacking in depth and squareness" (I have never seen a square muzzle on a spaniel).

Third—"Neck not quite clean (If this means throatiness, Darkey has none, but has lots of frill).

Fourth—"Ribs too flat and body too short" (I deny he has flat ribs, body is rather short).

Fifth—"Neither body nor loin round enough" (What this means I don't know. I know Darkey was rather thin as he has been running all winter without any care, which also accounts for his coat being a bit rough.)

Sixth—"Too narrow in front, forelegs too long, light in bone, not quite straight, feet small and turned out, elbows not well placed." (From this description I should imagine that he must have front legs something like an Irish shallalagh, the more twists in it the straighter it becomes and the better it is liked. "Coat too curly about neck and loins. (It is certainly wavy just now, but that is accounted for by want of care, as he has slept out in an open kennel all winter and followed the horses every day.

If Darkey had not won under other judges, I think after reading this description of him I should give him away. What must the other nine entries in this class look like? It is very well for their owners that they did not come into the money or there would have been nothing left of them at all worth taking home.

I am not writing this in any cavilling spirit, but just to draw public attention to the defects of the prize winner, as written down in the judge's note-book. Knowing Mr. Mason, I expect I will hear from him through your columns. "Alas! poor Darkey."

J. S. NIVEN.

LONDON, Ont.

HARE DOGS.—Linden, March 14.—In issue of March 13 "E. F. F." doubts my statement in regard to a beagle's hunting when six months old; nevertheless it is the truth. I do not mean to say that all beagles will hunt at that age, as there are several that I know of that are older than his dogs and show no signs of hunting as yet, but I do not think it is the fault of the dogs; they must have a fair chance to learn or they certainly will not hunt at six months. I take my puppies out with the old dogs after they are four months old, on moonlight nights, and let them hear the old ones drive an hour or so, and after they have been out a few times that way they are anxious to know what it all means, and if they are good ones they will go at six or seven months. "E. F. F." must not get discouraged, but keep taking his puppies out, and in all probability they will be all right when the season opens again. I had a foxhound a few years ago that never showed any signs of hunting until after he was two years old, but when he did take hold it required a pretty good one to beat him. My puppies give tongue at five months. That is where the best part of the fun comes in; and I know of no better music than to stand and hear the little fellows when they get a good hot scent; and a man that can't enjoy that kind of sport is hard to please. My dogs have run down rabbits several times this season and I have seen it done by Mr. A. Parry's and by Mr. George Jones's beagles, both of this place; so mine are no better than lots of others; but I do not think a dog can run one down on bare ground by any means unless it is wounded. It has always been done in snow from 6in. to 12in. deep. I have been out this winter in snow from 6in. to 15in. deep, and have never had any trouble about my dogs' ability to get through it, notwithstanding that your correspendent "Brush" from Canada says, "with snow from 10in. to 12in. a beagle will soon come to heel and follow the path you make;" it has not been my experience. When there is too much snow for my beagles there is too much for me. I have a bitch that will whelp in a few days, and in six months from now I would like to have "E. F. F." come and see me some fine moonlight night in September or October, and I will show whether a pup six months old will hunt or not. There are two bench show dogs owned here a little over a year old, sired by champion Little Duke out of a first-class bitch, and I would not ask for two better dogs for hunters than they are turning out to be; they will hunt from daylight until dark if necessary. If "E. F. F." wishes to see some good stock in the beagle line he should visit the dog show at Boston in April next, where there will be the best exhibit of them ever seen in Boston.—W. S. CLARK.

CURRENT NOTES.—A dog's real worth comes out at a dog show. Mr. John E. Thayer's entries at the Boston show are put down in the catalogue at valuations which sum up a total of more than $125,000. "Porcupine" utters a plaint in the *Sporting Life* because the dogs at the Buffalo show were put down at a paltry million. As "Porcupine" had a prize winner there, perhaps he thinks it ought to have been two millions....In the event of a dog show by the Pacific Kennel Club at San Francisco next fall, we understand that several prominent Eastern breeders will send some of their best specimens to compete for the valuable kennel prizes that will undoubtedly be offered. The president of the club, Col. Stuart Taylor, has recently been elected president of the Occidental Coursing Club.

AWARDS AT SHOWS.—New Haven, Conn. *Editor Forest and Stream:* I would suggest to the managers of the coming bench shows the advisability of having some official list of awards published. If the clubs do not care to go to the expense and trouble of having the awards printed in on the margin of the catalogue, a good way is to have an extra page printed with the awards complete. This can easily be bound in with the rest of the catalogue on the second day of the show, and would not only greatly increase the value of the book, but give a list of the awards which can be relied upon. This is done at a great many of the English shows.—E. S. PORTER.

DISGORGED FOOD.—Bismarck, Dak., March 10.—*Editor Forest and Stream:* Did you ever hear of a bitch feeding her pups in the following peculiar way? Twice each day on going home from my office, I let her into the stable, she having been fed by all the neighbors, who all know Flo and like her. She immediately disgorges from a pint to a quart of what she has eaten. The pups expect it and jump for her mouth as soon as she enters. They are six weeks old, and the bitch seems to have but little milk. This she does twice each day. I have watched her for ten days.—W. H. WILLIAMSON. [This is not an unusual habit with dogs; and it is the customary mode of feeding young with some birds and other animals.]

A VIOLENT COUGH continued through the winter often brings consumption in the spring. Soothe and tone the irritated and weakened lungs with Hale's Honey of Horehound and Tar, and the cough yields and the danger disappears. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Victoria. By Essex Kennels, Andover, Mass., for white and orange St. Bernard bitch, whelped Feb. 18, 1887, by Rudolph II. out of Bernaline (A.K.R. 3239).

Cupid. By Essex Kennels, Andover, Mass., for cream fawn pug dog, whelped March 7, 1887, by Cicero (A.K.R. 4269) out of Titania (A.K.R. 471).

Yum-Yum. By W. H. Walbridge, Peterborough, N. H., for orange tawny and white St. Bernard bitch, whelped Nov. 20, 1886, by Marco (Harold—Judy) out of Hermita (A.K.R. 3018).

Gambetta. By W. H. Walbridge, Peterborough, N. H., for orange and white St. Bernard dog, whelped Nov. 20, 1886, by Marco (Harold—Judy) out of Hermita (A.K.R. 3018).

Queen Vic. By W. H. Walbridge, Peterborough, N. H., for orange tawny and white St. Bernard bitch, whelped Nov. 20, 1886, by Marco (Harold—Judy) out of Hermita (A.K.R. 3018).

Toby D. Glencho. By Felix V. Riviere, Thibodaux, La., for dark red Irish setter dog, whelped Oct. 26, 1886, by Dude (A.K.R. 1843) out of Annie Elcho (A.K.R. 4449).

Sandycroft Kennel. By Victor M. Haldeman, Milford, Del., also the prefix Sandycroft.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie Sting—Count Noble. Howard Hartley's (Pittsburgh, Pa.) English setter bitch Nellie Sting (Sting—Novelty) to B. F. Wilson's Count Noble, March 17.

Smut II.—Earl. A. McDonald's (Rockland, Me.) cocker spaniel bitch Smut II. (Brahmin—Rosa Bonheur) to his Earl (Obo, Jr.—Black Garrie), March 7.

Black Countess—Obo II. A. McDonald's (Rockland, Me.) cocker spaniel bitch Black Countess (Black Pedra—Smut II.) to J. P. Willey's Obo II. (A.K.R. 432), March 12.

Hazel Bird—Beaufort II. A. McDonald's (Rockland, Me.) pointer bitch Hazel Bird (Fritz—Bird) to his Beaufort II. (Beaufort—Nellie Bird), March 6.

Nettie B.—Belthus. Percy Ohl's (Plainfield, N. J.) English setter bitch Nettie B. (Mark—Belle) to H. F. Schellhass's Belthus (Rock—Meg), March 18.

Gypsey—General Grant. Wm. Silvey's (Philadelphia, Pa.) fox-terrier bitch Gypsey to Wm. T. McAlees's General Grant (Raby Tyrant—Warren Lady), Feb. 21.

Belle—Bang Bang. D. S. Gregory's (Jersey City, N. J.) pointer bitch Belle (A.K.R. 203) to Westminster Kennel Club's Bang Bang (A.K.R. 394), March 11.

Dela—Naso of Kippen. Chas. H. Newell's (Portland, Me.) pointer bitch Dela (A.K.R. 1347) to Westminster Kennel Club's Naso of Kippen (Naso II.—Maggie), March 6.

Noma—Hindoo. Fleetfoot Kennels' (Delhi, N. Y.) cocker spaniel bitch Noma (Brag—Clipper) to their Hindoo (Brahmin—Pansy B.), Jan. 7.

Daisy B.—Schuyler. Fleetfoot Kennels' (Delhi, N. Y.) cocker spaniel bitch Daisy B. (Sport—Curly) to their Schuyler (Brag—Fanny), Jan. 2.

Daisy Queen—Hindoo. Fleetfoot Kennels' (Delhi, N. Y.) cocker spaniel bitch Daisy Queen (Brag—Daisy B.) to their Hindoo (Brahmin—Pansy B.), March 14.

Beauty—Brag. Fleetfoot Kennels' (Delhi, N. Y.) cocker spaniel bitch Beauty (Grip—Flirt) to their Brag (Wildair—Little Buttercup), Feb. 14.

Fly—Hindoo. Fleetfoot Kennels' (Delhi, N. Y.) cocker spaniel bitch Fly (Col. Mac—Dot H.) to their Hindoo (Brahmin—Pansy B.), March 4.

Pet H.—Brag. Fleetfoot Kennels' (Delhi, N. Y.) cocker spaniel bitch Pet H. (Col. Stubbs—Beauty) to their Brag (Wildair—Little Buttercup), Feb. 7.

Dot H.—Hindoo. Fleetfoot Kennels' (Delhi, N. Y.) cocker spaniel bitch Dot H. (Brag—Chipper) to their Hindoo (Brahmin—Pansy B.), Feb. 5.

Flirt—Schuyler. Fleetfoot Kennels' (Delhi, N. Y.) cocker spaniel bitch Flirt (Col. Stubbs—Beauty) to their Schuyler (Brag—Fanny), Feb. 9.

Ruby III.—Gowrie. L. K. Mason's (Hasting, Ia.) Chesapeake bitch Ruby III. (A.K.R. 1913) to George E. Poyneer's Gowrie (Sunday—Nellie), March 1.

Hermita—Merchant Prince. W. H. Walbridge's (Peterborough, N. H.) St. Bernard bitch Hermita (A.K.R. 3018) to E. H. Moore's Merchant Prince, March 13.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie Bly. Warren H. Beede's (Lynn, Mass.) bull-terrier bitch Nellie Bly, March 13, eight (three dogs), by J. W. Newman's Young Royal Prince (Young Royal—Scarlet II.).

Jersey Trix. W. H. Joeckel, Jr.'s (Hoboken, N. J.) fox-terrier bitch Jersey Trix (A.K.R. 4490), Jan. 30, four (three dogs), by A. Belmont, Jr.'s Bacchanal (Belgravian—The Bedlamite).

Beech Grove Duchess. Geo. Jackson's (Beech Grove, Ind.) mastiff bitch Beech Grove Duchess (Beech Grove Duke, A.K.R. 3370—Beech Grove Gabrielle, A.K.R. 3371), March 7, ten (five dogs), by A. M. Fletcher's Tot (Titus—Digit).

Clapham's Duchess. Geo. Jackson's (Beech Grove, Ind.) mastiff bitch Clapham's Duchess (Turk—Lioness), March 15, four (three dogs), by his Beech Grove Duke (A.K.R. 3370).

Beech Grove Gabrielle. Geo. Jackson's (Beech Grove, Ind.) mastiff bitch Beech Grove Gabrielle (A.K.R. 3371), Dec. 14, ten (four dogs), by his Beech Grove Duke (A.K.R. 3370).

Vixen. Wm. T. McAlees's (Philadelphia, Pa.) fox-terrier bitch Vixen (Raby Tyrant—Warden Lady), Feb. 17, two (one dog), by Fred Hoey's Shovel (Spades—Rosecleaf).

Warren Lady. Wm. T. McAlees's (Philadelphia, Pa.) fox-terrier bitch Warren Lady (Brockenhurst Joe—Swan), Feb. 21, five (four dogs), by August Belmont Jr.'s Bacchanal (The Belgravian—Bedlamite).

Nana. Essex Kennels' (Andover, Mass.) pug bitch Nana (Sam—Titania (A.K.R. 471), March 18, five (two dogs), by their Cicero (A. K.R. 4269).

Titania. Essex Kennels' (Andover, Mass.) pug bitch Titania (A. K.R. 471), March 7, five (three dogs), by their Cicero (A.K.R. 4269).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Madge II. Lemon and white clumber spaniel bitch, whelped August, 1886, by Johnny out of Madge, by F. H. D. Vicite, Ottawa, Ont., to W. A. Hodge, Waterbury, Conn.

Cupid. Cream fawn pug dog, whelped March 7, 1887, by Cicero (A.K.R. 4269) out of Titania (A.K.R. 471), by Essex Kennels, Andover, Mass., to Miss Ida F. Warren, Leicester, Mass.

Bang Bang—Moonstone whelp. Liver and white pointer dog, whelped Aug. 5, 1886, by Westminster Kennel Club, Babylon, L. I., to J. M. Tracy, Ocean Springs, Miss.

Naso of Kippen—Glauca whelp. Liver and white pointer bitch, whelped Oct. 1, 1886, by Westminster Kennel Club, Babylon, L. I., to J. M. Tracy, Ocean Springs, Miss.

Bang Bang—Moonstone whelp. Liver and white pointer bitch, whelped Aug. 5, 1886, by Westminster Kennel Club, Babylon, L. I., to F. R. Hitchcock, New York city.

Tammany—Bertie whelp. Liver and white pointer bitch, whelped Dec. 14, 1886, by Fred Bollett, Brooklyn, N. Y., to John White, Bridgeport, Conn.

Bertie II.—Liver and white pointer bitch, whelped Dec. 14, 1886, by Tammany out of Bertie, by Fred Bollett, Brooklyn, N. Y., to E. K. Lefingwell, same place.

Yum-Yum. Orange tawny and white St. Bernard bitch, whelped Nov. 20, 1886, by Marco out of Hermita (A.K.R. 3018), by W. H. Walbridge, Peterborough, N. H., to E. B. Walbridge, same place.

Gambetta. Orange and white St. Bernard dog, whelped Nov. 20, 1886, by Marco out of Hermita (A.K.R. 3018), by W. H. Walbridge, Peterborough, N. H., to Prof. A. S. Annis, Manchester, N. H.

FOREST AND STREAM (from which we have frequently quoted articles by "Jay Bebe," well known hereabouts by his full name of J. B. Battelle) has a most interesting article from Mr. Battelle on "Domesticating the Ruffed Grouse," which we should be glad to copy in full, but for lack of space. Mr. Battelle's paper is one of the most curious and interesting contributions to natural history in the current literature on that subject, and it shows an enthusiastic love of his subject which is only equaled by the fascinating manner in which he sets forth his studies and experiments.—*Toledo Commercial.*

RANGE AND GALLERY.

WILMINGTON, Del., March 16.—Company E, D. N. G. Rifle Club, of Wyoming, again met defeat in a rifle match held to-day, at the hands of the Wilmington Rifle Club. The visitors in full uniform arrived this morning and were escorted by a committee of the home club to the rooms of the latter. The two clubs started for Schuetzen Park at 10 o'clock and after the first match took dinner at the Logan House. The weather was quite cold and the wind blew very hard, so that the conditions were very unfavorable to good shooting. The members were somewhat protected by the box recently erected, but the marker had a frigid time of it. The visitors were abundantly entertained and announced their intention of coming soon again to contest for the cup, which remains in the possession of the Wilmington Club:

200yds. Match—Wilmington Club.

ST. LOUIS, March 18.—Twenty members of the Pistol Club took part in this week's shoot for the club medal. In the score Mr. Perret and Mr. Bauer tied on 116, but in the shoot off Perret won, making 117, and thereby winning the medal twice in succession. The members are practicing steadily this week to keep Perret from getting next week as, in case he should win at the next shoot, the medal becomes his. Following are the scores made, the possible being 120:

L Y D Perret	12	12	11	12	12	11	11	12	11	12	—116
W Bauer	10	12	12	12	11	11	12	12	12	12	—116

BALTIMORE, March 19.—The Maryland Rifle Club held its final contest to-day for positions on the team to shoot with the Sandy Springs team on the 26th inst., and also for the gold badges at their range at Darley Park, and the team will be selected early in the week. The badge was won this time by Dr. C. J. Bell, of the Johns Hopkins University. It must be won three times to become the property of the contestant. The first 10 shots were for the badge. The scores were as follows:

O'Brian	3444404434254—56	C J Bell	4454454545334—62
C Schriner	4444454443450—56	L Bell	5544454434343—61
Dr Councilman	4434484434545—58	Prof Martin	4444344444344—58

SALEM, March 29.—At the shoot at the range to-day there was a good attendance, and in spite of the rain the following score was made:

Off-Hand Standard Target, 200yds., Military Rifles.

W G Hussey	4	4	7	7	9	7	8	6	10	—70
W Bachellor	10	5	6	5	7	6	9	8	7	6—69

TURNERS, N. Y., March 19.—The Central Valley Rifle Association, which comprises some of the best marksmen and line casters in the country, has changed its name to the Central Valley Rifle and Rod Association. The officers just elected for the current year are as follows: President, Dr. Joseph F. Ferguson; Vice-President, H. L. Leonard; Treasurer, R. Bicken; Secretary, A. B. Talcott, and Assistant Secretary, William B. Barclay. The association has received a challenge from a Pennsylvania rifle association to shoot a match by telegraph. The targets are to be measured by an officer of each club, attested by a qualified magistrate of the law, and the result telegraphed by each club to its opponent. It is not known yet whether the challenge will be accepted or not.

BRADFORD, Ont., March 15.—A rifle match took place here to-day between the Bradford and Aurora clubs, resulting in a victory for Aurora by 38 points. Following is the score, 5 shots per man per range:

Bradford.	100 yds.	200 yds.	Total.	Aurora.	100 yds.	200 yds.	Total.

There has been no cessation of the bombardment of targets in Conlin's New York gallery during the week. The revolver experts have Captain Paine's big score before their eyes and are trying to duplicate it. Some of them come pretty close to the model, Bird and Collins keeping within one point. Mr. A. Bronnan has made 45 out of a possible 60 on the decimal target, shooting the heavy .32-caliber revolver at the word "One." A new feature is the running man target reduced to 200yds. apparent range. Shooting at this target with a double action revolver tests the nerve and quickness of the marksman.

IRA PAINE'S PISTOL.—The announcement that Chev. Ira Paine was to give an exhibition of his skill with the revolver at Walnut Hill range on the 18th, drew a great crowd to the field. Mr. Paine was accompanied by his wife and Mr. A. C. Gould, editor of the *Rifle*, through whose efforts the exhibition has been brought about. Some time since Mr. Paine, at the same range, and under the same conditions as the match of to-day (100 shots from a Smith & Wesson army revolver, distance 50yds., on the standard American target), made a score of 791 points, which placed him at the head of revolver shooters in this country. To beat the record was the object of to-day's meet. Ten strings of 10 shots each were fired. The first string, 87 points, was encouraging, being two points above the record. The fifth point was remarkable, the tally showing 90 points, five more than had ever before been made. The balance of the work was superb, the last score being an 87, and landing Mr. Paine with a score of 841, beating his previous record by 50 points. As the score now stands, Mr. Paine has beaten the next highest record to his own by 59 points. The weather conditions were excellent. The scores:

First score.....9 5 7 10 10 10 9 10 9 8—87
Second score.....7 6 6 7 6 9 9 10 7 5—72

FITCHBURG, Mass., March 16.—The Fitchburg Rifle and Gun Club, at annual meeting March 13, elected the following officers: President, C. H. Brown; Vice-President, George W. Weymouth; Secretary, William V. Lowe; Treasurer, E. N. Cummings; Directors, H. I. Wallace, F. H. Rideout, A. B. Small, S. W. Putnam, C. H. Brown, Jr. The directors appointed the following standing committees: Range Committee, F. H. Rideout, S. D. Sheldon, William V. Lowe. Committee on trap-shooting, S. W. Putnam, B. W. Mackay, I. O. Converse. On houses and grounds, H. I. Wallace, E. N. Choate, I. O. Converse, L. R. Stathey, A. W. Baker, Jr. On finance, H. J. Wallace, A. W. Baker, Jr., J. E. Kellogg. On membership, J. M. Blanchard, E. N. Cummings, F. H. Rideout. The club had a large and enthusiastic meeting, and starts the present year with a very good outlook. The club has been in existence several years as a rifle club, and now that it has added the second feature of trap-shooting it has become more popular than ever. It numbers among its members some of the finest rest shooters at 200yds. in Massachusetts, and has a record of such shooting second only to that of the Massachusetts Rifle Association. It also has several strong off-hand shots. Among trap shooters it is well known that there are several who more than hold their own at any of the shooting tournaments.—WILLIAM V. LOWE, Sec.

The members of the Our Own Rifle Club, of Newark, held their weekly shoot for their diamond badge on March 17, with the following result: Snellen Team—Dietzel 98, Bertram 101, Klem 85, Gill 83, Knothe 90, Smith 88, Weider 93, Condit 75, Kroeplin 78, Willms 73, Snellen 114; total, 984. E. Freiensehner team—Weeks 111, J. M. Kiefer 82, F. A. Freiensehner 104, Limberger 85, Dresler 95, Friedenheit 95, O. A. Kiefer 96, Ochsher 73, Bauder 85, Jamouneau 87, F. Freiensehner 91; total, 904.

The Our Own and Rutgers Club have arranged for a series of matches, to take place as follows: First match at Rutger's range, March 29; second match at Our Own's range, April 5. The third match, if it is necessary, will be on a neutral range selected by the two clubs. The clubs are pretty evenly matched, and the matches will be interesting.

The regular weekly shoot of the Rutgers Club took place on the 15th at Huegel's range, with the following result: McGrath team—Hidebrant 101, McArdle 97, Snyder, 97, S. Smith, 85, Schwartz 91, Daly 60, Dalton 75, Black 77, Goeklin 81, McGrath 108: total, 872. Dietz team—Meisel 100, Osmun 91, J. Smith, 71, W. Smith, 70, Butler 40, Farrel 84, Schaffer 60, Allen 94, Frost 91, Dietz 94; total, 799. The McGraith team won by 73 points, Hildebrant and McGraith of the same team making the highest scores.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

"FOREST AND STREAM" DECORATION DAY TROPHY.

THE FOREST AND STREAM will give a $100 trophy to be competed for on Decoration Day, May 30, 1887.

The competition will be open to all gun clubs in the United States which were organized by the date of the original announcement, March 3, 1887.

CONDITIONS.

To be competed for by teams of three club members, each man to shoot at fifteen artificial targets thrown from a single trap.

A club may enter more than one team, provided, however, that no member may shoot on more than one team. Entrance fee, $3 per team. The entire sum of the entrance moneys (nothing whatever being taken out) will be divided into prizes, as stated below.

Each team may shoot on its own grounds, or elsewhere, as convenient. Scores are to be certified to by three club officers, under conditions which will be explained in due time.

Any target manufactured by the following concerns may be used, viz.: the Ligowsky Clay Pigeon Co., Cincinnati, O.; the Niagara Flying Target Co., Suspension Bridge, N. Y.; the Target Ball and B. P. Co., Lockport, N. Y.; the Cleveland Target Co., Atlantic Ammunition Co., 291 Broadway, N.Y.city, agents. Not more than one style of target to be used by any one team.

Targets to be thrown from any trap manufactured by any of these companies; trap to be set to throw the targets at least 45yds. from trap.

Five targets to be thrown straightaway, five at a right angle to the right, and five at a right angle to the left.

Guns of 10, 12 or smaller bore may be used. Distance 18yds. for 10-bores, and 16yds. for 12-bores or smaller. Any charge of powder, with 1¼oz. shot. Gun to be held below the armpit until shooter calls pull.

PRIZES.

First Prize.—The team making highest score will receive the FOREST AND STREAM DECORATION DAY TROPHY, value $100.

Second Prize.—The team making second best score will receive a cash prize of 50 per cent. of all the entrance fees.

Third Prize.—Team with third highest score will receive 30 per cent. of entrance fees.

Fourth Prize.—Team with fourth highest score will receive 20 per cent. of entrance fees.

In case of tie on highest scores made the tie must be shot off, under same conditions, for the TROPHY. Ties for any other prize must be shot off, unless by unanimous consent divided.

THE TRAP AT MARION.

NOTWITHSTANDING some of the New York morning papers had it that Brown was sick and the Graham-Brewer match for $500 a side on the grounds of the J. C. H. G. C. on the 17th inst. was off, a large number of trap-shooters were on hand—many from a distance, and Old South Paw and his boys, who ran the affair, had a big day. Al's Uncle Sam's face had a big beam on, and the boys had their hands full. They were an exceptional lot of birds Al furnished. Somebody said he had been training them on Snake Hill for days for the occasion. A cold stiff wind swept from the left across the traps, making big scores impossible and the quality of the birds more so; many of them with a couple of cracks of the wings were off like bullets and stopped not at all within bounds. The day was opened with the following: J. C. H. G. C. rules, $4 entrance, with birds:

First sweep:

Kleinz.....1 0 1 1—3
W Siegler.....1 1 ½ 1—3½
Outwater.....0 1 0 1—2
Folsom.....1 0 0 1—2
Blauvelt.....0 1 1 ½—2½
George.....1 ½ 1 ½—3
Harrison.....1 0 0 0 —1
Davis.....1 1 1 ½—3½

W. Siegler and Davis divided first, Kleinz and George second.

Second sweep:

Kleinz.....1 ½ ½ 1—3
W Siegler.....1 0 1 1—3
Outwater.....1 1 1 ½—3½
Folsom.....1 1 1 0—3
George.....1 0 1 1—3
Blauvelt.....1 1 0 0—2
H Siegler.....½ 1 ½ 1—3
Davis.....1 0 ½ 1—2½
Hughes.....1 1 ½ ½—3
Beers.....0 1 1 0—2
Nichols.....1 0 1 ½—2½
Johnson.....½ 1 1 1—3½
Thompson.....1 1 1 1—4
Day.....½ 1 ½ 1—3
Mills.....½ ½ 0 0—1
Class.....1 1 1 1—4
Payne.....1 0 1 0—2
Applegate.....1 ½ ½ 1—1

Thompson took first, Johnson second; Kleinz and W. Siegler divided third.

Third sweep, same conditions:

Hughes.....1 1 1 0—3
Class.....½ 1 1 1—3½
Nichols.....1 0 1 1—3
Beers.....0 0 0 1—1
Pernent.....½ 1 1 1—3½
George.....1 1 1 0—3
Outwater.....1 0 1 0—2
Still.....1 1 1½—3½
Folsom.....1 1 1 1—4
Applegate.....½ 1 1 1—3½
Lever.....1 1 1 1—4
Mills.....1 1 1½—3½
W Siegler.....1 1 1 1—4
Klinz.....½ 1 ½1—3
Quinlan.....1 ½1 1—3½
Blauvelt.....1 1 0 1—3
Thompson.....1 0 ½1—2½
Williams.....1 ½1 1—3½
Day.....0 ½0 1—1½
Stice.....0 1 1 1—3
Davis.....0 0 0 0—0
B Payne.....0 ½1 1—2½

Folsom, Lever and W. Siegler first, Mills second, Stice third.

Then came a match for $50 between Frank Kleinz, of Philadelphia (one of Brewer's backers) and Wm. Graham, 50 birds each, Hurlingham rules. Kleinz had much the harder birds and he was shooting a strange gun and lighter than his own, in order to comply with Hurlingham rules. He shot much better, it will be seen, than sweeps, but he became somewhat rattled in the match and made some bad misses. Graham knew all about the gun he used; he made some excellent kills, his wonderful second barrel coming in with telling effect. Fred Quinland acted as referee—and Duke did the retrieving:

Graham.....1202011021212212201111101111120201222211012122—41
Kleinz.....2100212210000021010120102101222222012002010012l2—30

Graham had 12 straightaway drivers, 5 right hand drivers, 8 left hand drivers, 3 right quarterers, 5 left quarterers, 2 incomers, 5 towerers, 3 dead out of bounds. Kleinz had 9 straightaway drivers, 3 right hand drivers, 4 left hand drivers, 6 right quarterers, 3 left quarterers, 3 incomers, 2 towerers, 2 dead out of bounds.

After this match the following sweep took place, open to all, $10 entrance, 10 birds. Hurlingham rule except weight of gun. W. I. Ritch, referee:

Stice.....1111110211—9
Class.....1021221201—8
Graham.....1211210211—9
Kleinz.....1111120111—9
Quinlan.....0211220012—7
George.....0221120122—8
Nichols.....1111211010—8
Lever.....1110111111—9
Folsom.....1100101111—7
Hughes.....1211010120—7
Miller.....1001212111—8
Mills.....1110011012—7
B Payne.....1010010210—5
G Davis.....1210100000—4
Cannon.....0011122110—7

In shoot off: Stice, Lever, Graham and Kleinz divided first; Class and Nichols divided second, Cannon took third.

Then Miss Oakley showed the crowd how a female could handle a gun. Miss Oakley stands gracefully at the score and made some very good kills, but the gun seemed too heavy for her with such clipping birds. She joins the Wild West Show in Europe next month. It was now nearly dark, and thus closed a big day among the pigeon men of New Jersey.

Graham refuses to shoot the match with Brewer at Philadelphia on the 24th inst. or anywhere else until Brewer shoots him on the grounds of the J. C. H. G. C. as agreed, which, if Brewer really means business, will take place the 31st inst. at Marion. The money from Brewer's friends was on hand to shoot at Marion after the match at Philadelphia, but Graham wanted the first agreement carried out, which will be done or the forfeit demanded.

There is another match on the tapis to take place on the grounds of the J. C. H. G. C., on April 21, between George Davis and W. C. Cannon (the one-armed shooter), 50 birds each, $250 a side, forfeit up; but more of this anon.

There will be sweepstake shooting, open to all, at crows, some 400 having been captured for the South Side Gun Club, the shooting to commence at 2 P. M., Saturday, the 26th inst., at the club grounds, Emmet street station, Newark, N. J. Trains from New York, Pennsylvania R. R., 12:30 and 2:30 P. M. Both trains stop at Marion. JACOBSTAFF.

FITCHBURG, Mass., March 17.—There was a large gathering yesterday at the River street range of the Fitchburg Rifle and Gun Club. Among the sportsmen present were Eugene F. Swan, E. T. Smith, M. D. Gilman, W. S. Perry, W. L. Davis, Joseph Beaury, of Worcester; A. R. Bowdish, of Oxford; George F. Ellsworth and I. N. Dodge, of Gardner; R. D. Wardwell, Herman and Theodore Strater, of Boston; J. H. Leonard, H. W. Eager, Frank Dansereau, E. F. Longley and H. G. Wheeler, of Marlborough; Frank Bruce and John Knowles, of Hudson; George Sampson of Clinton, C. W. Burbank of Leominster, and Charles M. Stork of Dumbarton, N. H. We also noticed S. W. Putnam, E. N. Cummings, H. C. Dean, W. I. Fox, G. W. Weymouth, A. W. Baker, Jr., and C. H. Brown, Jr., of this city. Eleventh competition for the Climax Badge, 10 clay-pigeons and 10 blue rocks:

	Pigeons.	Blue rocks.
Gilman	1111011111	1111111111—19
Smith	1111110111	1111111111—19
Davis	1011111111	1111111110—18

McKay	1010111001	1110101111—14
Dodge	0111010101	0010111111—13
Beaudry	1111010111	1011010001—13
Weymouth	0010110100	1011111111—13
Bowers	1010101101	1010011001—11
Ellsworth	1001010000	0001111111—10
Dean	0100110011	1010000111—10

On shoot off: Gilman, 9 out of 10; Smith, 3 out of 5 and withdrew. The badge has been won as follows: H. W. Eager, 3 times; C. M. Stark, 3; Theodore Strater, 3; E. F. Cooper of Exeter, N. H., and M. D. Gilman once each. It is to be shot for 12 times, when it becomes the property of the one who has won it the greatest number of times.

BOSTON, March 17.—The Boston Gun Club held a grand shooting tournament on their grounds at Wellington to-day. It was the first of a series of five matches for the A. B. C. shell prizes. Although the shooters arrived later than usual quite a number of birds were disposed of. The day being fine afforded good sport, the gentle breeze just being sufficient to give the clay-pigeons beyond the usual range; notwithstanding this good scores were made. Ross, of the Massachusetts, making the unusual score for our grounds of 25 straight in the A. B. C. match, which resulted as follows: Boss first, Wilson second, Francis third, Edwards fourth, Stanton fifth, Evans, Nichols and Lawson sixth, Ames and Kirkwood seventh, Bailey eighth, Connell ninth, Brown and Colony tenth. The following scores give the summary of the sweepstakes and prize shooting.

A. B. C. match at 10 clay-pigeons, 10 Peorias, and 5 Macomber metal targets:

	Clay-pigeons.	Peorias.	Macombers.
O Ross	1111111111—10	1111111111—10	11111—5—25
Kirkwood	1000100100— 3	1110111111— 9	11110—4—16
L B Evans	1100111100— 6	1111111111—10	01000—1—17
E W Lawson	0111010100— 5	1111011111— 9	01011—3—17
C S Edwards	1111111111—10	0101111111— 8	00100—1—19

J T J Goyle	0100000000 withdrew		

1. Five clay pigeons—Francis first; Evans second; Henry third.
2. Seven Peoria birds—Kirkwood and Francis first; Evans second; Derochmont third.
3. Seven clay pigeons—Francis first; Evans and Cutting second; Kirkwood third.
4. Five clay pigeons—Kirkwood first; Evans second; Witherell and Cutting third.
5. Seven clay pigeons—Farnsworth first; George and Kirkwood second; Derochmont and Evans third.
6. Three pairs Peoria birds—Evans first; Francis second; Connell third.
7. Three Peoria birds—Connell, Lawson and Stanton first; Kirkwood second; Evans third.
8. Five Macomber birds—Kirkwood first; Witherell second; Francis third.
9. Ten clay pigeons—Edwards and Ross first; Wilson and Francis second; Stanton third; Evans fourth.
10. Ten Peoria birds—Ross, Evans, Swift and Wilson first; Kirkwood and Lawson second; Stanton third; Evans fourth.
11. Five Macomber birds—Ross first; Swift, Francis and Kirkwood second; Stanton third; Adams and Ames fourth.
12. Three pairs Peoria birds—Edward and Lawson first; Francis second; Stanton, Swift and Baxter third; Nichols and Kirkwood fourth.
13. Five clay pigeons—Mack first; Kirkwood second; Wilson third; Baxter and Coyle fourth.
14. Five blackbirds—Stanton, Swift and Kirkwood first; Lawson and Ross second; Baxter third.
15. Seven clay pigeons—Francis first; Swift second; Wilson third.
16. Five Peoria birds—Ross, Lawson and Stanton first; Colony and Coyle second; Baxter and Kirkwood third.
17. Five pairs Peoria birds—Ross and Lawson first; Stanton second; Kirkwood and Baxter third.
18. Five clay pigeons—Mack and Ross first; Swift and Kirkwood second; Lawson and Baxter third.
19. Five Peoria birds—Stanton and Swift first; Baxter and Kirkwood second; Connell third.

The next match in the series will be shot Wednesday, March 30.

TORONTO, March 14.—The Toronto Gun Club held their first artificial bird shoot of the season at the grounds of the West Toronto Junction Gun Club, near Dan Blea's hotel, this afternoon. The weather was fine and a large number of members turned out and a very pleasant time was spent. A number of the West Toronto Club members joined in the shooting with the Toronto Club.

Sweepstake No. 1, 12 Canada blackbirds from 3 screened traps, 4 prizes:

A Ellis	11	W Jefferson	7
W McDowall	10	H Newman	6
D Blea	9	T S Bayles	6
D Biedan	9	T Brimer	6
G Thompson	8	B Pearsall	6
P Wakefield	8	H Walton	6
W Felstead	8	F F LeRoy	4
W Clinton	8	A Plush	4
G Pearsall	7		

Sweepstake No. 2, 7 blackbirds, 4 prizes:

Ellis	6	P Wakefield	5
Blea	6	Dollery	5
Thompson	6	Felstead	4
Jefferson	6	Pearsall	4
McDowall	5	Newman	3
F Wakefield	5	Beldan	3

In shooting off ties the first four won as named.

Sweepstake No. 3, 9 blackbirds, 3 prizes:

Blea	9	Thompson	5
Felstead	7	LeRoy	5
McDowall	6	Pearsall	5
Ellis	6		

Messrs. McDowall and Ellis shot off for third prize, the latter winning.

TORONTO, March 19.—A few members of the Toronto and West Toronto Junction Gun Clubs shot a friendly match at live birds at J. Oulcott's, Eglinton, this afternoon. A goodly number of members of both clubs went out to witness the shoot. Although the weather was cold and windy and not the kind for big scores, yet some good shooting was made. The teams shot very evenly all through until the last round, when the old club forged ahead and finally won by four birds. Jeff. Worden for the Torontos and Dan Blea for the Junctions, made exceptionally clean shooting. After the team shoot a sweepstake match was shot. The first four named were the winners. Mr. Joe Taylor was referee. Three sweeps at Canada blackbirds were also shot off. Mr. Oulcott, who is sick and could not take part, was very much missed. Team shoot, 10 birds each man:

Toronto.		West Toronto Junction.	
J Worden	10	D Blea	9
A Ellis	8	E Dollery	8
D Beldan	8	G Davis	7
E LeRoy	8	J Walton	7
G Pearsall	7—41	P Wakefield	7—37

Sweepstakes, 10 birds, 4 prizes:

J Bell	9	H Newman	7
A Purse	8	J S Baylis	6
G Pearsall	7	R Black	5
George H	7	W Pearson	4

First sweep at 12 Canada blackbirds, 3 prizes:

D Blea	12	P Wakefield	7
A Ellis	9	E Dollery	6
W McDowall	8	T Halton	6
E Le Roy	8	G Davis	4

Second sweep at 9 birds:

R Black	8	T Halton	6
A Ellis	7	P Wakefield	4
D Blea	7	W McDowall	4
W Pearson	6	E Le Roy	4

Third sweep at 9 birds:

D Beldan	8	George H	6
D Blea	8	F Quarrie	6
R Black	7	J Bell	5
A Ellis	7	W McDowall	5

NEW DORP, Staten Island.—Jannette vs. Emerald Gun Club, 10 men each, 10 birds, 25yds., 80yds. boundary, H. and T. traps. The birds were a good lot:

Jannette Gun Club.		Emerald Gun Club.	
H W Cordts	0101102111—7	G Hudson	2111101101—8
J Rottman	1211110211—8	Godfrey	1210121201—8
G Fricke	1111210101—8	W Glacum	2010200111—6
N Brunie	0101101011—6	J Voss	0120111102—7
H Vetter	1111120120—8	J Measel	2020011110—6
H Rottman	1120110210—7	Garring	1012002011—6
C Luteman	1111211102—9	G Ramsey	1102101202—7
C Matson	1010210101—6	McMann	1200111121—8
H Otten	1111211212—10	C Granger	1012010121—7
C Meyer	1010210120—6—76	L Scamberhorn	0100010100—3—66

There has been some talk of a return shoot. The following are the officers of the Jannette Club: H. W. Cordts, President; F. C. Bahr, Vice-President; John Hubert, Second Vice-President; N. Brunie, Treasurer; Ch. Anders, Secretary; Ch. Meyer, Sergeant-at-Arms.—O.

TORONTO, March 12.—The Owls had a big turnout this afternoon, when they had another of their weekly shoots. The scene was on Messrs. Gooderham & Worts' cricket field, and some capital scores are recorded below:

First match, 10 birds each, one barrel, gun below the elbow:

Ayres	9	Unwin	5
Humphreys	8	Lush	5
Beatty	7	Miller	4
Wells	6	Stewart	4

Second match, 5 snowbirds:

Unwin	4	Lush	3
Humphreys	3	Lockhart	3
Beatty	3	Ayre	2
Stewart	3		

Third match, 10 Peoria blackbirds:

Humphreys	8	Stewart	5
Unwin	8	Lush	5
Beatty	6	Lockhart	5
Bennett	6	Thompson	4
Sheppard	6	McClure	4
Scaife	6	Ayre	4

Fourth match, 5 Peoria blackbirds:

Humphreys	4	Unwin	3
Greenwood	4	Beatty	3
Bennett	3	McClure	3
Sheppard	3	Stewart	2

BRADFORD, Ont., March 15.—This afternoon a match was shot between the Aurora and Bradford Gun Clubs at 15 blackbirds each, resulting in favor of Aurora by 1 bird. Following is the score:

Bradford.		Aurora.	
J S Boddy	111111111101111—14	G Wilkinson	1101101100010111— 9
P Knoblock	111001111111100—11	R Wells	111111111110111—14
J St Clair	001111110010010— 8	J Roe	0001011010010111— 7
J Armstrong	0100001000111011— 9	E Collham	0111000000111110— 7
N A St Clair	1000111001111001— 8	J Mousley	1110010111111111—12
W Loury	1100011010111100— 8	R Mousley	0011011110111111—11
J F Lillicrap	1110101111100001— 8	A Petch	0101001000010010— 5
T Edmanson	1010011101011111—10	M Machell	0100011011111100— 9
	73		74

NEW YORK, March 17.—The Washington Heights and the Algonquin Gun clubs had a team match to-day at the former club's grounds, 169th street and Twelfth avenue. Each team was composed of eight men, who shot at ten clay-pigeons each from the 18yds. mark. The score of the match is as follows:

Washington Heights.		Algonquin.	
Fountain	2	Brenner	5
Disbrow	3	Griswold	7
Harrison	6	Van Schaick	4
Snooks	4	Hanna	7
Fox	4	Male	2
Terwilliger	4	Lordley	3
Hunt	5	Radjinsky	8
Glasser	3—31	Dunseith	5—41

Referee, Mr. Bradley.

TORONTO, March 17.—The West Toronto Junction Gun Club held a shoot this afternoon, the members being divided into three classes.

First Class—For prize presented by Chas. Stark, at 15 Canada blackbirds thrown from three screened traps:

Al Royce	10	C Hinton	10
W Clarke	11	E Brown	7
B Blea	10		

Royce won on shoot off.

Second Class—Prize presented by T. J. Peake—15 blackbirds, 3 traps:

G Briggs	12	J Worden	9
F Brimer	10	G Davis	8
W Wakefield	10	T Charlton	7
P Wakefield	9	H Newman	Retired

Third Class—Prize given by the club; 15 blackbirds, 3 traps: G. E. D'Eye 9, J. McGee 7; four others retired.

READING, Pa., Mar. 17.—The two days' pigeon shooting tournament, open to all comers, came to a conclusion here to-day. In all six sweepstakes were shot, the result being as follows: First shoot, 13 entries, 5 birds, 25yds. rise, one barrel. Ulmer and Quinlan divided first, Eley and Jones second, and Canon got third money. Second shoot, 11 entries, 10 birds, 27yds. rise, one barrel. Eley first, Hill second, and Stuart and Cooper divided third. Third shoot, 9 entries, 5 birds, handicap rise, 54 to 30yds, two barrels. Canon and Clayton divided first, Sharp and Killen second, and Eley third money. Fourth shoot, 8 entries, 10 birds, 30yds rise, two barrels. Eley, Quinlan and Forrester divided first money, Canon and Hill second, and Jones came in for third. Fifth shoot, 9 entries, 9 birds, 25yds., two barrels. Quinlan and Cooper divided first, and Canon and Goodman second. Sixth shoot, miss and out, 6 entries, 25yds. rise, one barrel. Canon, Quinlan and Eley killed five each and divided. Mr. Buckwater acted as referee.

BROOKLYN, Mar. 16.—A wonderful fine lot of birds, assisted by a good cross wind, made the shooting of the Coney Island Rod and Gun Club meeting to-day at Parkville, L. I., anything but good. According to the club rules a kill with the second barrel only scored half a bird. "Bub" McLaughlin, 25yds., killed all his birds and used his second barrel three times, making a score of 5½. J. H. Jones, 30yds., killed six with his first and missed one, and his score of 6 gave him the first prize and the club medal. The third prize was divided by L. Davenport, 29yds., and R. Mensees, 27yds., with a score of 5 each. A match for $100 between J. Beecham and J. H. Jones at 29yds. at seven birds each, the former receiving two dead birds, resulted in favor of Jones, who killed 6 to his opponent's 4. A subsequent sweepstake was won by L. Davenport with six straight kills. Second money was taken by J. Smith. Referee, D. Goodwin.

NEW JERSEY TRAP NOTES.—The annual crow shoot of the South Side Gun Club, of Newark, will be held on Saturday afternoon at 2 o'clock. The crows, 300 in number, have been trapped at Yardleyville, on the Delaware, and will be shipped to Newark this week. A full attendance of the members and an exciting shoot are expected.... Morristown is to have a new gun club, with a new club house and grounds for shooting flying targets.... The West Newark Gun Club held its regular clay pigeon match on the 17th, each member shooting at 25 birds, 21yds. rise. C. A. Doty broke 24, J. Adelman 23, J. Weber 20, G. Deisler 17, O. Hornich 15, W. Bishop 10, A. Assman 8, J. Lamb 8, H. Habig 8, F. Hilford 3.

ATHENS, Pa., March 20.—The gun club held their first shoot of the season for the club's gold badge on March 19. Clay-pigeons and blue rocks were the targets used. Mr. Frank Fuller won the badge by breaking 11 out of a possible 12. In the evening the members met at the headquarters and elected the following officers for 1887: President, Frank Fuller; Vice-President, E. W. Davies; Secretary and Treasurer, W. K. Park; Committee, N. J. Knarlesboro, H. D. Smith, Frank Fuller, Chas. Armstrong. It was decided to enter one team and possibly two for the FOREST AND STREAM Decoration Day Trophy Match.

TEXAS.—A tournament of the Texas State Sportsmen's Association will be held at Gainesville, Tex., May 9 to 14, at Ligowsky clay-pigeons and wild and tame birds. The tournament will be under the auspices of the Gainesville Gun Club. Address Box B, Gainesville, Tex. Guaranteed purses, three diamond badges, Guidon and Ligowsky silver cup. Open to the world. Purses, badges, medals and cups valued at over $5,000.

The Coney Island Rod and Gun and Fountain Gun clubs have appointed Messrs. Ayres and Blattmacher a committee to select a ground at or near Woodlawn, L. I., for the use of the clubs, who are willing to come into the proposed amalgamation of Long Island shooting clubs.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

MAY.

28-30. East. Div. Spring Meet, Haddam Island.

JUNE.

18. Brooklyn, Annual, Bay Ridge.

JULY.

18-31. W. C. A. Meet, Ballast Island.

AUGUST.

FOR membership apply to the Secretary, W. M. Carter, Trenton, N. J. Required age, 18 years or over. Application to be accompanied with $3. Sec'y A. C. A. Central Div., E. W. Brown, 4 Bowling Green, New York. Sec'y A. C. A. Eastern Div., W. B. Davidson, Hartford, Conn. Sec'y W. C. A., J. O. Shiras, Cincinnati, O.

A CRUISE TO CHARLOTTE HARBOR.—II.

BY TARPON.

BY noon we are back to camp, the tide is rising fast and we must be off. Dinner is hurried over, and pushing, poling and wading, we work through the shoalest part of the pass. Soon we reach better water, and making sail, are off at last. A few miles bring us to Little Sarasota, where Capt. Webb has a fine place, the place and owner both being spoken very highly of by all who have been fortunate enough to see the beauties of the one, or test the hospitality of the other.

By the way, "that reminds me" I have a letter of introduction to that same Capt. Webb, have been past his ranch a score of times, and have never even seen him. Always have a fair wind and plenty of it. I'll get windbound there one of these days, see if I don't.

We pass Webb's with a free sheet, and at sunset open out Casey's Pass, where we meet the sloop Vanessa, Capt. Topliffe, on her way home from Charlotte Harbor. The crew gave us a dreary account of bad weather. "Well," says Cook, "good weather must come pretty soon, and we'll be there when she comes."

An early start is made in the morning, for we have fifteen miles of open beach to make before we can get in to Stump Pass. The wind is light; we jog along some twelve miles, when it fails us completely. We wait an hour. No wind, no sign of wind. The Skipper pulls out a coil of line from the stern locker, hitches one end to the mast, makes a bowline in the other end, and working up to the beach jumps ashore with the bowline over his shoulder. "Now, Cook, you keep her along clear of the beach, and steer fine," and away he starts on the towpath of shell and sand for Stump Pass, which is reached at last. And as we work inside a splendid breeze starts up, but dead ahead, so we are not sorry for tracking.

After a quick dinner we start for Boca Nevaro. The Cook wants to paddle a while, and the Skipper is agreeable, for it is a stiff breeze and he wants to do some fancy sailing. He does it too, for when about half-way through he fills his pipe, belays the mainsheet, and gets under the lee of the weather coaming with a match all ready when, bang! comes a puff from around a clump of mangroves, and down goes Honest J. with the water pouring over the lee rail. Not for long, however, for the little craft jumps into the wind and wallows out of the mess, while the Skipper stupidly looks on, match in one hand, pipe in the other. When things are settled a little, he lights his pipe, and with a long, contemplative puff, remarks, "Well done, little boat, all the credit's with you."

Boca Nevaro is reached by 4 P. M., and while Cook gets camp in order, Skipper goes for birds, getting enough and to spare; in fact one has not to look for birds in Charlotte Harbor.

Morning breaks fair and bright, and the fleet is soon away heading south. A few hours run and Big Gasparilla, with its fish ranch, is reached, where we have dinner, and get away again, making Lacosta about 3 P. M. There is a large fish ranch on Lacosta owned by Spanish parties; the catch is principally pompano, which are salted and shipped to Havana. Lacosta is one of the finest of the outer keys, containing some very good hammock land. There are two families settled here permanently, but the island is a lighthouse reserve.

Next morning we go through a narrow passage in the mangroves, and run for some ten miles through beautiful landlocked bays, finally coming out near the pass between Lacosta and Captiva. We cross the Pass and work around into the little harbor of Captiva, where we find quite a village of palmetto houses, a good wharf and plenty of fresh water, but no inhabitants. We take possession of the shed nearest the wharf, bring our traps ashore, and are once more housekeeping. We remained here three days, hunting, fishing and rambling round the island. The fishing was excellent—redfish, mangrove snapper, jack, etc. All too soon the time passed, and when we at last stowed for a start, it seemed like leaving home. But we must go to Sanibel, we have been told there are lots of shells there.

On our way to Sanibel, we find two squatters who have planted a cocoanut grove and are waiting with patience for a crop. As it takes some twenty-five years for the trees to come to bearing size, it is evident they need all the patience they can get.

Sanibel is reached at last. We find a good-sized sloop, the Guide, of Sarasota, lying moored to the bank, while her crew are out prospecting for shells. Our camp is soon made, and we start for the beach with great expectations, which were hardly realized. Shells were few and far between, at least the kind we cared to gather. After supper the captain of the Guide came over for a smoke. We found him quite a character in his way, and brim full of yarns about the coast, which had been his home from a boy. Later we were joined by his party, an elderly gentleman and his wife, who were having a quiet cruise by themselves. We sat around the fire late that night. Our visitors were intelligent, well-read people with no affectation, and we enjoyed it amazingly. And the old lady, as she sat stirring the fire, remarked that "she hadn't had such a good time since she came to Florida." Genial old soul, I hope she'll live a thousand years.

In the morning the Guide and her party left for Fort Myers. The Cook started for the beach, while the Skipper in the Horicon started for a sand bar just inside the Pass, looking for redfish. He does not find any redfish, but does find a sawfish over 15ft. long, into which he prods the grains, hard and fast, and then sits down suddenly. Like many another undertaking, all the fun was in anticipation. That fish wouldn't be quiet, and he wouldn't run in smooth water either, but up and down and across the channel, just where the waves were short and lumpy, and he kept the Skipper bailing, too. But all things have an end, and Mr. Sword-fish in an unguarded moment stranded himself at the mouth of a little bayou, and near a large stump; the Skipper was overboard in a twinkling, and in spite of sundry slaps on the shins, and one or two capsizes in the soft mud, that fish was moored to the stump so solidly that he could not have got away had he been twice as big. And the saw which hangs over my table is a magnificent affair. "Furthermore," Mrs. Tarpon says, as she looks over my shoulder, "that saw is not for sale."

After two very pleasant days at Sanibel, we decide to strike across to the main land and go back between Pine Island and the main, completing the circuit of Charlotte Harbor.

We got away with a fair tide but a strong head wind; the wind increases, and after beating and battering about for several hours, we manage to make St. James and go into camp.

St. James is a new town built on the extreme southern part of Pine Island, and as the ground is flowed by the heavy spring tides it can hardly be called a sandy bank affair. The settlers have made a very creditable showing for the time they have been there, but just why they decided on that location for a town is not so plain. Probably some one makes money out of it. While we were in camp here the Cook was quite sick. We tried all the medicines purchasable at the new store but Cook got no better. Finally, as a last resort, the Skipper brought out his snake medicine (some of as villainous whisky as was ever put in a bottle). Cook, after much coaxing, tries one dose; it was enough. Says he: "Rather than take any more of that I'll get well," and he did.

One night at St. James was enough, and though the weather was bad and bid fair to be worse, we made sail and stood for Punta Rassa. Wind increasing as usual, we were obliged to get under the lee of a large mangrove key, where we reefed down snug and made another try. But wind and sea were too much for the little craft, so we came to at a small key inhabited by a man, his wife, several children and dogs, just how many dogs I can't say, as I got bewildered trying to count them. However, they gave us welcome, the man and his wife as well as the dogs; in fact, the latter seemed particularly glad to see us, especially the Cook, for they gazed at his tender calves with a wistful, longing look that was positively touching. But there was something about the Skipper's hard, angular features that they did not like, so they gave him a wide berth. We were detained here the rest of the day, making our camp at night on a little patch of ground barely large enough to stretch out on.

In the morning came better weather; we stretched over to Sword Point, then walked up under the lee of the land and so make smooth water. Sword Point is one of the Skipper's old camping places and of course he has something to say about it.

Noon brings us well up behind Pine Island and we decide to camp on Scorpion Key, another one of the Skipper's old camping grounds. It was Scorpion Key where Souther got hold of the big shark and had a pair of very sore hands to show for it, but he got the shark. As we mean to stay here some time we take great care to make our camp as comfortable as possible.

After everything was shipshape, the Skipper takes the Horicon and starts for a rookery near by; in fact the expedition was planned with a view to a few specimens of rare birds, but in that respect was only partially successful. The bird hunters have done their work in Florida pretty well and rare or beautiful birds are hard to find and harder to get. When the Skipper reached the rookery he found it almost deserted. Two years ago he was there and the place was fairly alive with birds, white herons, white egrets, Louisana herons, roseate spoonbills, white ibis and cormorants and pelicans without number. Now nothing but a few ibis, pelicans and cormorants, the old nests tumbling to pieces and no new ones building.

We spent three happy days and nights in our camp at Scorpion Key, though the weather was bad and we did not catch fish, and did not get the birds we wanted.

On the morning of the fourth day Cook reported, "Fresh water getting short." "All right, Cook, we'll go over to Gasparilla and get some." We had a good breeze to the head of Pine Island, then almost calm for a few hours, then coming out ahead and blowing heavy. Reefed down and had a sloppy time generally, but got over to Gasparilla all right. Found the fishing ranch deserted, so we took possession, filled our water tanks, got supper, took a ramble on the beach and ended up by camping in the ranch-keeper's house. We were very tired and looking forward to a good night's rest, but were sadly disappointed; the place was alive with rats, and they resented the intrusion of strangers so much that they resolved to keep us awake, and they succeeded admirably.

Morning again, and away for Stump Pass, which we reach at 4 P. M. The schooner Lillie, of Key West, is in for a harbor as it is blowing quite fresh outside. Cook made camp, while Skipper went off to the flats and laid in a supply of birds. The Lillie gets away at daylight, but we do not care to try just yet. About 9 A. M., however, the wind hauled off the land and we made a start hoping to cover the 15 miles between here and Casey's Pass. Our easterly wind lasted for 5 miles, then fell calm. A puff from the south'rd, one from the west, back to east again, finally jumping out of northwest and coming down on us like a thousand of brick. The sea got up very quickly, and we had our choice, back away to windward, run back to Stump Pass, or go on the beach.

We chose to go to windward as long as we could, and have to the next best. Cook thought we had better reef, but the boat was too small to hold her own in such a sea with anything less than full sail. We lashed a pole fore and aft the cockpit, then stretched our shelter over the whole so as to keep out most of the water, and worked away. "Fortune favors the brave," and after some three hours we were off Casey's Pass. The sea was breaking clear across, and looked ugly, but by close watching and careful steering we made it. One little dash through the breakers, and as we slide into smooth water the Cook gives a sigh of relief and the Skipper reaches for his pipe.

After we get in the pass we keep off to the right and run south a half mile to the Skipper's old camp. Skipper finds these old camps most everywhere. While we were in the thick of camp making we caught sight of a large catboat coming down the inside passage. Just as the Cook remarked "She's coming flying," we saw the wee sails of a canoe astern of the catboat. Of course, we were interested, and when the canoe drew up alongside, and then, passing the big boat, drew ahead, the Skipper was all alive. "Cook, I'll bet a cookie that's the old Solid Comfort." Sure enough she proved to be that same, and when her captain luffed in to our camp in answer to our hail, it seemed like meeting an old friend. Something of a canoe is the Solid Comfort, launched July, 1881, she has been in daily use ever since, is still tight, serviceable and apparently as good as new. She has no nickel plate, no mahogany finish, but she is the most comfortable canoe I have ever seen, and though she is quite modest about it, she has made the longest cruise known, and has covered more miles under sail and paddle than any canoe afloat.

We rolled in our blankets early, for we were homeward bound now, and must make an early start in the morning. Before light we were on our way. With a fair wind we worked through the Mangroves, and at 5 P. M. were at our old camp at Sarasota. More fair wind the next day, and away we go up Sarasota Bay. Tampa Bey is reached a little past noon, and we push out for Mullet Key. We are soon over, past Mullet Key, and headed for Pass-a-Grille. We make the Pass before sunset and go into camp.

Here we have an adventure. We are tired, and are soon asleep; but something is prowling round camp, and Skipper rouses several times to look about, but the night is too dark to see anything. "Guess it's a coon," says the Skipper. About midnight there was a noise in the boat; the Skipper looks out and thinks he can see a coon. Something is there, sure. Skipper reaches for the gun and stands up. Something is creeping along the sand. Bang! Something stumbles, gathers and stumbles again, and with a low growl disappears in the darkness. Skipper slips in another cartridge, and lies down, this time to sleep undisturbed till morning. An early breakfast, and we are off, to make a good run, and at 3 o'clock P. M. are at Hog Island—twenty miles from home.

This will probably be our last camp, and we try to make the most of it. We cook a glorious supper, but the appetite seems to be lacking. There is a fine evening to enjoy ourselves in, but somehow we don't seem to do so. We are sad at heart, for this is our last night out. Morning comes, after a restless night, and in silence we break camp, stow our traps and away for home. We have had a grand outing—lots of bad weather, etc., but looking back we cannot remember anything but the jolly good times we had, and would like to try it over again.

In this great big country of ours there are thousands who would enjoy just such a trip, but circumstances exist that render it impossible; but half a loaf is better than no bread, and if they cannot go themselves, they can read and enjoy it second-hand. That is why this is written, and if its perusal gives pleasure to one tired soul in harness, the end sought will be reached.

NEW YORK C. C.—The following letter has been received by the secretary: 72 Mark Lane, E. C., March 12, 1887. C. J. Stevens, Esq., Secretary N. Y. C. C.—Dear Sir—The date of our sailing challenge cup race is Saturday, June 11, and it will take place, as heretofore, on Hendon Lake. We are hoping to have some competitors from your side, and to be able to return some of the hospitality shown to our men when with you. It has not yet been definitely settled whether we shall challenge for your cup again this year, but I will bring the matter before the committee at the first opportunity and communicate the result to you at once. I am, dear sir, yours truly, T. G. F. WINSER, Sec. R. C. C.

BOW-ARROW POINT.

THE following description of the proposed site of the A. C. A. camp of 1887 is from the Plattsburgh *Republican* of Jan. 22, '87:

"We understand that a committee of the A. C. A. will visit this part of Lake Champlain early in the spring with a view of looking for a site for the summer camp of that association. They can hardly fail, we think, of being pleased with Bow and Arrow Point, the southernmost point of North Hero Island, and which is located at the eastern entrance of the Gut, the important water thoroughfare between Grand Isle and North Island.

"Bow and Arrow Point lies just eight miles from Plattsburgh. It is, as its name indicates, a 'point' of land, which at a distance strikingly resembles a shapely arrow point, one of those interesting relics of the stone age of the North American savage, specimens of which are found quite frequently in all this region. That form doubtless gave this point its name, 'Bow and Arrow Point.' But whence comes the 'Bow.' Look on the coast survey chart, or look down on the locality from a balloon, and you will see at once. Three the shores northward on either side, from the Point, to the head of Hibbard's Bay on the east, and to Hazen's Point on the west, and you have a very good contour of a bent bow, with the arrow in place ready to be sent home, across the Gut, straight past Col. Nichol's Point of Pines, into the Hartwell Cottage grounds.

"Whether the name was given by the Indians or the French who came in here almost three hundred years ago is not known, but it is certain the name is very old, and it is not unlikely that the extraordinary resemblance of these shores to their most deadly weapon of offense, defense, and for the chase, suggested itself to the original owners of this pleasant domain.

"Bow and Arrow Point is a little over a half mile long, from the extreme southern point to the narrow neck at the northern end which joins it to the main island (a mere carrying place, this neck is a gravel ridge, just wide enough for a carriage road, which is entirely overflowed in high water). Its extreme width is 700ft., which width it holds for nearly 1,000ft. in the center, the two extremities tapering gradually to points, as already noted. From the Point the land ascends gradually, going north until it reaches, at a distance of about 2,200ft., an elevation of some 50 or 60ft. on the west shore, which is marked by a rocky precipice, while the east shore is low, the land inclining to the east as well as the south. This entire southern portion is covered by a thrifty young grove of hickory, very open, the whole being sodded with grass. The shore line on the east 3,000ft. long, is available throughout for camps or cottages (as the whole ground is in fact), while on the west, the shore from the head of the precipice rapidly descends to the neck at the north end, the northern portion having many charming sites for camps, with nice grass ground and low evergreens. Beyond the neck to the north about half a mile is the nearest farm house, and there are, we believe only two houses on North Island within two miles of the point.

"There is sufficient depth of water to allow the largest lake steamer to land, although there is no dock, steamers coming up alongside the gravelly beach, on the east side of the Point, landing passengers from a plank. One mile and a half south on Grand Isle is Adams Landing, where is located Adams postoffice, store and boarding house. Here boats from Plattsburgh, and Burlington, and Maquam, the lake terminus of the Boston & Lowell R. R., land four or six times a day, the regular fare from Plattsburgh being 25 cents. There is abundant safe harbor ground on the indented shores of the Gut, and splendid open water for sailing to the westward, the distance to the New York shore, due west, being four miles and a half, with the two Sister Islands lying a mile and a quarter to the southwest, while one and a half miles east, through the Gut, brings one past Ladd's Point into the waters of the Great Back Bay of Lake Champlain, interposed with islands, and a stretch of nine miles open water to St. Albans Bay.

"It goes without saying that the scenery from the elevated portion of Bow and Arrow Point is grand, with the Adirondacks in full view to the west, the Green Mountains to the east, and Lake Champlain all around, and we may also add that there are no malarious swamps in the vicinity, and only healthful shores around Bow and Arrow Point.

"With pure air, pure water and plenty of it, good sailing, with no ugly swash or currents; good bathing, good bass fishing (the best bass fly-fishing in the lake within 500yds. of the Point), good neighbors, good base of supplies, mails from Boston and New York and Montreal twice a day; ten hours from New York city, nine hours from Boston, four hours from Montreal, and on the great waterway from the Hudson to the St. Lawrence, with all these advantages, what better inducements can the American Canoe Association ask for than are afforded by Bow and Arrow Point? If they conclude to come, as we hope they will, the sight of their fleet of 250 sail in the grand regatta will be unequaled on Lake Champlain (barring the unknown possibilities of prehistoric time), since the sailing of old Viceroy Tracy's great fleet of 300 light bateaux and bark canoes' from Fort St. Anne on Isle La Motte (twelve miles north of Bow and Arrow Point) in October, 1666, bearing 1,000 French and Canadian Indians on their great expedition against the Mohawks."

THE A. C. A. MEETS AND THEIR COST.

Editor Forest and Stream:

Will you submit to the members of the A. C. A. the following questions; any opinions upon them will be useful to the committee on revised constitution:

First—If the annual dues are reduced to $1, payable to division purser, what proportion of that $1 should be remitted to A. C. A. treasurer. In other words, for how little (per member) can the A. C. A. be carried on, expenses being limited as already outlined?

Second—How much can each division afford to pay (per member)? From ¼ to ½ of $1 seem to be probable limits.

Third—As to annual camps, is there any suggestion better than the following: Each division to hold a camp at a time not interfering with others. The division to which the A. C. A. commodore belongs to make its camp the annual A. C. A. camp. Each division in turn to have this honor. This camp to be held if possible after the others, and to be the scene of the regular regatta and of the international races under the A. C. A. officers and regatta committee with the assistance of the division regatta committee. The local division to bear expenses to its usual division amount, the A. C. A. making up the extra expense.

It is very desirable to get these questions settled without delay, although they may not take effect until after the next camp. They have direct influence upon the action to be taken by new divisions and prompt answers will be submitted to the committee which should meet at an early date. R. W. GIBSON.

FLAGS FOR PRIZES.—The regatta committee for 1887 invites contributions in flags for prizes at the meet at Lake Champlain in August. The responses received by regatta committees in former years lead the committee to hope that the flags to be offered at Bow-Arrow Point may have added to their worth as prizes, the value derived from the knowledge that they are the offerings of friends. Flags may be sent to any member of the committee. Contributors may designate the race for which they prefer their flags should be offered, and the committee will endeavor to comply with their wish. Flags should be sent to the committee before July 1. Henry Stanton, Chairman, 43 West Thirty-sixth street, New York city; H. C. Rogers, Peterboro, Ont., Canada; George H. Barney, Springfield, Mass.

THE THISTLE'S CHALLENGE.

THE challenge from the Clyde is likely to arrive here by the last of this week, and the dimensions will soon be made public. The iron work of the hull was finished nearly two weeks since, and the carpenters were well advanced with the decks, etc. As to the inception of the idea, it was first talked of by Mr. Jas. Bell and an East Coast yachtsman, and Mr. Watson was consulted as to his willingness to undertake the task. This was prior to Galatea's defeat; following that Mr. Bell mentioned the matter to several Clyde yachtsmen, and in half an hour sufficient funds were guaranteed; a meeting was held and Mr. Watson was empowered to go on with the work.

In spite of the statements of seven or eight sets of plans submitted by Mr. Watson, he never submitted any, and the dimensions were not known even to the owners up to a very recent date, and not until she was half completed did any of them see either the plans or the boat. While the actual dimensions of the Thistle are very different from those published by the Boston *Herald*, it is now certain that, as we pointed out at the time, the plans given were made in Mr. Watson's office and given to builders, giving the general construction and scantling with sufficient accuracy to base an estimate upon, in fact representing a boat of about the same cubic contents and cost, but as it was foreseen that drawings thus given out might come into the possession of persons for whom they were never intended, they were intentionally "cooked." The time will be short now before the full dimensions will be known and the question of what must be done to defend the Cup will again be put before the New York Y. C.

BUILDING NOTES.

AT Mumm's yard, Bay Ridge, the Shamrock is planked up and her deck frame in, the beams being of oak, hackmatack and yellow pine, sided 4 to 6in. and moulded 4in. with 4in. hackmatack knees. The steamed timbers which we mentioned were bent by Mr. Shepherd, of New Haven, whose method of bending under pressure was described some time since in the FOREST AND STREAM. The timbers, when received at the yard, were thoroughly set, as they came from the moulds, not springing at all as they cooled. Each timber is bolted to a similar one of sawn hackmatack, making a very strong frame.....Vision, Mr. Alexander's steam yacht, is on the ways for a general overhauling. The frame of Mr. Aspinwall's steam yacht is all in position. ...At Greenpoint, Mr. Samuel Pine is at work on two steam yachts, one 67ft. over all, 12ft. beam and 9ft. draft, for Mr. A. B. Benjamin of New York. Mr. Sullivan is building a triple expansion engine, and the boiler is building at Rondout. The other yacht is to be 77ft. over all, 13ft. beam, and of shoal draft.....At One Hundred and Eighteenth street, East River, Mr. Julius Johnson is building for himself a steam launch, to be called Mermaid, 58ft. 6in. over all, 51ft. l.w.l., 11ft. 6in. beam and 4ft. 8in. draft.....Viking, schooner, is being rebuilt at Greenport.....Viola, steam yacht, has been lengthened 10ft. forward, and the position of her masts changed.....At Patchogue, L. I., Mr. Gilbert Smith is at work on two centerboard sloops, one for Mr. Jas. Slater, 33ft. over all, 31ft. l.w.l., 13ft. 6in. beam and 2ft. 9in. draft. The other, for Mr. Edward Bement, is 33ft. over all, 11ft. 3in. beam and 2ft. 6in. draft.....At East Boston Mr. Forbes's steam yacht is partly plated.....Wood Bros. have orders for a launch 28x6ft., a 24ft. yacht's gig, and also for a sloop to beat the Shadow.....Ibis, steam yacht, has been stripped to the garboards and replanked at Lockwood's Railway, some timbers being replaced and also a new rail and stanchions.....Hanniel has had her pilothouse made narrower and her pole masts replaced by topmasts, while the cabin has been fitted up in cherry and mahogany.....At Mystic wharf, Captain Brown of the Adelita, has built a steam launch 37ft. 6in. over all, 7ft. beam, and 3ft. 8in. draft... At Fall River Reed Bros. are busy with a cutter for Mr. Geo. Ballard, from his own designs. She will be 33ft. over all, 9ft. beam, and 6ft. 6in. draft, of course flush decked.....Mr. Green, of the same place, will build a launch for Mr. R. T. Potter from G. F. Clarke & Co.'s designs, 30ft. over all, 6ft. beam, and 3ft. draft. .....Mr. W. B. Smith, of Boston, is at work on the catboat modeled by Capt. Crocker. She is 23ft. 4in. over all, 19ft. 6in. l.w.l., 9ft. beam, 2ft. 3in. draft.

RACING CLASSIFICATION.

WITHIN the past two weeks the question of classification has been acted upon by two clubs in such a manner that a reasonable degree of permanency is assured, and it is little likely that they will be called upon to make any material change for a long time. In both clubs the system of division adopted is that proposed in the latter part of the article in the FOREST AND STREAM of Feb. 10 which first called attention to the subject, the classes being the same as there given, with one exception, to be notice further on. The Atlantic Y. C. adopted at the last meeting, on March 14, the following amendment to Rule 1, Sec. 1 of Regatta and Sailing Regulations:

"In all regattas and sailing races of the club, the fleet shall be classified by waterline length as follows:

Class A—Schooners, 75ft. and over.
Class B—Schooners, under 75ft.
Class C—Cabin sloops, 75ft. and over.
Class D—Cabin sloops, 65ft. and under 75ft.
Class E—Cabin sloops, 56ft. and under 65ft.
Class F—Cabin sloops, 48ft. and under 56ft.
Class G—Cabin sloops, 41ft. and under 48ft.
Class H—Cabin sloops, 35ft. and under 41ft.
Class I—Cabin sloops, 30ft. and under 35ft.
Class J—Cabin sloops, 26ft. and under 30ft.
Class K—Cabin sloops under 26ft.
Class L—Open sloops.
Class M—Cat-rigged boats.

If in either Class A or B two yachts do not enter and start, all the yachts in these two classes shall sail in one class. If in either Class D or E two yachts do not enter and start all the yachts in these two classes shall sail in one class. If in either Class F or G two yachts do not enter and start, all the yachts in these two classes shall sail in one class. If in either Class H or I two yachts do not enter and start, all the yachts in these two classes shall sail in one class. If in either Class J or K two yachts do not enter and start, all the yachts in these two classes shall sail in one class."

On March 7 the New Rochelle Y. C. adopted the same in a modified form, as follows, the object being to adapt the same class limits to the wants of a young club with as yet a moderate sized racing fleet, to limit as far as advisable the number of prizes to be paid for by the club, and yet to provide liberally for the future growth of the fleet. The form adopted is as follows:

"In all regattas and races of this club the yachts shall be classified by length on waterline, as follows:

Class A—Schooners of 75ft. and over.
Class B—Schooners under 75ft.
Class C—Cabin sloops, cutters and yawls of 75ft. and over.
Class D—Cabin sloops, cutters and yawls of 56 and under 75ft.
Class 1—Cabin sloops, cutters and yawls of 41 and over 56ft.
Class 2—Cabin sloops, cutters and yawls of 30 and under 41ft.
Class 3—Cabin sloops, cutters and yawls under 30ft.
Class 4—Open jib and mainsail boats of 23ft. and over.
Class 5—Open jib and mainsail boats under 23ft.
Class 6—Mainsail boats of 23ft. and over.
Class 7—Mainsail boats of 19 and under 23ft.
Class 8—Mainsail boats under 19ft.

At any time after all the entries have been received and prior to the start, the regatta committee may, if they deem it advisable, subdivide Classes D, 1, 2 and 3, or any one or more of them as follows:

Class D { 1—Cabin sloops, cutters and yawls of 65ft. and over.
{ 2—Cabin sloops, cutters and yawls under 65ft.
Class 1 { *a*—Cabin sloops, cutters and yawls of 48ft. and over.
{ *b*—Cabin sloops, cutters and yawls under 48ft.
Class 2 { *a*—Cabin sloops, cutters and yawls of 35ft. and over.
{ *b*—Cabin sloops, cutters and yawls under 35ft.
Class 3 { *a*—Cabin sloops, cutters and yawls of 26ft. and over.
{ *b*—Cabin sloops, cutters and yawls under 26ft.

No such subdivision, however, shall take effect in a class unless two or more yachts actually start in each of the subdivisions of such class."

In the schooner classes the limit is placed at 75ft. instead of 65 and 80, as we suggested, but so long as the clubs do not feel strong enough to give more prizes and to do more to develop schooner racing, the division at 75ft. is as good as any; and it is probable that for a time at least, the best interests of yacht racing will be better promoted by a concentrated effort on the part of each club to build up single-stick racing, than by expending a large part of their strength on the two-stickers. In the single-stick classes the division is, in all but the smallest class, the same as suggested by us. It differs a little from the method shown in Table II., page 55, but is, we think, better, having suggested itself after the table was in type and when it was too late to change it. Practically the difference is slight, being only an increase of one foot to the upper limit of classes 3, 4 and 5, but it is rather more systematic and nearer to theoretical perfection. Starting with 75ft. as the minimum limit of the largest class, the limit of the class below is 65ft., or very nearly 86 per cent. of 75. Similarly the next lower limit is 56, or 86 per cent. of 65, and the limits decrease in the same ratio down to 26ft., the smallest size that the principal clubs have to deal with. The intervals between the classes decrease each time by one, being 10, 9, 8, 7, 6, 5 and 4. Of course in a matter of this kind the practical considerations must always outweigh all merely theoretical ones, but the latter are fully covered by the above division, and the following revision of Table II. shows the effect on existing yachts:

	Ft. In.	
Mayflower	85.00	Class I.
Priscilla	85.00	
Atlantic	82.01	
Puritan	80.00	
		—75
Bedouin	70.1¼	
Titania	69.09	
Gracie	69.04	Class II.
Shamrock	67.00	
Pocahontas	67.00	
		—65
Fanny	65.09	
Ileen	65.04	
Stranger	65.00	
Thetis	64.02	Class III.
Huron	63.00	
Hildegarde	61.66	
Mischief	61.00	
Wenonah	60.09	
		—56
Clara	53.07	
Whileway	53.00	
Cinderella	52.00	
Isis	51.05	
Athlon	51.02	
Oriva	50.11	Class IV.
Thistle	50.09	
Active	50.02	
Eclipse	50.1¼	
Gaviota	50.00	
Bertie	49.00	
Roamer	48.10	
		—48
Valkyr	47.04	
Regina	47.03	
Daphne	46.03	
Hesper	45.10	
Fanita	45.05	
Bayadere	45.00	
Rover	44.08	Class V.
Maggie	44.07	
Adelaide	44.06	
Vixen	44.01	
Penguin	44.00	
Ulidia	42.06	
Imperia	41.10	
		—41
Espirito	40.10	
Muriel	40.06	
Crocodile	39.11	
Madge	38.09	
Rival	38.03	Class VI.
Hope	38.00	
Mona	36.06	
Schemer	36.04	
Lapwing	36.06	
Polly	36.00	
		—35
Surf	35.04	
Hera	34.11	
Mariota	34.00	
Elephant	34.00	
Shadow	33.08	
Iseult	33.04	
Ægir	33.00	Class VII.
Shona	33.00	
Wacondah	33.00	
Daisy	32.09	
Delvin	32.00	
Culprit Fay	31.00	
Idoran	30.02	
Magic	30.02	
		—30
Arab	28.09	
Aria	27.04	
Iolanthe	27.00	Class VIII.
Yolande	26.06	
Vivien	26.03	
Nora	26.01	
		—26
Merlin	25.06	
Stranger	25.03	Class IX.
Fad	25.02	
Gem	25.02	

Here there is no disturbance of existing classes, except that it will allow the outbuilding, in time, of some of the present boats, but the only class seriously affected in this way is the present 70-71ft. class of the New York and Seawanhaka clubs, the Eastern Y. C. already having its limit at 75ft. It would allow Clara and Cinderella to be outbuilt, but so they could be under the existing rules; so they would have no special cause for complaint, as the extra two and three feet, respectively, which a new boat would now have, would be little inferior to the three and four feet excess which a boat built to the proposed limit, under 56ft., would have over Clara's 53ft. and Cinderella's 52ft. As we before pointed out it would give two new classes, Nos. 3 and 5, in which a lot of boats at present outbuilt, would find some very good racing.

From all points of view the scheme seems to be a good one, and we believe the two clubs that have adopted it will have every reason to be satisfied with the decided step forward that they have been the first to take. In the New York Y. C. no action has been taken and none is likely to be until the end of the present season; and in the Seawanhaka C. Y. C. some difficulties have arisen in connection with the classification passed hastily at a former meeting, and at the last meeting, on March 15, it was determined to continue the old classification for the present, but to appoint a committee to consider the necessary changes, which will be made after the present season is over.

The action of the New Rochelle Y. C. shows how the scheme may be made use of by clubs which desire to use only a portion of the classes, while at the same time they may readily add others as the need for them arises. There are many clubs whose present classes are based on no system but have grown up to fit their boats. Most of these will find one of the following divisions adaptable to their wants:

Class limits, 75, 56, 41 and 30, or 65, 48, 35 and 26. The leading boats of the club can be grouped about the classes of one or the other of these series, some latitude being allowed for the first year or two to accommodate all existing boats. Any new boats must of course be built to the class limits, and as the fleet increases the intermediate classes can be called into use. The fleet of the Lake Y. R. A., mentioned by our correspondent "Ontario" on March 3, will serve as an instance.

The largest class would be Class 3, under 65ft.; the next would be Class 6, under 41ft., and the next, Class 8 and Class 9. The schooner Oriole would be arbitrarily placed in Class 3, racing with the same boats as at present; the Cygnet, 42ft., would similarly be placed in the class under 41ft., with her present competitors; and the Laura, 32ft., would race in the class under 30ft. The matter might be arranged in one of several ways so as to conform the four classes required to the limits of the classification we propose, and to allow the intermediate classes to develop themselves as the growth of yachting on Lake Ontario increases. There is one point of secondary importance in the amendments of the Atlantic and Larchmont clubs that is open to improvement, the naming of the classes. It may be as well to letter the schooner classes to distinguish them from the sloops, but the latter should be simply numbered from 1 downward, as the numbers are more readily remembered. Class 1 should mean the Mayflower class of single-stickers, no matter what club is referred to, and if this, the simplest possible method, be once generally adopted, then the mere fact that a yacht is a Class 3 boat for instance, will tell at once that she is approximately about 65ft. on the waterline, not so many old or new tons, or so many feet "over all," "mean" or "corrected" length. It has been pointed out that one change has been made by the two clubs mentioned from the arrangement which we first gave, the smallest class being under 26ft. instead of 25ft., as we gave it. This comes from decreasing the interval by one each time, and carries out fully the theory; but in practice a change must be made somewhere here if the classification is to be carried down still further to the smaller classes, that we hope to see some day well filled. If the same operation be continued down, the next class will be 26 less 3, or 23ft., the next 21ft., and finally 20ft. This *reductio ad absurdam* indicates very clearly that in practice it will be necessary to cut off the very fine mathematical point that has been reached, and to adjust the classes on a purely practical basis. The smallest cabin boats that are likely to race are of 18ft. l.w.l., and this is the proper maximum limit for the lowest class. The limit of the class above might be at 22ft., making two equal intervals between 18ft. and 26ft. There are so few of these small cabin boats as yet that it does not matter greatly what classes are marked out for them; the point is that now is the time to settle finally what classes are desirable, in readiness for the mosquito fleet of the future.

AMERICAN CENTERBOARDS IN BRITISH WATERS.

THE certainty that at least one of the new American yachts which have attained such prominence in the past two seasons will visit British waters this summer and try conclusions with the foremost of the cutters, brings up the question as to the footing they will be placed on in the races. Heretofore the matter of centerboards has been summarily disposed of by the following rule of the Y. R. A.: "No yachts that are fitted to shift keels or to otherwise alter their form, shall be permitted to enter." Further than this, the centerboard has been generally regarded by the good old conservative British yachtsman as an invention of the Evil One, albeit of British origin; something that was morally wrong and reprehensible, and that no sailorman could afford to be associated with, except at the cost of such a loss of caste as attaches to a man who shifts ballast or shoots a fox. One of them speaks as follows in the last issue of the *Field*: "I do not know what is the general opinion of racing yacht owners as to the admission of centerboard yachts to contend at the ensuing season's regattas. No. 8 of the Y. R. A. Sailing Rules clearly layf down that they are not admissible, and it would seem to me that regatta committees ought to abide by these rules unless the Y. R. A. agree that it be temporarily suspended. Clearly the object of yacht racing is to develop the best form of hull and canvas for a sailing vessel in all weather, and to discountenance the construction of purely racing machines, and it is universally admitted that the Y. R. A. rules have been most successful in doing this. I was much surprised, therefore, at seeing Mr. Charlwood's letter, stating that he is favorable to the admission of centerboard yachts at this season's regattas. The late defeat of Genesta and Galatea allow of no doubt as to the result of such contests. The vessel that can get her ballast as low, and get her keel as deep as she likes when going to windward, and can make herself into a skimming dish when running, is bound, with good handling and in ordinary weather, to beat our best racer. I believe it is the universal wish of yachtsmen to show every hospitality to visitors this and every year, and I sincerely trust some other means of doing this may be devised than that of altering our racing rules to allow a type of vessel, useless save as a racing machine, to show us the way around our principal regatta courses.—A C CLASS YACHT OWNER."

It must be confessed that there was a time when centerboard yachts, as a class, deserved much of the evil reputation which they had abroad, but even in this there was no just ground for the wholesale condemnation and ostracism of a most ingenious, effective, and in some cases indispensable appliance.

Beyond a sweeping and indefinite condemnation of all centerboard craft, regardless of model or other features, no charges have ever been formulated by those who oppose them, nor has any fair attempt been made to decide upon the merits of the centerboard alone, apart from the hull which carries it. The fact is that the centerboard has been found for many years in very bad company, and has been hastily judged accordingly. During the long period in which keel boats, except a few large schooners, were practically unknown, the entire yacht fleet not only carried centerboards, but associated with them such proportions of great beam and little depth as to make a most dangerous and undesirable type of boat.

It is no wonder that the unsavory records of many American craft earned them the title of "death-traps," and raised a very strong feeling against them among those whose altered conditions offered no inducement to adopt the same type; but to estimate the correct position of the centerboard in the matter it is only necessary to suppose a case; that the centerboard had never been invented; that no expedient was known for holding a boat to windward but the keel, and the same ideas as to model prevailed as were found in the old sloops. The resulting boat would then have been exactly like some built in Boston a few years since, when the idea of a small keel yacht was first generally discussed. These boats were built from the same moulds that had served for shoal centerboards, but a deep fixed fin of wood took the place of the board; in fact, many centerboard boats were altered in this manner. As this fin was not weighted in any way, the boat was just as crank and dangerous, and as much a "death-trap" as the similar boat with a board that housed. It is true that the light draft allowed by the housing of the keel encouraged the construction of boats with so little depth of body as to be bad for any purpose, but this defect of model was due to many causes other than the board, and it is unjust in the extreme to attribute it to the latter. The excellent records of many centerboard vessels, both yachts and traders, show this, and the fact is established to the satisfaction of all who will look into it in an unprejudiced manner, that a safe and perfectly seaworthy centerboard vessel is easily possible.

When it comes to the question of a purely seagoing vessel of any kind we prefer the keel. it requires no knowledge of shipbuilding to see that the simple and undivided structure of the keel boat must of necessity be stronger for the same quantity of material than when the keel is divided and is weakened by joints inserted; and yet, on the other side, are the scores of old centerboard vessels that have bumped about the coast for years in perfect safety, while the American centerboard yachts have crossed and re-crossed the Atlantic, have doubled Cape Horn, and are found every winter in West Indies. Many centerboard yachts have at times come to grief; many are unfit for the work they are often put to, and the possession of a fleet of shoal racing craft has interfered much with the development of American yachting in the past, but we submit that those who have judged and disbarred the centerboard have not yet made good their case against it as a reprehensible device that is unworthy of toleration.

The sole idea of its use, to the British yachtsman, is to be hauled up at will in order to allow the yacht to obtain an unfair advantage in draft over the keel boat, and at the same time another advantage is to be gained when free by the lessened surface due to the board being housed. This latter view has always been held by the recognized authority abroad, the *Field*, and is also expressed only last week in the following from the *Observer*: "The jubilee match round the kingdom will attract many of the best American yachts, and among them centerboarders, against which British yachtsmen entertain a strong, and, as some think, a slightly unreasonable prejudice. Invented by an Englishman, the centerboard or sliding keel never found much favor among his conservative countrymen, while our American cousins, far wiser in their appreciation of novelties, have utilized it extensively. It has been proved over and over again that hoisting their centerboard gives American yachts an advantage of eight or ten minutes in a twenty mile run before the wind over an English rival. They are also equal or superior when closed hauled to the wind. Perhaps the experience of the next few months may soften our insular prejudices, and the result of the international competition may be an approximation of our type of yacht more to that now regarded as best by our American cousins—a form of vessel which by no means unsafe or unseaworthy and not much unlike the crack vessels of our own pleasure fleet of a generation since." When Englishmen have seen as many races between keels and centerboards as have taken place here since Madge beat Schemer, they will probably be ready to recognize the fact that many of the times when the cutters win is down the wind, when the centerboarder may, if he pleases, house his keel. As to the other point, lifting the board for shoals, it must be remembered that the centerboard boat needs all her board under her to take her to windward, so that, unless off the wind, she must hold to her board or fall off terribly to leeward; and as to draft she must have at least 20ft. under her where the cutter is safe with 18ft. To be sure the danger of grounding permanently is less, as her board prevents that, but the use of the board as a "Dutch Pilot," for sounding, while it may do in a catboat in smooth water, would be a very different matter with Mayflower in a race, as the danger of some serious damage to the board or trunk is too great to be intentionally incurred.

Thus far the only action that has been taken toward admitting the centerboards is by the Royal London Y. C., which has posted the following notice in its club house:

"Centerboard yachts will be permitted to compete in all the races of this club during the current year, provided their boards are securely fixed in any position and sealed to the satisfaction of the committee at or before 9 P. M. of the day previous to the race. It is probable that our races for the jubilee prizes will take place at Cowes on Friday, Saturday and Monday, July 29, 30 and Aug. 1.

G. W. CHARLWOOD, Secretary Royal London Y. C., March 11."

From a British standpoint this may be considered a generous and liberal concession, but to any one familiar with the use of the centerboard in large boats and with the entire absence of all restrictions on British yachts in their races here of late years, the utter absurdity of such conditions is apparent. As the offer of the Royal London Y. C. is made in a friendly spirit it is probable that the fault lies only with the ignorance of centerboard boats, but how it appears to Americans may be illustrated by a supositious case. When Madge came here, masthead pendants and runners were unknown on small craft, and in fact were by many considered a piece of useless complication; American yachts did not need them, why should cutters have them? Now suppose that the gentlemen who arranged the races between the cutter and the sloops had said to Capt. Duncan: "Of course you can carry your masthead pendants, but you must either set both up taut or slack off both before 9 A. M. on the day of the race and keep them in the same position during the race." This would not be any more unreasonable than the offer quoted above.

As the record stands to-day in the big class, and it is the face of the record which most men look at, it rests with the cutters to prove that they are as fast as the American boats; not that they, unhampered by any conditions, are as fast as Mayflower in a crippled condition and sailing under restrictions she was never built to sail under, but that when both are started under a fair allowance, under equal restrictions, and over an open course, the cutter can show the way home. A fine victory it would be to boast of if Irex could carry her 18ft. over the course in safety, while Mayflower could not pass with her draft of 20ft., or if at the end of the race, with the latter ahead, she should be compelled by any emergency to hand her board and be disbarred from a prize fairly won.

Racing yachts are built for speed first of all, and with a full realization of the rights and duties of yacht clubs in fostering none but a seagoing and capable vessel and of discouraging all racing machines, we submit that as the case now stands, there is not sufficient evidence on which to disbar the centerboard as a dangerous feature; but still further, before such evidence is to be sought for, the friends of the keel boat must fairly beat the centerboard or must surrender unconditionally. If the keel boat is the faster the question is settled, no one wants anything else. If the centerboard boat is the faster, then the question of her other qualities may be passed on; but never while she remains unbeaten can the Y. R. A. or any other body legislate a victory for the keel craft by labeling her rival "extra hazardous," and putting her in the category with the boiler of a racing steam yacht that has failed to pass inspection.

The present season promises to settle two of the most important questions that have ever concerned the yachting world. One of these is the relative speed of the new American boats and the best cutters. Our views as to the races of 1885-6 are well known; we decline to accept the result as conclusive until backed by races in different weather. In crossing the Atlantic for a race the Mayflower is sure of meeting the best of the cutter fleet over floated, and the chances are good that there will be some weather that may be fairly considered a test. Now, what is wanted is a perfectly fair field, courses and conditions that neither side can cavil at when the race is over. We speak not as friends of the centerboard, but as the first and staunchest friends of the keel boat, and what we chronicle at the end of 1887 is a record for them as full, clean and beyond dispute as Clara made last year.

The other question as yet undecided is the seagoing ability of the new boats, a question the solution of which can only be guessed at, but which the passage of Mayflower is likely to settle. There is no doubt of the power and ability of both her and Puritan over the ordinary regatta courses and about the coast, and the silly stories set afloat at times about their weakness in the races are not worth notice; but they have never been tried as an ocean passage is likely to try them, and not until they are can the question be considered as settled. Instances are brought forward of centerboard boats that have crossed the Atlantic, the little Alice, Silvie and Vesta, but it is not considered that all these are vastly different craft, shoal, wide, and with all ballast stowed inside. Their behavior argues nothing for a boat at once wide and deep with a great weight of ballast hung as low as possible; nor is any light shed on the subject by the passage of Clara, Genesta and Galatea, all carrying heavy keels, but without the excessive beam. The question is most important, and it must be finally settled before the new type can be indorsed as seagoing vessels.

With the latter question only Mayflower, her owner and her designer are interested, and they promise to do their parts; the first rests with the British clubs, and we hope that when the points we have touched on are fully understood they will deal with them in a way that will insure plenty of racing and fair sport when Mayflower hoists her fighting flag on the other side. At present she will challenge for the Queen's Cup, held by Arrow, and for the two American cups held by Irex, neither being hampered by any restrictions the centerboard, but while she is going aboard for racing and will be ready to enter other races, she will enter none under such conditions as the Royal London Y. C. have imposed. In regard to her visit the *Field* speaks as follows, and we hope that yachtsmen generally will look at the matter in the same sensible and fair-minded way:

"Next to the decisive action of the Y. R. A. in altering the method of rating yachts, the most promising feature is the announcement made this week that the Mayflower is to visit us this summer, and, by anticipation, the question of admitting centerboarders into our matches has been raised. We need not enter into the general policy of the rule of excluding centerboard yachts from all matches, but it seems to us highly desirable that the rule should be waived for one year, so far as certain matches are concerned, and that the club should at once make known what matches they are willing to make the exception for. A restriction that the board should be fixed down would practically exclude a yacht fitted with one, as her draft would be so excessive; or she would have to house so much of it that she might as well house it altogether. We therefore think that, if centerboarders are to be admitted, they should be taken as they are, without restrictions of any kind.

"In connection with the promised visit of the Mayflower, it has been announced that she will at once challenge for the Queen's Cup, won by the Arrow from the America in 1852, and recently turned into a challenge cup by Mr. Taukerville Chamberlayne. This gentleman has already turned his thoughts toward preparing his old ship for a contest with the Mayflower, and even for this event alone it is to be hoped that the American masterpiece will be brought over.

"Then there are the Brenton Reef and Cape May challenge cups, now held by the Irex. The matches, indeed, between Irex and Mayflower would be of stirring interest. A question has been raised in America that the Y. R. A. rule as to centerboards would bar Mayflower from challenging; but, so far as we can judge, the Y. R. A. rules have nothing whatever to do with the matter. The only reference to rules in the published conditions under which the contests are to be sailed is that they are to be in accordance with the rules of the New York Y. C., but without time allowance. Thus it seems clear that centerboarders could not be barred by Y. R. A. or any other rules."

The position of the FOREST AND STREAM on the keel-centerboard question has been clearly and strongly stated in times past, but now, in putting forward the side of the centerboard yachts we do not propose to be misunderstood. In the new boats the worst features that were formerly associated with the centerboard have disappeared, and they are far different craft; but looking at the question from a sailing point of view, without regard to digging clams, to the exigencies of mudflat navigation, or to similar modifying influences, we consider the keel boat the most perfect tool yet devised for those who take their enjoyment on the water. It is the proper instrument for sailing wherever local limitations do not interfere with its use. In points of construction and accommodation it possesses enormous advantages. The centerboard we consider a makeshift, but a most valuable one, for without it the greater part of the Atlantic coast and its contributory watercourses would be useless both for trade and pleasure. The centerboard boat of all kinds has its uses, the fault begins when it is misapplied to a purpose for which it was never designed or fitted. As to the great question of speed we do not claim that the keel is of necessity faster than the board, but on the other hand we distinctly deny that the board has yet shown its superiority over the keel. With a large existing fleet of centerboard boats already brought to a high state of perfection by years of experiment before the first keel boat was known here, the odds were vastly on the side of the former; but now, with Shona, Clara and Bedouin well to windward of their respective classes, and with Oriva's record still in remembrance, there seems no immediate need to fear that the keels cannot take care of themselves on either side of the water, without any such protection and nursing as is proposed in restricting the rights of their rivals.

MEDUSA.

COM. CENTER'S cutter is on the ways for a shoe aft, to aid her steering, and Mr. Munnn has done a very good job, the after part of the shoe being of oak, through bolted with composition metal, while the middle is of lead, also heavily bolted, cast in place to fit the shape of the former lead keel. A piece of lead has also been added at the fore end of keel, and the rudder has been backed to make it as deep as the bottom of the new shoe. The draft will be 10ft. 5in., but as the yacht is in every way fitted as a seagoing vessel this is little detriment. The cabin has been very handsomely and tastefully fitted up and ornamented, and there is not a boat of the size in the fleet to-day that can equal the entire interior from a cruising point of view, a snug and comfortable home afloat. The outfit includes two complete rigs, that now in use being a snug cruising rig with end of main boom over the taffrail and a short bowsprit. Of course the owner's ingenuity and experience are visible everywhere, from the "anti-fouling" pennant at the truck to the alterations just noted in the keel, all of which work has been done directly under his personal supervision. The racing honors of late have all gone to Boston, but with the many changes made in the Medusa it looks as though New York would be able to boast this year of the most complete and perfectly fitted cruising yacht on the coast.

THE SECOND CRUISE OF THE PILGRIM.

PART II.

WE washed down decks, had breakfast underway and passed out of the Piscataqua and by the bell buoy off Kitt's Rocks at 8 o'clock. There was a light fog which I viewed with some apprehension, but the sun soon scoffed it up, we set the spinaker and started up the coast with a light S.W. breeze. The wind gradually worked around to S., to S.S.E., to E.S.E., to E. and finally to E. by N., where it remained until evening. It was very pleasant running along close to the coast and viewing hill and dale, inlet and promontory, breakers and sandy beaches, summer cottages and mammoth hotels.

Off Cape Neddick we had a genuine sensation. The boys were dozing upon the house and I was stretched out in the cockpit steering, when I saw upon the starboard bow a quarter of a mile away what I supposed was a man fishing. There was something peculiar in his appearance and I reached for my glasses. When I looked again he had disappeared. I thought this very strange and watched the place where he had been. In a minute he appeared, but before I could get my glasses focused upon him he sank again just as I shouted to my crew, "Look at this, boys; here is the sea serpent." The boys were up in a moment, but did not see the strange object. Then I kept a lookout to starboard and they to port. In a few minutes they shouted, "Here he is!" The same figure was upon the port bow, half a mile from the place of his first appearance.

I saw him just as he sank. Then he appeared soon upon our beam, and then upon the port quarter near the breakers, but he moved so rapidly and remained above the water so short a time, that I could not get a look with the glasses. He resembled a black spar buoy, 8ft. long and 1ft. thick, increasing in size to the surface of the water, and inclined to it at an angle of about 20° from the vertical. There was a slight bend where the neck (?) passed beneath the water, as if a larger body lay there in a horizontal position, but I did not see any head, eyes, rings, coils or foaming wake such as other persons have reported. He kept about a quarter of a mile from us, moved with great rapidity, and was perfectly at home in the water. He always retired from view politely backward, or sank right down, keeping the visible portion of his body at the same angle with the vertical until out of sight. If this had been a fish I think he would have turned forward and have been much upon the ocean. I have seen all the marine animals familiar to sailors, and know the anatomy of saurians, fishes and whales, but this inhabitant of the Maine coast puzzles me. An old sailor hero says, "It was a killer." He does not know any other name for it. It could not have been the arm of an octopus, or cuttlefish, because that animal cannot move so rapidly. Could it have been the probocis of a gigantic swordfish?

The wind had got around to the eastward by 3 o'clock, we had taken in the spinaker long before and set the jibtopsail, but were obliged now to take this in because of the necessity of beating to windward out of the bight off Well's village and south of Cape Porpoise. The current swept down around the cape, the wind was getting around ahead, the sea began to be heavy against us, and it was very evident the weather was going in for a fog. Last year the Pilgrim was caught here the same way and obliged to seek a harbor at Kennebunkport. I did not wish to run in there again, because one cannot get in till half flood and the accommodations alongside a wharf are uncomfortable. So we made a long leg off shore and upon the next tack reached the entrance of Cape Porpoise Harbor. The breakers were heavy, the reefs and rock-bound shores were great walls of foam, and my "Coast Pilot" warned of the many dangers of the entrance. I stood up near Old Prince buoy and took a good look at the opening. It was narrow, obscure and forbidding. A few vessels could be seen at anchor inside. How I wished we were among them. The sky in the east was overcast with dark, threatening clouds; the wind was rising every minute; the sea was getting very uncomfortable; the sun was sinking behind the land; we could not cook in such weather; we needed rest; Wood Island was ten miles away; it would be midnight or later before we could get up to it, and then I did not know the way into the harbor. Weighing all these facts anxiously, I gazed again upon the breakers and the islands, and tacked ship off shore with a heavy heart. I would try for Wood Island and trust to luck.

Short tacks took us up to Cape Rocks and there was a dory scudding in. We shouted and tacked, and ran in as near as we dared; but the lone fisherman's eyes were bent upon home and he heeded us not. We had set the ensign in the rigging an hour before, but no one noticed it. We tacked off shore again and plunged onward. In a few minutes we saw, far out to sea, a dory struggling toward Cape Porpoise Harbor. It had escaped our notice while we were battling along the shore. Here was our chance. The fisherman could take us in somewhere. The sheets were payed off and we swept down upon him. I swung my hat and shouted, "Can you take us in to Cape Porpoise?"

"Yes, foller right along arter me, I'm goin' in myself."

"All right!"

We trimmed down, tacked and had a wet sheet and a flowing sail. The Pilgrim went too fast for the dory and the fisherman looked back at us a little anxiously. We took in the staysail and slacked off sheets. On we went just north of Old Prince, not too close along Goat Island, passed the red buoy to starboard, then directly for the black channel buoy and passed it to port, then ran toward the house upon the highest hill. In the request, our notice of a mooring pointed out to us by the fisherman and took in the sails.

"Do these moorings belong to anybody? Won't somebody disturb us?" I asked.

"They belong to you jest as much as to anybody."

"But the Coast Pilot says this place is crowded with fishermen, and one can't lie here without getting foul of somebody."

"That's only in the fall when the vessels are arter herrin'. You're all right here and safe in any blow. The channel is very narrow; you'll see mud on both sides of yer when the tide goes out."

"I'm very glad I met you; it looks like bad weather."

"Yes; guess we'll hev an easterly. I thought you was mighty curious to beat up shore in this nor'easter with the night comin' on. Tho't p'haps you knew your way and was goin' into Stage Harbor. Good harbor, sometimes. Rather rough for a small craft. When wind's this way, current runs down shore mighty hard. Knew what yer wanted the minnit yer kept off. Fine yacht, ain't she?"

"Yes; and a good sea boat. I'd not venture out this way in an ordinary craft."

"How much ballast?"

"About 5,000lbs,"

"Tho't she was pretty stiff."

"What you from?"

"Boston; left there the 21st, and Newcastle this morning."

"They make fine boats down in Bostin. 'Spose she cost most $2,000?"

"No; about half as much."

"Sho! yer don't say so. Carries lots of sail, don't she?"

"Yes, the ballast is low down."

"Lots er room below, I see."

"Wall, must be getting hum to clean my fish."

"What shall I pay you?"

"Nuthin.' I don't charge nuthin. Glad I could accommodate yer."

"I am much obliged, but I wish to pay you. Here, take this," said I, handing him a silver dollar.

"All right, captin; if I go out to-morrow I'll bring yer in a good fish."

"Very well, much obliged; good night, come aboard again."

"Good night; it's gittin' thicker already."

Then our good-hearted friend trimmed his small sail and sped up the channel.

A thick mist had spread over the islands and ocean; rain began to fall; it was soon dark as pitch, and the wind was blowing a gale from the northeast. As we lay upon the cushions and listened to the turmoil of the elements and occasionally looked out the windows and saw nothing except a few anchor lights and the light of the cape shining dimly through the gloom, we blessed the old fisherman and felt grateful to the Lord for our delivery. It blew a heavy gale for thirty-six hours, and we were obliged to delay another day for the sea to subside. Would the Pilgrim have weathered it?

Cape Porpoise is an interesting place to visit. A narrow channel extends a mile to the village and another one goes north and communicates with Stage Harbor. High tide shows a broad bay; when the tide runs out it shrinks into a narrow estuary with extensive flats and dangerous ledges. The land is rough and unproductive, and the inhabitants are mostly engaged in fishing. Some quaint characters may be found every evening at the general store near the landing, and their stories of fishing and adventures upon the sea are very interesting and instructive. We wanted fresh milk and eggs, but could get neither, as the supply was carried daily to some of the summer hotels of the coast. At low tide Jack and I took our guns and waded across the flats, and succeeded in bagging a dozen snipe in two hours, which made an excellent stew for dinner. It was considerable work to get them, but much more to clean the poor little things.

I took a long shot at a yellowleg, he fell and his companions flew

away. Soon he arose and began walking away from me. I hastened to cross over a little arm of the bay and took my eyes off of him for a moment; when I looked again he was gone. After a long walk over the flats, I saw the same or another bird across the stream 40yds. away, and as he strutted a little preparing to fly, I let go at him and killed him. The tide was running in strongly, the water was nearly up to the tops of my long wading boots, and I was in imminent danger of being swept off of my feet and drowned; but I wanted that snipe and I got him and returned to the land side, thinking what a fool I was to take so great a risk for such a trifle. He was the goal of my ambition just before, and "his price was above rubies." I've no doubt some sportsmen will be disgusted at such a pot shot and my not giving the bird a chance by shooting him on the wing. The birds did not give me any chance. They always got up and flew away from me before I could get within 30yds., and I had not fired a shotgun since I hunted curlew in Florida during the war.

The next day was pleasant, the sea had gone down, the wind was west; we hoisted the mainsail and watched the tide flow in and the fishing schooners preparing for sea. We started when they did, about 8 A. M., knowing they would take the best time of tide to keep clear of the rocks off Folly Island. Once fairly outside, we set the gafftopsail and spinaker, and sailed along freely and pleasantly by Wood Island, Old Orchard, Richmond Island and Cape Elizabeth, where we had fought our way against a head wind and a hard sea last year, made the buoys all right, and ran into Portland, and were anchored and cleared up before 3 P. M.

In running in, I noticed a long line of breakers ahead and kept more off shore. It was simply the surf upon the main shore, which shone so brightly across the water as to seem much nearer than it was in reality. Often have I shifted my course in dread of rocks beneath some summer flash of the sea, to find that it was far beyond my course.

The Portland Club has several new yachts, particularly one 35ft. cutter, built somewhere down East and said to be fast. She has enough lumber in her for two vessels of her size, and spars, rigging and top works are uncouth and clumsy. Dr. Bray's Tempus is a very comfortable craft of the old sloop model, just large enough for housekeeping and not too large to go around in the island channels, and the owner and family spend many a warm night of summer at some breezy anchorage down the bay. Dr. Bray is Fleet Surgeon of the Portland Club, and a very genial and hospitable gentleman. He has cruised extensively to the eastward, and believes that Casco Bay is about the best place in Maine for a summer sail. While I agree that the bay has fine waters and lovely isles, I think Penobscot Bay has many advantages over it in landlocked waters, wild wooded shores, and few inhabitants.

Peak's Island is a great cooling off place for Portland and neighboring cities, and the northern shore is covered by picturesque cottages, hotels, skating rinks, theaters, boat-houses and gardens. Excursion steamers run there from the city every hour or two until midnight, and swarms of people may be seen upon their decks and along shore, enjoying the sea breezes and the dreadful clang of the brass bands. We spent a couple of days off the island in company with the schooner Magellan Cloud, S. B. Y. C., whose jolly Captain Moses kept up the prestige of our organization by firing the morning and evening gun, which we duly respected in hoisting and hauling down colors. The island enjoyments suited the boys, but I prefer less civilization and noise. The tide runs strongly along the shore, and we got aboard one evening just in time to find the Pilgrim with cable up and down drifting off into the bay. The bottom was soft and it took us an hour to find a place where our 35lbs. anchor would hold us, though it was flat calm and there was no swell.

The third day after our arrival a heavy gale began from the southwest and shifted to the southeast with heavy rain and fog. The fog sirens at the cape and steamers' whistles were blowing day and night. We rigged a tent over the cockpit, housed the topmast, let go another anchor and went below, where we remained nearly all the time for two days, listeniug to the patter of the rain and the music of the wind in the rigging, writing up the log, reading back numbers of the journals and sleeping "rocked in the cradle of the deep." We were in no hurry and enjoyed the bad weather and the rest that we were obliged to take. A yachtsman ought not to be in a hurry unless to make a safe port at night or in a storm. His restless spirit should be calmed by the surrounding waters, and the pretty sails that propel him ought to remind him that he is the sport of the wind and cannot play the autocrat. In proportion as he adapts himself to the environment will he derive pleasure from his expedition. If he is in a hurry he had better travel by a regular line of steamers or invest in a steam yacht, and abandon his pretensions of fraternity with the true blue.

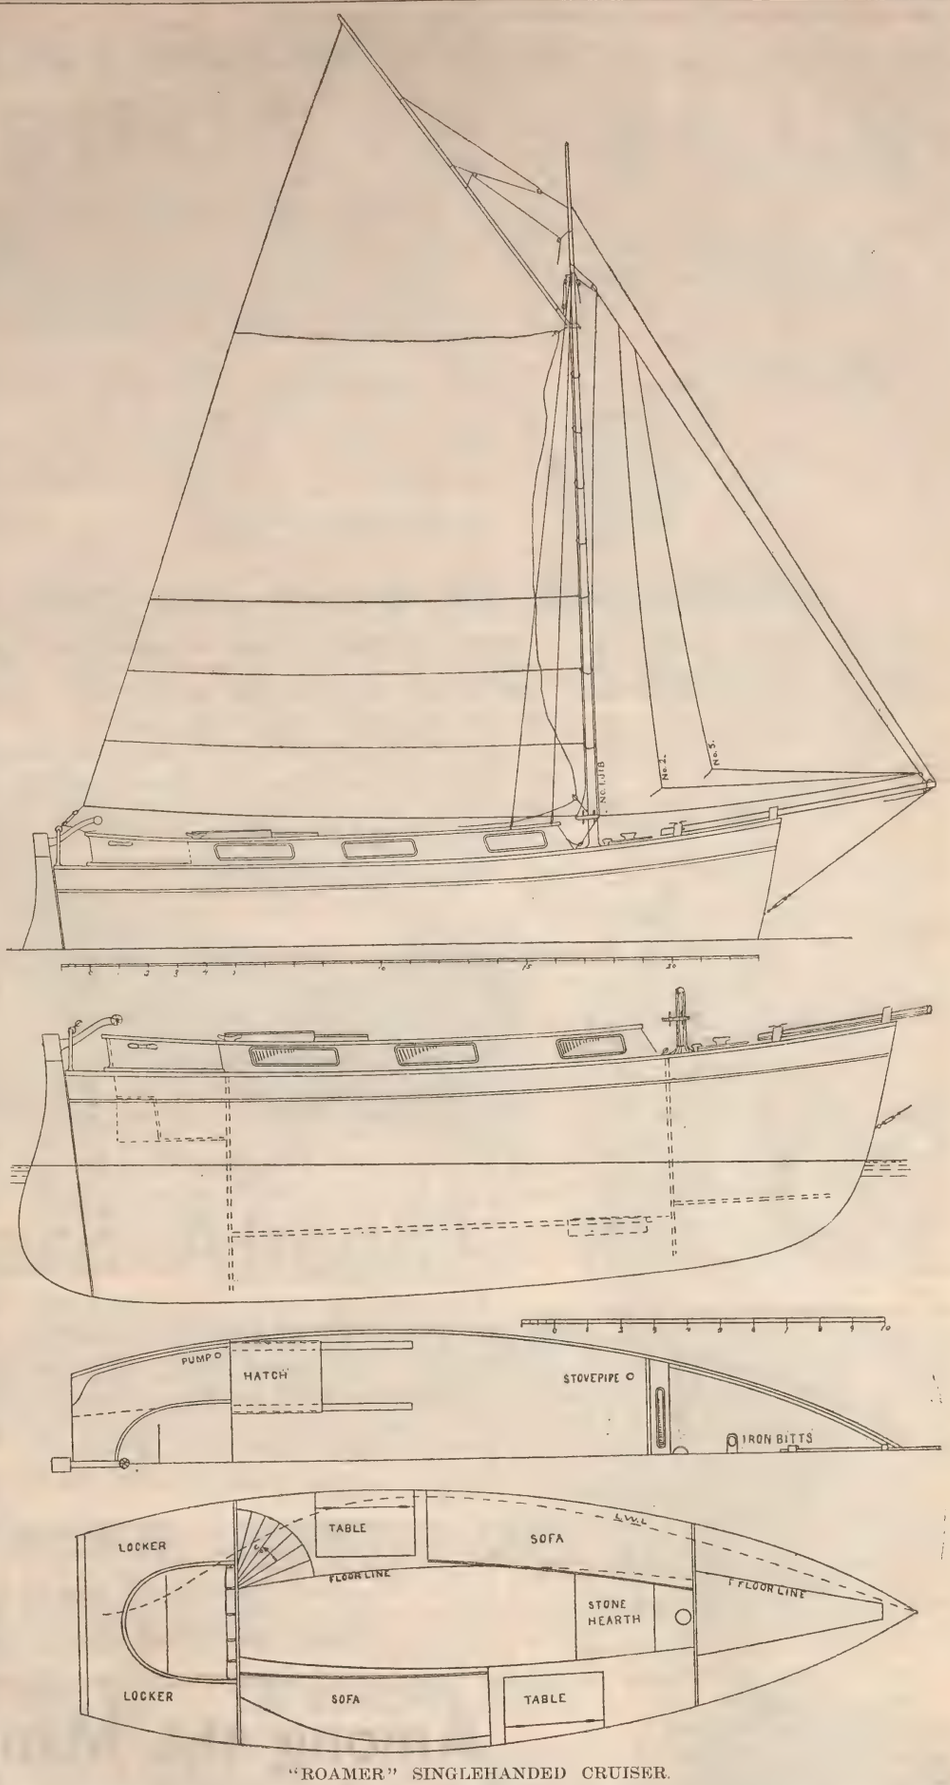
We experimented with the tender to find where she could be kept from chafing. When astern she would come up at the turn of the tide or change of the wind and bump the stern, or swing around under the counter and grind and bump spitefully, as if she were lonely and wished to come aboard. When fastened to the end of the main boom she acted in the same contrary manner. We fastened the bow close to the end of the bowsprit and the stern to a bowsprit shroud. This was a good place except when there was some pitching, then the ropes would draw taut and make a noise that would keep us awake, and sometimes the boat would get under the bobstay and saw away till we could stand the racket no longer. With a bow and stern line to the boat alongside and numerous fenders between her and the side of the ship, she lay very well in quiet water, but a little sea or the swell of a steamer would disarrange the fenders and the boat would bang up against the side and make frightful scratches in the paint. Then we lowered the spinaker boom, used the spinaker sheet, and hauled the bow of the tender out to the end and let her swing clear, and were delighted at our immunity from chafe and noise.

A tender is a useful nuisance anyway when one cannot take her on deck or up to the davits, and this is impossible in single-hand yachts. A tender for a 25ft. yacht ought to be a good sized keel boat for many reasons. There are plenty of places where one must use her in considerable seaway to make landings, to tow her consort off the shore or a reef and to carry three or four persons; she ought to ride the seas smoothly, without swinging or filling when being towed, and to have enough stability not to frighten ladies who venture aboard. A boat to fill these requirements should be from 10 to 12ft. long. The Pilgrim's is a 12ft. cedar keel boat and I think a smaller one would not have followed the painter in many of the wild storms we encountered. I came very near starting out last year with a folding canvas canoe. Observations of several convinced me such a tender would not do in the rough waves of the New England coast. Neither would a punt.

CARESWELL.

ELECTION OF OFFICERS.

New Bedford Y. C.—Commodore, Richard H. Morgan, cutter Ilderim; Vice-Commodore, Edgar B. Hammond, cutter Medea; Rear-Commodore, Nathaniel Hathaway, sloop Addie; Secretary, Edgar R. Lewis; Treasurer, E. Stanley Willis. The clubs has a membership of 170 and a fleet of 54 yachts.



Empire Y. C.—Commodore, John S. MacDuff; Vice-Commodore, Daniel O'Brien; Rear-Commodore, Louis McGown; President, Richard Cullen; Secretary, Charles Friend; Treasurer, James Mulligan; Measurer, A. J. Brush; Judge Advocate, H. Ketcham; Fleet Surgeon, W. W. Tungel, M.D.; Chaplain, Chas. W. Hunter; Steward, John Fennell; Sergeant-at-Arms, John O'Brien; Regatta Committee, J. Myhan, A. J. Brush, Charles Brandt, P. Clifford, P. J. O'Brien, John Fennell, Andrew Curry, and Charles Raubs; Board of Trustees, P. Myhan, Harry Hill, Richard Cullen, William Kinsey, John S. MacDuff, A. J. Brush, John A. McManus and Robert Lang.

Essex Y. C.—Newark, N. J.—Commodore, H. W. Jourdan; Vice-Commodore, George Nenninger; Secretary, H. Bamberger; Treasurer, H. Nenninger; Measurer, B. Mullaney; Financial Secretary, G. Krullschmitt; Board of Trustees, L. H. Crane, Phillip Long and Robert T. Clark.

AMERICAN Y. C.—The American Y. C. have purchased a site on Milton Point or Penningoe Neck, between Rye Beach and Port Chester, on the New York shore of Long Island Sound. They will at once erect a large club house and an iron pier. The grounds will be reached by a horse railway from Rye, 1½ miles distant. The club course will be altered to start opposite the house and also to finish there, a triangular course being substituted for the present straight one. The price paid for the property is reported as $25,000 and bonds for a considerable amount have already been taken to defray the entire cost.

WEST LYNN Y. C.—Commodore, Ozro Ridout; Vice-Commodore, E. F. Rich; Fleet Captain, Wm. Sproul; Secretary, Edwin S. Brown; Treasurer, F. G. Olin; Measurer, S. F. Guilford; Regatta Committee, Walter Sawyer, P. S. Ridout, E. H. Howe, J. A. White, T. F. Parker; Finance Committee, W. H. Warren, W. J. Walsh, P. Lynch; Amusement Committee, F. G. Olin, R. H. Burden, E. F. Rich.

CHANGES OF OWNERSHIP.—Clytie, schooner, Mr. Anson P. Stokes, has been sold to Mr. Alanson Tucker, of Boston....Enterprise, cutter, Mr. H. V. R. Kennedy, has been sold to ex-Com. Hogins. Atlantic Y. C., former owner of the Agnes....Lois, sloop, formerly Kangaroo, has been purchased by Mr. F. Beames.

"ROAMER" SINGLEHANDED CRUISER.

AN ENGLISH SINGLEHAND YACHT.

Editor Forest and Stream:

I greatly enjoy the yachting department of the FOREST AND STREAM, and in return I send an account of a little craft I recently had built, as it will be of interest to the readers of the Pilgrim and Coot cruises, especially as although so small I designed her with a view to having a splendid hard-weather cruiser, and she has more than borne out my expectations. My idea was to have the largest boat I could handle alone in all weathers, a really good, powerful sea boat, and large enough to afford comfortable accommodations for my wife and self for long cruises. After one season over about 2,000 miles of water, and under, of course, all conditions of sea and wind, I can unhesitatingly pronounce her a success. Her dimensions are as follows. Length over all, 25ft.; beam, 8ft.; draft of water, 4ft. 2in. She is decked all over except steering well, and is rigged after the Bawley boats of the Thames, with a mainsail without a boom, as this allows of a brail being used, a very useful thing on a singlehander, enabling the sailor to bring up without lowering mainsail, to gybe with safety in bad weather, and being convenient in many other ways. She carries one headsail set on a bowsprit 5ft. 6in. outboard. The mainsail has 17ft. hoist, 15ft. head, 19ft. foot. As will be seen, being a deep-draft, powerful-bodied boat, carrying nearly six tons ballast (inside), she could carry twice the amount of sail, but for all weathers I do not care to handle more alone, and being a good model as soon as it blows she is fast, and in rough water blowing hard goes to windward grandly. I do not want to go into a controversy of shallow vs. deep boats, but I think in small yachts at any rate that deep draft boats are the best, as a shallow draft could hardly live in the same sea, and certainly not get to windward as she can. I have tried both types and in small vessels there is no comparison; the deep boat feels like a powerful, rushing, hard-driven boat, whereas the other feels a beaten-down, spanking, knocked-to-leeward-at-every-jump sort of a boat. This is badly expressed, but the practical sailor will know precisely what I mean. In my cabin I have 5ft. 9in. headroom; cabin is 14ft. long and comfortably fitted with stove, lockers, pantry, and everything necessary for making a floating home of her. Forecastle 6ft. 6in. long, for sails and spare gear. She is a very jolly little boat, and for my purpose could not be better. I do not know whether her type would do for American waters, but perhaps her description may be interesting to my "cousins" who love blue water. ROAMER.

CORONET AND DAUNTLESS.—Up to the time of going to press no news of the arrival of the racers has been received, though they have been twelve days out. The steamer British Prince, which arrived at Philadelphia on March 17, reports that at about 9 A. M. on March 14 in lat. 40° N. and long. 64° W., a schooner yacht under full sail before a westerly wind was sighted. An hour later a second schooner was sighted, which showed H M J Q, the Dauntless' signal. Coronet was 11min. to the eastward and 13min. northward of Dauntless, the distance from Sandy Hook being 540 miles. The steamer Erin also reported sighting the two on Sunday night about 230 miles out. The steamer Rugia also reports passing a schooner on March 18, but it does not seem probable that it could have been one of the racers. A severe easterly gale has been reported off the British coast, and it is probable that it will meet and delay both.

FROM THE FORECASTLE TO THE CABIN."

CAPTAIN SAMUELS'S book, which we noticed last week, is meeting with well deserved favor. The writer has done a good work in showing what a sailor's life is without the gloss and tinsel; the following incident in his life summing up clearly the two extremes of a sailor's fortunes:

"Two days later we found ourselves in Mobile, early in the morning. Upon landing we were met and shown to a sailor boarding house, the only home Jack knows. Well does Jack know, too, that he will be swindled before he leaves it. We were received with the usual demonstration that the sailor provokes when he lauds with his pockets well filled. We were assigned to the best room and all hands were called to drink at our expense. We breakfasted sumptuously and had the seats of honor at the table. A plan for the day's pleasure was laid out as we ate. Two carriages and two large coaches with flags were engaged. Everybody was invited. After breakfast we started, and what a jolly time we had.

"There had been a great deal of drinking, and when we returned in the evening Peter (the Captain's chum, an old sailor, the former being then but a young boy), was so helpless that he had to be put to bed. I stayed in the room with him. I had not taken any liquor for fear of being drugged. I took off Peter's belt, which contained most of our money, and fastened it around my own waist, as I felt myself the safer custodian of the two. On being invited to supper I feigned fatigue, and turned in, after fastening and barricading the door.

"It was not long before it seemed as if bedlam had broken loose. A general fight was going on in the house. Pistols were used, and the screaming of the women and the oaths of the men were frightful to hear. I had not undressed, and if it had not been for my chum I would have jumped out of the window. The police finally cleaned out the place below and all became quiet. To arouse Peter was impossible. I was overcome by fatigue and fell asleep, but was soon awakened by loud rapping at the door. I was too frightened to speak. The door was broken in and I was seized, blindfolded, gagged and led out of the house. They told me that if I squealed I would have my throat cut. I was taken into a dark cellar and bidden to stay there until I was wanted. I cried myself asleep. How long I slept I don't know. When I woke my thirst and hunger were painful. Finally a villainous rascal, carrying a lighted candle, unlocked the door, and said if I would ship for Havre he would give me something to eat and drink. I asked for Peter and was told that he would ship on the same vessel. I agreed to everything in order to see daylight again. I got something to eat, and what I supposed was some coffee, but I had hardly drunk it when a stupor seized me, from which I only recovered under a rough shaking and a bucket or two of water which was soused over me. Then I found myself in company with Peter on board the ship Belvedere, of Baltimore, Captain Oliver, bound for Liverpool via Appalachicola, where we were to land 60,000 bricks and reload with cotton. We were told that we had shipped and received $80 each in advance. Protest was useless, and we obeyed when we were ordered to man the windlass quickly under penalty of having our heads smashed.

"This was Wednesday. We could give no account of ourselves since Monday. We had been robbed of our money and uniforms, and were rigged out in old trousers and ragged shirts. These, with the Scotch caps that we found on our heads, were all we could show for the money and drubbage we had landed with from Jefferson, to say nothing of the advance the captain told us we had received from him.

"To be carried or forced on board of a ship in this manner is what is termed in sailor parlance being "Shanghaied." The word was coined in New York in the latter part of our Liverpool packet and California clipper service, when men were scarce and wages high. Many times have I seen men mustered to roll-call who did not know the names they had shipped under or where they were bound. This barter in human flesh, I am happy to say, is no longer practiced.

"Now began a voyage on which occurred the most shocking scenes. As I said before, there were but six of us who could do anything. I did not amount to much, as I was too light; but I could steer, and I made up in activity at light work what was wanting in weight. My chum was as good as three men. His herculean strength and splendid seamanship stood him in good stead now. We were well treated, as all sailors are if they do their duty without a growl. We had not been out an hour when one of the crew, in a fit of the delirium tremens, jumped overboard, while nine men in the forecastle were either sick from being drugged or had the yellow fever. The mates believed them to be shamming; and used their fists and ropes' ends accordingly. The way these poor fellows were beaten was dreadful. The captain would stand by and look on, saying, 'Give it to them. I'll have my eighty dollars out of them, or kill them if they don't go to work.' Four of them succumbed and were thrown overboard like carrion during our trip of three days. The other five were landed, and I believe also died. Our ship had been a perfect pesthouse. They fumigated us, and we had no communication from the shore for ten days. At the end of that time we began discharging the bricks."

Such is the life of the common sailor; a day's spree ashore followed by weeks of misery afloat; and many other instances of similar treatment occur throughout the book. The story of the mutiny of the Dreadnought is well told, but it is too long to reproduce here.

A HINT FOR BOATING CLUBS.—There are many localities where good sailing waters are found but where little sailing is done for want of suitable boats. The following extract from the Dublin *Express* offers a plan that is easily put in practice by a small club, and that is likely to result in very good sport. The class of small sailing boats between the canoe and the catboat is growing rapidly in this country, and meets with much favor among young men. The limits proposed below are very good, as they limit the cost, insure a fairly good and a safe boat and make a time allowance unnecessary, and we shall be glad to hear of similar clubs to the "Water Wags" being formed here: "The Water Wags claim for themselves many points of vantage, viz., a perfectly useful boat, that will either sail or row, that is built on safe lines, and will carry four to six persons, and is yet light enough to be drawn by its crew up a beach, and nevertheless has all the qualities of a racer in its own class. These many advantages have been obtained as follows: The lines of a safe and useful punt, 13ft. long, with the steady beam of 4ft. 10in., have been selected and planned to carry a centreboard, to give it a grip in the water; and all the fleet will be built on that model. By doing so all the boats will be equal as regards build, and the sail plan is then limited to 75sq. ft., so that the motive power is equalized and confined within a safe limit. This will give a close and exciting race where skill will be all important, and no time allowance necessary; and the races around Kingstown Harbor on a summer afternoon between the ten boats now being built, and probably others to follow, may be looked forward to as one of the novel features of the coming season."

TIMELY PREPARATIONS.—The prospect of a lively yachting season has set the staff of the New York *Herald* at work already, practicing for the great event, and even the dull details of a boodle trial have not quenched the nautical ardor of one scribe, who writes as follows:

"The good ship Oyer and Terminer floated off the mud bank of our jury system yesterday, where she had been pounding for three weeks, and, with Thomas Cleary on board as a prisoner of state, floated safely out of the shallow water into the broad and bounding ocean of legal uncertainties. Mr. Justice Barrett was on the quarter-deck, calm and watchful, as he coursed her by the unerring counsel of experience and learning. Warrant Officers Martine, Nicoll and Semple were at their posts, and the deck around them was covered with charts and logarithmic calculations, done up in tin boxes and between the covers of legal sheepskin. In the waist were Messrs. Shafer, Dougherty, Vincent and Fitzgerald, who were at times rather inclined to argue about the course of the ship, but on the whole were much quieter than was expected, considering the several attacks of *mal de mer* they had experienced during the weary days the ship had lain in the doldrums of jury getting. At the outset, after the twelve good and true jurymen had been safely stowed away in the brig, with Bos'un Billy Ricketts and his mates as a marine guard over them, Mr. Justice Barrett announced that the watches would be divided into three, and all hands should keep them. The first watch is from ten in the morning until one in the afternoon; the second from two in the afternoon until half-past six; the third from half-past seven until ten in the evening. At this hour—four bells—all hands might turn in or turn out just as they pleased, and be blowed to them. But Messrs. Shafer and Dougherty did not like this, and even went so far as to go up the quarter-deck and remonstrate, pulling their forelocks the while, and swearing by Davy Jones and other well-known jurists that they could not stand the fatigue. So His Honor, with great condescension, said he would permit the night watch to end at 9 o'clock, at which all hands gave a hitch to their trousers, rolled their quids of chewing gum over, and expressed themselves as satisfied."

DELAWARE RIVER.—The Trenton (N. J.) Contingent.—In the regatta of the Quaker City Y. C. last June, Nahma, Minerva and Annita, of Trenton, won all the prizes in their class in the order named. Captain Frank Ferry took the initiative in overhang, weighted keels, low wide rig and housing topmast, making the Nahma the speediest in her class. Commodore Micker is following suit with the Minerva—the last of a great name. She won easily over the Carry Z. in the closing fall regatta without time allowance. Her long, slender overhang gives her a stylish appearance, and adds greatly to her power. With a change of rig and ballast she will not only be a dangerous rival in her class, but will hurry some of her larger sisters. She will be fitted with a new suit, and will fly all the kites available. With the exception of the Gretchen, she is the smallest cabin yacht in the fleet. The Annita, built by Captain Vanzant, of Trenton, is of the sharpie type, but wider, with the beam further aft. She certainly sails fast for a heavy dew boat. Her cabin is very roomy and luxuriously fitted. She was designed for the shoal waters about Trenton and for the use and comfort of ladies, the family and friends of Mr. Richard Whitehead, her owner. I am not advised if his new cutter will be enrolled in the club, probably not. Our Trenton brethern are modest and don't want much, as will be seen by the unostentatious way they carry off all the prizes, and it would not be a surprise if through their excessive diffidence another batch goes thirty odd miles up the Delaware next June. The regatta committee are already exercised to know what kind of a trophy would suit them. The Salem (N. J.) Contingent, forty or more miles down stream will be, represented by Mr. Sinnickson's new and handsome yawl Witch. It will be seen the Q. C. Y. C. have yachts enrolled in the club from the Delaware Bay to the head of navigation, and taking in all the intermediate towns on the river. —R. G. WILKINS.

SEAWANHAKA CORINTHIAN Y. C.—A special meeting of the Seawanhaka C. Y. C. was held on March 15, at which Rule XXXIV. of the sailing regulations was finally passed in an amended form, and Rule XII. was also finally adopted. The rule relating to classification was also taken up and altered so that the old classification is retained for this season, the intention being to appoint a committee and to revise the classes after the end of the season. The course was also changed so as to start off Owl's Head, making it the same for the larger classes as the N. Y. Y. C. course, and increasing the length of the courses for the other classes a little. An amendment to allow clubtopsails on yachts of over 50ft. was lost. The Law Committee presented a form of bond which was approved, and Com. Canfield offered an amendment providing that officers of the U. S. Navy shall be exempt from the payment of any annual dues; but it was decided that the amendment could not be passed in the form in which it was offered. The Committee on Location reported that negotiations had nearly been concluded for a house in a very desirable location, and announced the following committees: Lectures—Com. Canfield, Messrs. J. F. Tams and C. H. Leland; Library—Wm. Whitlock, W. P. Stephens and Walter L. Suydam; Models and Drawings—John Hyslop, A. Cary Smith and W. P. Stephens; House Committee—F. O. DeLuze, H. S. Rockenbaugh, T. A. Bronson, J. Wm. Beekman and R. F. Bixby. Messrs. S. V. R. Cruger, F. T. Underhill and A. P. Montant were appointed a committee to attend to the interests of the club about Oyster Bay.

MAYFLOWER AND ARROW.—Gen. Paine and Mr. Burgess have finally decided that Mayflower is to cross the Atlantic early in June, while Mr. Burgess will follow with his family by steamer about the middle of June. He will have entire charge of the racing, and will sail against Arrow for the Queen's Cup, and Irex for the Brenton's Reef and Cape May cups, but will put Mayflower in no races where any restrictions are placed on the centerboard. Mr. Burgess has sent the following telegram, as well as a letter, to Mr. Chamberlayne. "Mr. Tankerville Chamberlayne, owner of the cutter Arrow, etc.: If challenge of last year is open for the cutter Arrow, holder of the Queen's Cup, to sail against an American sloop, Gen. Paine authorizes me to say that the Mayflower has been placed in my charge, and that she will sail the Arrow for the Queen's Cup over the Queen's Cup course. Please answer.—EDWARD BURGESS." Nothing further has been reported concerning Sachem's trip across.

CRUISING.—Stella, steam yacht, Mr. W. W. Kengon, was at Brunswick, Ga., from Musquito Inlet, on March 14, and on March 19 arrived at Savannah.....Meteor, steam yacht, left for the South after a short stay at New York, and was at Norfolk on March 15. .....Alva, steam yacht, Mr. W. K. Vanderbilt, arrived at Brunswick, Ga., from Nassau on March 18, and sailed next day for Port Royal, S. C....Talisman, steam yacht, Mr. J. W. Slater, arrived at Charleston on March 18....The sloop Daisy is reported at Cedar Keys, Fla., on March 18, after a cruise from Lake Minnetonka, Minn., with her owner, Mr. S. E. Baldwin and wife, and Mr. James Hess on board.

A JUBILEE RACE IN NOVA SCOTIA.—The latest thing in jubilee races is a proposal on the part of the Nova Scotia Y. C. to offer a $500 cup for a race in Halifax Harbor, probably over a 40 mile course, and to invite New York and Boston yachts to enter. An invitation will probably be received by the New York Y. C. prior to its meeting to-night.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

B. D. B.—The midship section will answer very well for a canoe yawl.

A. A. P.—The process is patented by Mr. N. G. Shepherd, of New Haven, Conn.

H. M., Augusta, Ga.—Copeland's Pete was by J. Hill's Trim and out of Sam Swanton's Smut.

W. S. L., Niagara.—The proposed keel seems fully large enough to take the place of the centerboard.

D. F. M., Philadelphia, Pa.—"Canoe and Boat Building" gives full directions for lapstrake construction.

E. H. C., Boston.—See the last volume of the FOREST AND STREAM for letters about makers of birch canoes.

E. D., Ariel, Pa.—We know of no second-hand engine. The Shipman is the best oil engine for a small launch.

WALTERS, Sheffield, Ill.—You can obtain cork jackets from D. Kahnweiler, 146 Worth street, New York.

G. S. O., Kingston, Ont.—The proposed lead in keel would make the boat stiffer and probably improve her speed.

E. K. L., Brooklyn, N. Y.—Tammany is by Pilkington's Tory (Garth's Drake—Moore's Mab) and out of Moonstone (Price's Bang —Davey's Luna).

G. O. J. E., New York.—"Small Yachts" gives full instructions for taking off the lines of a yacht. You can paint over the potlead by sandpapering it down well.

C. J. A., Providence, R. I.—You will find designs of tents in "Canoe and Boat Building." The quality of canvas needed can be easily calculated when the size of tent is decided on.

H. O. C., Boston.—You will find rules for calculating displacement in "Small Yachts" and "Canoe Building." They are too lengthy to be given here.

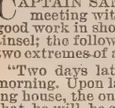
JUNIATA RAPIDS.—Will W. H. Graydon give the location of those "wonderful rapids" in the Juniata? I know the river from source to the Susquehannah, but cannot locate the rapids.—INQUIRER, (Altoona, Pa.).

NONPAREIL C. C.—The nearest good black bass fishing to Newark, N. J., is at Greenwood Lake. You may get permission to camp there, but you will not have much good fishing there if you return the same day, for the morning and evening are the best times.

H. B., White House, N. J.—1. What are the addresses of the New Jersey Fish Commissioners? 2. What is the address of the United State Fish Commissioner? 3 Of whom can I buy brook trout and German carp? Ans. 1. Richard S. Jenkins, Camden; William Wright, Newark; F. M. Ward, Newton. 2. Prof. Spencer F. Baird, Washington, D. C. 3. There are no persons advertising these fish at present. Small carp, from 1 to 2in. long, may be obtained free in the fall by applying to the United States Fish Commission.

MAN AND OTHER ANIMALS.

THIS is the season for the red-breasted robin. Abundant as these birds are in the up country, they are as nothing compared with the number of those on the coast. In the morning and evening they fly up and down the "banks" in gangs of millions. The strips of beach are narrow, and it is always easy to know just where the birds fly, since they pursue a certain route. So the fishermen—this being a dull season—employ their seines in catching birds. They set the seines between tall poles on the beach and catch thousands of robins in a morning or afternoon. At one flight a man caught over 2,000. He put away half for food for his family and shipped the others. On Bogue banks with a small net last Monday a Mr. Ross caught 500 robins. The birds fly quite low and do not observe the net at all. The people who have set the nets are always concealed near by.—*Raleigh Letter in Richmond Dispatch.*



"I want ten cents' worth of bait," said the lone fisherman of Long Wharf to the tackle vender. "Seems to me these are very small worms," he remarked, as the ancient gentleman scooped up the limp fish food. "Great Scott!" yelled the bait merchant, "What do you expect for ten cents—sea-serpents?"—*Oakland Tribune.*

Mr. Charles Gilchrist has been the fortunate recipient of a colored lithographed memorial plate, signed by His Royal Highness, the Prince of Wales, as Executive President of the Colonial and Indian Exhibition of 1886, and by Philip Cunliffe Owen, Secretary to the Royal Commission. The plate is presented with a commemorative medal, and is given in recognition of Mr. Gilchrist's contribution of specimens of wild rice to the Exhibition.—*Port Hope (Ont.) Times.*

Great Barrington's largest elm tree, supposed to have had a growth of 150 years, and to have given shade to the chiefs of the Stockbridge Indians in their council deliberations, was cut the other day at the junction of North Elm and Main street. John Wright, who lives near, was afraid that the tree would break down on his house, but it was found to be sound, and, as it was 18ft. in circumference, it is estimated that it will make 12 to 15 cords of wood. There is considerable feeling in the village regarding the destruction of the tree, and a number of prominent people say that Wright had no authority to cut it down. The tree stood near the line of the old upper and lower Housatonic townships.—*Springfield (Mass.) Republican, March 16.*

Among the Many Novelties

Introduced by us last spring were the

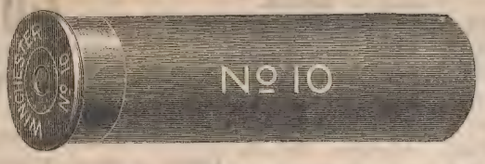
Dead Finish, Waterproof, Braided Silk Fly Lines,

FOR SALMON, TROUT AND BLACK BASS.

These lines have given perfect satisfaction and stood the most severe tests. *They do not crack, chip or become sticky and stiff,* but remain soft and pliable. These lines are waterproofed through and through, not merely on the surface. They will not become tender in use or by age.

Also a new style **LANDING NET,** made of *waterproof braided linen line,* which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

ABBEY & IMBRIE,



Manufacturers of every description of

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

THIRTY-TWO PAGES.

Four pages are added to the usual twenty-eight, and this issue of Forest and Stream consists of thirty-two pages.

ON SNOWSHOES THROUGH THE PARK.

NEXT week we shall begin the publication of the report of the special commissioner intrusted by the FOREST AND STREAM with the difficult and dangerous duty of making the tour of the National Park in winter. The attractions of this wonderland in summer are well known, but until now no man has beheld its winter glories—glories in many ways more striking and more strange than those of the summer time.

Our commissioner had our full confidence and was pinned down by no definite directions, but we instructed him, if it were possible, to visit the various Geyser Basins, the Yellowstone Lake and the Falls, and to report on their winter character. He was also to look out carefully for game, and above all to see if he could discover any bison or signs of them in the Park.

His trip has been in all respects successful. All the principal localities of interest were visited by him, and the marvellous effects of the frost are described in his report. After leaving the Upper Geyser Basin, the crest of the Rocky Mountains—the Continental Divide—was crossed in a blinding snow storm in which it was impossible to travel except by compass, for all landmarks were hidden by the flying snow, and the wind whipping about among the peaks, came, as it seemed, from half a dozen different quarters at the same time. Over the desolate snow-buried mountains the explorers made their slow way, and down on to Pacific waters, out on the bleak, frozen plain which, in summer, is the blue, dancing Shoshone Lake, along that and then back once more up the mountains, and again over the main range and down to the Yellowstone Lake. From the Hot Springs at the head of the West Arm of Yellowstone Lake, the party traveled on the ice down to the outlet of the lake.

From the time of leaving the Swan Lake Basin until the Hayden Valley was reached, but little game was seen. From that point on, however, elk were observed in great numbers, the country about Mt. Washburne and the Valley of the Yellowstone being a favorite winter range with these animals. With the modesty of a brave man our commissioner speaks lightly of the perils and hardships undergone on the trip. There are few men who know what such a trip means; a journey of over 200 miles on snowshoes, through a country whose features are all changed by the deep snow, in a temperature often 60° below the freezing point, and where provisions and blankets have to be carried on the travelers' backs.

Our correspondent has done his work bravely and well, as we knew he would when we selected him for the work. There has been no bluster about him, no long-winded dissertations about what he was going do. His journey accomplished, he tells his story in the simple, quiet manner of the old-fashioned mountain man.

EUROPEAN MILITARY ARMS.

A VERY interesting contest is just now going on in Europe. Each nation of that war-smitten group of commonwealths is urging its inventors forward to the manufacture of a small arm which shall so far exceed the devices in use elsewhere as to give to the soldiers of the lucky nation a vast advantage when the game of war comes to be played in dead earnest. Each is seeking to "get the drop" on his fellows in this respect; and to American students of this branch of invention the results so far attained are more curious than valuable. It appears that the same trouble is met there that was complained of by our own mechanics in past years. Gold-laced incompetence serves as an extinguisher upon the clever efforts of the practical men who understand the problem exactly and have the ability to meet its requirements. Armory mechanics are the men who make the improvements. They meet the difficulties face to face, or rather hand to hand. They see the arms come back broken, and in that way note where hard usage discovers the weak points of the weapons. It is not at all likely that any inventor is to strike upon any great revolution in the making of this class of arms, at least so long as the present source of explosive force is employed. Gunpowder is capable of a very narrow range of application. A new gas producer or active agent of propulsion for the bullet may bring with it an entire modification of the form and capability of small arms of every sort, but until that day comes the changes and improvements are likely to be in form, and that only within very narrow limits.

The history of the manufacture of rifles in this country would be instructive reading to those leaders who are now facing the problem of a better arm abroad. After American ingenuity has exhausted itself on this subject it is not likely that any European mechanic or student will strike anything better. The American weapons have gone abroad, but through prejudice or international jealousy, or some other reason do not seem to be looked upon with favor. The models, sent here, of the arms selected for use in the several continental forces are not likely to help our inventors any. They look like antiquated models which, in this country, have been laid aside as objectionable. The bolt action seems to be the starting point with several of these inventors, yet American makers could give valuable points on that action, especially when combined with a tube magazine.

It would seem that the question of a rapid firing weapon (for all opposition to the use of a magazine or repeating arm is now brushed away) is to be settled in some way by the use of a detached reservoir of cartridges, and that the rifle itself is not to be made at once an active weapon and a supply depot. In this line of invention the American patent office shows several very satisfactory solutions of the problem, and while it seems improbable that such should be the fact, yet it certainly appears from such information on the subject as comes this way, that those appointed to select arms abroad are not posted upon the wares to be found in our market, or the lessons to be learned from the history of firearm invention here.

In this country it may not be long, with the present agitation upon the question of an improved militia, before a cry is made for a new arm. It has already arisen to a demand in this State, and, as before, the regular army will be quick to catch a good thing from the militia.

Sporting arms and gunnery generally will be apt to come in for improvement under the attention paid to this subject, and in place of mere betterment and quality, there may be, in the near future, material modifications of the forms of our shotguns.

SNAP SHOTS.

THE ocean yacht race between the Dauntless and Coronet turns out to have been a purely business enterprise engineered by Mr. Bush, the Coronet's owner. He wanted to sell his boat, and thought she would bring a higher price after making a record; so he played his points. Mr. Colt, owner of the Dauntless, was induced to match his boat against the Coronet, under the delusion that the race was to be a thoroughly sportsmanlike affair, and never dreaming that he was being used as a jack-screw to lift the market price of the boat Bush had to sell. The New York Yacht Club, the Royal Cork Yacht Club, and various other organizations joined in, each guilelessly adding its mite to booming the boat Mr. Bush had for sale. But the greatest triumph of the speculative "yachtsman" was in seeing the daily papers publish whole pages of cable despatches giving full details of every bucketful of water that flooded the Coronet's decks—all these, Mr. Bush chuckled to himself, were a series of reading notices for which even the *World* forgot to charge its customary dollar a line. When the race was over, Coronet a winner, the thrifty Brooklynite put up his price to $150,000, issued his circulars, and is now awaiting a buyer. It is extremely doubtful that, in spite of all his brilliant engineering, the Coronet's owner will dispose of his craft to the Englishmen at the figure named; for much less than that sum much better boats are built in England, and the yacht's March passage across the Atlantic is not a feat so wonderful that eager purchasers will elbow one another for the privilege of paying £30,000 for an American built boat.

Mrs. Rickard, an Indiana farmer's wife, shot an eagle which measured, when killed, nine feet from tip to tip of wings. By the following week, when the item had been copied into Eastern papers, the spread of wings had expanded to thirteen feet. At this rate it bids fair to rival the fowl occasionally heard of on the floor of the House of Representatives, when the member from Buncombe, in impassioned rhetoric, pictures the proud bird of freedom poised on Pike's Peak, with one wing stretching out to the Pacific and the other to the Atlantic, screeching defiance to the effete monarchies of Europe.

The New York Assembly having passed Finn's bill to repeal the short-lobster law, the Senate has ordered it to a third reading and will probably pass it. We have explained that Finn runs a barroom, where, in the event of the bill's passage, he can set out his little lobsters as free lunch bait. He is also said to be pushing this iniquitous measure in behalf of certain dealers, against whom suits for large short-lobster fines are now pending; they have adopted the plan of repealing the law as involving less expenditure of hard cash than would payment of their fines.

An Indian Territory squatter observed a mouse come up through his cabin floor and play hide-and-seek around a can of gunpowder on the floor. The man started in for pistol practice at the mouse, hit the can, exploded the powder, blew off the roof, wrecked the cabin, killed a two-year-old son outright, mortally wounded a ten-year-old girl, seriously injured himself and his wife—and missed the mouse.

The sketch of grouse shooting in the Pocono Mountains, by "A Country Parson," is from the pen of the author of "The Recollections of a Drummer Boy," which attracted so much attention at the time of their publication in *St. Nicholas*, and have subsequently been published in book form.

The difference between the laws of the Medes and Persians and the game laws of New York is that the former were unchangeable, but the latter are changed every year with the regularity of the procession of the equinoxes.

At the A. T. Stewart library sale in this city last Tuesday, a copy of the original edition of Audubon's "Birds of America," in nine volumes, was sold for $1,350.

Mr. R. B. Roosevelt disclaims that the hodge-podge game bill prepared by him is a "codification." In this his position is impregnable.

The hearing on the Maine Game Commissioner charges was held last Tuesday, decision being reserved until after the examination of the documents in the case.

A RECORD OF FAILURES—II.

THE weather was gradually getting colder, so that sleeping out without tent or other shelter was not very pleasant, but I was often surprised to find what a very low temperature indeed may be actually enjoyed when one is engaged in some active pursuit. Jim and I had been out hunting one day, and, for the first time, I had had my ears slightly frozen, as I wore no cap. At night I was reading an account of Hall's arctic exploration, in which is given a harrowing description of the men's suffering from the extreme cold, the thermometer indicating 59° of frost. When I began to think over the narrative I could not help wondering a little, for it seemed to me that we in Manitoba have often experienced much colder weather and never imagined that we were enduring arctic hardships. All day I had been out on the hills in a gale of wind, often with my mits off, though careful not to touch the rifle barrel with my bare hands. I knew it was far below zero, so I asked of one who had been to town, "What was the temperature to-day?" and was told 30° below zero, at the highest. This was 62° of frost, a gale of wind, no arctic clothing, nothing on my head but a handkerchief over my ears, and yet I had no idea that I was suffering so severely. Verily I believe that many arctic explorers set out with the predetermination to suffer terribly from the frost and are afterward very unwilling to believe that their purpose has in any way been frustrated.

It may be necessary to explain that I was capless by choice. I cannot hunt with my head covered. A cap muffles both eyes and ears beyond the possibility of use and always makes the top of my head unpleasantly hot, even at 20° below zero. Yet when the winter closes in it is necessary to have some protection for the ears, and so experience at length taught me to wear the simple red scarf of the Indians, and I was well pleased to find how completely it answered the ends of its existence. It saved my ears from freezing, kept my head cool and allowed the free use of my senses; and it on one occasion, I believe, saved my own life, as will afterward be seen, and on another kept me from shooting an Indian, for I had covered him in a thicket taking him for a deer, and was about to fire when I caught a glimpse of the scarlet badge, and possibly saved myself from life-long regret.

In many particulars I was thus led to believe that the Indian has wild life "down fine" and that many of his practices are the outcome of their experience. Thus, as already mentioned, his foot in walking is set straight. I found that by setting my foot straight my stride was increased, while also in deep snow it enabled one to return exactly on one's old track. So also in camping. I have tried all modes, tents and no tents, straw camps and willow camps, big fires and little fires, and have at last come right down to the simple blanket around a few poles behind, and a small, neat fire in front, just as the Indian does the whole year round.

Next day I set out alone once more to look for venison, and tramped all day in a new direction, but found nothing to vary the monotony of the deerless scene. True, I could at any time make a change by killing small game, for this is very emphatically a rabbit year, and a chicken year as well. The rabbits (*Lepus americanus*) exist in hundreds and thousands; every willow bed is swarming with them, and every other tussock you kick gives birth to a snow white bunny. Their footprints are in myriads all over, and are one of the chief difficulties in the way of tracking deer in the shallow snow. There is no sport in killing them, for here we may apply the philosopher's adage in full force, "thar aint no fun in a steddy streke of luck." I tried in various ways to enjoy hare hunting. First I took the rifle and killed one, two, three, four, five, one after the other. No. 6 proved to be a fox, and with a diabolical perversity characteristic of my guns whenever anything worth shooting turns up, the red-haired gentleman, though at short range, skipped lightly away unhurt. Next I tried coursing. I would take three dogs that could usually catch a fox, into a bluff on the prairie, beat out the rabbits and let the dogs start after one that chanced to make across the open. It's a grand thing to take the conceit out of a dog. All three would give chase, but gracious, there was nothing for them to chase but a white streak. I never yet knew of either dog or fox catching a rabbit in a fair race. I tried shooting with a bow, but the bunnies simply laughed at my archery and could give me short-range shots in derision. Lastly I tried spearing them. I flung a muskrat spear several hundred times one afternoon, split innumerable trees, and succeeded in impaling two luckless rabbits. But it was too cruel a mode and I never tried it again. Now I endeavor to take no notice when I see a hare crouched in the grass just beyond reach of a club and too near for a charge of shot.

But at present it is deer we are after, so we'll let the rabbits alone.

On the twelfth day of blunders I made a far wider circuit, away into the unknown north. As I was coming homeward I came upon the yesterday's track of four deer. When you can't get a fresh track take the best you can, it freshens at every yard, is a good principle. I followed the stale trail for 40yds. and then found where the deer had lain all night; one very large buck had risen cautiously more than once during the night and then lain down again. After this I followed the track more carefully, but had not gone more than 50yds. further when, to my blank astonishment, there loomed up on the hillside 50yds. ahead, the broad gray flank and antlered head of an immense buck—my old friend I thought. But he had seen me first and bounded the moment the ready Winchester was raised. I fired on the jump and loaded and fired again and again, four times in all. Four deer sprang up but they separated; two went to the east and two to the south. I kept out of sight after the first shot, and by running along the hollows kept sight of the deer for some time, but they continued running and soon I had nothing but the tracks, and on these, to my disgust, there was no sign of blood, for I had twice been dead on the big buck and thought him mine already, almost! I followed the two that led me homeward. In time their trail came to a wide shallow valley, a dip in the whole country, in the middle of which was a long willow bed, but I doubted if the deer would stay there as their course was across, so I sat down on the hill to watch. It was hard work waiting, but I knew the time was well spent; and at length, after what seemed like an hour, I was rewarded by seeing two dark specks leave the willows a mile away, and slowly wander up the side of the hill. At first I did not stir, knowing that they would look for me, but when once they had again disappeared, I ran toward the place as fast and straight as possible. Before I was across the valley I found the tracks of the other two, they also had counted on the slough as an asylum, and I made a note of it, knowing from the signs that they would stay there till called for. When I reached the hillside I went more cautiously, crawling along and from time to time raised my head above the brush to look for the deer. After the third or fourth scrutiny I caught sight of a dim flash of white, and knew its meaning only too well—they had seen me and were already bounding off. I stopped and gave a whistle; up a hill they ran, and while they stood gazing I fired. They bowned over the hill and away. I coursed along the next hollow, knowing how they would run, then after covering about 250yds. I rose up slowly above the scrub to look for my deer, and just at the same moment I saw the great-eared head slowly lifted above the cover looking for me; our eyes met and I fired, but I was 200yds. away and hasty, and—well, I'm tired of saying what happened. I followed till dark but saw them no more, though by the tracks they had had at least one more good look at me, and to fully explain the unquestionability of the statement I sketch the graven record I had of the occurrence. One track only is sketched. At A we have the deer walking toward C, but being still uneasy it mounts the hill (B), and after that its hasty flight shows that it perceived that it had good grounds for making its best time.

As soon as possible after passing the night at home, Jim and I were on the warpath, and we soon found the tracks in the slough where I had left the deer. I went to one side, Jim went right in on the trail. Presently his keen eye sighted the head of a buck some 40yds. off among the willows; up went his rifle and he was about to fire, but just at that moment in direct line between and beyond the ears, the saw my scarlet ear cloth. Had he fired, hit or miss, my chance of escape was one in a hundred. He lowered his rifle in some trepidation, the deer took alarm and bounded out behind me some 50yds., but, neither saw nor heard anything of them. This was the slough whither I had driven the big buck and his three companions. Jim and I drove out the three, but we never saw the monarch again, for the snow had covered his old track, and from what I now know I believe that when I last fired at him I killed him.

We dined, then again took up the trail. Gordon Wright was with us; he was well known as a good rifle shot at a target and he had frequently hit a 4in. mark at 200yds. to show us "how to kill deer," and he never lost an opportunity of teasing us about our wild shooting. It was all in vain we argued that killing a deer and hitting a tree were as different as snaring a buffalo and clubbing an ox; the ridicule continued, so we resolved to give him a show at any price. Jim did the stalking and at length procured a noble chance—a buck and a doe unconsciously feeding at 200yds. distance. Gordon had his pick of the rifles, a rest across a tree, a standing shot, a short range, unlimited time and a broadside view, and he fired and totally missed like a very infant in gunnery, and the unscathed deer bounded past in full view, as usual with the doe in advance and making by far the best time.

Just before we came up with them a rather curious incident occurred. Jim was trailing, and Gordon and I were in the sleigh at a reasonable distance behind. We supposed that the deer were still far in advance, and as we were not yet warmed up after the dinner, Jim was wearing his big buffalo overcoat, and it so muffled his senses and disguised his person that he nearly walked right into the deer before he saw them, and they were so busy snorting and stamping, and wondering what in thunder was that big wooly brute, that they never thought of flight until less than 30yds. lay between them and their pursuer. Jim had not thought it worth while to carry a rifle for some time, and by the time we had provided a weapon in response to his "For heaven's sake give me a gun," the deer were doing the "jump act."

All the rest of that day we followed hard. Later on in the afternoon we came to a ravine that the horses could not cross. Jim went on. I remained to tie up, then followed; but before I overtook him Jim had again sighted the deer; he had one shot at 300yds. and another, and as we afterward learned, a telling shot at 500. He then returned and we managed to get the team over the gully and again took up the trail. Much sooner than we had expected we found where the deer had lain down, and there for the first time we saw a dark stain of blood in one of the marks. I need not enter into further details of this day's sport beyond mentioning that we followed the track for a long time, but never saw any sign of blood on it. Several times Jim was able to point out to us the pair as they crossed the hills just ahead, but we could not have supposed by their actions that one of them was wounded; lastly, just about dark we tried a couple of long shots for luck and came home.

The next day Jim and I took up the track again, and after following three miles from the place of the telling shot we found the doe lying stark and stiff. The big .55 ball had entered her right ham, passed through her bowels and lodged between the ribs of her left side. The fact that this animal could go three miles with a mortal wound and never bleed a drop, excepting when she lay down, is something of which I never heard the equal in the annals of hunting. Close by the dead doe were tracks showing that the buck was unwilling to leave his mate. With this knowledge we made a careful stalk and soon found his lordship in a ravine, I had a good chance at 60yds. and missed with the rifle, but poured nine buckshot into his ribs; he bounded, fell, then gathered himself up and ran desperately. We watched him for a mile, then we were compelled to return homeward, but were confident that all we had to do in the morning was come and get deer No. 2. But alas! another snowstorm blasted our hopes, and though we went far and fast and made many a cast, we had to give it up and content ourselves with the doe.

This was the end of our hunt; like the devil's pig-shearing, a case of great cry and little wool; and yet I must say that I enjoyed it amazingly, far more in fact than if I had killed a deer every day, for we know that the "beauty of hunting is its mighty onsertainty, an' thar ain't no fun in a steddy streke o' luck." And now, having whetted our friends' appetite for a more successful foray and demonstrated the entire foolishness of setting out with a rifle, where range, capabilities and sights are wholly new to you, I'll quit and prepare myself for a different result in my next hunting expedition.

ERNEST E. THOMPSON.

MANITOBA.

IN THE POCONO MOUNTAINS—I.

BY A COUNTRY PARSON.

THERE were only three of us this time, Sam, Jerry and I. Perhaps I should say we were four, reckoning the dog, Ponto, as one (and perhaps the best one) of the party. Ponto was Sam's dog; a beautiful and intelligent white setter well broken to the hunting of quail, but so far without any experience with pheasants. What the surnames of my companions may have been need not concern the reader, any more than it concerned me, once we had got into the bush and were busy with the birds; for before we had reached the summit of the Pocono Mountain, where we were to leave the cars and take the buckboard, I became conscious of a tendency toward dropping all superfluous titles and shortening the names of my comrades to terms of purely monosyllabic intimacy. I suppose every hunter and fisher experiences this same inability to master long names when calling to his companion in the brush in some sudden emergency; as when he has caught a big trout or driven a bird within his comrade's reach. Under such circumstances to exclaim "Mr. Jackson Robinson, I"—would be ridiculous; for apart from the formality of the procedure, it is to be taken into the account that, in pheasant shooting, at all events, your bird is gone "before you can say Jack Robinson."

So, then, while we were steaming up the mountain, we abbreviated and curtailed and foreshortened our names until, when we stepped on the platform of the station on the top of the mountain, our party consisted only of Sam, Jerry, me and the dog.

"Reed, the Englishman," who carries the United States mail through these rugged regions, being on hand with his buckboard, we all mounted, excepting Ponto, who, in the delight of his dog's heart at being free to roam among the bushes, ran alongside or ahead of our vehicle, or behind it as the mood moved him.

It was a beautiful day. The sun shone out bright and clear, and the north wind blew cool among the rustling oak leaves and the murmuring pines as we rode along. We had calculated on good weather, and our weather predictions were, as the event proved, eminently wise. For full five weeks, that is to say from the middle of September to the last week in October, no rain had fallen. It was a long dry season, the grass and shrubbery all dying, and the farmers everywhere hauling water, in some instances a distance of miles, for their suffering cattle. It was our belief that it was too dry and too warm for pleasant hunting during this spell, and that it was likely to be followed by a week or so of rain, after which we should probably have clear and cold weather. And it came as we had said. The last week in October it rained. On Sunday, Nov. 1, it cleared, and remained clear until the following Saturday, giving us just one week of fine, frosty, sunshiny, breezy November weather, an almost ideal week for a healthy tramp in the woods.

We fell to discussing our dog Ponto, on whom so much of our success depended. "He's no pheasant dog," said Sam, "and I don't know how he's going to work. He's good on quail. A better dog never was for quail. But he nor I ever hunted for pheasants, and I don't how it's going to go. See there!"

Sure enough there Ponto stood by a bush by the roadside a few rods ahead of the buckboard, stiff as a poker. How beautiful he looked! What a remarkable instinct these bird dogs have! But before we had long time to contemplate his actions, wh-i-r-r-r—away went the pheasant. Had we only had our guns in order we might have had a fine shot; but it is rather dangerous riding on a buckboard with a loaded gun, and we had rather miss all the wayside pheasants than meet with some sad accident.

At Almanackers, "the half-way house," as it is called, we stopped to water the horse and change the water in our milk can containing a dozen fine large bass, with which we designed to help stock a certain remote and almost inaccessible lake away up in the mountain, several hundred smaller bass having been lately put in. We had brought these fish all the way from Easton, changing the water at every chief stopping place. "Now, see," said Jerry, "it's a fine lake, and if we can get it well stocked with bass once, we can have some sport there, as it were, between seasons. When the trout season is over, and we can't fish for trout any more, then we can go up to the lake. And in the fall if we get tired of shooting, we can exchange the gun for the rod for a day or so, and that, I think, will be fine."

In due time we arrived at our destination. With the appetite of woodchoppers we sat down to a beautifully spread table and ate a hearty meal, after which, taking our guns and can of fish, we were driven by our good friend Jake about three miles away up on the mountain to the lake. "It's a rough road we are going," said Jake. And so it was, verily. Rocks and stumps and fallen trees and burnt logs—over these and into ruts and over roots we bumped and thumped until we reached the lake. A beautiful sheet of water, truly! Two or three acres in extent, it lies in an unbroken solitude of mountain waste, seldom seen by man. I was the more im-

pressed with it because of the remarkable charm lent it by its surroundings. The day was nearing its close. The westering sun shed a peculiar yellow light over its waters. Away on the other side the dark pines stood with their sombre shade. A profound calm, as of the primeval silence, brooded over the scene. Add to this the rarity of the atmosphere, the fresh air, the sweet woodsy smell all around you of mosses and sweet-scented shrubs and decaying foliage, and you may form some idea of the scene. Tilting the milk can and pouring out its water into the lake, I had the pleasure of seeing the 10in. bass dart forth as full of life as when taken from the tank that morning more than fifty miles away. Away they went into that beautiful sheet of mountain water, where let us trust their progeny may make gentle sport for many an angler besides Sam, Jerry and me in years to come.

Turning back from the lake we made our way over boulders and through bushes to the road where Jake was waiting for us with the buckboard. Before mounting it, however, we concluded that Sam should send Ponto into a little ravine and look for birds. But a brief run soon convinced us that no birds were there. It was not the right kind of ground. The signs were not favorable, for the land was barren of those shrubs and berries, particularly the red partridge berry, which our game so dearly loves. So mounting the vehicle we rode home, thinking it too late in the day for any further work.

The next morning, Tuesday, at 8 o'clock, we took our way out along the wooden railroad (built in the interest of a certain factory managed by our host), each carrying his lunch in his game bag, and Jerry having his black, two-quart tin coffee kettle in safe keeping. In addition to Ponto we took with us another dog, native to that neighborhood, and one that I should never have suspected of being a hunting dog. He was the most ridiculous looking animal of the dog kind I believe I have ever seen; about 10 or 12in. high, 2½ft. long, short, yellowish hair, long ears, and forelegs that would puzzle any writer, not also an artist, to describe. I called him "knock-kneed," and was inclined to make sport of his hunting pretensions.

"But I tell you," said Jerry "Sport is a good dog. Yes, sir! You don't believe it, maybe; but wait till we get a rabbit up, and you'll see how he can get over the ground. He's a good dog, Sport is, ain't you Sport?"

Sport wagged his tail, whined gently, and rubbed his nose against Jerry's leg, for he knew Jerry for an old friend.

"That dog run?" queried I. "Really, now, I should like to see it. I think I should die laughing at the sight. Why, he'd fall over his own toes. What species of dog is he, anyway?"

"He's a dash-hound," said Sam. "That's what he is. I know that kind."

"So called because he can't dash very much, I reckon."

"No," said Jerry, he's what they call a beagle, and a beagle is a good dog. They are good on hare."

"Short, yellow, dog hair?" I ventured to suggest, "the kind of hair that Noah's dog had."

"Oh, you git out! Hare, I say; rabbits, then, if you can understand that better. Yes, sir; and in England I have read they always like to have a few of this kind of dogs in a pack of hounds because they have very fine, musical voices, and serve to enliven the chase."

"Well, well; Sport, my boy, I really wouldn't have suspected you of wanting to sing in the choir. But since you are here, why come along, sir, and welcome."

"The only trouble with that kind of dog up here in this country," continued Jerry, as we walked up the railroad in the fresh, frosty morning air, all aglow with expectation of a fine day's sport," is that they don't like the briers, and there are a good many patches of briers around here, you know. You see, Sport has short hair, and the briers soon cut his skin and he can't stand it. Then he often gets tired on a hard day's hunt, and sometimes I carry him in my arms."

Thinking it was no wonder Sport liked Jerry we trudged on, and soon lost our beagle. Jerry whistled and called, and called and whistled, but Sport was afraid of the briers and was making a long detour to avoid them. After a great while he came up, panting, was soon lost again and disappeared for an hour, turning up as suddenly and mysteriously as he had vanished. He followed us until about the middle of the forenoon, when we were led into a seemingly endless patch of burnt timber thickly overgrown with briars, into which he would not venture. We saw him no more till we reached home in the evening.

Before reaching the Tobehanna Creek we left the railroad, and turned into the bush to the left in the hope of getting up some birds. None, however, appearing, we circled around, heading for the bridge through a swamp when—of course, just when we were least thinking about it, with a great flapping of wings away over to the left where Sam was thrashing about in the bog, a cock started up from the top of a pine tree, making a great noise, and sailing away with his tail feathers spread out like a fan.

"Wha-a-t's that?" exclaimed Sam, as he gazed after the first pheasant he had ever seen, the bird being too far from him for a shot.

"That? Why that's a conjunction, as the boy said when he bumped his head against the post."

"A what? Is that a pheasant? Well, I declare. I wish he had been a little nearer to me, or I not so far away from him."

"Yes; and I wish I had stayed back where I was ten minutes ago, and I'd had a bird in my bag—or maybe two in the bush."

"He's gone across the creek," said Jerry," "we'll get him up again when we get over that way. Come on, let's cross the bridge."

Now, we could walk over the bridge very easily, but poor Ponto! What a time of it we had with him. He followed his master to the middle of the bridge, but there he stopped and began to cry like a child and to shiver like a leaf. Finally we got him over and started up the hill for a beautiful patch of pines on the crest. What a beautiful woods it was. The thick pines, the deep shade, the mossy walks between, the sunbeams shimmering down here and there—and then the deliciously fragrant smell of pine and trailing vine. Throwing ourselves out in the manner of a miniature skirmish line, we threaded the mazy walks of the forest, looking here and there for birds. The deep silence had been unbroken for a long while, each being bent on getting the first shot. And Sam was the lucky man.

It happened—I scarcely know whether I should tell just how it happened, but it is really too good to keep, and I certainly cannot keep so good a thing to myself. It happened then, thus: I was standing in a road, an old deserted bark road, looking around me, and listening sharp. Away to my right I heard voices. I thought I recognized Sam's as one, and called out "Hello, Sam!" No answer. Again I shouted "Hello, Sam!"

"Hey!"

"To whom are you talking? Is Jerry there?"

"No. I'm a talkin' to my dog."

Tramping over in the direction of the voices engaged in low conversation and peeking carefully through the bushes, I saw as beautiful and sweetly idyllic a little business transaction as ever occurred in a woods. There was Sam and there was his dog—and there too was another man, not a member of our company, a backwoodsman, who was in the act of taking a long twine from around his neck. I watched the operation with interest, and soon saw a fine pheasant dangling from the twine and speedily deposited in Sam's game bag.

"For a consideration," thought I. "Well, is Sam going to set up the game on us that way? Are hunters, then, like fishermen, of whom it is poetically said:

"'Fishermen will fish,
And fishermen will lie,
And what they cannot catch
They surely will buy.'

"Hey, Jerry!"

"Hello!"

"Sam's got one."

"He has? Why, I didn't hear him shoot."

"He didn't shoot—with his gun."

"Catch it with his hands? Throw salt on its tail? Jump into the bushes and kick it to death?"

"Wait awhile and you'll see."

Leaving Sam to his own reflections—I sincerely hoped his conscience would not trouble him over much—we tramped on until we came out to a clearing known as "Van Horn's," where was a house and barn, both deserted. Skirting the clearing we re-entered the pines, when wh-i-r-r! up went a bird just ahead of me and I wasn't ready to shoot. "Bah!" said I, "There it is again. Why in the world didn't you shoot, you dunderhead you, and not wait for a better chance? Don't you know, sir, by this time that pheasants don't build nests in a man's hair? Are you not aware that these birds, like Time and Tide, wait for no man, and that if you want to have a shot at them you must take it on the instant, aim or no aim, hit or miss?" Indulging in such mental soliloquy—it is wonderful how much internal talking a man does when he's out a hunting—and determined that so soon as another bird got up I would promptly "shoot him on the spot," I soon found myself joined by Jerry and Sam.

"You got a bird, they say?" queried Jerry.

"Yes," said Sam, "I got one."

"Yes," said I, "I saw you get it."

"Did you? Fetched it down nice, didn't I?"

"For one thing I give you credit, Sam, and that is that after your interview with the Bushman you didn't fire off your gun, and then shout at the top of your voice, "Fetch her in Ponto! Dead bird, Ponto!"

"Well, now, you didn't think I was going to do that, did you? Anyway, it's a fine bird. Just look at her; she's warm yet. That fellow must have shot her not more than a half hour back."

Here we cast ourselves down under a tree and rested on a hillock covered with thick moss.

It was not long after leaving this spot that we became entangled in a great patch of briers, through which we fought our way for more than an hour, getting a good sweating, scaring up a few birds and not having a shot. By the time we got out we found it was nearly noon, and so concluded to make for "Wagner's Run" and there take our dinner.

Now, a dinner in the woods, beside a murmuring mountain stream, after such a tramp as we had, is indeed no small affair. Talk about Delmonico's, and quail on toast, it can't compare with a ham sandwich, a raw onion, an apple, a few cakes, and as much exquisite coffee as you can drink. Ah! what an appetite a man has under such circumstances, and how good his dinner tastes!

Our fire was soon built. That was my part of the work. I may modestly say that I pride myself on my fires. I am a first-class incendiary—in the woods—and have seldom failed to make a roaring fire at the first effort, no matter how little or how wet my wood might be, or how hard the wind might blow. While I was engaged in this, Jerry was filling his two-quart bucket at the brook, and pouring the ground coffee out of a paper bag into it, while Sam was lying on the bank and wondering "what made the water in the stream look so dark."

"It's the hemlock makes it," answered Jerry, as he cut a long pole from a bush and began to trim it, intending to use it to hold the kettle over my fire. "The water passes over so many hemlock roots in the bed of the stream that it gets the color of tan bark. They say it is very wholesome."

In three minutes from the time when the kettle was hung over the fire the coffee was done.

And there we sat in a row on a log, three happy, careless, light-hearted men, with our lunch on our knees, and enjoying our dinner grandly. Ponto lay curled up at our feet resting and sleeping.

"Now, this is what I call fine, fine!" exclaimed Sam. "This is delightful. It's better than all the doctors and all the medicine in the world."

"Yes; it clears the head and rests the brain, and renovates the whole man."

"It's a great deal better," half soliloquized Jerry, "than that old song I've got to hear so often at home in my store, 'Give me a half a dozen screws.'" Now Jerry is an hardware man.

Then followed stories and yarns, and jokes, and—the inevitable cigar, of course, while the second kettle of coffee stood sizzling on the red hot coals. A two-quart kettle filled twice makes four quarts; and four quarts divided by three—I leave the patient reader to figure it out, for we must be moving.

I will not follow our wanderings in the woods during the afternoon. Suffice it to say that we circled around "Wagner's" till dusk, getting up a number of birds and shooting two. Sam bagged both, leaving Jerry and me without so much as a feather to plume ourselves on, as we were met at "Wagner's" about 5 o'clock by Jake with the buckboard.

H, M, K.

EASTON, Pa,

THE MOUNTAIN SERMON.

IT WAS our first Sunday at old Barney's. The sun was just rising over the mountain tops as I closed the little gate and turned down the stony, grass-grown road. A picturesque old road it was on that Sunday morning in June. To the right the creek rippled, rippled, rippled, against the pebbles that lined its banks. To the left the mountains raised aloft their blue peaks in solemn, impressive grandeur. Trees lined either side of the road, and their leaves rustled lightly in the faint morning breeze. The very birds among the branches chirped in a subdued manner, and the bees hummed soft and low among the wild flowers. The faint, far-off tinkling of a cow-bell floated on the light morning air. All nature seemed imbued with the quiet of the Sabbath. The week-day bustle and fuss had ceased and nature rested. On such a morning one prefers being alone. The world is shut out, forgotten, and nature opens and receives one kindly, and discovers her most perfect forms, her rarest charms.

I followed along the old road, stopping at every turn to view the new beauties that burst upon my view. An ever-varying foreground with the same background of mountain peaks overtopped by the soft blue sky.

Half an hour's walk brought me to a little rustic bridge that crosses the stream, the same old rustic bridge that is part of a famous picture by one of our greatest landscape painters. Standing on the bridge I looked over the railing. Under the bridge the water ran cool and clear and deep, washing among the crumbling stones of the single pier, whirling into swirls and circles as it left the bridge. An immense trout lay deep in the water, fanning himself slowly with his fins. He, too, seemed to me to be enjoying his Sabbath, his week-day eagerness for prey and worrying of foes laid aside on this day of rest. As I left the bridge I mentally remarked: "Good bye, old fellow, enjoy your day of rest; on the morrow a dainty little fly will light on the still pool that will tempt even your fastidious palate, and your cool, watery house will know you no more."

I proceeded up the creek until I came to the point from which the artist had painted his picture. Standing on the spot where his easel had stood a year before, I looked back at the bridge. A picturesque old structure it was, with its falling timber and moss-grown logs, crumbling and decaying boards. For years it had been unused save by an occasional foot passenger. Nature had seized it for her own, and most artistically had she worked on every part; not a stone, not a log, not a board that was not picturesque. As I looked I reflected on the wonderful artistic working of nature. Give to her the plainest old house and how soon has she converted it into a picturesque ruin, the straight roof bent into a graceful curve, a few shingles torn off, those remaining moss-covered; she has twisted the chimneys; drawn out a stone here, a piece of mortar there; broken lights out of the windows, trailed vines over the timber, and surrounded the crumbling gray ruin with masses of wild flowers, green grasses and picturesque brambles and weeds. Throw the commonest paving stone into a barren field, and how soon nature clusters around it tufts of grass and graceful curving vines and variegated wild flowers, until the unsightly object is hid and a spot of beauty marks the place.

On and on I wandered along the road, taking little heed how far I traveled or the time I spent. Suddenly a new sound came floating on the air, the sound of singing voices, and the next turn of the road brought me in sight of a picturesque church, standing by the roadside. Around stood old-fashioned country wagons; horses were hitched to the fences and trees. Almost mechanically I walked up the path and entered. A man kindly made room for me and I sat down. As I did so the singing ceased, and the preacher rose in the little wooden pulpit and began turning over the leaves of the Bible. He was a peculiar looking man, very tall, very slim, and very awkward appearing; his hands were large and thin and seemed in his way; his face was unshaven, and his clothing anything but clerical looking. After some search he found what he was looking for, then turning his eyes on the congregation, he said: "Brethren, David says, 'Ye mountains and hills, praise ye the Lord.'" The voice was low and soft, and delicately modulated, yet so distinct that not a syllable was lost. It arrested the attention of even the most wandering one.

Then he began his sermon by showing how many scriptural events had happened among mountains, and how mountains formed an important part of the Bible history. Beginning at the resting of the ark on the mountain, he spoke of Abraham, of Moses, of Saul, of David, and of all the events that happened on mountains until Christ's Sermon on the Mount, the Crucifixion on the Mount, and the Ascension from a mountain. Each scene he describes in words so pure and simple that every hearer could understand, yet in language that burned with living fire, the fire of a deep solemn earnestness that caused his countenance to glow and the hands that at first seemed awkward to fall into gestures of the most perfect grace. Then he drew the contrast between a mountain life with its quiet and peace, its freedom from care and with the evidence of God's power and works on every hand, and a life in a city, with its bustle and stir, its contentions and strife, its trials and temptations. It was here that the preacher rose to his grandest efforts. Such flow of language, such bursts of eloquence, such depths of pathos as came from that ordinary-looking man in that little mountain church I never heard before, and—unless I am fortunate enough to hear him—I never expect to hear again.

When he closed there was silence, a breathless silence that showed what attention had been given his words. As we passed out of the church I said to one of the men: "You have a wonderful preacher; what is his name?"

The man answered: "Oh, that's not our preacher. Our preacher is sick and this un took his place; he's staying at Sol Denny's, trout fishing; his name is ——." And he named one of the most celebrated preachers of one of our large Eastern cities.

F. I. SHERMAN.

SOME OTHER TIME.—"Any bear about this neighborhood?" he inquired as he got off the train and leaned an eight-hundred-dollar breechloader carelessly in the hollow of his arm. "The woods is full of 'em," said a citizen; "one of 'em bit my brother's leg off yisterday. Are you loaded fer b'ar, mister?" "No, sir," replied the young man, hastily boarding the train, "I'm only loaded for rabbits."—*Harper's Bazar.*

BIRD NOTES FROM NEW MEXICO.

FORT WINGATE, New Mexico, March 10.—At different times in minor papers I have alluded to the character of the country and climate of this place, but as both character of country and climate influence bird migration, I would preface my brief remarks here by saying that Fort Wingate as a rule is noted for a charming climate and that the character of the country hereabouts is mountainous and hilly with broad intervening valleys. The nearest stream (a very small one) is sixteen miles distant, while only a few creeks and springs are to be found in the immediate neighborhood. On the whole, it is by no means a good place for bird collecting, and the migrants pass it by rapidly, as there is no special inducement for them to stay. To study the migration of birds at such a point as this is difficult, and for these very reasons I have given.

This is the afternoon of March 10; the air is thin and highly rarefied, while the sun shines brightly and not a cloud is to be seen in the clear blue sky. It is as warm as mid-April in New England, although away up in the pockets of the mountains snow patches are to be seen, which are within ten minutes' easy climb from the Fort. Thus far, although I have been round in the hills a number of times during the past week, I have failed to see a single specimen yet of our *Sayornis saya*, usually the first bird that shows itself in the vanguard of the vernal migration through this region. I feel a sort of an intuition that they are coming before long, as everything seems so propitious. During this suspicious calm, then, perhaps it will not be entirely devoid of interest to mention the majority of birds I have seen in the neigborhood lately and which have been here in greater or less numbers throughout the winter.

One takes his gun such an afternoon as this for instance, and scrambles up among the sandstone boulders and piñons that cover the hillsides that skirt the basin-like valley in which the little bunch of houses known as Fort Wingate, stand, until he reaches a convenient resting place where you halt to look about you.

You are at first struck with the death-like stillness of the place, the marvelously clear air, the great distance at which you can individualize the details of the far-off landscape. The peculiar and weird appearance of the geological formation also impresses you, and one of an imaginative turn of mind might easily believe himself to have been transported to the rugged side of some mountain in the moon.

Having regained your breath after the climb, for it is hard work in this altitude, I assure you, you stroll across the small open places, then pick your way through the boulders and piñons, when the fact is brought to your mind that you have not seen a single living thing for the half hour that you have been out.

At last this painful stillness is broken, and in a way once heard will never be forgotten by the listener.

> It is the ringing note
> That comes from the throat
> Of Townsend's Solitaire,

and you may hear it several times repeated in its soft cadence before you are able to discover the songster himself. But he soon takes to wing, for he is a restless bird, and by an uncertain, in a measure, jerky, flight, he pitches over toward the top of another piñon tree, where he alights. This bird is to be found about Fort Wingate, so far as my observations go, at all seasons of the year.

Next, in strange contrast, comes to your ears the guttural croaks of a pair of the ever-present ravens, as they fly steadily along, high, high over your head. During severe winters these birds are found hereabouts in numbers, but in summer they pair off, and resort to the highest peaks to breed and rear their young.

This year both *Sialia arctica* and *S. mexicana* have remained through the winter, although the former has been by far the more abundant. Large flocks of Western robins (*M. m. propinqua*) have also stood the season out, and have kept fat upon the cedar berries. These birds have puzzled me not a little, for, so far as I could discern, there was no appreciable difference whatever between some of the specimens shot and the Eastern form of the bird. The white markings on the outer tail feathers in the vast majority of instances were very extensive, and rarely I obtained one wherein it was reduced to anything that might be designated as a white emargination of this feather.

The *Paridæ*, during the season, are represented by *Sitta carolinensis aculeata*, *Sitta pygmæa*, *Parus inornatus griseus*, and *Parus gambeli*. I have failed to discover any others, and of the four species mentioned, they can be taken almost any day throughout the winter.

We also find a wonderfully interesting and hardy bird in *Salpinctes obsoletus*, and sometimes in midwinter when the young hurricanes that sweep over this region have bared the sandstone rocks, one will see the wren as lively as ever, holding his own on the summit of one of them, and as a lull takes place for a moment, giving vent to his loud and characteristic note as he energetically, with many brisk wags of his tail, scrambles down the side to the leeward to weather the next gust.

This year *Oroscoptes montanus* has also condescended to stay over, but from what I have seen of him I don't think he has enjoyed himself so very much; while *Lanius ludovicianus excubitorides*, at home at all times in the Rockies, seems more in spirit in December than during the sultry summer months.

The towhees have had themselves represented by *P. maculatus megalonyx*, fairly abundantly, too, for we usually see one or two if we diligently search their favorite resorts, the scrub-oaks and low bushes on the cañon sides. Two or three varieties of juncos and sparrows are commonly "put up" during such a search, also, with perhaps a small flock of Arizona goldfinches as we pass into the open again. In very cold weather we occasionally come across a half-frozen specimen of *Sturnella m. neglecta*, and I never flush one and hear his note that I do not wonder how it came about that he was so long shrouded in doubt as to being a very "good species." Next we may start out of the brush some dozen or more specimens of *Agelaius phœniceus* in their brown coats, and usually as wild as hawks, evidently wishing every last one of them that April would hurry along. Passing now into the broken foothills, perhaps a mile further we are suddenly greeted by a tremendous and discordant jumble of jay-like noises as a loose, though numerous, flock of piñon jays (*C. cyanocephalus*) pass us on the wing. They are really worth seeing, and one does not regret his experience in this desert as he sees this broken blue cloud of birds throw themselves pell mell into the low piñon pines. Two other jays are also found here during the entire winter, and these are *Aphelocoma woodhousei* and *Cyanocitta stelleri macrolopha*, both splendid representatives of the family. I have yet to see a magpie in this vicinity, summer or winter, nor can I find any one else who has ever observed the bird here. *Otocoris alpestris arenicola* stays all the year round, but has been uncommonly rare during the past winter.

Woodpeckers also are scarce, and the only ones I have seen or taken are *Colaptes cafer*, *Dryobates stricklandi* and *D. v. harrisii*. A few hawks and owls, characteristic of the region, are occasionally met with, but one may go for a week and see neither one nor the other; indeed, I have not observed more than four specimens of owls during a residence of two years and a half here.

Sometimes a turkey or so is brought in by the Indians, but aside from this none of the game birds, so far as the *Gallinæ* are concerned, occur in the vicinity. I will say, however, that a few days ago I discovered the tracks on the snow of some eight or nine quails (they absolutely frightened me), which probably were made by a wandering flock of *Callipepla squamata*, as these birds are the ones which may be obtained some fifty miles from Wingate at a place called Grant Station. There is a wee small pond near the fort that dries up on the slightest provocation, into which a few stray mallards and blue and green-winged teals may tumble at odd times during the winter, and occasionally a Wilson's snipe be found to alight there, but this completes the list for these two families, and it is not materially increased by the advance of the season.

This sketch completes my observations, and as fragmentary as it may seem, I assure you it is based upon careful field notes extending over two winters, so on the whole you see it is not a very encouraging field for ornithologists to work up, and I only jot down these points to fill in the gaps of the general geographical distribution of birds in this country, which we all know to be of value, be the list a short or long one. R. W. Shufeldt.

THE SHRIKE AS A MIMIC.

Editor Forest and Stream:

A correspondent in your columns wants to know whether he has discovered a new feature or power in the imitative or musical abilities of the great American shrike. I have often observed and admired them in the Southern States, where I believe they are more numerous and domestic than in the North, and have listened with very much enjoyment to their delicious warblings. There was one that was particularly tame and companionable around my house, and almost always when I was busy in the orange grove or elsewhere near by, he would perch on a tree close by, or on the cart within arm's length, and with twinkling eye and knowing poise of head watch for whatever of insect life should turn up, pouncing down on it and bearing it away to eat or impale upon an orange thorn. Snakes a foot long, "mule killers," frogs, beetles, grasshoppers and such small deer were common ornaments on the orange trees, and whether it was the surplus of his repasts that was so hung up, or whether it was the result of innate "cussedness," I have never been able to decide. He is the persistent, persecuting enemy of all birddom, and takes soul-satisfying delight in tormenting and driving away from his neighborhood other feathered flesh.

He was commonly called in that country the "French mockingbird," on account of his ability as a songster. His was not the throat-splitting, ecstatic outpour of liquid deliciousness that the mockingbird gives us. He did not throw himself into the performance with the abandon and irrepressibility so characteristic of the latter, as though in addition to his own thorough enjoyment of the concert and his powers he should win applause from his audience and challenge competition; but he sat his modest attire, quietly on his perch and for his own sole enjoyment, in terms so modest they could be distinctly heard but a few yards away, he gave, in soft gutturals, delicate trills, finely modulated warblings and cadenzas, the most unique and exquisite entertainment I have ever heard from throat of bird. O. O. S.

EGGS OF THE LOON.

Editor Forest and Stream:

In an article by "H. A. C." entitled "Mother Care," in your issue of March 24, 1887, the writer states that in 1881, on Long Lake, Manitoba, he watched the breeding of the great northern diver or loon (*Urinator imber*), and asserts that the female laid five eggs before she began setting.

Having been interested in the collecting of birds' eggs for the last sixteen years, I was not a little surprised at this statement, as I had never heard of more than two eggs being found in a nest of this species. In the "Water Birds of North America," by Baird, Brewer and Ridgway, it is stated that "two is the unvarying number" of eggs laid by this species, and the writer says "I have never seen nor have I heard of more than two eggs in a nest of this species," and cites as authorities for the statement Mr. George A. Boardman, of Calais, Maine, Mr. Hearne, who wrote "A Journey to the Northern Ocean," Mr. B. F. Goss, of Southern Wisconsin and Mr. MacFarlane of the Hudson's Bay Company, all of whom have had exceptional opportunities for investigating the breeding habits of this bird. Supposing the birds observed by your correspondent "H. A. C." to have been correctly identified, they seem to have beaten the record in a marvelous manner, and the set of five eggs would have been a prize to any collector. The "vandal half-breed," as a true son of the woods, probably wished to reduce the family to the proper number, and certainly proved himself no mean marksman when he killed three "quite grown up" loons at one discharge of his gun. In this neighborhood at least, such a shot would not be possible, for no bird knows better how to take care of himself than the great northern diver, as I know by sad experience. R. B. L.

[The error was probably in "H. A. C.'s" identification of the bird he observed; it was not a great northern diver but a grebe of some kind. The whole tone of the article shows this.]

Eggs of the Great Auk.—I have read with interest in your issue of 17th inst., the history of this unfortunate bird long since extinct. While your article mentions the existence of skins, skeletons, etc., it does not tell of any eggs being still preserved. There are, I believe, very few known to exist. I was personally acquainted with a country gentleman in England who sold one a few years ago to the British Museum for the extraordinary sum of £50. It belonged to his daughter, having been given to her by an ancestor, and being looked upon as merely a trifling "keepsake," its preservation was quite a chance one.—F.

Eagles.—South Norwalk, Conn.—Last November I shot a golden eagle near here, which measured 7ft. 6in. from tip to tip; it was a young male bird.—W. E. L. A bald eagle shot this month by T. H. Sipe, twelve miles from East Saginaw, Mich., measured 7ft. from tip to tip and proved to be a magnificent specimen.

A Robin's Hard Lines.—Rockland, Me., Feb. 13.—While riding in a sleigh to-day I saw a butcher bird dragging a robin over the snow. I secured the robin and would have killed the butcher bird. This is the earliest I ever saw a robin in these parts.—Buck.

Spring Arrivals.—Salem, Mass., March 25.—Bluebirds, song and fox sparrows, redwing blackbirds, rusty grackles, robins and short-eared owls have been seen. Geese flew north last week and I heard them again last night. No woodcock yet.—X. Y. Z.

THE CALIFORNIA LAW.

SACRAMENTO, Cal., March 17.—*Editor Forest and Stream:* Inclosed please find the amended game law of this State, passed by the Legislature just closed. The changes, briefly stated, are these: The new law makes the close season for quails and grouse end Sept. 10 instead of Oct. 1. It extends the open season for deer from Nov. 1 to Dec. 15.

These changes would not be so bad, but the law also (a concession to the granger element) permits local boards of supervisors to "regulate" the game law in their respective counties. The result of this will be to absolutely repeal all game protection in certain counties, for supervisors, as a rule, know nothing of the subject and will be governed by the demands of those who hunt for the market, or who want to kill game at all seasons. Some old mushheads have got the idea that quails destroy grapes (which is a gross absurdity), and they demand the right to slaughter them at all times. And yet I know intelligent vineyardists who have investigated this matter thoroughly, and have lately purchased Arizona quails and turned them loose in their vineyards to eat up the destructive bugs and insects that prey upon the vines. It is a fact that no man has ever yet found a grape seed in a quail's crop. But to see a quail in a vineyard seems to have as bad an effect on some men as the planting of a red flag before the face of a bull. The change in the deer law affords the long-wished-for opportunity to slaughter snowbound deer in the mountain counties, at a time when they are not fit to be eaten. W.

Sec. 1. Section 626 of an act entitled: "An act to establish a Penal Code," approved Feb. 14, 1872, is hereby amended so as to read as follows: 626. Every person who, in the State of California, between the 1st day of March and the 10th day of September in each year hunts, pursues, takes, kills or destroys quail, partridges or grouse, or rail is guilty of a misdemeanor. Every person who, in any of the counties of this State, at any time, takes, gathers or destroys the eggs of any quail, partridge or grouse, is guilty of a misdemeanor. Every person who in this State, between the 1st day of January and the 1st day of June, in each year, hunts, pursues, takes, kills or destroys doves is guilty of a misdemeanor. Every person who, between the 15th day of December, in each year, and the first day of July in the following year, hunts, pursues, takes, kills or destroys any male antelope, deer or buck is guilty of a misdemeanor. Every person in the State of California who has in his possession any hides or skins of deer, antelope, elk, or mountain sheep, killed between the 15th day of December and the first day of July, is guilty of a misdemeanor. Every person who shall at any time, in the State of California, hunt, pursue, take, kill or destroy any female antelope, elk, mountain sheep, female deer, or doe, shall be guilty of a misdemeanor. Every person who shall at any time hunt, pursue, take, kill or destroy any spotted fawn is guilty of a misdemeanor. Every person who shall take, kill or destroy any of the animals mentioned in this section, at any time, unless the carcass of such animal is used or presented by the person taking or slaying it, or is sold for food, is guilty of a misdemeanor. Every person who shall buy, sell, offer, or expose for sale, transport or have in his possession any deer or deerskin, or hide, from which evidence of sex has been removed, or any of the aforesaid game at a time when it is unlawful to kill the same provided by this and subsequent sections, is guilty of a misdemeanor.

Sec. 2. Sec. 231 of the same Act is hereby amended so as to read as follows: 631. Every person who shall at any time net or pound any quail, partridge or grouse, and any person who shall sell, buy, transport or give away, or offer or expose for sale, or have in his possession, any quail, partridge or grouse that have been snared, captured or taken in by means of any net or pound, is guilty of a misdemeanor. Proof of possession of any quail, partridge or grouse, which shall not show evidence of having been taken by means of other than a net or pound, shall be *prima facie* evidence in any prosecution for a violation of the provisions of this section that the person in whose possession such quail, partridge or grouse is found, took, killed or destroyed the same by means of a net or pound.

Sec. 3. Sec. 636 of the same Act is hereby amended so as to read as follows: 636. Every person who shall set, use or continue, or who shall assist in setting, using or continuing, any pound, weir, set net, trap, or any other fixed or permanent contrivance for catching fish, in the

waters of this State, is guilty of a misdemeanor. Every person who shall cast, extend, or set any seine or net of any kind for the catching of in any river, stream or slough of this State, which shall extend more than one-third across the width of said river, stream or slough at the time and place of such fishing, is guilty of a misdemeanor. Every person who shall cast, extend, set, use or continue, or who shall assist in casting, extending, using or continuing, "Chinese sturgeon lines," or "Chinese shrimp or bag nets," or lines or nets of similar character, for the catching of fish in the waters of this State, is guilty of a misdemeanor. Every person who, by seine or other means, shall catch the young fish of any species, and who shall not return the same to the water immediately and alive, or shall sell or offer for sale any such fish, fresh or dried, is guilty of a misdemeanor. Every person convicted of a violation of any of the provisions of this chapter shall be punished by a fine of not less than $50 or more than $300, or imprisonment in the county jail of the county where the offense was committed for not less than thirty days nor more than six months, or by both such fine and imprisonment. One-third of all moneys collected for fines for violation of the provisions of this chapter to be paid to informer, one-third to the district attorney of the county in which the action is prosecuted, and one-third to the Fish Commissioners' Fund of the State of California. Nothing in this chapter shall be construed to prohibit the United States Fish Commissioners or the Fish Commissioners of the State of California from taking such fish as they shall deem necessary for the purpose of artificial hatching, nor at any time. It shall not be lawful for any person to buy or sell, or offer or expose for sale, within this State, any kind of trout (except brook trout) less than 8in. in length. Any person violating any of the provisions of this section is guilty of a misdemeanor. The board of supervisors of the several counties of this State are authorized, by ordinance duly passed and published, to change the beginning or ending of the close season named in section 626 of this code, so as to make the same conform to the needs of their respective counties, whenever in their judgment they deem the same advisable.

BEARS AND BEAR HUNTERS.

STAUNTON, Va., March 8.—While the bear stories are going the rounds let me tell you one. Mr. Hugh Ingram and son, living at Buffalo Gap, in the North Mountain, ten miles west of this city, while returning from their work in the mountains a few days ago, noticed on the snow signs of fresh earth, thrown out of a sort of cavern formed by the falling of a large tree, which had torn up roots and earth in a way familiar to every woodsman. Upon examination into the cause of these fresh disturbances the skull of a bear was seen just inside the pit, and the father, who is an old and skilled hunter, called upon the boy to arm himself with some good-sized stones, and by one well-directed cast the head was fairly crushed. They then pulled it out and found it to be a cub about a year old. But as soon as he was fairly out of the mouth of the cavern, another head appeared, and, like the Irishman at the side show with the snakes, young Ingram saluted it with a stone, and down it went. His father and himself pulled the mate to the first cub out dead, and just as the orifice was cleared of this one, the old lady bear appeared in sight, gave one growl and made a dash for liberty. Ingram's shepherd dog seized her as she ran past him, and hung on to her about ten paces. She, however, soon shook him off, and made her way safely to the mountain.

The Staunton *Spectator* of this date, showing the destruction of the bear family that has lately been going on in an adjoining county of Rockingham, says: "In Briery Branch, Rockingham county, four citizens have killed and captured ten bears since Feb. 1. The *Spirit of the Valley* says that John A. Curry has killed two, Phillip Miller one, George Michael two (and captured two cubs) and James D. Long has killed three."

I think these circumstances go pretty far to show that these animals do not hibernate in this latitude to any very great extent. WHACK.

WISCONSIN GAME LAW.

THE new Wisconsin game law reads: Sec. 1. It shall be unlawful to take, catch, kill, or have in possession when killed or taken, any woodcock between the first day of December and the succeeding tenth day of July.

Sec. 2. It shall be unlawful to take, catch, kill, or have in possession when killed or taken, any quail, partridge, pheasant or ruffed grouse, prairie hen or prairie chicken, sharp-tailed grouse or grouse of any other variety, snipe, plover, or wild duck of any variety, or any aquatic fowl whatever, between the first day of December and the succeeding first day of September.

Sec. 3. It shall be unlawful to kill or take by any means, contrivance or device whatever, or pursue with intent to kill or take or worry, or to hunt with dog or dogs, any deer, buck, doe or fawn, between the tenth day of November and the succeeding first day of October.

Sec. 4. It is unlawful at any time to take, catch or kill any of the animals or birds mentioned in the first three sections of this act, by means of any snare, net, trap or spring gun; and it shall also be unlawful at any time to use at any time in pursuit of any such animal or bird, any pivot or swivel gun, or any other firearm not habitually held at arm's length and discharged from the shoulder.

Sec. 5. It shall be unlawful to take, destroy, or have in possession the eggs of any of the birds mentioned in this act, or of any wild pigeon, or to wantonly disturb or molest the nesting place of any such bird or pigeon, or to kill, wound or take any wild pigeon within three miles of a pigeon roost.

Sec. 6. It shall be unlawful to use in the pursuit of any duck, goose, brant or other aquatic bird, any decoys, sneak boat, sail boat, steamboat or floating raft or box, or any similar device, and it shall also be unlawful to construct any blind in the open water outside the natural growth of grass or rushes.

Sec. 7. It shall be unlawful at any season to hunt, shoot, catch or pursue any of the birds or animals mentioned in the first six sections of this act in the night time, or to employ any device, means or contrivance whatever for catching, killing or destroying any such animal in the night time.

Sec. 8. It shall be unlawful to kill, take, wound or pursue any of the birds or animals mentioned in the first six sections of this act with intent to export, carry or convey the same, or any part or portion of such bird or animal beyond the boundaries of this State. In determining the question of intent of any party charged under this section, any competent proof that the accused has within one year exported or caused to be exported or conveyed beyond the limits of this State, any bird or animal covered by this section, or any part of such bird or animal, shall be received as prima facie evidence of the existence of such unlawful intent charged in the complaint or information.

Sec. 9. It shall be unlawful to catch, kill or destroy, or have in possession when so killed or taken, any otter, marten, mink or muskrat or fisher between the first day of May and the succeeding first day of November.

Sec. 10. It shall be unlawful to pursue, trap, ensare or kill any otter, beaver, mink or muskrat or other fur-bearing animal, upon the lands or to the middle of any stream of water adjoining lands of another person who is engaged in the business upon such lands, of breeding or rearing any such animals.

Sec. 11. Any person who shall violate any provision of this act shall be guilty of a misdemeanor and shall be punished by fine not exceeding one hundred dollars, or by imprisonment in the county jail not more than six months or by both such fine and imprisonment.

THE ALASKA EXCURSION.

NEW YORK, March 28.—*Editor Forest and Stream:* I suppose that any undertaking of the magnitude of the Alaskan sportsmen's excursion is sure to encounter difficulties, and when I received a copy of the "Laws and Executive Orders Relating to Alaska," and read Section 1,955, which says in substance that no firearms, ammunition or distilled spirits shall be exported from any port or place in the United States to the Territory of Alaska, and all such arms, ammunition and distilled spirits landed or attempted to be landed or used at any port or place in that territory shall be forfeited, and if the value of the same exceeds $400 the vessel upon which they are found or from which they have been landed, together with her cargo, tackle, apparel and furniture shall be forfeited, and any person violating such regulations shall be fined not more than $500 or imprisoned not more than six months, I was dismayed. And Section 1,956 says that no person shall kill any otter, mink, martin, sable, or fur-seal or other fur-bearing animal within the limits of the Alaska Territory or in the waters thereof, and every person guilty thereof shall, for each offense, be fined not less than $200 nor more than $1,000, or imprisoned not more than six months, or both. This section, however, contains a "but" that saves the Alaskan excursion from shipwreck before leaving New York; and it reads like this: "But the Secretary of the Treasurer shall have power to authorize the killing of such mink, marten, sable or other fur-bearing animal, except fur seals, under such regulations as he may prescribe." And I take great satisfaction in stating that Secretary of the Treasury C. S. Fairchild, after some little correspondence to show him what we wanted, issued the necessary instructions to the Collector at Sitka under date of March 25. So the shipwreck that seemed imminent has happily been averted, thanks to Secretary Fairchild.

Since I last wrote you, we have had a net gain of two to our numbers, two having been obliged to drop out owing to sickness and unforeseen circumstances, so we yet have room for eight more. There is an opinion prevailing among the majority of those who have decided to go that the start ought to be delayed until July 15, for the reason that the fur of the fur-bearing animals killed in the middle of summer, while they were shedding their coats, would be in no condition to preserve, and if the start was delayed till July 15, we could postpone the return till well into October, and thus secure mementoes of the trip after the fur had set, in a good condition for preservation. This will be done in deference to the wishes of the majority.

The latest news from England is under date of March 4. A. W. Craig, Esq., of Baythorn Park, Halstead, Essex, writes that family affairs will prevent him from leaving England to accompany the party, much to his regret, but that he has two or three friends coming to the United States this summer who will probably accompany us. To my mind, the decision to delay the start until July 15, is a good one, and the ultimate success of securing the desired number (30) assured.

J. E. PALMER (Morton House, City).

THE MICHIGAN WARDEN.

EAST SAGINAW, Mich., March 23.—*Editor Forest and Stream:* Inclosed find clipping from the Grand Rapids *Eagle* of the 19th. This has the right ring about it, and if the new warden does as he talks we shall have no reason to regret the Governor's appointment. However, sportsmen throughout the State were very much disgusted with the action of Governor Luce, as they were a unit in saying he had the appointment made before the office was created, and used it to repay a political friend. Mr. Smith is a bright young lawyer and has lots of energy and push, but it is extremely doubtful whether he knows a ruffed grouse from a bluejay. After the number of years of hard work that the Michigan Sportsmen's Association has spent in its endeavors to secure the passage of a game warden bill, and the earnestness it has shown in its work for the protection of game in the State, it was certainly entitled to the consideration at least of being consulted, even though the Governor made the appointment to suit himself afterward. The people in this part of the State, however, will do everything in their power to assist Mr. Smith, I am confident, and as it is largely an experiment, and we are interested in the success of the measure, I know that the sportsmen throughout the State will lend a willing and helping hand to him in enforcing the laws. B.

The *Eagle* says: Knowing the interest felt throughout the State upon the course that will be pursued by the new game warden, the *Eagle* called upon Mr. Wm. Alden Smith of this city, the newly appointed State game and fish warden, who returned last night from Detroit, where he has been to consult the State Fish Commissioners and others especially interested in the enforcement of the game and fish law, and asked regarding the attitude he should assume in the premises. He said, "Governor Luce tendered me this position unsought, of his own will and accord, and simply said to me, 'There is an important and responsible position which a large and respectable number of our citizens in and outside of sportsmen's organizations have been endeavoring to create for many years. At last they have succeeded, and the measure is meritorious. The law should be enforced, and you can have the position unhampered and unrestricted in every way. All I shall expect of you is to enforce the law, and while I am Governor of Michigan, I shall back you up, and aid you wherever in my power. You are to represent no clique or class, but owe allegiance wholly to the people of the entire State.'"

"Under such conditions," Mr. Smith said, "I accepted the place, and am determined to make the appointment a creditable one to Governor Luce, satisfactory to the friends of the measure, and creditable to myself. Of course I realize the difficulty of enlisting the local Boards of Supervisors where the immediate constituency derive both profit and pleasure from violating the law. But in most of the counties, especially the northern ones, the local authorities will do all in their power. I have already received about 200 letters from different parts of the State assuring me of hearty co-operation. It shall be my purpose in the appointment of deputies to select men fitted for the place. Applications are pouring in upon me very fast, but I shall take time to organize an efficient and effective force for the work on hand. Several prosecuting attorneys have assured me of their willingness to prosecute offenders. Their co-operation is very much needed to make the work a success. Wherever they are loath to take the initiative I shall try the cases myself as far as possible. The value of the game and fish product in Michigan is enormous, and if the laws regarding its preservation are obeyed, it will last many years, but if they are slaughtered and destroyed wantonly, it will be but a short time before several of the most valued species are extinct.

"Finally, you can say for me that my purpose is to discreetly and energetically enforce the laws as they appear upon the statute books, and the responsibility must fall upon the Legislature that enacted them. If the laws are just they should be obeyed, and if unjust, repealed. The State Fish Commissioners, as well as Mr. Gillman, Dr. Holmes and others interested, assured me of their hearty co-operation, and I shall enter upon the duties of the position with an uncompromising determination to succeed."

MISSISSIPPI SNIPE.

ABERDEEN, Miss., March 21.—Our quail season closed on the 15th of the present month. Notwithstanding the long open time and the great number of sportsmen, there is a sufficient number of birds left over to insure a fine crop for the next season.

Snipe have been coming in in fair numbers for several weeks, but have been pursued so constantly that they are exceedingly wild. Many good bags have been made, but at an expenditure of effort and ammunition altogether out of proportion to the number killed. I went out some ten days ago in the afternoon with a friend who has been very successful in former excursions.

We rode on horseback to a field just across the creek some two miles from town.

The day was warm, calm and bright, and according to all the rules the birds should have afforded good shooting. But snipe, like men, seem sometimes to take a positive delight in violating all rules and regulations, and a more persistent set of law-breakers than the birds in this particular field I have never seen. Instead of rising within 20 or 30yds. and going off at moderate speed, these ill-conditioned birds would get up at distances never under 40yds., and striking a mile-a-minute gait would not clear the tops of the low cotton stalks until they were 60 or 70yds. away. As I was there to shoot, I shot, and once in a very great while I had the satisfaction to arrest one of these swift flyers and see him fold his fleet wings and make a final pause in his mad career. But these happy accidents were dotted along the dreary waste of unprofitable shots even more sparingly than the oft-quoted oases in the historic Sahara, and wading in the thick mud under a glowing sun grew at length just a trifle monotonous.

To add to my discomfiture my horse, a wall-eyed brute of gaunt proportions and uncertain temper, but candor compels me to add of fast and easy gait, had taken it into his evil head to break the halter by which I had anchored him to a convenient stump, and leave for town at a 2.40 gait, his hoofs clattering over the long wooden bridge like a full charge of cavalry.

My companion, who is an excellent shot and has one of the hardest and clearest shooting guns I have ever seen, succeeded in making a tolerable bag, and I was debating whether it were better to tramp over the long and dusty road to town or to borrow a mule from the "son of toil," who cultivates the place where we were shooting, and continue the hunt, when to my delight a colored brother hove in sight leading the recreant steed. The ill-conditioned brute had divested himself of the bridle and the negro was leading him by a bit of plow line eked out with a whip lash. Repairing to the aforesaid stump, I found the greater part of the halter, and with that and the bit of rope contributed by the negro improvised a bridle.

Being again possessed of the means of locomotion, we determined to repair to an adjoining sedge field and try for a bevy of quail. The birds were soon found and I had the satisfaction to bag five in seven shots, making a double and felling a third that rose wild as we were retrieving the first brace. One of this brace was only wing-broken and had fallen near a large ditch full of water. In his efforts to escape he took to the water and swam like a duck. On our way home the dogs pointed a bevy in some thin woods. One of the birds rose and perched in a tree nearly over the head of one of the dogs.

The dog saw the bird and transferred his point to it, assuming one of the most picturesque attitudes I have ever seen. We bagged a brace from this bevy, which was a small one, and this ended our hunt. Our bag numbered nine quail, sixteen snipe, twenty-five in all, a very fair bag for two guns in less than five hours and within two miles of a town of five thousand inhabitants. Still, had the snipe behaved with ordinary decency, we could easily have bagged double the number. WILL.

ILLICIT QUAIL DEALERS TO PAY THE PENALTY.—Canastota, N. Y., March 14.—*Editor Forest and Stream:* At the special term court in Onondaga county to-day I received judgment against a party in Syracuse for having quail out of season in the sum of $75.—WM. H. LINDLEY, Thirteenth District.

CAPE COD SNARES.—*Editor Forest and Stream:* Since sending my communication on "Cape Cod rabbit snares," which was published in a recent number of your valuable journal, I have received a letter from an old hunter living in Plymouth county, Mass., apprising me of new features in game trapping; viz., the catching of partridge and quail, as well as rabbits. He informs me that unless trapping can be stopped, partridge, quail and rabbits will soon be exterminated in his section of country. Boys, and some pretty old ones, are engaged in this trapping; while the ground is bare the snares are employed. These are constructed by use of fine copper wire, or fish-line attached to spring poles, and are set in openings in the little hedges, and are usually about a rod apart. Naturally enough, partridge, quail, or rabbits seek the openings in crossing these hedges, but when once they enter at one of these inviting little gateways, they are strung up to await the round of the trapper. After gathering game from these traps, it is piled together and shot fired into it that it may have the appearance in market of having been shot, thus eluding the objection which might be raised against such game, as having been trapped. Whether it be close time or not, these trappers manage to send their game to Boston or New York markets. When the ground is covered with snow, small steel traps, which can be easily carried in the pocket, are used. Rabbits are tracked to their burrows, and the trap set in the entrance. My informant thinks that in hunting over the country between two points about six miles distant, covering an area of probably not more than 18 to 20 square miles, he has within the past two years found 1,000 snares. It is needless, perhaps, to add that he, as well as hundreds of others, protest vigorously against this cruel and destructive practice.—G. K. O. [Our correspondent and his friends should send details of these matters, with names of offenders, if known, names of witnesses, etc., to Mr. Henry J. Thayer, Secretary Massachusetts Fish and Game Protective Association, 246 Washington street, Boston. The association will prosecute all infringements brought to its notice.

JOHNSTOWN, N. Y., March 21.—The Johnstown Gun Club has proven itself a very worthy organization. Aside from the matter of perfecting its members in marksmanship, it has taken in hand the matter of protecting fish and game from the depredations of those who have neither a respect for law or a care for their extinguishment. Their latest effort is toward stocking the streams with brook trout. Early in the season they made application to the State hatchery at Caledonia, for such purpose, and on Tuesday morning a messenger from that institution arrived in town with 35,000 young trout, some of them nearly an inch in length, which were taken by the members and placed in the several streams near the village. They were in fine condition, and much care was taken in depositing them in the brooks. With this lot was one can of German trout, which were also taken care of at the same time. Gloversville also received the same number. With proper care the streams in this vicinity will abound with trout, and the lovers of angling can enjoy a day's sport without a trip to the northern wilderness. The club is also in daily expectation, from Philadelphia, of 120 quail, which will be housed until some time during May, when they will be taken to the woods and let loose. As these birds multiply rapidly, if they are undisturbed, the woods will soon be filled with them, thus affording fine shooting. Nearly the entire expense of these acquisitions has been met by the members of the club, and it is to be hoped that our people generally will use their best efforts to aid and assist them in the protection of both fish and game.—*Republican.*

AUBURN, Susquahanna County, Pa., March 15.—Game wintered well, and if the breeding season be favorable, we shall expect good sport next October. Plenty of grouse escaped last fall, and all passed the winter safely and are now in good form. I can put up from twelve to fifteen any morning in a piece of cover within sixty rods of where I write. Quail in this section are practically exterminated. I found but one covey during the past shooting season, and heard of no more being seen. The "scalp act" has worked wonders considering the short time it has been in force. But it is not at all popular with court house rings, and will doubtless be repealed before the present Legislature adjourns. During the year ending Dec. 31, $1,600 was paid for the destruction of the enemies of our game and poultry interests. Saw the first bluebird March 8 and robins two days later.—BON AMI.

PLATTSBURGH, N. Y., March 22.—Inclosed find bill of fare. It will show you how the game laws are respected in Clinton county. Venison and partridges can be bought any time in Plattsburgh. Fish are sold daily that have been caught in seines and gill nets. If our game constable would take the trouble to walk not over half a mile from the center of the village, he could pull out gill nets any day, and the time of year is now near when there will be a net across every stream and creek at this end of Lake Champlain. These fish hogs are very careful not to let a single fish go up to spawn, and the thing that encourages them most is that the markets are always ready to buy them.—SCEPT. [Why does not our correspondent call attention of game protector to these things, and if he pays no attention make complaint to the Fish Commissioners? The bill of fare of the Cumberland House, Plattsburgh, March 21, comprises venison and partridge.]

THE WEIGHT OF QUAIL.—Annapolis, Md.—I notice inquiries to your paper as to the weight of quail. From Nov. 1 to Jan. 1 this is the principal land game hereabout and the average bird will not weigh more than 5oz. Two or three years ago, however, I remember in company with a friend, shooting some five or six, the unusual size of which attracted our attention and I weighed a hen bird—not the heaviest of the lot either—which just balanced an 8oz. weight. These birds were killed in a slip of woods where they bred, and I am quite sure they not only found more nutritious food than ordinarily in the field, but as it was rather a difficult place both to find and shoot them, they had lived longer than the average quail is allowed to live, although they were just as sweet and tender as any other birds. I have often hunted the same place since, but never again have I found the large birds.—J. I.

MINNESOTA GROUSE.—Pillsbury, Minn., March 17.—Despite the unusually long and severe winter, both ruffed and pinnated grouse have wintered excellently. Of the latter there are many more to be seen hereabouts than ever before in the spring, and rare sport is anticipated during the open season. I scarcely ever ride in any direction without seeing ruffed grouse, and the birds look plump and fat. The recent Legislature has abolished spring duck shooting. Aside from a few for personal table use they have never been molested here in the spring. There is a little snow on the ground yet but rapidly disappearing. I propose to camp out the greater portion of the summer, and wish that a few "No. 1 hard" sportsmen might visit this locality and share with me in the extra fine fishing.—J. F. LOCKE.

A ROCKY MOUNTAIN EXPEDITION.—*Editor Forest and Stream:* An opportunity will be afforded a limited number of persons to join a party in a month's camping trip in the game and fish regions of the Rocky Mountains in northern central Colorado. The route will embrace a rail trip through the principal scenic attractions of the region, viz.: the Grand Cañon of the Arkansas, Marshall and other passes, etc. After leaving the railroad, about 35 miles wagon and packing to camp. Start will be made from here about July 1, and the party will be equipped for taking photo views of scenery en route and in camp, as well as observations of geology, altitudes, etc. The expense will not be great. I will furnish further particulars to any one desirous of going.—D. C. BEAMAN (Ottumwa, Iowa).

MARLBORO, N. H., March 23.—A party went rabbit hunting the 11th of this month, returning with twenty-one white hares, Mr. Goodhue Terrey killing five of them, two others killing four each; there were twelve in the party. At one time there were four hares ahead of one dog. Moshier Underwood of this place, has as fine a coon dog as there is in this State; he brought in forty-two coons last fall, getting ten of them in two nights. A butcher bird was seen to catch an English sparrow in one of our streets a few days ago, which was about all that it wanted to carry. One flew into my barn this morning and caught a sparrow within four feet of me. I tried to shut the door to capture it but it was too quick for me.—J. S. M.

ACCOMAC CLUB.—The Accomac Club, of Brooklyn, N. Y., which was incorporated a short time ago, has completed its membership by the election of the well-known wing shots, L. Duryea and C. S. Kendall. The club, which is limited to twenty-five members, has purchased several thousand acres on the shores of Chesapeake Bay, in Accomac county, Va., on which are two club houses and another one in course of erection. That section of the country is famous for snipe and duck shooting, and on the uplands quail, partridge and woodcock abound.

PACKING A DEER.—In my article on deer packing in the FOREST AND STREAM of March 17 I wrote that the bones of the hind legs were taken out the same as those of the fore legs, and then opposite fore and hind leg skins tied together, etc. Your compositor has made me say, "bones of the hind legs tied together." Readers will naturally wish to know how that could be done.—O. O. S.

QUAIL AND HAWKS.—Smithburg, N. J., March 25.—I find that quite a number of quail have wintered over, although a good many have been killed by hawks. I am satisfied that one covey of six birds were destroyed by them. A few woodcock have made their appearance.—BLUE ROCK.

THE NEW YORK GAME LAW.

Editor Forest and Stream:

You have, before this, received a copy of the bill introduced into the Assembly at Albany, for the "preservation," it says, of wild deer, etc.—bill No. 699. It was introduced, "by request," by Mr. Hadley, the chairman of the committee on game and fish protection. This is notice enough that he ignores responsibility for, or approval of, the bill. This is encouraging in the outset. The bill must go to the committee and be subjected there to examination and scrutiny, and this will squelch it.

It is a bill of abominations. Inconsistency, ambiguity, absurdity, characterize its structure. To instance what appears from its first four sections: it recognizes, and ignores alternately, any distinction between wild and tame deer; it prohibits the possession of "dead deer" or venison "killed in this State," and the transportation of any "wild deer" or venison killed in this State, in a time mentioned. It, in terms, proposes to prohibit having in possession, or exposing for sale "deer" or venison, all through the open season, and then provides that one may have in "possession" in the open season "deer" killed in this State. It, in terms, would prohibit the transportation of "wild" deer or venison killed in this State, except in the time from Aug. 16 to Nov. 3, after providing that it shall be unlawful to kill any deer in a part of that period. It would prohibit the possession or exposure to sale, in our open season, of "deer or venison" lawfully killed out of the State.

A further cursory examination develops a capital iniquity, no doubt its darling object; and the bill is abominable more for what it omits than for what it contains. Remembering that it is a proposed substitute for the whole body, substantially, of our present game law, its omissions are most significant. This bill proposes to repeal the law as it now is with reference to the burden of proof, in prosecutions of offenders, and so paralyze the most efficient methods of its administration.

To illustrate: When one is found in possession of venison during the time its killing is prohibited, but within the time, afterward, when its possession, if lawfully killed, is permitted, and there be the best ground for believing that the killing was done in the close season, and that an attempt is being made to get it to market under cover of the right to have venison in possession when prosecuted, the possessor may show, in his vindication, that he had no venison but what was lawfully killed. If he be innocent, he is the only one that can prove it, and so the law puts the duty of doing so upon him. He may be a witness himself. He knows the person from whom he received the venison, and that person knows his vendor, or donor, and so, through witnesses having personal knowledge, he may reach the innocent killer, who will, of course, be glad to step forward in vindication of truth and injured innocence.

Is there hardship in this? Not at all. Remember the end to be accomplished, the end all pretend to favor, and the impossibility of accomplishing it in any other way.

Suppose the accused be guilty, that is to say, suppose he carelessly omits all the precautions that would keep him within the law, conceals facts that come to his knowledge, is interested to do so as carrier or marketman. Is it not impossible to convict an offender if he may with impunity expose the contraband venison without the necessity of showing such possession lawful? This is just what the bill proposes to allow. It proposes to make the right to have in possession a cover for the guilty, when it is intended as a protection to the innocent, and this it does effectually when it excuses the accused and those having knowledge of his guilt from opening their mouths. The witnesses and the facts are unknown to, are concealed from the prosecutor, are hostile to him. Concealment is their studied purpose, from the poacher who slays the deer alive in the woods, through all the middlemen who are concerned with evading scrutiny, and employ for purpose every disguise and artifice that ingenuity and fraud can suggest. So the law requires explanation from the persons capable of making it, and who can produce the witnesses. It is a tax upon the innocent, but in the interest of innocence and right, and this is a duty that innocence everywhere assumes with alacrity.

But wholesome and necessary as is all this in the administration of the law, this bill proposes to subvert it all, and so paralyze every effort of the people by their officers to bring criminality to punishment. This is effrontery enough with over measure. It is well right here to call attention to this essential rule of evidence. It is in Sec. 36 of the Act of 1879 as amended by the Act of 1886, and is the whole basis of and strength of efforts to suppress what is well-known to be the most flagrant violations of the law for the protection of deer—the slaughter of them after the open season, under the cover of the right, for a prolonged period, to have venison in possession.

Again, I notice the bill proposes no remedy against the spring slaughter of wild ducks and geese, but would shorten the season at the wrong end, in the fall, instead. It proposes to cut off September, when in fact our native wild ducks, those that hatch here, are full-grown and prime by the middle of August, and nearly all leave us and migrate by Oct. 1. The Canadas permitted their shooting Aug. 15 until a couple of years ago, when their open season was made to commence like ours, Sept. 1, and the harmonious working of the two neighboring statutes affords sufficient protection to these birds in the fall.

And now let me ask and question through FOREST AND STREAM, when is there to be a cessation of annual tinkering of the game laws, and so divesting them of the effective force or authority that ought to belong to their clearness and their settled interpretation, and make them both popular and efficient? Is it the purpose of the enemies of fish and game protection to bring it into disrepute by unsettling and mystifying the law and so demoralizing the efforts of the officers charged with its enforcement? Why will not the better sense of the people of the State and of their representatives in the Legislature put the ban upon such a purpose and such efforts? It will. The sentiment favoring the efficient protection of fish and game was never stronger among the masses of the people, and they will resent this constant frittering away the efficiency of laws intended for that purpose. The sportsmen of the State are the natural leaders of a sound public opinion on this subject, and the great body of them have only to speak.

Perhaps a personal explanation is in order just here. I noticed in FOREST AND STREAM, over the initials J. H. R., something in the accusatory vein, whether intended or not (?) His genuine sportsmanlike instincts revolted at the reported dogging of deer into Mud Lake. I would have been gratified at the reception of information from him that would have led to the conviction of guilty parties. I am sure such results would have gratified J. H. R. I am at a loss to know why his excellent opportunity was foregone, or perhaps, his compassion excited by the flimsy and ridiculous excuse offered by those whom, if he did not know to be guilty, he had good reasons for believing to be. This is not a bit like Rushton. P. R. LEONARD.

Editor Forest and Stream:

The Assembly Committee on Game had a meeting to-day, March 23. The meeting was delayed by the vote on high license. Just before the committee met there was a meeting of the Fish Commissioners, it was surmised, to indorse the Roosevelt bill.

The hearing was opened by a member of the Eastern Association, who stated that he had requested the introduction of Hadley bill No. 699 not to be passed, but to be substituted by the Roosevelt bill. Mr. Cookinham made brief remarks opposing the Roosevelt and Hadley bills, attacking it for its scattering and mixing different subjects through many sections which now are condensed into one, and because of its multiplying exceptions it could not be enforced, and other objections. He was followed by Mr. Roosevelt for an hour or more in favor of his bill. He opened by disclaiming that it was a codification, but was a new bill; claimed existing laws were confused, but did not specify any defect in particular, or how his bill was superior, except to claim that the present law was not sufficiently liberal to market men. (A bystander suggested privately that he had surrendered himself to the market interest, a class that had done most toward depletion and less to replenish or protect fish and game than all others.)

He justified July woodcock killing, deprecated the three deer limitation, favored sale of venison and game from out of the State, and went through each separate section and claimed it could be enforced, and was better than the present law. The Eastern Association man said he favored the bill excepting two sections upon which he would be heard in future. He was followed by Mr. Collins of Utica, favoring the present law with one or two amendments now before the Senate in bills No. 163, 164, which restore the former six-inch trout law, re-enact with some practical amendments the sections as to game birds, and cut off April for ducks, etc. He favored May 1 for the catching of trout, but if any portion of the State was to have April 1, he wished it the same for all. He described the manner of catching and keeping alive small trout to stock private ponds and reservoirs in saloons in season and out, and under the proposed laws such would be protected to the depletion of other waters. He was proceeding to specify by items the objections to the two bills proposed when the committee adjourned for a further hearing at some future time, of which notice would be given. REPORTER.

ALBANY, March 24.

HUNTING RIFLES AND BULLETS.

EXPERIMENTS WITH "P.'S" BEAR BULLETS.

THE objects of some experiments made at my request, on Oct. 21, 1886, at Peekskill, N. Y., by Major H. W. Merrill and Mr. G. J. Romer, were: First, to test the accuracy obtainable with an extra large charge of powder, with bullets my own experience had proven true flyers, by rifle experts of the experience and skill at the target of these gentlemen. The Bland double express rifle in their possession offered peculiar facilities for this experiment, as the short bottle-neck shell of 2½in. length, for which the rifle was chambered, had capacity for 120 to 130grs. of powder with careful packing, the rifle itself being one of the best London make.

Secondly—It was evident to me that in the FOREST AND STREAM trial, 1885, this rifle was not qualified with the best ammunition to develop either its power for making the flattest trajectory or for accurate shooting. The 310gr. solid bullet was doubtless true flying, as it appears to be fairly shaped and properly alloyed, but it is evident to me that solid bullet and a powerful express rifle are an ill-mated pair. It is true its comparatively flat curve will give a greater percentage of hits, but such a bullet flying with a high velocity, piercing through any animal hit with a small hole, expending a great deal of its power in probably going a half mile beyond, will be very little more efficacious in destroying life than another solid bullet starting with half the velocity and lodging within the animal's vitals. What is required for such a powerful rifle is a hollow-pointed bullet that will, of its own velocity, literally explode on entering the animal's vitals, thus securing every animal hit, and, as a matter of humanity, preventing its escape into the thicket to die a lingering death.

In the trial of this rifle for the 100yds. range, it will be recollected a 118-277-grain cartridge was procured by the FOREST AND STREAM at a New York gun store and used. It did not give as flat a curve at that range as it should for its powder charge. A specimen bullet kindly sent me by Mr. Romer from one of these cartridges partly explained the reason. It was almost pure lead if not quite so, instead of having a good per cent. of alloy. The writer has several times animadverted upon the responsibility of getting good results from leaden bullets with heavy charges of powder, the theory being that the bullet is so much upset, that the forward end assumes such a shape as to cause an increase of air resistance, resulting necessarily in a higher curve and consequent loss of accuracy of flight. All riflemen of experience have noticed the latter result with bullets of pure lead. The following experiment (among others made by the writer) is introduced to show how the trajectory is affected by the use of such bullets.

Ten (10) shells were carefully loaded with 114grs. C. & H. No. 6 powder; into 5 of these were inserted a 290gr. express bullet (pure lead) from a lot furnished by the Union Metallic Cartridge Company, and into the other 5 a 300gr. alloy express bullet (cast in the same moulds as my 270gr. express bullet, using a smaller core peg). They were, to insure perfect accuracy, fired alternately from my .45cal. Sharps, the odd numbers representing the alloyed bullet and the even number the leaden bullet:

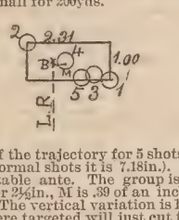
May 9, 1886.—Bar. 23.35, dry bulb 46½°, wet bulb 37½°; weight of a cubic foot of air 427.6grs., 200yds.

Shot.	Height of Curve.	Shot.	Height of Curve.
1	6.58	1	7.09
2	6.87	2	7.73
3	6.47	3	6.94
4	6.42	4	7.81
5	6.68	5	7.71
Average	6.68	Average	7.42

The highest point of the curve for the alloyed bullet is on an average 6.68in., and for the leaden bullet 7.42in., a difference of .74in. in favor of the alloyed bullet, whereas the 290gr. bullet should have made the flattest curve. It is a fact that for a given heavy

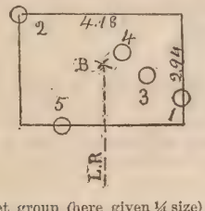
charge of powder, say for 200yds., there is a limit to the reduction of the weight of the bullet to obtain the flattest curve. If reduced below that limit its curve will be higher for the same charge. But in this case it does not hold good, for under about the same atmospheric conditions (421.4, 423.6, and 434.2, an average of 426.4grs. per cubic foot of air) with about the same charge of powder and a 270gr. bullet (20grs. less) a curve of 6.27in. was made, an average of fifteen shots. This result, therefore, must have been caused by the unscientific front of the 200gr. bullet, either from its change of shape by concussion, or by its original unscientific shape, or from a combination of both these causes. It will be likewise noted that the variation in the height of curve of the several shots is greater with the 200gr. bullet, .87in. than that of the 300gr. bullet, .45in., a difference of .42in., indicating a want of accuracy of flight in the former bullet, which is also correct, as it has long been discarded for use in the field.

From the above experiment it was evident that the experiment with the Bland rifle with the soft bullet did not show its power. It was also desired to get the trajectory of the lighter bullet for the 200yds. range to compare it with the trajectory of my rifle with a similar cartridge, but under different atmospheric conditions.



Mr. Romer promptly agreed to make the test for me, and accordingly fifteen of my bullets, patched, and such as for several years have been used in hunting large game, were sent him by mail; eight were .45cal. express bullets, 270grs., and seven were .45cal. 310grs., all patched. Had it been known, the experiment would have been so elaborate, more bullets would have been sent, but it so happened as many were sent as the nature of the package permitted. As Messrs. Bland were perfectly willing for any test for this rifle, the trial was made as soon as the convenience of these gentlemen allowed. At the same time Mr. Romer tested the Merrill muzzleloader for the 200yds. range, it doubtless being recollected that for some cause it was tested for only the 100yds. range at the FOREST AND STREAM trial in October, 1885. Precisely the same ammunition was used as at that trial. It is here noted that the test by Mr. Romer of the Merrill muzzleloader as also of the Bland rifle was intended as a test for accuracy as well as for the trajectory of each rifle. Precisely the same sight was taken on a small aligned bullseye. The Merrill muzzleloader, fired from Mr. Romer's machine rest, gave the following result. But first an account of this rifle's shooting was sent to me at the time for my examination, and as it will add greatly to the interest of my article. I trust the Major will excuse me for using it here.

Cal. .42, length of barrel 28in., 100grs. powder, 212grs. conical bullet, the rifle fired under about the same atmospheric conditions as at the FOREST AND STREAM trial. Height of curve at 100yds.:



Shot.	Inches.
No. 1	7.260
No. 2	7.185
No. 3	7.010
No. 4	7.200
No. 5	7.612
Average height of curve	7.265

By reference to the FOREST AND STREAM Trajectory Test Report it is seen that this average shows a flatter curve than was made by any breechloader, including the Bland express, which was 7.53in., and Romer's muzzleloader, 6.399in. The average of the trajectories of the mass of American breechloading small-bore rifles tested at that trial are about doubly as high as the Merrill. A copy of the original target and screen sent me shows an admirable grouping both on the screen and target, the parallelogram covering the centers of the bullet holes on the former being 2 5-16in.× 1.0in., and on the latter 4 3-16in.×2 15-16in. Such grouping of the shots is the best test of the accuracy of a rifle, and it is doubted whether it can be equalled at one trial only by any breechloader above .40cal., using proportionate quantities of powder and bullet.

Trial No. 5, Merrill muzzleloader, group on the screen at 100yds. (here given ¼ size) is 2.31sq.in. (not 2.3in. square) with conical bullet and the same identical charge used at the FOREST AND STREAM Test, to wit .42-100-213. Ratio, 1 to 2.13. This light bullet had not quite the sustaining power for so long a range that my heavier ones would have had; besides, the powder charge was for 100yds. only and too small for 200yds.

The mean height of the trajectory for 5 shots is 7.26in. (and for the first 4 and most normal shots it is 7.18in.). See the heights of the 5 curves in the table ante. The group is 2.31sq.ins, the diameter of circle 2.50 or 2½in., M is .39 of an inch only to the right of B or point blank. The vertical variation is 1in. only. All three of the mean curves here targeted will just cut the backbone of an ordinary sized deer at 100yds. in this range, the rifle being set point blank for 200yds., and the aim on the deer's center. No breechleader in the FOREST AND STREAM rifle test except Bland's shot strong enough to do this, and hence their one great fault.

The 200yds. target group (here given ¼ size) is 12.31sq.in., the diameter of circle 4.70in., and the string from B, the fixed center, 8.40ins., the average 1.68in. Vertical variation is only 2.94in. In this particular case B was the fixed center or point blank on the target, and hence this cluster is around the point of aim B, and M is eliminated. This rifle was well trained, and it made a very close target, but it is the clusters we are to regard for accuracy. No. 5 shot changes its place relatively a little on the screen and target.

A trial was then made to ascertain whether, with the same bullet and a reduced quantity of powder (to 53grs.) the screen and target accuracy would be affected, and the result was less accuracy by a considerable (the target is a parallelogram 8 5-16 ver. × 9 6-16 hor.) and a higher curve of course, 10.87in., an average of 6 shots. Major Merrill and some others have always been of opinion, I believe, that high proportion of powder to lead did not (necessarily) lessen the accuracy of the shooting of the muzzleloader. This experiment seems to prove it. With the breechloader the experience seems to have been that the best proportion for target accuracy is from 1-5 to 1-6 powder. Hereis an experiment, however, following, with the Bland rifle, where a proportion of 1 to 2.16 made a very good group at 200yds., as the bullet holes were covered by less than a 7in. ring. There should be no difference in the shooting of the two classes of rifles provided the bullet moved from its seat in the shell into the barrel in as smooth and unobstructed a manner, approximately, as the bullet of the muzzleloader passes through the bore. It is in passing the chasm at the end of the shell and into the end of the bore, where the bullet is liable to become uncentered, the chief cause of, occasionally, a wild shot from all breechloaders. This is the great defect and weakness of the breechloader, and should receive the attention and study of all rifle makers and experts, so that the evil may be remedied or at least palliated as soon as possible. This defect is acknowledged by all our rifle experts at the target in an emphatic way, at every "shoot," by their invariable custom, where the best work is desired, not only to clean the bore, but in addition shoving the bullet into the bore and properly centering it, and then the shell loaded with powder is placed behind it.

As to the experiments with the Bland rifle, all the details of which were forwarded me, including the original target and screens at 100yds, it seems unnecessary to premise that experiments made by gentlemen of such experience and skill as Major Merrill and Romer are absolutely correct. Their manner of making these experiments, as explained in the report (the details of which it is deemed unnecessary to give) are mathematically correct, and on checking the figures for arriving at the results, no error was detected. As before remarked it was regretted, when too late, that a few more bullets had not been sent, but with the care each shot was fired, not a shot having gone wrong or been used as sighting shots, it seems of no moment. One shot carefully fired through screens and properly traced, is worth, if a normal one, a dozen where the proper care is not used, as so often happens. These experiments are very valuable from their great reliability:

"Report of experiments made at P.'s request by Major H. W. Merrill, witness, and G. J. Romer, shooter, on the trial of Bland's double express rifle No. 10,203, on Oct. 21, at Peekskill, N. Y.

"The shooting consisted of four separate trials of four shots each; distance 200yds; one screen at 100yds.; all shooting done from machine rest, with the same aim or constant pointing of the rifle. The horizontal line of sight, as determined by the use of telescopic sights, is used as the base line and requires a cut-off of .69in. to be added to the height of curve at 100yds. (1.38in. being the distance between the bore of rifle and the line of sight at muzzle." (N. B., in the tabulated height of curves following this, correction of .69in. has been allowed for.—P.)

"Trial No. 1, made with Ely cartridges, from same lot as used in FOREST AND STREAM trial. Powder, 112grs., C. & H. No. 6; bullet, 277grs., Ely; copper tube in point. Thermometer 65°, barometer 30.25; height above tide level 125ft.; wind ten miles an hour from 8 o'clock; weight of cubic foot of air, 531.9grs. Height of curve at 100yds.:

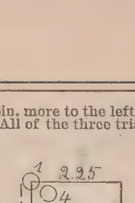
It has been thought unnecessary to give further details, as in addition to the above an exact copy, from the originals, of the grouping of the bullets of each trial, at the screen (100yds.) and at the target (200yds.), herewith inclosed, will give all the information desired. It is hoped the diagrams for trial 3 and 4, and that for the Merrill rifle will, at least, be published, the grouping for No. 1 and 2 being rather too much scattered to make it desirable."

In comparing trial 1, bullet lead, and trial 2, bullet hardened (the two practically of the same weight), the hardened bullet has the flattest trajectory by .42in., approximating the result of the experiment given in the first part of this paper. The grouping is also more compact and better.

In comparing trial 1 and 2 with bullets seated ½in. into the shell, and trials 3 and 4, cartridges loaded by Mr. Romer and bullets seated about ⅛in. into shell, the latter two have, as was to be expected, a much flatter trajectory, but likewise, though having much higher powder proportions, show groupings of bullets both at the screen (100yds.) and at the target (200yds.) at least 100 per cent. more compact. This was, doubtless, due a great deal to Mr. Romer's careful loading, but I think the manner of seating the bullet into the shell had as much or more to do with it. Mr. Romer kindly sent me one of the Ely 277 bullets with a pencil mark on the patch showing the depth it was loaded into the shell, in this case nearly ½in, (7-16), as was the case in trials 1 and 2.

In trial 3 and 4 the bullets, at my request, to correspond with my own practice when loading for rough usage, were seated ½in. into the shell, as near as could be done. The advantage in accuracy of having the bullets seated the smallest amount possible into the shell for practical use is too well known to discuss. It is emphasized by all experts at the target from their invariable habit, as before alluded to, of shoving the bullets into and centering them in the bore before placing the shell in position.

It is always interesting to note the relative grouping of bullets on the screens and at the target. There is nothing to be remarked about the Merrill groups except that shot No. 5 fell slightly too much in going over the last half of the range, but striking only 2in. from the center, the five shots make an average string of 1.70in. and a very close diagram on the target. Trial 3 and 4 of the Bland rifle shows very fine grouping, the bullets preserving their position on the target very close, relatively to what they are on the screen. Shot 4 of trial 1 and shot 3 of trial 2 (bullets deeply seated in the shell) appear to be somewhat off. In starting and taking the "running jump," so to speak, at the bore, they appear not to have struck the center of the bore, but to have passed through the bore and from the muzzle "out of center" and starting on its course at a slight angle with the direction of the line of fire. With bullets loaded deep in the shell comparatively every few shots are apt to be comparatively "wild" from not passing into the bore properly centered. To insure the most uniform shooting from a breechloader the bullet should be seated into the shell just sufficiently so for practical use, say ⅛in.; and at the same time the bullet so shaped that its forward part (when the shell is shoved into position ready for firing) should, by the patching be gently engaged by the grooving, so that when it (the bullet) moves forward it is guided by the forward part into the bore properly centered and is very sure to pass from the muzzle all right for accurate flight. This, even with a clean bore, is greatly facilitated by the beveling of the lands at the mouth of the shell. This subject of beveling the lands was so thoroughly ventilated by me a few years ago that all reputable gun factories have adopted it for all classes of rifles. It improves the shooting of the naked bullet and has made it possible to shoot the patched bullet from the American breechloader without cleaning after each discharge, which was not possible with rifles chambered before that date.

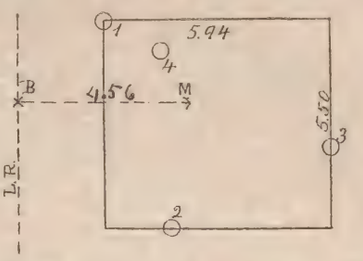


Subjoined is a table of the diagrams made at each trial, the groups being referred to a parallelogram, the horizontal and vertical sides of which cover the centers of the bullet holes. It shows in a condensed form the results, merely adding that Mr. Romer obtained so much more favorable results from the Bland rifle than what was obtained from the same rifle at the London *Field* trials of October, 1883, where it competed in the .450-bore class, that a comparison appears superfluous. It, without doubt, was caused by the more skillful handling of the rifle and better ammunition.

TABLE OF DIAGRAMS.

Trial.	100yds.		200yds.		Remarks.
	Diagram Inches.	Sq. In.	Diagram Inches.	Sq. In.	At 200yds.
No 1	2 ×6¼	13.00	5⅛×12⅜	70.81	
No 2	4⅜×3⅝	15.86	9⅜×7⅞	73.82	
No 3	2¼×2 5-16	5.23	5 15-16×5½	32.65	String 12.17 Av. 3.04
No 4	2 5-16×4 1-16	9.39	5 5-16×8 3-16	43.49	String 14.50 Av. 3.62
Merrill M.L.	2 5-16×1	2.31	4 3-16×2 15-16	12.31	String 8.48 Av. 1.70

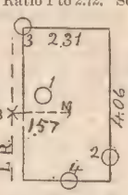
The trajectory made by the 125-270gr. cartridge from the Bland rifle (6.39in. rise at 100yds., equal to about 6.50in. at the highest point, 111.5yds. from the firing point) is remarkably flat under the atmospheric conditions in which it was fired (weight of cubic foot of air, 539.5grs.).



Trial No. 3 (as above).—Third group is 5.23sq.in. on the screen at 100yds; P.'s express hunting bullet, 270grs. with 125grs. powder; ratio 1 to 2.16. B is a 1in. bullseye, and the supposed point blank aimed at. M, Mean, is 1.05 right of B. L R. line of range. Had the rifle pointed at 1.05in. more to the left, the same cluster would have been around B. All of the three trials were made in a 10-mile wind.

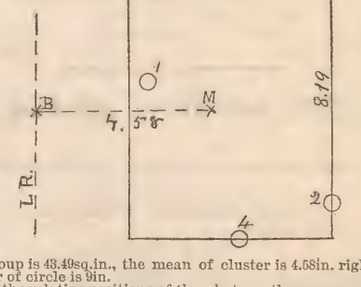
The mean height of trajectory is 6.39in. above its base. The group is 5.23sq. in. Scale here given is ¼ size.

The diameter of a circle, including the outer centers of shots is 2.76, or 2¾in.



Next comes its mate, the target group at 200yds. The explanation for B M and L R need not be repeated. The scale of diagram is ¼ size.

The mean of this cluster is 4.56 right; the diameter of a circle including the group, is 7in; the group is 32.65sq.in. Compare the regularity of the relative positions of the shots on the screen and target—no gyration motion to the bullets is shown.



The highest recorded velocity from an express rifle is that of a 26in. barrel, express rifle, by Tolley, loaded with 150¼grs. C. & H. No. 6 powder and a 274gr. express bullet, which, by the calculations of Major McClintock, gave a rise at the highest point of the 150yds. range of 3.41in. The same calculations extended gives a rise for the 200yds. range of 6.80in. With 25grs. less of the same powder and substantially the same bullet, this 28in. barrel express (Bland) gives nearly ½in. less rise for the 200yds. range. The same rifle with a 125-340gr. cartridge gave a rise of 7.125in. at 100yds., say 7.25in. for the highest point of the 200yds. range.

Trial No. 4 (as above).—Fourth group is 9.30 sq. in. on the screen at 100yds., using P.'s other heavier express hunting bullet, 340grs., powder the same. 125grs. Ratio 1 to 2.72. Scale of diagram ¼ size.

The mean height of the trajectory is 7.12in. above its base, group is 9.30sq. in., diameter of circle is 4.20in., M is 1.57 right.

Next comes its mate, the target. Scale of diagram ¼ size.

The group is 43.49sq.in., the mean of cluster is 4.58in. right, the diameter of circle is 9in.

Notice the relative positions of the shots on the screen and target; they are very regularly placed.

And would any of the mass of the weak-shooting breechloaders tested at the FOREST AND STREAM trial have equalled in screen and target accuracy (clusters) either of trials 3 and 4 above? I mean, provided their pointing (or aim) had been constant as mine was. In windy weather a heavy powder charge is necessary for accuracy.

The highest recorded velocity for an American express rifle is that made by a 114-270 express cartridge from a .45cal. 32in. barrel as tested by Captain Michaelis for the writer and published in a previous paper, 1,904ft. per second (average of 8 shots). A 114-340-grain cartridge tested at the same time gave a mean velocity of 1,804.5ft. per second, average of 8 shots. The first cartridge, under the atmospheric conditions represented by 509.4grs. per cubic foot of air, would give a rise at the highest point of 200yds. range of 6.99in. The second cartridge, with atmospheric conditions of 507.4grs. per cubic foot of air, gave a rise at the highest point of 7.58in. From experiments with as much as 120grs. of powder, I think this about the best results to be gotten from this rifle near sea level with the straight 2⅛ or 2¼in. shell, the shell being long and of only .50in. diameter at the base, the powder is not so thoroughly utilized. The Bland rifle, with its 2¾in. bottle neck shell of .575in. diameter at base, uses 11grs. more powder more economically, for it develops so much more velocity that, with the 270grs. bullet it gives a less rise for the 200yds. range by a half inch (.49), and with the 340grs. bullet .35in. less, nearly ¾in. This comparison about agrees with my estimate of the advantage gained in power by a rifle using the compact 2¾in. bottle-neck shell for the same rifle. Anywhere around the foothills of the Rockies a rifle of 32in. barrel chambered for the shell with 125-270grs. charge, should make as low as about 6in. trajectory for 200yds., and with 125-340grs. charge as low as 6.5in. trajectory (say with 9lb. rifle), and the recoil will not be especially noticeable when shooting at game.

I believe the writer first suggested the lengthening out of the 2⅛in. straight shell so as to afford more room for a wholesome express charge, but immediately afterward altered his opinion on finding, by experiment, that even the 2⅛in. shell did not economically burn its powder, and mere lengthening the shell without increasing its base, would increase the evil. Since then I have suggested the English bottle-neck 2¾in. shell as, by its increased diameter and increased length, at the same time larger capacity, it seemed to have all the requirements the straight shell lacked. In 1878 I became familiar with this shell, as my hunting companion of that season used a double express London rifle chambered for that shell, which seemed to give the best satisfaction for a shell of that capacity. The experiment with the Bland rifle with a 28in. barrel shows the superior power of the bottle-neck over the straight shell, as was to have been expected.

A correspondent of mine, an officer of the Seventh Cavalry, however, has a .45cal. Sharps, chambered for the 3¼in. straight shell, which he has used for several years on big game and is wonderfully pleased with it. He used 125grs. of powder and a patched express bullet a little heavier than my 340gr. bullet (the moulds made from the same cherry), but he thinks the trajectory of his bullet is no better than the report given of my 114-340gr. cartridge.

As the Winchester R. A. Co. have put upon the market an express cartridge, using this 3¼in. shell with 125grs. powder and a 300gr. naked express bullet, for use in their single shot rifle, it is

hoped that riflemen interested will soon be furnished with an authoritative statement of what muzzle velocity is developed by it as well as its trajectory up to 200yds., and a test for accuracy to that distance. A rifle with that charge, if not accurate for that hunting range, fails in one of the principal requirements of an express rifle. Using a naked bullet will, I think, be found a mistake, but that can easily be corrected. As the patched bullet has been, by the experience of experts, found so much superior in accuracy where one-fifth powder is used, there is so much more reason for the use of this bullet where greater charges are used and the elements of air resistance to its flight are so much magnified.

As the writer gets such fine results from the 2⅞in. straight shell, is as evident not only from his (our) report, but from the experiment by Captain Michaelis, showing a muzzle velocity of 1,961ft. per second, and such extremely good accuracy from the bullets, as is evident from the experiment of Mr. Romer and Major Merrill, above given (all confirmatory of his own report), it may be very pertinently asked, what better shell does he want? The reason has been given in a previous paper, and is repeated with care, by means of a 5ft. loading tube 110 to 115grs. of C. & H. No. 6 powder (according to its facility for packing), can be gotten into this 2⅞in. shell, and with a greased jute wad, such as is used of 3-32in. thickness, over powder, there is then ⅛in. left for seating the patched bullet, which is ample in my experience. This thin jute wad has been found the best lubricant and is admirably adapted for this shell.

It is evidently desirable, however, to have a shell which is easily loaded with the amount of powder considered sufficient and into which 10 or 15 more grains can be packed with a little more care. Nor do you wish to be restricted to this thin lubricant wad if anything better is brought out, especially as this wad has to be imported. But it may be truly said the lengthening of the shell to 3¼in. will obviate most of these objections. But this is coupled with the additional objection that the loaded cartridge will also be lengthed, properly loaded to 4 and 4¼in. The 2¼in. shell is already too long, if it can be obviated 3¼ to 4in. according to the length of bullet loaded; whereas the 2¼in. bottle-neck shell, the more powerful and more compact, with the same bullets and loaded in the same manner need not be more than 3¼ to 3¾in. long. It is unnecessary to say how much more desirable the latter cartridge is for field use than either of the others. The objection of some that this is an English shell is unworthy of consideration, each nation being constantly in the habit of appropriating each other's ideas. This very shell, the solid-drawn shell, is an American invention, and is now used exclusively for sporting and target rifles in Great Britain. What the American sportsman wants is the best designed rifle that can be had regardless of nationality. They can be built cheaper in this country and there is no desire to import them. A single-barrel rifle is all that is desired for our most dangerous game.

Though this paper is already too much lengthened, it is, nevertheless, desired to call attention to the fine results obtained from the "machine rest" invented by Mr. Romer, for steadiness and accuracy. It is to be hoped he will patent it, for such a machine adjustable for arms, giving varying recoil, should be very valuable for testing rifles. As it is, the test of target accuracy of rifles is now dependent more upon the shooter than any other factor. P.

POSSIBILITIES.

We might have all been heathen,
Bowed down to wood and stone;
We might have all been hermit crabs,
And each one lived alone;
We might have all been little deer,
Or moose, or caribou;
We might have been a nest of owls
And sung too-hoo! too-hoo!
I might have been a crocodile,
And Tom an alligator,
Ben and sister monkeys,
Way down by the equator.
I might have been an elephant,
With my bandbox and my trunk;
Sis and Tom been bullfrogs,
And go curchunk! curchunk!
Mamma calls us little geese,
As we play with Pap's old cartridges;
But papa says, we're nothing but
A brood of little partridges.

New Jersey	March 1.	Vermont	May 1.

FARMER BROWN'S TROUT.

IT is not Farmer's Brown's trout any longer. He owned it once, or rather owned the piece of meadow land through which the mountain stream, after dutifully cooling the farmer's milk crocks, curved and twisted until just at the edge of the woods it poured over a jagged shelf of rocks, buried itself in a deep pool, and pouring out again more turbulent than ever, under the broad shadow of the woods, it babbled musically over glittering gravel and moss-covered stones, until it mingled its clear waters with the Susquehanna, half a mile away.

In the broad deep pool lived Farmer Brown's trout. It had been there a long while. The spring freshets pouring down from the mountain and crashing with their burden of ice through the meadow never drove it away. In some deep recess, perhaps under the bank, it slumbered through the winter, and with the arbutus and the violets came the old trout, its gold and crimson spots brighter than ever, and its appetite sharpened to a keen edge after its long fast; and stray insects that, braving the perils of a spring frost, floated over the pool in the dewy April mornings, were ruthlessly gobbled up.

Farmer Brown held that trout in the highest veneration. No cruel hook had ever been thrown into the pool, and dire indeed would be the fate of any luckless youth who meditated harm to the sacred fish. At times it would float idly upon the surface, waving its tail with an indolent and graceful motion that seemed to say, "As long as I am here your crops shall flourish. Prosperity and plenty shall be yours." Certain it was that Farmer Brown's grain was the best for miles around, and his corn and melons could not be equaled. All this the farmer attributed to the trout. True, his neighbors laughed at that. His land was well watered and very fertile they said, no wonder his crops were good. But then these remarks were prompted by envy. His neighbors were not blessed with a good genius in the shape of a trout.

So the years passed on, and the trout grew larger and larger. No wonder it thrived. It led an innocent unsophisticated life, shut in from the temptations and perils which assailed other fish, and with a confidence born of security it navigated the narrow boundaries of its pool.

Once it disappeared for a while, and during its absence a thunderstorm overthrew half an acre of the farmer's best wheat, and a fox killed half a dozen of his chickens. But at the expiration of a week it returned and darted round in sportive glee to express its delight at getting home again, and ever after it appeared to be a little more cautious and spent most of the time sulking in a deep corner of the pool under the twisted roots of an old buttonwood tree.

One morning the farmer's watchful eyes discovered a figure creeping along the edge of the pool. When he and his trusty bull pup arrived on the scene the spot was deserted and the trout was serenely swimming around. But footsteps in the moist earth and part of a line with hook attached dangling from a dead limb of the tree told only too plain a tale. Farmer Brown's wrath knew no bounds. He vowed that such another sacrilege should cost the offender dear, and procuring a number of steel traps he placed them around the pool, and even kept the bull pup on half rations for a week. Nor even when an inquisitive young calf wandered into one of the traps and broke its leg did his vigilance abate. He even cut down an aged walnut tree in order to obtain a clear view of the pool from the house, and kept a gun loaded with rock salt constantly in readiness behind the door.

We were canoeing down the North Branch, and the cool and shady grove of oak and hickory through which farmer Brown's trout stream ran into the river, was so inviting that we struck camp, ran up our tent and prepared for a couple of days of quiet enjoyment. Canoeing is fascinating sport, but steady paddling day after day in the hot sun makes a short stop very refreshing indeed, and especially amid the beautiful scenery which makes Wyoming county so justly celebrated. We pitched our tent on a grassy knoll slightly above the river, lit a fire and prepared supper. The yellow perch were browned on both sides and the coffee was boiling over, but with a too fastidious taste for canoeists we desired cream in our coffee. Leaving Forster in charge of camp, Morton and I seized a tin pail and started off in search of a farm house. No dwelling was in sight. Instinctively we followed the brook up through the woods, and soon came to the open meadow, and just across the field lay the farm house, its old-fashioned windows gleaming blood red in the rays of the setting sun. Morton leaped over the fence, sprang forward and stepped into a steel trap, which closed on his ankle with a sharp click. Fortunately he wore rubber boots and the sharp fangs did not penetrate the flesh. The trap was securely fastened to a heavy stake driven into the earth, and clung to his ankle with a death-like grip. With united strength we were endeavoring to wrench the jaws apart, when the barking of a dog attracted attention, and looking up we saw two men and a savage dog bearing rapidly down upon us across the field. Escape was impossible and we passively submitted to be collared and led up toward the farmhouse, while the dog guarded the rear, diverting himself with occasional vicious snaps at my legs. Explanations were demanded, and as the presence of our tin pail showed that we had entertained no designs upon the trout, we were finally dismissed with a quart of milk and a strict injunction to trespass no more. Not a word was said about the trout; Farmer Brown was too shrewd for that, and we attributed such unusual precautions to a crusty nature and general dislike for trespassers. But the next day a rustic visitor at camp enlightened us. We heard all about Farmer Brown's big trout, and I regret to say that regardless of the farmer's feelings, we secretly resolved to capture that fish. We proceeded with great caution. A reconnoitering expedition was made up through the woods to the pool, and screened from view by the trees which fringed the edge, we saw the fish moving around in the clear, deep water. It was a beauty, and with no premonition of fate it fearlessly sported in front of our admiring eyes. We hastily made a survey. From the edge of the woods a line could be thrown into the pool, and at the same time we would be pretty well screened from view.

We made our way undiscovered back to camp, and before turning in selected from our scanty supply a couple of gaudy flies. Our sleep that night was disturbed by troubled visions, in which Farmer Brown and his bull pup occupied a prominent place. At daybreak we were up, and before the sun had peeped over the top of the mountain Morton and I were at the pool.

Thin banks of mist floated over the water, and the hazy atmosphere rendered the farmhouse an indistinct mass in the distance. The water, unlit by the rays of the sun was dark and cloudy and smooth as a sheet of glass. With trembling fingers I adjusted a fly, and avoiding the trees as much as possible, I cast it out on the pool and drew it toward me over the surface. A second time I made a cast and then a third. Still a failure. At the fourth cast the fly dropped just at the foot of the buttonwood tree, and as it skimmed over the water, there was a swirl and a splash, and my reel spun out with a merry click which tingled every nerve in my body. The trout was hooked and hooked firmly. Instantly it darted toward the tree, but sheering off dashed up the pool and was stopped short by the ledge of rocks. Then back again so rapidly that my line slacked in coils and as suddenly became taut as the huge fish darted to the other end of the pool, making frantic plunges out of water and vainly endeavoring to rid itself of the cruel hook. Then up to the rocks again, and in the deep hollow, worn out by the down-pouring water, it sulked and refused to budge.

We had to be very cautious. If we ventured out to the very edges we ran great risk of being seen, and as the sun was now scattering the mist the farmhouse seemed alarmingly near. I began to reel in and succeeded in starting the fish again. It was a new and startling experience for it, and with undiminished energy it dashed back and forward through the pool, now diving close down to the pebbly bottom, now up to the surface, half out of water, and then off to some far corner to gain strength for another struggle for freedom. But now the strain began to tell on it. The wild darts were less frequent, and the tension on the rod lessened visibly. The struggle was drawing to a close, and none too soon, for the tinkling of cow bells, and distant voices floating toward us on the breeze warned us to depart.

I rapidly turned the reel, and drew the fish closer and closer. It struggled feebly as it drew near shore.

"Now," said Morton, "hold on," and springing to the edge he grasped the line. One sharp, quick pull and Farmer Brown's trout lay gasping for breath at our feet, its beautiful sides glittering and changing color in the rays of the sun. We seized our prize and hurried down through the woods to camp. Forster, with a far-sighted confidence in our abilities, had a roaring fire and a frying pan ready for us.

We had planned an immediate start, but the thought of fresh trout sharpened our already voracious appetites, and recklessly dismissing Farmer Brown from our minds we determined to breakfast first. With many pangs we skinned the trout—a pound and a half I should judge—and encasing it in cracker dust placed it on the fire.

The coffee was boiling and the air was odorous with fried potatoes. The trout was soon a rich brown on both sides, and eagerly gathering around our hastily improvised table—one of our canoe sails—we started in. Just then the crackling of branches startled us, and Morton in his trepidation spilled the hot coffee over his arms. Soon by the spring stood a rustic looking youth of probably twelve summers. A light switch in one hand denoted his errand. Hunting a stray cow probably. Evidently one of the young Browns. But his glances were not directed at us. At his feet lay the evidence of our guilt—the dismembered head of the trout, beautiful even in death, and the lovely mottled skin, its brightness already beginning to fade. A glance at the frying pan completed the story. He turned without a word and darted up the slope.

We stared at each other in consternation. "Hallo, Johnny, that's only a sucker," shouted Forster. I ran up the slope in time to see him vanishing among the trees. He was already beyond call. There was a nice state of affairs indeed. We would sooner have faced an earthquake than Farmer Brown's wrath. With frantic haste we pulled the tent down and threw it into one of the canoes. The table cloth, dishes and all, was bundled up and thrown into another. Blankets, pails, clothes, dishes, fishing tackle, provisions, and anything we could lay our hands on were hurriedly and promiscuously crammed into the hatches. With admirable self-possession at such a trying moment Forster seized the trout and carefully placed it in his canoe, while I took charge of the coffee and potatoes. A hasty survey showed that nothing was left behind. We lifted our heavily-ladened canoes and dropped them into the river. A sudden noise in the bushes startled Morton, and the end of the canoe he was carrying slipped to the ground with a crash that foreboded ill to our chinaware.

We grasped our paddles and rushed for the canoes. None too soon. Away up in the woods a dog was barking. Forster delayed a second, and seizing a hatchet and nail he nailed the head of the trout to a huge oak tree where it could not escape notice. He ran down the bank and sprang into his canoe. A couple of strokes and he grounded on a rock. In vain he endeavored to shove off. At last in despair he leaped into the water and dragged it off just in time. As we paddled out into the current the bull pup's melodious voice rang out on the air. He burst into view and close behind him came Farmer Brown, whip in hand, and three of his men. I will draw a veil over the scene. Suffice it to say that threats and imprecations horrible to relate greeted our ears. We were cordially invited to come in and be skinned alive, or take our pick of half a dozen other punishments equally as pleasant. We magnanimously bore it in silence and made no reply. The current carried us swiftly along, and a last backward glance revealed our pursuers running along the shore, shaking their fists in futile rage at our fast receding forms. We soon rounded a bend, and then floating side by side, we proceeded with our interrupted breakfast, and Farmer Brown's trout was soon a mere skeleton. But we felt by no means safe, and paddled with such energy that by sundown we camped within sight of the lights of Pittston, and not until another day's journey had carried us thirty miles further did we feel convinced that we were beyond the reach of Farmer Brown's vengeance. W. M. GRAYDON.

A CANADIAN CAMP TRIP.

THE long winter, with its work and worry, was at last a thing of the past, and as the weather warmed and we began to think of the heat of midsummer, we wished it might be so ordered that we might get out of the heat of the city and to some of the streams where we might not only rest, and recuperate, but where we might enjoy the pleasure of casting the tempting bait into some stream where there were fish to take it, so that we might take them. While we were thinking of it a friend wrote that a party were arranging to invade Her Majesty's dominions on an expedition of this kind. As I had never been across the border, and knew nothing of land, people, or the sport to be had, except that the latter was reported to be of the best within reach, the proposition to include me in the lucky number of those who were invited to go, just suited my mind. As there were five clubs going to the same section, we arranged to all go on the same day and train, and thus be able to get better terms for transportation. There were five clubs and we were provided with a special train of three coaches and two baggage cars, the entire train to be run from a certain city in western Pennsylvania to our destination at Severn River, Ontario. We took enough large duck tents to accommodate all the party, and one for the stores and cooks. We had provisions of all kinds enough to last all the time we expected to camp, with a stove and everything needed to insure our comfort. One of the articles will commend itself to every camper who loves comfort as well as sport; each one was provided with a folding cot. This kept us off the ground and insured a dry, warm place to sleep after a day spent in the sun or rain.

We left Pittsburgh at 10 A. M. and sped northward all that afternoon. It was after dark when we crossed the border at Niagara Falls, but as we went over the gorge through which rush the rapids below the falls, we could see the mighty torrent in all its grandeur far below us, and hear its mighty roar above that of the train. We had arranged matters by correspondence with the customs officers on both sides of the line, so that our baggage was not inspected either going or coming. We pledged our party not to violate any of the customs laws, and gave those of Ontario a list of guns, rods, tents, etc., promising not to sell or otherwise dispose of any of them. They treated us fairly, and we did the same by them. We first realized that we were on foreign soil when we entered the Northern and Northwestern station and saw the American coat of arms over the U. S. Consulate. This was in Hamilton, where we arrived about midnight. From here

our course was almost due north over this road to Severn bridge. In order to reach our destination the sooner we concluded to charter a special engine and go on rather than wait until morning and go by the regular train. But this extra expense proved a delusion. When we wakened during the night we found ourselves either side tracked or proceeding about as fast as one could walk. And when morning came and we should, according to agreement, have been at the end of our journey, we found that we would have about all we could do to get there before the regular train. And, in fact, while we were unloading our traps from the car the regular train, which we had paid $60 to beat by five hours, passed us.

Our camping place was on the point where Severn River empties into Sparrow Lake. As we had so much freight and so many passengers, we engaged a steam tug to tow part of it down the river, while the other boats were loaded with the tents and articles which would be first needed to get the camp into order, and, manned by some of the party, these went ahead. A very strong wind was blowing up the river and it took our magnificent propeller nearly all the afternoon to get us down those five miles. The steam would give out and we would lay up to the bank a while and give the thing a chance to get its breath. When we did at last get to camp we found it in order and supper ready. I need not tell any one who has ever camped out that we had been ready for it long before it was ready for us. It was a beautiful place to camp. In our front was the river, and those who desired to do so could catch fish while in camp. About a hundred yards below was the shore of the lake, and where the river emptied into the lake was the best place to fish for bass which we found during our stay in camp.

We camped here two weeks and it rained ten days out of the fourteen. It was not a dry nor a warm rain either, but one of the wettest and most disagreeable I ever saw. This did not interfere at all with the fishing. When any one wanted to go he would don his waterproof coat and boots, and sail away as if the sun were shining. The fishing was of the finest. We have tried it elsewhere since, but never had such good luck as at this place. The only fish we wanted to catch were bass and muscalonge, but the salmon and other kinds would persist in wanting to be caught, and so we had to take them in out of the wet to satisfy them. The largest bass caught by any one of the party weighed 4¾lbs., and measured 20in. in length, 6 in breadth and 2in. in thickness. The largest muscalonge weighed 9lbs. It is enough now to give one the fidgets to remember the royal beauty of a string of eight or ten of these when first brought out of the boat and laid on the grass. Of bass, muscalonge and salmon (what they called pickerel), we made a record of 315, weighing 625lbs. As it is said that fishermen will sometimes tell fish stories, we had a rule that no one should get credit for a fish nor claim having caught one who did not have it weighed by the secretary and a record of the facts made by him. What is here written is from this record.

The first time we noticed any of the parasites on any of the fish was when we caught an 8lb. catfish on a spoon when trolling. The roof of his mouth was nearly covered with what we called leeches. They were about half an inch in length and had such a hold that they could not be removed without killing them. After this we found them in the mouths of all the varieties of fish we caught, but especially in the salmon. Persons who had fished in these waters the year before told us that when they were there the bass had so many worms in the flesh of the back that they were so stupid as to destroy the sport of catching them, and that they were of course unfit to eat. When we were there we examined them and all other kinds, but so far as the flesh was concerned they were in good health. It was a mystery to us how they could live with these leeches sucking their blood, especially when they were located in such a tender and vital place as the roof of the mouth. Sometimes we thought that those which were the most infested by them were more sluggish and made less fight than those which were not, but we were never sure that it was not all in our own imagination. The reason for this condition of the fishes of these waters we concluded was the fact that the water was not swift enough, and that the bottom was nearly always covered with water grasses, fish weed and other growths. Whatever the cause it was there as I had never seen it elsewhere. HOMERUS.

BLAIRSVILLE, Pa.

THE NEW YORK TROUT SEASON.

TO-MORROW the trouting season opens in the State of New York in all parts south of the Adirondack region, and the weather gives very poor promise of sport. The spring has been unusually backward even on Long Island, where the sea breezes temper the rigors of winter whenever there is an intermission of the northerly blasts. The consequence is that anglers in the vicinity of New York city have shivered at the thought of wetting their lines on the opening day, and the prospect is that but few of them will do so. Old residents of Long Island declare that they scarcely remember so cold and backward a spring. The bluebirds and robins usually appear on the island about March 1, but it is not more than two weeks since they came, and they are not numerous yet. As we write a cold northwest wind is blowing and ice is forming on small pools where the water is not flowing.

Accounts from other portions of the State show about the same state of affairs. The Hudson River is still frozen over above Poughkeepsie, and many of the streams in the central and western portions of the State are closed with ice. During the past week we have seen many of the streams of Long Island which are all open and have been so almost all winter, but the trout have not been rising as they usually do in March. Notwithstanding this we know of several anglers who will face the weather and try their skill, no matter what wind may blow. The South Side Club will have their opening day, fishing or no fishing, and there is every prospect that the warm stoves of the club house will be as attractive as the ponds and streams.

There will be no exhibition of trout from all portions of the country in Fulton Market, as has been the custom, but the slabs will be well supplied with frozen Canada trout and fresh trout, the latter mainly from private ponds, and possibly some live specimens from the same source. The South Side Club sometimes has as many as a thousand pounds for sale on the opening day, this being their surplus stock not needed for turning into the fishing ponds where the catch of members is limited to twelve fish per day, each. Many of the best trout waters of Long Island are passing into the hands of clubs. The Oxford Club, of Brooklyn, a well-known social club, has just obtained the large pond and some miles of stream at Patchogue, and formed a branch to be known as the Oxford Rod and Gun Club. They will stock the waters and will have one of the best preserves on the island in a few years. We visited their grounds this week and were surprised to find them so extensive and such splendid streams.

On the north shore the prospect for early trouting is not as good as on the south side of the island. Members of the Brooklyn Rod and Gun Club report that few will try the fishing at their ponds near Smithtown, and that so far but few fish have been seen to rise in the Nissequogue River. Northward, in Sullivan and Ulster counties, there will be no good fishing for some weeks.

REELS.

Editor Forest and Stream:

It has now been some time since the subject of reels has been discussed through the columns of your valued paper, and as the reel is a very important factor of the average angler's kit, I would be glad to see an expression from some of your readers who have given the matter attention.

Among other mysteries to a novice, it has always been a query to me why the manufacturers of modern reels persist in placing the click attachment on the right, or handle side of a reel. It certainly cannot be for convenience sake, as your reel when in action must invariably be stopped at the moment of applying it, and at the imminent peril of your rod. Nor can it be said—comparatively speaking—to improve the model, for the gracefulness of outline secured would be too insignificant to be worthy of mention. What then? Some one will likely suggest that the machinery of a reel requires the placing of the click on that side, but from my own limited knowledge of mechanism and that of more practical persons, I am convinced that such is not the case, and it could be made work equally well on either side. I now have before me the cut of a reel claiming to be "Patent Perfection," that "can be changed in a second from a free running multiplying to a click multiplying, or vice versa," yet let this same reel be attached to the business end of a fish, and you would have to first bring it to a dead stop like any other reels, and then go through the exhilarating pastime of searching over its surface for a needle pointed index by which to change the gearing. This seems a long way from "perfection" of the "patent" type, or otherwise. This, however, is considered one of the standard and most popular reels now extant, and consequently was chosen as a representative of the prevailing style. Of course in reels with the automatic click, viz., those which cannot be adjusted from the outside, this difficulty is obviated, and until those with the attachment are considerably improved, in way of keeping it independent of the handle, where it can be operated at pleasure with the free hand, I shall deem them the best. I understand there are now a few reels on the market with an adjustable click on the left side, but have not as yet seen one, nor have any of the angling friends of my acquaintance. Is there such a reel actually existing? Let us hear from others regarding this. JO.

WELLSVILLE, Ohio, March 18.

[Combination reels are a necessity to those who own but one reel and wish to use it for all purposes; and, like all combination tools, has its disadvantages. As we understand it the gearing is adjusted to click, drag, or free running before the fishing begins, and unless for purposes of casting it is left so. Or, if the cast is made from the free adjustment the drag is put on before a fish strikes. When the click is used it is left on all the time. If the angler can afford it several reels should be owned if he wishes for more than one kind of fish which requires a change.]

BANGOR SALMON FISHING.

THIS from to-day's *Commercial* speaks well for Fish and Game Warden Allen's public spirit: "The development of Bangor's salmon fishing during the past two years is phenomenal and greatly surprising to even the leading sportsmen who have taken a deep interest in the matter from the start. We now have within the city limits the greatest fishing grounds in the country—a place where the king of fish rises quickly to the fly, and where any sportsman can enjoy a tussle with the shining beauties. Thus far it has been a source of considerable revenue for Bangor, and promises during the next few years to bring thousands of dollars into the Queen City, which will be distributed in those places where it will be of the most benefit. The fishing this year was threatened in two directions. First, out-of-town parties proposed to lease the grounds and charge such sums for their use as would prevent fishermen from away, who do not care to encourage a monopoly, from coming here. Then parties proposed to hang booms along the shore and this would stop it. Officer Allen, who has been one of the most enthusiastic sportsmen visiting this place, recognized this fact, and to prevent it secured a lease for ten years of the shore, the whole length of the fishing ground, at a nominal sum. It comprises a part of two farms belonging to Messrs. C. A. and Herbert E. Nealley, and the land lease extends from low water mark to a line parallel with the river and twenty rods from high water mark, thus giving plenty of room for the requirements of the place. Mr. Allen, in conversation with a *Commercial* reporter, says that he did not do this as a speculation, but merely to protect the grounds, which were to afford so much pleasure to the Bangor fishermen and their visitors and to prove such a source of permanent income to the city. Mr. Allen only wants to get his money back. He has been offered $500 for his lease, but would not take it, as he believed the parties making the offer did it to speculate, and this would immediately kill the summer tourist business as far as Bangor was concerned. But the best move in connection with the matter is now being made by Mr. Allen. Visitors here have complained that at the fishing grounds there was no place to leave articles, not needed at the river, where they would be safe. Mr. Allen is forming a club to be known as the "Penobscot River Salmon Club," and the membership fee in which is to be $10. The organization will be completed and will erect a fine club house on a knoll overlooking the river and close by the shore. Here there will be private closets for each member in which clothing and fishing gear can be kept. The whole house will be fitted up with an idea to convenience and comfort. A piazza will extend around it from which ladies or visitors can watch every movement of the fishermen, and without a glass, the house being so near the river. Sheds for horses are to be built on a level spot on the land which Mr. Allen has leased. Operations will commence on the house so that it will be finished by the middle of May, when the fishing season commences. Everything possible will be done by the club to perfect the accommodations at the grounds and our sportsmen should certainly feel under obligations to Mr. Allen for his efforts in the matter. A fine list of members has already been secured, headed by Mr. F. W. Ayer, Bangor's leading devotee of the fly-rod." FLY.

BANGOR, Me., March 23.

ROCKY MOUNTAIN TROUT.—Grant Co., N. M., March 15.—*Editor Forest and Stream:* The black-spotted trout, *Salmo purpuratus*, is a native of most waters in the Rocky Mountain region of New Mexico, and visitors to Lake Tahoe, Cal., may recollect the magnificent fish caught there and shipped to San Francisco, where they are deservedly considered a great delicacy. They reach a weight of about 30lbs. under the most favorable circumstances, and are much more valuable for introduction into eastern waters than the rainbow trout. It is stated that they feed on any living thing they find near them. If this be true, the feeding would be difficult as well as expensive. But I have ample evidence from my own experience that the trout in question feeds on any vegetable matter, such as cooked potatoes, beans, rice, bread, etc., and rises as readily to a crumb of bread as it does to a fly. I have on my ranch a pond about 300ft. long, 80ft. wide and 7ft. deep, which I have stocked with specimens of *Salmo purpuratus*, caught in Sapio Creek, to the number of about 1,500. They are not fed regularly, but nevertheless have greatly increased in size, the largest being now after two years, about 3lbs. They are so easily kept and such a fine flavored fish, with very few bones, that it is really a wonder that they are not introduced into eastern waters more rapidly, especially since they will stand a much higher temperature of water than the rainbow trout, and are certainly not inferior in flavor. I am not alone in this statement, as anybody can ascertain by consulting Goode's "Fish and Fisheries," Sec. 1, published by U. S. Fish Commission, pp. 475f., although the author is in error in saying that these fish will feed only on living animals.—S. S. BRANNIN.

TRACADIE TROUT.—Fredericton, N. B., March 25.—As the salmon and trout rivers of this province are to be put up for competition at public auction on the 30th, and the beautiful Tracadie is among those offered, a short account of a trip I made to it in 1881 may be of interest to some of your readers. Leaving Bathurst on July 20, we drove sixteen miles, we reached the river by night and camped at the upper forks, and put in a very unpleasant night. Next day sent the horses back. Heavy rain set in and lasted until the 24th, keeping us prisoners in camp. At last the sun showed itself, and although the river was very high I commenced operations, using a small-sized salmon fly, bronze pigs wool, topping for tail mallard wings, gold twist, red cock's hackle. The river was falling rapidly, and toward evening we camped, having dropped slowly down stream all day. My basket had nine trout, biggest 2lbs. 4oz. Next day I set to work with a will; total by evening 62 trout weighing 70lbs.; biggest fish 3lbs. 8 oz. On the 26th I had same number of fish, gross weight 86lbs. 8oz.: biggest 4lb. 4oz. The next morning I caught 15 fish weighing 21lbs. 12 oz., and then gave up, as we had a half tub of salted trout and no more salt. Flies for Tracadie should be large, with orange or lemon bodies, mallard wings and plenty of tinsel. I caught some of the heaviest on phantom minnows. We saw no sight of salmon.—CHAS. A. BRAMBLE.

A SHOAL OF INFANT BASS.—Some years ago, while fishing in the Chiniere, a stream running through a swamp in Louisiana, in crossing a little stream two or three feet wide and a few inches deep, which was brawling along among twisted roots and driftwood, my attention was arrested by what was, to me, a novel and very interesting sight. There was a tiny waterfall, about 12in. high, formed by the little stream falling over a large root or half-buried log. Here I discovered at the foot of the fall, an accumulation of something like half a peck of little black bass, one to two inches in length. They were crowding upon one another, and by a snap-like motion jumping up over the little cataract one or two per second. After watching them for quite a while, I made an effort to capture some of them to serve as bait for their parents in the stream a little way off, but only succeeded in getting two or three, which were too small for my purpose, the little army dispersing into a pool below.—COAHOMA.

ALBANY FLY-CASTERS' ASSOCIATION.—Albany, N. Y., March 16.—*Editor Forest and Stream:* The Albany Fly-Casters' Association was organized yesterday. The tournament held last fall has been the means of creating great enthusiasm among fishermen here, and the desire to organize just such an association has been earnest and strong. Our object is to improve our members in the science of fly-casting and to hold an annual tournament "to compare excellence in the use of rod and reel." We hope to have the good will of FOREST AND STREAM. The officers elected yesterday were: President, W. W. Hill; first Vice-President, D. H. Fonda; second Vice-President, Dr. Herman Bendell; Secretary and Treasurer, Walter D. Frothingham. Executive Committee, Thomas W. Olcott, Lansing Hotaling, Fred K. Wood, W. G. Paddock, B. F. Reese.—WALTER D. FROTHINGHAM (69 State street, Albany, N. Y.).

TROUT IN THE HACKENSACK.—A few days ago Mr. Clarence Haines, of Jersey City Heights, was netting shrimps in a small brook fed by a spring from Glendale woods, which empties into the Hackensack River within 200ft. of the west side race track, when he scooped up a trout of 10in. in length weighing nearly half a pound. Our informant was not aware that brook trout often run down into salt water, but this is the case in Long Island and other parts, where they are not prevented from doing so by the warm waters of large streams.

SAUGERTIES FISH AND GAME CLUB.—This club, of Saugerties, N. Y., has elected the following officers: President, T. B. Keeney; Vice-President, John Seamon; Secretary and Treasurer, J. P. Russell. The club proposes to stock the Esopus Creek and other waters, and to secure vigorous enforcement of the laws.

THE FIRST SHAD FROM THE HUDSON.—The cold spring has delayed the shad season in the Hudson. The first fish is usually looked for about the middle of March, but on Monday, March 28, it was taken in a fyke-net at South Beach, Staten Island, by Benj. Sharrott.

THE MINNESOTA COMMISSION.

WE HAVE the report of the Fish Commissioners of Minnesota for the two years from July 31, 1884 to July 31, 1886. In 1884 the work was largely with the lake trout and whitefish. With the latter, with what were received from the United States Fish Commission, there were over 20,000,000, which exceeded the capacity of the hatchery, and therefore, one-half of these were planted in Lake Superior when the embryo was well developed in the egg. Later on the remainder were hatched and planted near Duluth. During the same year there were planted in the inland lakes and waters of the State 625,000 wall-eyed pike, 8,000 California mountain trout, 50,000 landlocked salmon, 39,000 black bass, 289,000 brook trout, 261,000 lake trout and 3,105 German carp. In all over 11,000,000 fish for the eighteen months ending Dec. 31, 1885. In 1886 the plant reached 12,692,550.

A very creditable collection of fishes, native of the State, was made for the World's Exhibition in New Orleans. The taxidermic processes of this collection were managed by Messrs. L. B. Wyant & Son, while the coloring of the specimens was done by Commissioner R. O. Sweeny. After its return the collection will be placed in the State hatchery.

The increasing demand for more fish compelled an addition of hatching capacity, and during the past summer an addition to the building, 20x40ft., has been made, which doubles the capacity of the former hatchery. Much annoyance has been felt from lawless men working in a gravel pit, whose meddlesome presence and thieving compelled the building of a high board fence, topped with barbed wire, and heavy gates like a fortress, and even then the garrison had to be reinforced by a special policeman and a corps of bulldogs to keep out these persistent marauders and free-booters.

The new United States hatchery at Duluth is described at length, with seven full page illustrations of sections and elevations, as well as floor plans. This is followed by some extracts from the Bulletin of the U. S. Fish Commission, one on the "Preservation of Fresh Fish," by Prof. J. Cassar Ewart, and another on "Preserving Fish in Scotland by the Roosen Process," by Oscar Malmros. Tables of the distribution of the fish, and of the expenditures of the Commission complete the report.

THE WISCONSIN COMMISSION.

Editor Forest and Stream:

By the Commissioners of the State of Wisconsin up to the 26th of March, there have been distributed 2,750,000 brook trout fry to 194 applicants. When our season is over we expect this number to be increased to considerably more than 3,000,000, and the number of applicants to some 225. There have been distributed, also, some 425,000 lake trout, and there are about the same number still at the hatchery at Madison. At present there are in our hatching troughs about 500,000 of mountain trout eggs and fry, and when the season closes our output will be nearly one million. At the Milwaukee branch hatchery there are some 50,000,000 whitefish eggs in the process of hatching, and it is intended, when the proper season arrives, to fill that hatchery with wall-eyed pike eggs. There is a very large demand for these pike, and though during 1885 and 1886 there were 18,000,000 distributed, we have applications on file now for more than double that number.

There are four hundred applications on file for brook trout for this season, representing more than 7,000,000 fry. In consequence we have been obliged to reduce the allowance for each applicant very considerably, and even then we will be unable to fill more than one-half of the applications. From the fact that numerous boards of supervisors, through their chairmen, are applying for these fry for the various streams within their jurisdiction, it can be seen that the general public of the State are taking a deep interest in the stocking of their streams.

There have been two important bills in connection with our fishery interests introduced before the present session of the Wisconsin Legislature, and though not yet become law there is no doubt of their going through all right, both of them having passed through the Senate. The old laws are remodeled and condensed and the waters of the State are divided into two classes. The Great Lakes and their bays, and the inland waters. The bill in connection with the Great Lakes prohibits any person from catching, buying, selling or having in their posession any whitefish of less weight than 1½lbs. round or 1lb. dressed. It also divides the coasts into four districts and appoints a warden for each district, and these wardens are to devote their whole time in seeing that the provisions of the bill are carried out. During the last few years there has been an enormous slaughter of young whitefish from ¼ to 1½bs. in weight, and I think this bill will have the desired effect. The fishermen themselves are strongly in favor of it and evidently see that it is to their interest to allow the fish to reach an age at which they are of some commercial value and also reproducers of their kind.

The bill in reference to the inland waters appoints a close season for each of our better class of fish, prohibits spearing except in Lake Winnebago for sturgeon and in the Mississippi and allows no nets except dip-nets from Nov. 25 to Dec. 15. No brook trout will be allowed to be shipped out of the State and no person will be allowed to catch or have in their posssession trout (brook or mountain) of less than 6in. in length.

As an evidence of the general popularity of the Board of Commissioners and the good results of their past labors, the present Legislature unanimously passed an appropriation of $12,000 per year for the next two years. The vacancy caused by the death of the late J. V. Jones, of Oshkosh, was filled by the appointment of the Hon. E. S. Minor, of Sturgeon Bay, who, from the fact of his having been a practical fisherman and living on Lake Michigan for the past thirty years, will prove of great assistance in the considerations of the board. JAS. NEVIN, Supt. Fish Com.

MADISON, March, 1887.

THE GRAMPUS.—The United States Fish Commission schooner Grampus, whose lines and plans we recently published, will soon go on a cruise from Cape Hatteras to Cape Cod. The object of this cruise will be observation, research and collecting. The schooner is now fitting out with all the necessities for the trip, and will be commanded by Capt. Henry Collins, brother of the former commander and designer of the vessel.

SHORT LOBSTERS.—Boston, Mass., March 24.—Deputy Fish Commissioner F. R. Shattuck made complaint against Chas. L. Barnes, 194 Lincoln street, for having in his possession the tails of lobsters which the Government said belonged to those of less than 10½in. in length. These tails were pickled, and the evidence showed had been purchased in Maine in that condition, there being no law in Maine prohibiting the business. Expert testimony was introduced on both sides as to the probable length of the lobster when alive, judging from view of the tail out of the shell after being boiled and after being pickled. The case was tried last week before Chief Justice Parmenter, under acts of 1884, section 84, chapter 91, Public Statutes, which provides for the preservation of these crustaceans and says a penalty of $5 for each lobster less than 10¼in. found in defendant's possession. The defendant contended that the lobsters when alive were of lawful length, and that they were not taken in this commonwealth, and that our statute could not apply to dead lobsters brought from another State, because to so construe it would make it repugnant to the Constitution of the United States, which clothes Congress with exclusive powers to regulate commerce between the States. The court reserved its decision until to-day, when defendant was found guilty and sentenced to pay $100 and costs. This is the first case of the kind ever tried in this commonwealth.—HUBBARD.

CALIFORNIA COMMISSION.—Sacramento, March 17.—*Editor Forest and Stream:* The terms of Messrs. Dibble and Buckingham, members of the State Board of Fish Commissioners, having expired, Governor Bartlett has appointed in their stead Hon. Joseph Routier, of Sacramento, and a gentleman named Harvey, of Los Angeles. Of the latter nothing is known here, but Mr. Routier is an old and respected resident of this county, and will make an excellent official. He is a Frenchman by birth, but an American in everything else. He has been Senator from this county, and is one of the leading fruit-growers of this section—an intelligent, energetic man, and one who will give the State good service.—N. E. WHITE.

FIXTURES.

DOG SHOWS.

March 29 to April 1, 1887.—Inaugural Dog Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence. Entries close March 15.

April 5 to 8, 1887.—Third Annual Dog Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass. Entries close March 19.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

April 19 to 22.—Fourth Annual Dog Show of the Philadelphia Kennel Club. E. Comfort, President.

April 26 to 29.—Second Annual Dog Show of the Hartford Kennel Club. A. C. Collins, Secretary, Hartford, Conn.

May 3 to 6, 1887.—Eleventh Annual Dog Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent. Entries close April 18.

May 24 to 27.—Inaugural Dog Show of the Michigan Kennel Club, at Detroit, Mich. Chas. Weil, Secretary, Newberry and McMillan Building, Detroit, Mich. Entries close May 10.

FIELD TRIALS.

Nov. 7.—Third Annual Field Trials of the Western Field Trials Association. R. C. Van Horn, Secretary, Kansas City, Mo.

Nov. 21.—Ninth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings County, N. Y.

December.—First Annual Field Trials of the American Field Trials Club, at Florence, Ala. C. W. Paris, Secretary, Cincinnati, O.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4827.**

INTESTINAL OBSTRUCTION IN DOGS.

Editor Forest and Stream:

Having read Dr. Grinnell's interesting article upon intestinal obstruction in dogs, I would like to add a word to it and relate my experience with this very fatal disorder. I have now observed several cases of it, and have had recourse to laparotomy twice for the relief of this condition, both operations being followed by good recoveries. The cases are as follows:

No. 1. A pointer bitch, two years old, showed signs of obstruction, the belly becoming tense and tympanitic, by which is meant that on percussion with the fingers it gives a hollow, drum-like sound. The animal was in considerable pain, maintained the attitude of partial flexion, was very feverish, and took no food. She had passed no fæces for over 48 hours, though calomel and jalap had been administered by her owner. I decided to perform an operation with the consent of the owner, who saw that the bitch could be saved by no other means. Ether was given, and an incision 5in. long made in the abdominal wall. The intestines were pulled out and kept warm by clothes wrung out of hot carbolized water. I speedily found a large tumor in the small intestine, and cutting over it, removed a mass nearly the size of a hen's egg, consisting of a nucleus of bone, surrounded by matted hair, whose fibers were strongly agglutinated together. The intestine was stitched up with a catgut ligature, and then the intestinal walls were strongly sutured with iron-dyed silk. Two rings were screwed into the floor, at about 2ft. distance from each other, and the animal's legs were fastened to these, she lying on her side. An eighth of a grain of morphine was injected, and the bitch made a good recovery.

The other case was nearly similar, but the impaction resulted from a piece of turkey bone which stuck crosswise in the intestine. The animal recovered soon after the operation.

In France a number of dogs are gored by wild boars every year, so that the intestines fully protrude from the abdominal walls. These are rudely stitched up by the game keepers, and a large number recover, so that the probabilities are that the operation is a procedure which gives many chances of good results in cases where death is unavoidable without it.

It is a fact, however, that some puppies may have signs of intestinal obstruction, who have in reality ulceration of the intestines. I saw such a case a couple of years ago in a beagle a few months old. There was absolute retention of faeces, no bloody passages, great fever and prostration. After death I found over a hundred small round ulcers throughout the large and small intestines.

My conclusion is that it is advisable to perform laparotomy in any case of obstruction occurring in adult dogs, if they cannot be relieved by the means set forth by Dr. Grinnell. The operation can hardly be performed by one who is not a physician, but any doctor can do it with facility.

The dressing which I used after the operation consisted of a large pad of absorbent cotton soaked in carbolized glycerine and water, covered with rubber protective, and kept on by a bandage applied pretty tightly around the body.

I should be very glad to hear something more about this very interesting subject. G. G. VAN SCHAICK, M.D.

NEW YORK.

THE BENCH SHOWS.

NEW YORK.

NEW YORK, March 25.—*Editor Forest and Stream:* The following gentlemen will act as judges at our coming show: Mastiffs, Herbert Mead, Esq. St. Bernards, James Mortimer, Esq. English bloodhounds, Newfoundlands, Great Danes, bulldogs, bull-terriers, Scotch, Dandie Dinmont, Bedlington and Skye terriers, dachshunde, Basset hounds, Roland H. Barlow, Esq. Pointers. J. O. Donner, Esq. English setters, J. M. Tracey, Esq. Irish and black and tan setters, W. H. Pierce, Esq. Spaniels, J. H. Winslow, Esq. Fox-terriers and Irish terriers, Percy C. Reid, Esq., of England. Pugs, black and tan terriers, Yorkshire terriers, toy terriers and toy spaniels, Dr. M. H. Cryer. Deerhounds, greyhounds, poodles and Italian greyhounds, J. R. Pierson, Esq. Beagles and foxhounds, W. F. Streeter, Esq. Collies, T. H. Terry, Esq. Miscellaneous classes, Messrs. Barlow and Pierson. H. Clay Glover, V. S., will act as veterinarian.—JAMES MORTIMER, Supt.

BUFFALO.

At a meeting of the Buffalo Kennel Club held in this city March 15, the secretary was instructed to notify your paper that the dog show recently held here was not under the auspices of the Buffalo Kennel Club and was in no way connected with it. It was entirely a one-man money-making scheme of Mr. Chadyne, the owner of the building in which the show was held. This gentleman, hearing of the organization of the Buffalo Kennel Club, made use of its name; this was objected to and a committee appointed to wait on Mr. Chadyne and request him to discontinue the use of the club's title. He agreed to do so, and nothing further was noticed until the prizes were awarded, when the cards given to winners were found to read: "First Annual Bench Show of the Buffalo Kennel Club." This breach of faith should be known by all exhibitors at the late show, as the prizes they received were not given by the Buffalo Kennel Club.—THE BUFFALO KENNEL CLUB, per CHAS. B. COOK, Sec'y.

DETROIT.

We have already received over 300 applications for entry blanks which will be mailed by March 31, and the prospects are that we will have six to seven hundred dogs at our show. They come from all parts of the country, from Maine to Dakota, and from nearly all portions of the South. Our premium list will contain fully $3,000 worth of prizes, including special prizes which are so arranged that every first prize winner wins one special or more. One range valued at $50 is offered to the exhibitor making the largest number of entries. Two more $50 ranges; nine $25 silver cups, besides many cash specials and other useful articles too numerous to mention, make up the special premiums. We have secured the services of Messrs. J. M. Taylor, Cleveland, and J. F. Kirk, Toronto, as judges; and Mr. George H. Hill, Madeira, Ohio, as superintendent, which latter fact will assure all exhibitors that their dogs will be properly taken care of.—CHARLES WEIL, Secretary.

BOSTON.

The following is the official list of entries at the Boston show: 41 mastiffs, 83 St. Bernards, 13 Newfoundlands, 19 deerhounds, 16 greyhounds, 6 Chesapeake Bays, 100 pointers, 89 English setters, 81 Irish setters, 46 Gordon setters, 2 Irish water spaniels, 7 clumbers, 14 field spaniels, 55 cockers, 33 beagles, 1 basset, 9 poodles, 20 bulldogs, 32 bull-terriers, 53 fox-terriers, 5 Scotch terriers, 4 Irish terriers, 4 Dandies, 8 black and tan terriers, 15 Skye terriers, 34 Yorkshires, 42 pugs, 24 King Charles, 24 miscellaneous, 47 selling class. Total, 1,027. The above includes all the leading champions of the day.—BENCH SHOW COMMITTEE.

PITTSBURGH.

New specials are $25 cash for best collection of not less than five terriers; $5 for kennel man showing largest and best-conditioned collection of English setters; $5 for best pair of Irish water spaniel bitches. The date of closing the entries has been made Monday, April 4, after which positively no entries will be received. The entries are coming in rapidly and everything indicates a fine show. L. F. WHITMAN, Supt.

PHILADELPHIA.

We have added to our list of premiums classes for Great Danes or Ulmer dogs, $10 for first and silver medal for second; bitches $10 and silver medal.—W. H. CHILD, Sec.

SHOW REPORTS.—*Editor Forest and Stream:* I read Mr. C. H. Mason's critique on the Buffalo show with much pleasure. He shows no diffidence in dealing with the faults of the dogs and in saying what they really are. To a superficial observer it would appear that the prize winners were dogs in whom most of the possible defects of the canine race were pre-eminent; but we must recall FOREST AND STREAM'S reply to an exhibitor who had been more than ordinarily ruthlessly dealt with. I cannot remember the exact words, but they were to the effect that the object of criticism was to bring out the bad points of the dogs under discussion, not the good ones. Then, after pulling the spaniel prize winners to pieces without mercy, Mr. Mason concludes by saying: "It is a pleasure to judge such a class," or words to that effect, showing that the dogs, in spite of their faults, were as a class above the ordinary run. No dog lives who is without defect. Owners look on the faults of their pets with all too lenient eyes; but a judge or reporter, happily for the success of breeding, is not blinded by his love. He will, and especially Mr. Mason, let the public know everything that is wrong, and this is as it should be. I am actually beginning to tremble when I think of the mauling Mr. Mason will most probably give my dogs in his critique on the Newark show, should they be so fortunate as to be placed. It isn't pleasant, but it's wholesome, and I trust he will continue through the season as he has begun it.—C.

CURRENT NOTES.—The Hillside Kennel has recently imported the well-known fox-terriers Richmond Dazzle and Richmond Myrtle. Each has won a large number of prizes in England and they will now try conclusions with the cracks of this country.... Baltimore will probably "wheel into line" and hold a dog show in connection with the County Fair next September, at least the members of the Baltimore Kennel Club are agitating the subject with good prospects of success.

DARKEY.—*Editor Forest and Stream:* My worthy friend Doctor Niven has been "smiling (?) all the afternoon" (how about the patients?) because I passed over a few of Darkey's conspicuous defects and called attention to others that had hitherto escaped the Doctor's notice. I felt sure that in adopting such a course I would not be misunderstood, but as I have been I will make my meaning clearer by adding that I have always believed the Doctor capable of distinguishing between long ears and short ones. The object of a report is to instruct.—CHARLES H. MASON.

CAMERON'S RACKET.

From the American Kennel Register, March, 1887.

CAMERON'S RACKET.

[From the American Kennel Register.]

OUR illustration this month represents the white, black and tan beagle dog Cameron's Racket (A.K.R. 4010), owned by A. C. Krueger, Wrightsville, Pa. He was bred by Gen. R. Rowett, well-known as a successful breeder. Racket was whelped March 4, 1881, and is by Rally (imported Sam—imported Dolly), and out of Louise (Lee—Rosey). Rosey is full sister to Rally. Racket, it will be seen, is full of the blood of the Rowett strain. He has a magnificent head, good eyes, and beautiful, well hung ears that spread over 16in. He has a grand chest, capital legs, with plenty of bone and substance throughout. He has been shown but once, at Cleveland, last year, winning first and the special prize, a silver cup, of the American-English Beagle Club, for the best dog in the open class, and was also one of the winning kennel. He is also the sire of winners, among them is Schellhass's Trailer (A.K.R. 2525).

THE NEWARK DOG SHOW.

THE third dog show of the New Jersey Kennel Club was held at Newark, N. J., last week. The show in many respects was a very good one, and we regret to say that the club are out of pocket several hundred dollars. The members of the club worked hard and deserved success, but a dog show costs money, and unless the public will turn out to see the dogs, loss must be the result. As we stated last week, the benching by Spratts Patent was very attractive in appearance, but several changes are required to make the system perfect. The first thing to be attended to is the removal of the sharp points of metal that are on nearly every one of the partitions; we noticed several dogs that had been cut by them, one at least severely. Some of the exhibitors complained of the draught of air through the open partitions, and others that the dogs were more quarrelsome than under the old system; the latter did not strike us as being the case. The dogs were certainly more noisy than at any show we remember. Experience will undoubtedly suggest other changes. The feeding dishes are a great improvement, as are the metal cards to designate the prizes.

The judging in some of the classes caused considerable dissatisfaction, but as is usually the case those who had the least cause to find fault were the loudest in abusing the judge. The experienced exhibitor has become used to it and we begin to think rather likes it an account of the fun he has in showing up the errors. While deeply sympathizing with the judges and profoundly sorry to disagree with them we must nevertheless dissent from some of their decisions, our reasons for so doing will be found in our comments upon the dogs. There was considerable confusion caused by carelessness in placing the numbers on the wrong dogs, and in a number of instances the judge was obliged to go over the class a second time in order to straighten the matter out.

A special prize for the best dog in the show should never be given, as it is always very unsatisfactory; at Newark it was simply a farce. Instead of following the usual course of bringing the best of each class before the full board of judges and having the matter decided by them, all of the judges except Mr. Pentz were absent and the matter was urged upon him, and Mr. J. E. I. Grainger, who had judged none of the classes, was appointed to assist him. After boiling the matter down to two dogs, a pointer and a setter, the judges failed to agree, and Mr. Orgill, after much urging, consented to decide between them and gave his vote to the pointer. The prize is offered for the dog that comes the nearest perfection, no matter what his breed may be. Now, there were at least a dozen dogs in the show that under the conditions are better entitled to the prize than the winner; a number of them were not even taken into the ring. The list of good dogs was a long one. Commencing with the catalogue the rough-coated St. Bernard Duke of Leeds, the smooth-coated Leila, the greyhound Mother Demdike, the deerhound Chieftain, the pointer Naso of Kippen, the English setter Cora of Wetheral, the Irish setter Tim, the cocker spaniel Miss Obo II., the collie Flurry II., the beagle Cameron's Racket, the bull bitch Britomartis, and the fox-terrier Richmond Olive, are all more perfect specimens of their several breeds than is the winner of his. We have devoted space to this matter, believing that special prizes of this nature can serve no interests of the breeder or exhibitor.

Following is a list of the judges: St. Bernards, Mr. K. E. Hopf; mastiffs, Mr. Chas. E. Wallack; pointers and setters, Mr. Jacob Penz; spaniels, Mr. S. R. Hemingway; collies, Messrs. A. S. Apgar and James Mortimer; beagles and basset hounds, Mr. N. Elmore; Skye and Yorkshire terriers, toys, King Charles and Blenheim spaniels, Mr. Colin D. Anderson; remaining classes, Mr. J. F. Kirk. Veterinaries, Messrs. H. Clay Glover and W. H. Arrowsmith.

ST. BERNARDS—(MR. HOPF).

The showing of St. Bernards was very fine, many of the best specimens in the country being present. Nineteen of the 57 entries were the property of the judge and were not for competition. Duke of Leeds, looking well, carried off the honors in the rough-coated champion dog class, and his kennel companion Rhona had a walk over in the bitch class. In the open dog class, the recently imported Sir Charles was placed first, with Cyrus, Bosco II. and Rene, all well known, following in the order named. We were greatly impressed with the size of Sir Charles, and at first glance thought him a very easy winner, but a close examination showed that he is not nearly so good as we thought him. His head lacks St. Bernard character, he is too narrow in chest and his forelegs are not quite straight; his body is short for so large a dog, he is light in quarters and has a bad coat. Cyrus, placed second, has greatly improved; his head and feet will never be first-class, but his body is grand. Bosco II., placed third, has a capital head and good coat, but is light in body. There was not much to choose between the three. We preferred, however, Cyrus for first, Bosco for second and Sir Charles for third. Rene, well-known, was placed fourth. In the bitch class first went to Beda, a nice-bodied bitch with a good coat and nice tail carried too high. She has a mastiff-like muzzle and is underhung, which gives her a bad expression. She also might be better in forelegs and feet. Empress, second, and St. Bride, third, might have changed places. There is not much to choose between their heads; both are faulty, but St. Bride is the better in many other respects. Jupiter of Clover Patch won first in the dog puppy class. He is fairly good with a body above the average; he is rather round in skull and lacks expression. Casius, winner of second, is too young to show; he is light of limb but may improve. Beppo, third; is too round in skull and weak in muzzle; he does not carry his ears well and is not flat enough in coat; his forelegs and feet are fairly good. There was but one entry in the bitch class, not a good one; and she was given he.

In the smooth-coated champion classes the well-known Don II. and Leila had no competitors. In the open dog class the small but typical Rigi won with ease. Second went to Eric, somewhat improved since we saw him last. Prince Eugene, winner of third, is houndy and lacks character. The bitch class was a poor one. There were but two competitors and first went to Thisbe, and third to Flora II., second being withheld. Neither is up to first-class form. Adonis, the winning dog puppy, is rather promising; he is fairly good in head and body, with legs and feet above the average. Jupiter, winner of second, also promises well. He is slightly underhung, a bit short in back and his tail is curled. Prince E., third, is good in body but too round in skull and has badly carried ears. There were no bitch puppies shown.

MASTIFFS—(MR. WALLACE).

The mastiffs were few in number and lacking in quality. There were no entries in the champion classes. Ilford Caution, looking well, outclassed the others in the open dog class. Chinalette, winner in the bitch class, is a big bitch fairly good in skull and body, her muzzle is too long and lacking in volume; she is also light in bone and might be better in feet. Wacouta Rose, winner of second, won first at Buffalo. Regulus, the winning dog puppy, has improved somewhat since last fall and bids fair to turn out a fair dog. There was nothing else in puppies worthy notice.

NEWFOUNDLANDS—(MR. KIRK).

Two Newfoundlands only were shown. Of these, Follie, not a good one, was much the best. Flora, given second, was not worth a card, she has a retriever head and a curly coat.

GREAT DANES—(MR. KIRK).

This class also had but two entries. Don Carson, winner of first, won second at Buffalo. Rex, winner of second, has a passable head, but is too small and light in bone.

GREYHOUNDS—(MR. KIRK).

Only seven greyhounds were shown in the four classes Mother Demdike, looking fairly well, was alone in the champion class. In the open dog class Pembroke, the winner, is well known. Hector, winner of second, is a big, leggy dog, too long and light in loin; vhc. would have been enough for him. Sister in Black, looking fairly well, was alone in the bitch class. St. Leger and Stormy Day, first and second in the puppy class, are promising youngsters; we preferred the latter for first place.

DEERHOUNDS—(MR. KIRK).

Chieftain and Perth, both well known, were alone in the champion classes. In the open dog class Bras, first, should have exchanged places with Highland Laddie, winner of second. The latter is a grand dog with few faults, while Bras is faulty in shoulders and too flat in ribs. In the bitch class first went to Ramona; she well deserved the place. Only one puppy was shown, Brenda; too short in head and weak in chest to compete in good company.

POINTERS—(MR. PENTZ).

In the champion class for large dogs Robert le Diable had a walk over. He was shown too thin and was not looking nearly so well as when at the field trials last fall. Although his coat was bright and his flesh hard, he was lacking in muscle and his loin showed decidedly weak. Mealy, the only entry in the bitch class, was absent. In the open dog class Nick of Naso was properly placed first. He was in good condition and looking better than we ever saw him. Nick came to the show to defend the honor of his kennel, fearing that the other dogs might get away with Jimmie, but when Jimmie's number went up for second, Nick was ready to eat himself for having stood in the way of his redoubtable friend. Captain Fred and Tammany, respectively third and fourth, comprised all in the class worthy notice. Joe, vhc., is coarse and bad at nearly all points and should not have received notice. All of these dogs have been previously described and are well known. Tammany, although he has gone the wrong way, should have been second, with Fred third and Jimmie fourth. In the bitch class first went to Phyllis. We have seen this bitch twice before, but did not handle her. Had we done so, we should have called attention to her deformed breast bone. Had Mr. Pentz handled her as he should have done, we are sure that she would not have won. She is a good-looking animal but her deformity should have kept her out of the money. Lady Snow, placed second, was well shown, as was Temptation, third. Kate VIII., placed fourth, was much too fat, but notwithstanding her condition she should have been first. She shows more pointer character than all the others. Temptation was the next best one, with Lady Snow very near her. Bracket, looking well, was alone in the champion class for small dogs. He did not compete for the specials. The bitch class had no entries. In the open dog class Naso of Kippen made his first appearance in public and scored an easy win. We first saw him at our office last fall, and again at High Point during the field trials, and were very favorably impressed with him. A careful examination proves him to be even better than we thought him. His faults are few and not serious, his eyes are a trifle small and not quite dark enough in color; he is also a trifle throaty and a bit coarse in tail, his feet are rather larger than we like, but the pads are of good thickness and the toes are well arched. His head is good, as are his shoulders, chest, back and loin, his quarters are capital and his legs are first-class. He was clearly entitled to the special prize for the best pointer. Second went to Naso of Devonshire, rather a well made dog, with a poor head and coarse tail; he was in capital condition. Naso Boy, third, has a fair head, with good legs and feet; he has light eyes, flat loin and a long, badly carried tail. Bon Ton, well known, came fourth; except his bad head, he was better than the last two. Rip, vhc., is about the worst Rip that ever received a card. Hector, hc., is much better, as he has a fair head and good legs and feet. In the bitch class first went to Glauca. She is a fairly good bitch, rather plain in head and too wide in chest; she is also too round in body and a trifle out at elbows; she has fair legs and feet, and a good tail not well carried. Penelope, winner of second, should have been content with

the three letters, which she deserved for her good quarters, legs and feet. She is too weedy and snipy to get into the money. Modesty, third, although not in good condition, is far ahead of her. Dress, vhc., deserved her card. Queen Bow, hc., is better than any in the class, although Glauca is very close to her. Kent Queen, c., should have been higher up; she is not good in head and forelegs, but otherwise quite fair. Jessy Bang Bang won first in dog puppies. He has a poor head with small ears that are set on too high; he is also slack in the back and is light in bone. He should have exchanged places with Pomery Sec, winner of second, a better dog in head, neck and quarters, and with more quality. The third winner was winner of second in the aged class. There was not much to choose between him and Jessy Bang Bang for second place. Mayflower, winner in the bitch class, has improved, and was much the best in the class. A very moderate unnamed one was second. Maindell was lucky in having no competition for third place.

ENGLISH SETTERS—(MR. PENTZ).

There were three good dogs in the champion class. Foreman, looking very well, carried off the prize. He was a bit lucky, as both Rockingham and Plantaganet are better dogs. Rockingham, notwithstanding his lack of coat and flesh, was hard as a board and should have had the prize. In the open dog class first went to Royal Prince II., a catchy-looking dog with a good head and chest. His eye is a trifle light, his ears are not well carried and his neck is too thick and short; his shoulders are a trifle heavy, and he might be better in stifles, pasterns and feet. About third would have been enough for him. Royal Albert, his litter brother, was placed second. He is the better dog and should have been first. His head is good except that the skull is a trifle too round and his muzzle is not quite clean; he is good in ears, neck and chest, and shows considerable quality. His ribs are not sprung quite as much as we like, and his quarters drop a trifle too much. He was not in good condition, and will probably improve in loin and quarters with proper care. Pride of Dixie, placed third, won second at Buffalo. He should have been content with the three letters in this company. Rollo, the winner of fourth, is a much better dog. We liked him for second place. His head is a trifle plain looking, but aside from this he has no very bad faults, and is one of the best movers in the class. Gene, unnoticed, is about good enough for fourth place. He is a fairly good dog but did not show up well in the ring. In the bitch class, Cora of Wetheral had an easy win. This is the first time that she has been shown in good condition; she came out in grand form and won the special for the best English setter. Mavis, placed second, should have changed places with Daisy Foreman, winner of fourth. Mavis is snipy, slack behind the shoulders and bad in her feet. Princess Belton, placed third, is fairly well formed, but does not show much quality; her head and eyes are not quite right, and she does not move well. Daisy Foreman, fourth, was the second best in the class; she was well shown. Countess, vhc., is of fair shape, but her wild eye, snipy muzzle and poor coat were hardly worth the three letters. With the exception of the winning bitch the puppies were a poor lot, and she must improve to win in first-class company.

IRISH SETTERS—(MR. PENTZ).

Chief just managed to beat Blarney in the champion dog class, and Molly Bawn won in the bitch class over Hazel and Trix. The latter begins to show her age. In the open dog class all of the winners are well known except Kerry, the winner of second. He is a good-looking dog with a nice coat of good color; his head is heavy and his eyes are bad, while his forefeet turn out so much that he is almost deformed. His full brother Donigall, two years younger, is a cripple from the same cause. Tim, placed fourth, although not in first-class form, was easily good enough for first place, and just about good enough to have won the special. Bruce, looking well, should have been second instead of third, and Gerald, winner of first, was the third best, with Banker a good fourth. Begorra, hc., has been hunted until recently and was not in show form. We failed to find Bessie Glencho, winner of first in the bitch class, in her stall, and only saw her in the ring. She has a good head and a nice coat of good color. Yoube, second, is not so good behind as she was. Nellie, third, has greatly improved, and looked about as well as any in the class. Fourth was withheld. Jessie, hc., was good enough for the place. Ready, vhc., was rightly placed, she is well made but too small. The winning dog puppy has a nice coat of good color, but will have to improve at many points to win in good company. The winning bitch is quite promising, with good chest, back, loin and quarters. She is a trifle wide in skull, and her coat is not straight about her neck; it is of good color and may come straight with proper care.

BLACK AND TAN SETTERS—(MR. PENTZ).

Argus, looking better than we have seen him for some years, beat Nora in the champion class. In the open dog class first went to Don, winner in the puppy class here last year; he has a fair head, chest, back and loin and good coat; his forelegs and feet are faulty and his quarters are too light. Gazette, placed second, is a fairly good dog; his eyes were poor; he lacks stop, is a trifle flat in loin and light in forelegs; he is fairly good in chest, body, quarters and feet, and has good color and markings. Edo, third, is not a good specimen; he is faulty in head and feet, light in bone, leggy, and has a curly coat. Phil, vhc., we failed to find in his stall. Unless he has gone wrong since last year he is close to the first two if not ahead of them. Roxie, the winning bitch, is plain in head, flat in loin, light in quarter, and stands too low in front. She has good legs and feet and a good coat. She won the special for the best Gordon bitch, but should not have beaten Nora, a better bitch. The others in the class were not up to show form. Rose, winner of third, was second at Buffalo. Topsy, vhc., was not worthy notice; she is round in barrel, and her front legs come out close together. Only two puppies were shown, both bad ones.

SPANIELS—(MR. HEMINGWAY).

In champion field spaniels Newton Abbot Lady won over Compton Bandit; both are excellent specimens. Bandit has the best of it in head and feet and length, but is not quite so low, and his coat was not quite up to the mark; he should have won, however. In the open class Rob, the winner, looked well in the ring, but we failed to find him in his stall and consequently have no notes on him. Newton Abbot beat the others in the class easily for second place. Nonesuch, third, has gone wrong in forelegs and is rather light in bone. In the champion class for cockers Shina won over Brahmin and Marion, both excellent specimens; she also won the special, which should have gone to Miss Obo II. In the open dog class, liver or black, Doc and Brant were given equal first; Brant is the better dog and should have been first with Doc second. Ned Obo, looking well, was a good third, and Dixie, quite a fair puppy, should have been fourth. Miss Obo II. had an easy win in the bitch class; she was in good form and is about as good as we have. Widow Cliquot, placed second, was looking fairly well. Lady Pluto, winner of third, is fairly good, with head a trifle heavy for a bitch; her muzzle is not deep enough and she is not quite straight on her forelegs. In the "any other color" class first went to Don, looking well. Fanny, second, has a good body but her muzzle is short and pointed, and her ears are not right; she is also light in bone and stands too high on her legs. The puppies were a better lot than we generally see and nearly all of them received mention. Newcastle was alone in the champion class for Clumbers. The open class brought out two newcomers in Johnny and Drake. A cut of them appeared in FOREST AND STREAM some months ago. All four of the entries were of the same litter. Mr. Richardson, the owner of Newcastle and Tyne, very gracefully handled Johnny in the ring and landed him a winner, Drake coming second and Tyne third; Johnny was shown in capital condition; he is a very handsome dog. His head is too much of the setter type; not full enough at brow; he is much too high on his legs and is short of feather on his forefeet. Drake is lower on his legs and better in head than Johnny, but his eyes are bad and his expression is not good; he is also rather light in bone.

COLLIES—(MESSRS. APGAR AND MORTIMER).

Reported by Mr. C. H. Mason.

I will comply with the request of your kennel editor and send you a few lines on the collies at Newark. Pray remember, however, that "Shadow" is not the only man that is being hard worked. Throwing up coppers is a new way of finding out who is best qualified to wear the ermine at an important show; yet that is how Mr. Mortimer got the appointment at Newark. Many of the collie exhibitors wished to appoint a collie judge to fill the vacant place, but the Broadway firm insisted that Mr. Mortimer would be the right man in the right place. The wily penny favored Mr. Mortimer and so the valuable collie sweepstakes and other prizes were decided by a judge of collies and a judge of bulldogs. It is unnecessary to say this is all wrong or that the action of the Collie Club was severely censured. Suppose Mr. Barlow and Mr. Mortimer, appointed to judge bulldogs, Mr. Barlow an absentee, and a friend of Mr. Apgar insisting upon having that gentleman appointed in Mr. Barlow's stead. What would be said? Mr. Apgar has never owned or taken an interest in bulldogs, and Mr. Mortimer has never owned collies or been in any way identified with the breed. Or how would it look if the owner of a few third-rate native foxhounds should insist that I be appointed to decide the native foxhound sweepstakes. And how did it look when Mr. John E. Grainger coolly strutted into the judges' ring at Newark to decide which dog was the best in the show? Such things look exactly what they are—rot. I have explained how Mr. Mortimer got into the judges' ring at Newark and I hope "Shadow" will tell us how Mr. J. E. Grainger got there. New York, I am told, has established the very dangerous precedent of allowing men to appoint themselves judges. It is soon enough for a man to judge when he is wanted by exhibitors. This statement will be verified sooner than some persons expect.

Taken as a whole, the classes were away ahead of anything ever seen in this country. Robin Adair being entered for exhibition only, left Roy Boy a walkover for the champion medal. Had Mr. Terry's dog competed the result would have been the same. Roy Boy, while not first-class, is far better than Robin in head, coat and quarters. Lady of the Lake, a bitch of more than average merit, although not first-rate either in head or coat, placed the champion medal for bitches to Mr. Terry's credit; and then came the non-champion dogs. It was a splendid class of twenty-five entries, Dublin Scot, the well-known Irish champion, being among the number. As this dog is out of coat I will not criticise him beyond saying that he is a good one. Glenlivat, Mr. Watson's grand young dog, was not only lame but was in bad form, and should never have been sent to the show. His condition was a sad misfortune, as there was nothing to beat him for the sweepstakes had he shown up as he did at Buffalo. Scotilla, by Dublin Scot—champion Flurry, a rare bred and good-looking one, was in my opinion a very easy winner. He has a very nice head, almost perfect ears, superb mane and frill, profuse coat, not quite straight about the quarters; body, legs, feet and tail much above average—a very grand dog. Scotson, second prize, has not improved since I placed him first at Waverly last fall. He is not so good in head as he was and carries his ears badly at times. Clipper, third prize, is in great form just now, and I like him best of any for second place. His tail is carried much too high and his ears are not quite right; he is also rather short between the couplings and lacks size; shows character and quality. Nullamore was Mr. Apgar's choice for fourth prize, Glengarry Mr. Mortimer's. The latter has grown very strong in head and his coat has not hardened. Nullamore is well known and was fully described in my report of the Buffalo show. Seeing there was no probality of the judges agreeing, Messrs. Peshall, Shotwell and Wenzel requested me to settle the disputed question. This I refused to do, and Mr. Kirk was called into the ring. He incurred the displeasure of No. 44 Broadway, but gave the prize to the better dog, Nullamore. Shirley, hc., is a promising young dog, rather soft in coat at present and not quite clean in head. I would have given him another letter. Strephon has improved immensely in coat; he shows considerable collie character and is an excellent sire. Robin Hood is too soft in coat. The judges had not proceeded far with the open bitch class before it was apparent to the onlookers that there would be a hitch in the proceedings. This proved to be the case. Mr. Mortimer wished to give first prize to Lady Ellis (Hempstead Farm Co.'s) and Mr. Apgar cast his vote for Flurry II. All I need to say is that Flurry II. is a superb specimen—the best bitch ever exhibited in this country—and that between the two there is no comparison. Flurry II. beats Lady Ellis in every point. The fight for second place really lay between Helen and Clifton Maid. The latter is growing rather coarse in head, and Helen is too soft in coat at present. Both are good bitches. Mavis, a well-bred one, was vhc. Her owner and myself are never likely to agree about her merits excepting for breeding purposes. She is very slack in the back, and her forelegs and shoulders won't do for me. Rutland Maid, hc., is too small and cloddy; her head is just fair; she has plenty of coat and an excellent brush. Daisy Dean, vhc., is too soft in coat for a show bitch. Spoiled Miss should have been noticed. She is a much better bitch than Daisy Dean. This was an excellent class. The Chestnut Hill Kennels made a clean sweep of the puppy prizes, winning first and second in each class. They are a nice even lot, but there is nothing among them up to the form of Scotilla or Flurry II. Scottish Hero, first in the class for dogs, is a sable and white of more than ordinary merit. Skull rather round; ears not well carried; eyes and expression good; body and quarters fairly good, forelegs and feet very nice; tail rather short and carried very badly. Dublin Scot, Jr., second prize, is a trifle round in head, muzzle might be longer; expression not quite right, ears not carried sufficiently erect, loin flat, shoulders, chest and quarters fairly good, stifles nicely bent, good brush; legs and feet all right, mane and frills scanty; coat on flanks too short and soft; should improve. He is better than the average, but will probably grow too strong in head. Karo, third prize, is heavy in skull; ears small, but not well carried; eyes rather light; back, chest and loin fairly good, hocks rather straight, forelegs not set on quite right; coat rather soft, should improve; brush carried too high; shown much too fat; properly placed. Scot's Bairn, first in bitches, shows her good breeding. Skull and muzzle fairly good at present; ears small, but not well carried; expression good, chest, back, shoulders, quarters and hocks all fairly good: frill and mane scanty; coat too soft, will improve; brush fairly good; shows quality. Hazel Thorpe made a good second. CHAS. H. MASON.

BEAGLES—(MR. ELMORE).

The beagle classes were the best that we have ever seen, both in number and quality. Rattler III. was alone in the champion dog class, Little Duke, the only other entry, being absent. Myrtle also had it all her own way in the bitch class, Brush failing to put in an appearance. The open dog class was a hot one, every dog receiving at least a hc. Cameron's Racket won well, also winning the special for the best in the show. Rattler, placed second, and Trailer, third, are well known. The latter has grown heavy and is a trifle out at elbows. My Maryland, fourth, is also going wrong, although still a good dog. Goodwood Rattler and Jupiter, both vhc., are well known. Chimer, also vhc., is a recent importation. His head is too heavy and he is a trifle too long behind; he is otherwise good and a wormanlike-looking hound. Kino and Little Prince, both hc., are well-known. Look, also hc., we do not remember to have seen before. He is fairly well formed, but weak in muzzle, very throaty and a trifle out at elbows; his tail is a bit too long and he might be a shade shorter in body. In the bitch class first went to Lou, a very handsome little bitch; she is somewhat snipy and out of coat, otherwise she is very good; she was shown too fat. Krueger's Dot, second, is not quite so good in ears as Lou, but decidedly better in muzzle and coat and fully her equal in other respects. There was not much to choose between them, we rather preferred the latter. Gip, third, is snipy and throaty, but otherwise very good; she deserved the place. Thorn II. is in whelp and was not in show form; her head lacks expression and her ears are a trifle short and pointed, otherwise she appears to be a nice little bitch; she should, however, have been content with three letters and given way to Jessie, vhc., she has a better head and her equal in other respects. All of the others in the class received vhc. Melody, Trinket, Vixen, Betty, Virginia and Nellie are well known. Dot III. is too broad in skull, throaty and a bit loaded in shoulder. Blue Bell is not good enough to rank with the others and should have had one letter less. She is off in head and coat and out at elbows. Vickey is a nice little bitch with lots of quality. She does not carry her ears just right and is a trifle too long cast. The winning puppy is a promising little dog. We liked Whisper, winner of third, for second place. She is good in body, legs and feet and has a capital coat and brush; she is off in muzzle and carriage of ears. Tick II., second, is snipy, throaty and is not quite straight on his forelegs.

BASSET HOUNDS—(MR. KIRK).

The two entries in this class were foxhounds and the prizes were withheld.

FOXHOUNDS—(MR. KIRK).

The only entry in this class was a very indifferent dog of harrier type.

DACHSHUNDE—(MR. KIRK).

First in this class was very properly withheld. Waldman, winner of second, is of good color, but deficient in ear and crook.

PUGS—(MR. KIRK).

Bradford Ruby was alone in the champion class. We found it impossible to get many of the small dogs out of their cages, and consequently could not compare them. We therefore shall not comment upon them.

BULLDOGS—(MR. KIRK).

All the winning bulldogs are well known and need no description. Hillside was disqualified upon the ground that he had been castrated. His appearance indicates that such is the case. Two years ago we noticed this, but upon inquiry were assured that the operation had not been performed: and we now believe him to be in his natural condition, notwithstanding that Dr. Glover and two or three others have decided that he has been castrated. Doubtless his owner will take measures to decide the matter at an early day.

BULL-TERRIERS—(MR. KIRK).

Count had a walkover in the champion class, Victoria being absent. In the open class, over 25lbs., Maggie May scored an easy win. Judas, placed second, is too thick in skull and too lippy. He should have exchanged places with Count, third, a better dog. There were only two in the small class. Silver, the winner, is too light and shows too much of the terrier. In the puppy class Young Count was placed first, second going to Queen Bess, a nice bitch with a fairly good head, capital legs and feet. She is a bit lippy and a trifle long cast. Beauty, winner of third, is not a show dog.

FOX-TERRIERS—(MESSRS. L. & W. RUTHERFURD).

In the champion classes Belgrave Primrose and Richmond Olive had walkovers. The winners in the open dog class were all at Newport last September, and were then placed in the same relative positions that they occupied here, with Luke, the winning puppy at Newport, reserve. Among the new ones we noticed Little Swell, c. He is a smart little dog and would not have disgraced the three letters. In the bitch class some of the Newport winners were absent. Safety won first at both places, and Marguerite, third at Newport, was second here, with Verdict, a very terrier-looking bitch of nice size, third. Mr. Hopkins, who has charge of the Blemton Kennel, is deserving of much credit for beautiful condition of his dogs. The first and second puppies in both classes are owned by the Blemton Kennel, and as they were removed from the show soon after the judging, we had no opportunity to examine them.

Eleven wire-hairs faced the judge and the class was divided. Trap, in good coat, won in the dog class, but was closely pressed by the second prize winner, Trophy. He is better in head and shows more character than Trap, but is not so good in coat and is too wide in front. New Year's Day, placed third, was out of coat. Meg, the winning bitch, is about the best of the lot; she shows character and is good in body and quarters; she is a bit cheeky, stands over just a trifle at knee and is a little soft in coat. Tiny Todger, second prize, was not at her best.

BLACK AND TAN TERRIERS—(MR. KIRK).

Prince, a fair looking dog, was awarded first. We failed to find him or his stall and only saw him in the ring. Second was withheld. Sprite, a nice little bitch, is clearly above the 7lb. limit and deserving of notice. Bench show committees should either raise the limit of weight in this class or instruct their judges to award prizes to deserving animals that are outside the prescribed limit. Exhibitors that enter their dogs in good faith are entitled to fair treatment.

IRISH TERRIERS—(MR. KIRK).

Geesela, recently imported, had no trouble in getting away with first. She is a capital bitch of nice type, just a bit high on her legs. Greymount, winner of second, is a capital dog with a too profuse coat, his legs are not quite clean enough. Bryan Borru, third, is weedy and lacks character, his coat is shaggy and much too long and soft on head.

DANDIE DINMONTS—(MR. KIRK.)

Meg, looking fairly well, was alone in this class. She is well known as is Rocks, the only one shown in this class for Bedlingtons.

SKYE TERRIERS—(MR. ANDERSON).

Lady Kate, the winner at Buffalo, was placed first. Countess, winner of second, is too large and short of coat. She has a good head. Towzie, third, is also too large. She has a coat of good texture, but it is not long enough.

YORKSHIRES—(MR. ANDERSON).

The Yorkshires were not a good lot. We thought them as well placed as possible. Dolly, the winner at New York last year, did not arrive until after the judging was over.

TOY TERRIERS—(MR. ANDERSON).

The classification of toys was peculiar, to say the least. It reads "any weight," while "under 7lbs." is the proper wording. The winner is 3 if not 4lbs. above this, and consequently is not a toy. Mousey, second, and Minnie Warren, third, might have exchanged places. The latter is the best in body, color and markings. These dogs were in the catalogue as weighing 2½ and 1¾lbs. respectively. This we should judge is about one-half of their weight.

KING CHARLES AND BLENHEIMS—(MR. ANDERSON).

Rosius was alone in the champion class for King Charles spaniels. There was also but one entry in the open class; first was withheld and it was given second. We could not open her cage and did not examine her. King Victor had a walkover in the champion class for Blenheims. In the open class King Pippin was placed first and Lady second. These were also fastened in their cages when we called on them.

POODLES—(MR. KIRK).

Caro, the winning poodle, is a fairly good white with good curl. Fidell, second, is a black of small size, with only a fair amount of curl. Sherry, third, was suckling a litter and not in show form. The two vhc.'s are very pretty, but not quite up to the mark as poodles. Lulu, hc., has a coat somewhat resembling that of the Irish water spaniel.

The miscellaneous classes were not well filled. Sir Lucifer, in the large class, was the only one of the three entries worthy of notice. Jap, the only entry in the small class, is just a fair Japanese spaniel, with a hard coat and bad tail.

The selling classes we did not examine.

AWARDS.

Owing to the confusion caused by some of the numbers getting changed, some of the awards were wrongly given last week. Following are the corrections and additional awards:

In mastiff dogs G. W. Purdy, Jr.'s Jumbo II. was com. In mastiff bitches J. L. Hope's Chinalette was first, instead of Meg Merrilies. In deerhound dogs J. E. Thayer's Duncan was third. In champion pointer bitches Mcally was absent. In Irish setter dogs C. W. Rodenburg's Chip was com. In bitches Yoube was second, and Ready very high com. In cocker spaniels, other than liver or black, C. V. V. Sewell's Don was first and D. B. Scott's Fanny was second. In collie dogs Chestnut Hill Kennels' Nullamore was fourth, and Hempstead Farm Co.'s Glengarry was very high com.

DEERHOUNDS.—CHAMPION—*Bitch:* J. E. Thayer's Perth.—OPEN—*Bitches:* 2d and 3d, J. E. Thayer's Ramona, Thora and Berga. *Puppies:* 1st, H. Scribner's Brunda.

BLACK AND TAN SETTERS.—CHAMPION—Inwood Kennels' Argus.—OPEN—*Dogs:* 1st, O. H. Day's Don; 2d, Inwood Kennels' Gazette; 3d, A. F. Terhune's Edo. Very high com., L. Woodworth's Phil. *Bitches:* 1st, J. H. Anderson's Roxie; 2d, withheld; 3d, W. E. Rothermel's Rose. Very high com., A. J. Dean's Topsey. *Puppies:* Prizes withheld. Com., Inwood Kennels' Graphic.

FOXHOUNDS.—Prizes withheld.

DACHSHUNDE.—1st, withheld; 2d, O. Willigerod's Waldman. High com., Associated Fanciers' Flash.

PUGS.—CHAMPION—City View Kennels' Bradford Ruby.—OPEN—*Dogs:* 1st and 2d, Dr. M. H. Cryer's Max and Buff; 3d and 4th, withheld. High com., J. H. Seeley's Peek-a-boo. Com., Mrs. J. R. Gildersleeve's Punch. *Bitches:* 1st and 3d, Dr. M. H. Cryer's Bessie and Vesta; 2d, City View Kennels' Lady Cloudy. High com., W. M. Chapman's Helen. Com., P. F. Buckalew's Dot. *Puppies:* 1st, Dr. M. H. Cryer's Dot; 2d, J. H. Seeley's Peek-a-boo; 3d, G. Bell's Pippo.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Robinson Crusoe. *Bitch:* J. E. Thayer's Britomartis.—OPEN—J. E. Thayer's Josephine; 2d, P. J. Sharkey's Rose.

BULL-TERRIERS.—CHAMPION—F. F. Dole's Count.—OPEN—OVER 25LBS.—1st and 3d, F. F. Dole's Maggie May and Young Count; 2d, J. Patterson's Judas. Reserve, C. A. Stevens's Earl. Very high com., M. Chase's Mark-eyed Victor. Com., A. Bridgman's Jack.—UNDER 25LBS.—1st, F. F. Dole's Silver; 2d, withheld. Com., C. J. Peshall's Baby. *Puppies:* 1st, F. F. Dole's Young Count; 2d, H. D. & J. R. Steers's Queen Bess; 3d, F. Lister's Beauty. High com., C. J. Peshall's Pete. Com., W. Brooks's Diamond.

BLACK AND TAN TERRIERS.—1st, B. F. Crook's Prince; 2d, withheld.

IRISH TERRIERS.—1st, C. T. Thompson's Gcesela; 2d, G. D. Fowle's Greymount; 3d, Somerset Kennels' Brian Borru. Very high com. and high com., J. Van Schaick's Naller II. and Naller. Com., H. Denning's Bounce.

DANDIE DINMONT TERRIERS.—1st, G. G. Cleather's Meg.

BEDLINGTON TERRIERS.—1st, W. W. Silvey's Rocks.

POODLES.—1st, S. A. Helfer's Caro; 2d, Mrs. J. R. Gildersleeve's Fidell; 3d, Mrs. A. Helfer's Sherry. Very high com., Mrs. Annie E. Krouse's Queen, and C. Krouse's Beauty; H. C. S. Lord Jr.'s Lulu.

MISCELLANEOUS.—Large, 1st, Glencoe Collie Kennels' Sir Lucifer. Small, S. Lord, Jr.'s Jap.

SELLING CLASS.—Equal 1st, J. H. Shepple's Sam and A. C. Wilmerding's Princetta. Equal 2d, T. Boyd's Nellie and E. J. Hawley's Oscar II.

SPECIAL PRIZES.

Best kennel mastiffs, no entry; St. Bernards, Hermitage Kennels; pointers, Westminster Kennel Club; setters, Blackstone Kennels; spaniels, J. P. Willey; fox-terriers, Blemton Kennels; bull-terriers, F. F. Dole; beagles, J. Satterthwaite; pugs, Dr. M. H. Cryer; greyhounds, C. D. Webber; collies, Chestnut Hill Kennels. Best brace fox-terriers, Blemton Kennels; collies, Chestnut Hill Kennels; St. Bernards, Hermitage Kennels; beagles, A. C. Krueger; spaniels, J. P. Willey. Best Irish setter, Max Wenzel's Chief; Blenheim spaniel, Miss Mamie Phillips's King Pippin; English setter, F. Windholz's Cora of Wetheral; black and tan setter, Inwood Kennels' Argus; Clumber spaniel, M. Richardson's Newcastle; English setter stud dog, Blackstone Kennels' Foreman; Irish setter, Max Wenzel's Chief. Best beagle dog in open classes, A. C. Krueger's Cameron's Racket; bitch, J. Satterthwaite's Lou. Best dog in show, Highland Kennels' Robert le Diable; mastiff, E. H. Moore's Ilford Caution; deerhound in open classes, J. E. Thayer's Ramona; pointer, Westminster Kennel Club's Naso of Kippen. Best Great Dane, Osceola Kennels' Don Cæsar; greyhound, C. D. Webber's Mother Demdike; Irish terrier, C. T. Thompson's Geesela; mastiff puppy, O. Brant's Regulus; Newfoundland, W. W. Silvey's Follie; poodle, C. A. Helfer's Caro; English setter puppy, Blackstone Kennels' Patience; Irish, L. & J. Backer's Irish Laddie; beagle in open class, A. C. Krueger's Cameron's Racket. Best Yorkshire, P. Casedy's Ben; pointer dog, Highland Kennels' Robert le Diable; large, the same; Gordon setter bitch, Inwood Kennels' Roxie; cocker spaniel, J. P. Willey's Shina; wire-haired fox-terrier, W. Connor's Meg; bull-terrier, F. F. Dole's Count; collie brood bitch, Chestnut Hill Kennels' Flurry II.; greyhound puppy, C. D. Webber's St. Legar; brace of greyhounds, C. D. Webber; stud pointer, C. J. Peshall's Nick of Naso; best bulldog, J. E. Thayer's Britomartis; St. Bernard in open class, R. J. Sawyer's Sir Charles; best spaniel other than black or liver, C. V. V. Sewell's Marion; collie puppy, Chestnut Hill Kennels' Scottish Hero; toy dog, J. Johnson's Pete; black and tan setter in open classes, O. H. Day's Don; best puppy the get of Graphic (2) Clifton Kennels' Pomery Sec; get of Black Prince, E. M. Oldham's Lady Abbot; progeny of Newton Abbot Lady, J. P. Willey's Miss Newton Obo; get of Foreman, G. W. Neal's Daisy Foreman; smallest dog owned by a lady in Essex county, M. A. Hanchett's Minnie Warren; best in selling class, A. C. Wilmerding's Princetta; best exhibit of fox-terrier dog and bitch and dog and bitch puppy, Blemton Kennels' Bacchanal and Safety, and Snoozer and Verdict.

COLLIE SWEEPSTAKES.—1st and 2d, Chestnut Hill Kennels' Scottish Hero and Dublin Jr.; 3d, J. Watson's Glenlivat; 4th, J. D. Shotwell's Shirley; best whelped since Aug. 1, Chestnut Hill Kennels' Hazel Thorp.

SPANIEL SWEEPSTAKES.—1st, J. P. Willey's Miss Newton Obo; 2d, E. R. Hearn's Miss Bend Or; 3d, F. L. Weston's Moral.

FOX-TERRIER TOMBOY STAKES.—Blemton Kennels' Verdict.

ST. PAUL AND MINNESOTA CLUB.—We have just formed a kennel club here, and are incorporated under name St. Paul and Minnesota Kennel Club, with officers as follows, who with J. W. Stevens compose the first board of directors: President, E. F. Warner; Vice-Pres., W. F. Bickell; Sec., W. G. Whitehead; Treas., H. T. Drake. We will hold a bench show this fall equal to any in the East.—W. G. WHITEHEAD.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

A. S. R., Baltimore, Md.—The bitch died of post-partem hemorrhage, a very fatal complication of labor. It might have been arrested, but the chances are that nothing would have saved her.

DAN'S KNOWING WAYS.

YOUR recent chapter entitled "Intelligent Dogs," was excellent, but should have had an Irish water spaniel tale to it. Here is the tale:

One afternoon last fall, after ice had begun to form I went to a little lake in the woods and shot nine ducks. Dan, my Irish spaniel, promptly retrieved each bird. The next afternoon we repaired to the same place and were soon joined by two hunters, neither of whom had any dog. Stationing ourselves a few rods apart, the ducks soon began to come in and we shot eighteen or twenty; every bird which fell to my gun Dan proceeded to retrieve, but not a duck would he touch that I had not killed. When I ordered him to retrieve for the other gentlemen he gave expression in the most emphatic and intelligible dog language to the following: "I'll get your birds, Master, but if you think I'm going into this ice cold water to fetch for anybody else, you are mightily mistaken." The gentlemen left their dead birds in the water.

A few weeks ago a woodchopper was brought to my office with a severe cut on his foot; it was found necessary to take up an artery and sew up the wound. Dan was a highly interested spectator of the proceedings. A few days later, in some unknown way, the dog received a cut, extending from the corner of the eye toward the ear. Hunting me up he exhibited his wound, and I said after examination, "That will have to be sewed up, old fellow!" Opening my surgical case I took out and threaded a suitable needle, and seating myself in a low chair said, "Come, I'm ready." Without hesitation the dog advanced, laid his head on my knee, the head so placed that the wound could be most conveniently attended to, and never made the slightest movement while I took two deep stitches. He did groan a little, though, but I have an idea that he considered it necessary because the woodchopper did.

J. F. LOCKE.

THE PROVIDENCE SHOW.

PROVIDENCE, R. I., March 29.—The inaugural dog show of the Rhode Island Kennel Club began to-day. The quality of the dogs is very good indeed. Several newcomers were shown, some of them first-class specimens. The hall is well adapted for a show, and the benches are well arranged. The show appears to be well managed and things are running smoothly. All the judging was finished to-night except the open classes in Irish setters. The weather to-day has been cold and raw, and the attendance has not been very good. Following is a list of the awards:

MASTIFFS.—CHAMPION—E. H. Moore's Ilford Caution. OPEN—*Dogs:* 1st, E. H. Moore's Minting; 2d, Wacouta Kennels' Wacouta Nap. High com., John H. Collingwood's Leo, James E. Pollard's Prince. *Bitches:* 1st, E. H. Moore's Lady Dorothy; 2d, E. H. Moore's Hilda V. Very high com., Wacouta Kennels' Wacouta Rose. High com., Wm. H. Addison's Belle.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—The Hospice Kennels' Otho. OPEN—*Dogs:* 1st, The Hospice Kennels' Eiger; 2d, The Hospice Kennels' Hadjar. Very high com., Heathfield Kennels' Rip Van Winkle and John P. Bernard's Prince. High com., W. R. Watts's Hector II. and Associated Fanciers' Rahmsee. *Bitches:* 1st, R. J. Sawyer's Beda; 2d, Associated Fanciers' Nora. Very high com., the Hospice Kennels' La Duchesse. High com., Heathfield Kennels' Recluse. Com., John P. Barnard's Florence. SMOOTH-COATED.—OPEN—*Dogs:* 1st, the Hospice Kennels' Hector; 2d, the Hospice Kennels' Montrose. Very high com., Chequasset Kennels' Lodi and James W. Dunlap's Rigi. High com., the Hospice Kennels' Wotan. *Bitches:* 1st, the Hospice Kennels' Queen of Sheba; 2d, the Hospice Kennels' Kader.

NEWFOUNDLANDS.—Absent.

GREYHOUNDS.—CHAMPION—Memnon. OPEN—*Dogs:* 1st, H. W. Huntington's Balkis; 2d, William J. Shield's Prince. Very high com., H. W. Clarke's Royce. OPEN—*Bitches:* 1st and 2d, H. W. Huntington's Lancashire Witch and Hawthorne Belle.

DEERHOUNDS.—CHAMPION—*Dog:* John E. Thayer's Chieftain. *Bitch:* John E. Thayer's Wanda. OPEN—*Dogs:* 1st, John E. Thayer's Bras; 2d, Miss Ida F. Warren's Doctor Clyde. Very high com., John E. Thayer's Duncan. OPEN—*Bitches:* 1st and 2d, John E. Thayer's Heatherbelle and Thora. *Puppies:* absent.

GREAT DANES.—1st, Osceola Kennels' Don Cæsar and Wolverine Kennel Club's Cæsar. Very high com., Wolverine Kennel Club's Juno.

POINTERS.—OVER 55LBS.—*Dogs:* 1st, E. K. Sperry's Capt. Fred; 2d, Naso Kennels' Jimmie. Very high com., C. A. Parker's William Tell. High com., Morris & Clancy's Dick. Com., C. H. Gordon's Snipe.—OVER 50LBS.—*Bitches:* 1st, Clifton Kennels' Rosaline; 2d, F. H. Aldrich's Nell. Com., Associated Fanciers' Beulah.—UNDER 55LBS.—*Dogs:* 1st, Don Quixote Kennels' Don Quixote; 2d, Keith & Smith's Coronet. Very high com., E. K. Sperry's Colonel Pete. High com., F. Vail's Naso of Devonshire. Com., T. M. Aldrich's Vanderbilt.—UNDER 50LBS.—*Bitches:* 1st, Clifton Kennels' Queen Bow; 2d, C. A. Parker's Daisy A. Very high com., Clifton Kennels' Kent Queen. High com., Keith & Smith's Cloves (formerly Yarn).—PUPPIES—*Dogs:* 1st, G. W. Lovell's Glen Graphic; 2d, Clifton Kennels' Pommery Sec. Very high com., Keith & Smith's Spot. *Bitches:* 1st, G. V. Lovell's Belle of Maine; 2d, Keith & Smith's Juno.

ENGLISH SETTERS.—CHAMPION—*Dog:* Blackstone Kennels' Foreman. *Bitch:* No entries.—OPEN—*Dogs:* 1st, F. Leonard's Royal Prince II. Reserve, G. W. Wright's Rollo. Very high com., E. V. Hall's Pride of Dixie. High com., D. A. Goodwin's Premier, W. H. Tobey's Mack B. II. Com., T. M. Aldrich's Gene; C. C. Gray's Roy Monarch. *Bitches:* 1st, F. Windholz's Cora of Wetherell; 2d, G. W. Neill's Dairy Foreman. Reserve, A. A. Welsh's Maud. Very high com., B. A. Gage's Fortuna.—PUPPIES—*Dogs:* 1st, S. Scranton's Ike; 2d, T. H. Adams's Prince Napoleon II. Very high com., J. W. Lawson's Ten Pin. *Bitches:* 1st, S. Scranton's Tassa; 2d, F. C. Sayles Jr.'s Rose Laverack.

BLACK AND TAN SETTERS.—CHAMPION—J. L. Campbell's Nora.—OPEN—*Dogs:* 1st, F. M. Harris's Tom II.; 2d, W. H. Tillinghast's Mont. Reserve, L. N. Perry's King Philip. Very high com., J. Simpkin's Slocum. High com., C. F. Malloy's Jack. *Bitches:* 2d, W. E. Rothermel's Rose. Very high com., G. Ayen's Flirt. High com., G. E. Brown's Jessica. *Puppies:* 1st, S. O. Meader's King Philip; 2d, O. Taft's Dash.

IRISH SETTERS.—CHAMPION—Max Wenzel's Chief.

IRISH WATER SPANIELS.—1st, Associated Fanciers' Duchess II.

FIELD SPANIELS, over 28lbs.—CHAMPION—*Dog:* Compton Grove Kennels' Compton Bandit. OPEN—1st, J. P. Willey's Miss Newton Obo; 2d, W. O. Partridge's Rob. High com., Compton Grove Kennels' Compton Monte.

COCKER SPANIELS, UNDER 28lbs., BLACK.—CHAMPION—J. P. Willey's Shina. OPEN—*Dogs:* 1st, C. M. Nelles's Brant; 2d, Ideal Kennels' Adonis. *Bitches:* 1st, J. P. Willey's Miss Obo II. 2d, C. M. Nelles's Juno W. Very high com., J. P. Willey's Cloe W. High com., L. Hammett's Tres Chic.—OTHER THAN BLACK—*Dogs:* J. P. Willey's Zeppo. *Bitches:* 1st, Mrs. C. S. Davol's Dottie Stubbs. FIELD OR COCKER—*Puppies:* 2d, W. H. Moseley's Benito.

CLUMBER SPANIELS.—1st and 2d, Mercer & Hill's Drake and Johnny. High com., W. T. Windram's Jockey and Romp.

COLLIES.—CHAMPION—*Dog:* Associated Fanciers' Royboy. *Bitch:* Hempstead Farm Co.'s Lady of the Lake.—OPEN—*Dogs:* 1st, Hempstead Farm Co.'s Glencarry; 2d, Chestnut Hill Kennels' Strephon. Very high com., Associated Fanciers' Karo. *Bitches:* 1st, Hempstead Farm Co.'s Lady Ellis; 2, Chestnut Hill Kennels' Luella. Very high com., Associated Fanciers' Clifton Maid. High com., Hempstead Farm Co.'s Daisy Dean. Com., Chestnut Hill Kennels' Gen.—PUPPIES—*Dogs:* 1st, Hempstead Farm Co.'s Cheviot Lad. *Bitches:* 1st, Chestnut Hill Kennels' Lorna Thorpe.

BEAGLES.—OVER 12IN.—CHAMPION—A. H. Wakefield's Little Duke.—OPEN—*Dogs:* 1st, 2d, very high com. and high com., A. H. Wakefield's Fitzhugh Lee and Racer, Jr., My Boy, Leader. *Bitches:* 1st and 2d, A. H. Wakefield's Twinkle and Silver.—UNDER 12IN.—1st, W. S. Clark's Belle. *Puppies:* 1st, H. P. Porter's Spot.

FOXHOUNDS.—1st, Thomas Shallcross's Gip; 2d and very high com., L. N. Perry's WadeHampton and Zeb Vance.

DACHSHUNDE.—Associated Fanciers' Judy.

FOX-TERRIERS.—CHAMPION—*Dog:* J. E. Thayer's Belgrave Primrose. *Bitch:* J. E. Thayer's Richmond Olive.—OPEN—*Dogs:* 1st, Blemton Kennels' Lucifer; 2d and very high com., J. E. Thayer's Raby Mixer and Raby Jack. *Bitches:* 1st, Blemton Kennels' Gretchen; 2d, J. E. Thayer's Richmond Dazzle and Blemton Kennels' Marguerite. High com., S. Hammond, Jr.'s Bunch.—PUPPIES—*Dogs:* 1st, Blemton Kennels' Mephisto; 2d, J. E. Thayer's Shameless Mixture. High com., G. B. Inches' Muddler. D. S. Booth's Dandy Mixture. *Bitches:* 1st, Blemton Kennels' Gretchen; 2d and high com., J. E. Thayer's Richmond Dazzle and Lady Mixture. WIRE-HAIRED—G. Bell's Bristles.

BULL-TERRIERS.—CHAMPION—*Dog:* F. F. Dole's Count. *Bitch:* W. J. Comstock's Victoria.—OPEN—25LBS. OR OVER—*Dogs:* W. J. Comstock's Jubilee; 2d, F. Dole's Young Count.—OVER 28LBS.—*Bitches:* 1st, F. Dole's Maggie May; 2d, H. D. & J. R. Steers's Queen Bess.—UNDER 25LBS.—*Dogs:* 1st, F. Dole's Silver.—UNDER 28LBS.—*Bitches:* 1st, H. W. Lacy's Nanon; 2d, Waldron & Brownell's Little Rhody. *Puppies:* 1st, W. J. Comstock's Jubilee; 2d, W. D. & J. R. Steers's Nanon.

BLACK AND TAN TERRIERS.—J. Whitaker's Beppo.

IRISH TERRIERS.—1st, G. D. Fowler's Greymoun; 2d, Morris & Clancy's Nancy.

SKYE TERRIERS.—1st, F. B. Kirby's Countess.

YORKSHIRE TERRIERS.—*Dogs:* 1st, Morris & Clancy's Bill; 2d, F. Noble's Charlie. High com., Mrs. Borrowscale's Dandy. *Bitches:* Withheld.

ENGLISH TERRIERS.—1st, J. S. Sweet's Dandie; 2d, Boutelle & Bicknell's Charlie.

BULLDOGS.—CHAMPION—J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, G. H. Warren's Tom Ball; 2d, J. E. Thayer's Hillside. Very high com., J. P. Barnard, Jr.'s King Cole, Jr. High com., E. S. Porter's Caliban. *Bitches:* 1st, J. E. Thayer's Josephine.

PUGS.—CHAMPION—City View Kennels' Bradford Ruby.—OPEN—*Dogs:* 1st, Dr. M. H. Cryer's Max; 2d, Mrs. R. Rose's Fraud. Very high com., Mrs. C. C. Smith's Dot, Dr. M. H. Cryer's Buff; high com., J. E. Tales's Racket, Chequasset Kennels' Thunder. *Bitches:* 1st, Dr. M. H. Cryer's Bessie; 2d, Chequasset Kennels' Lady Flossie. Very high com., A. O. Austin's Dolores, Chequasset Kennels' Victory. *Puppies:* 1st and 2d, T. H. Adams's Mayflower and Master Ruby.

KING CHARLES SPANIELS.—1st, F. B. Fay's Milwaukee Charley; 2d, Miss B. Barrowscale's Pretty Polly. Very high com., F. B. Fay's Dollie.

BLENHEIM SPANIELS.—1st, F. B. Fay's Exeter Earl; 2d, B. F. Lewis's Little Banjo. High com., F. B. Fay's Exeter Beauty.

ITALIAN GREYHOUNDS.—1st, Mrs. A. A. Morehouse's Minnie.

POODLES.—OTHER THAN BLACK—1st, withheld; 2d, Associated Fanciers' King.

MISCELLANEOUS.—1st, Glencoe Collie Kennels' Sir Lucifer.

A VEXED QUESTION SETTLED.—*Editor Forest and Stream:* I think your view that a dog turns around before lying down to see that there is no danger near, incorrect, as a dog invariably keeps his head down. I think one of your correspondents claimed a dog invariably turned from left to right. I notice this is usually the case, but have occasionally seen a dog turn in the opposite direction. "Clumber," I think, is correct in thinking a dog turns in order to arrange his bed comfortably, as it will be often noticed if a dog lies down after turning he will get up at once and turn more until satisfied. Still, "Why does he turn around?" other animals do not, in order to obtain a comfortable bed. I add the further observation that I think it will be noticed that hounds are far more subject to the trait than other dogs.—PIOUS H. A correspondent, "Blue Rock," suggests in reply to the query, "Why does a dog turn around before lying down?" that it is because he is looking for the head of his bed.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Roy Gladstone. St. George's, March 20.—*Editor Forest and Stream:* I see in a late copy of your valuable paper that Mr. F. M. Streeter, of Lehigh Tannery, Pa., claims the name of Roy Gladstone for a puppy by Iron Duke out of Trusty Gladstone. As I claimed that name over a year ago for a lemon and white dog puppy by Roybel out of Little Fraud, whelped Dec. 21, 1885, I think I have a prior claim and ask him to claim another name.—G. F. CLARK.

Sagamore Tiff. By Sagamore Kennels, West Medford, Mass., for black and white English setter dog, whelped Dec. 13, 1886, by Joe (A.K.R. 4567) out of Bessie II. (A.K.R. 3965).

Lady Floss. By A. A. Tyler & M. M. White, Rixford, Pa., for black, white and ticked English setter bitch, whelped Nov. 19, 1886, by Ted Llewellin (A.K.R. 599) out of Marcella (Prince Phœbus—Stella).

Duke Llewellin. By A. A. Tyler & M. M. White, Rixford, Pa., for black, white and ticked English setter dog, whelped Nov. 19, 1886, by Ted Llewellin (A.K.R. 599) out of Marcella (Prince Phœbus—Stella).

Noble Druid. By G. F. Clark, St. George's, Del., for lemon belton Llewellin setter dog, whelped Feb. 22, 1887, by Rex Gladstone (A.K.R. 2167) out of Blue Queen (Druid—Leda).

Sam Mc. By Samuel S. McCuen, New Orleans, La., for lemon belton English setter dog, whelped Nov. 20, 1886, by Pride of the States (Brussels—Jenny Lind) out of Dashing Noblesse (Dash III.—Mollie). (Presented above puppy to Hon. J. V. Guillotte, Mayor city of New Orleans).

Eva Mc. By Samuel S. McCuen, New Orleans, La., for blue belton English setter bitch, whelped Nov. 20, 1886, by Pride of the States (Brussels—Jenny Lind) out of Dashing Noblesse (Dash III.—Mollie). (Presented above puppy to Hon. Theodule Buisson, of New Orleans, La).

Don Quixote Kennels. By Fred W. White, Worcester, Mass., for kennel of pointers.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Bess—Miro. Geo. W. Schenk's (Burlington, Ia.) Newfoundland bitch Bess (Bluecher—Cricket) to his Miro, March 24 and 25.

Juno II.—Chick. Geo. W. Schenk's (Burlington, Ia.) Newfoundland bitch Juno II. (Major—Juno) to his Chick (Jumbo—Cricket), March 24 and 25.

Nellie—Miro. Aug. Becker's (Burlington, Ia.) Newfoundland bitch Nellie (Bluecher—Cricket) to Geo. W. Schenk's Miro, Feb. 24 and 25.

Cricket—Miro. Geo. W. Schenk's (Burlington, Ia.) Newfoundland bitch Cricket to his Miro, March 26 and 27.

Lady Obo—Master Shina. H. G. Charlesworth's (Toronto, Can.) cocker spaniel bitch Lady Obo (Obo II.—Blackie III.) to his Master Shina (Young Obo—Shina), March 19.

Ladybird Obo—Obo, Jr. H. G. Charlesworth's (Toronto, Can.) cocker spaniel bitch Ladybird Obo (Obo II.—Ladybird) to C. M. Nelles's Obo, Jr. (Farrow's Obo—Farrow's Nellie), March 14.

Belle—Gladstone's Mark. Freestone Kennels' (Portland, Me.) cross bitch Belle (Swift—Mag) to F. Thurlo's Gladstone's Mark (Gladstone—Bessie A.), Feb. 18.

Kit—Count. Walter Orer's (Philadelphia, Pa.) bull-terrier bitch Kit to F. F. Dole's Count (A.K.R. 3173), Feb. 27 and 29.

Nellie—Count. W. G. Cochran's (Philadelphia, Pa.) bull-terrier bitch Nellie to F. F. Dole's Count (A.K.R. 3173), Feb. 26 and 28.

Meg Merrilies—Prince. Harry A. Fletcher's (Woodfords, Me.) red Irish setter bitch Meg Merrilies (A.K.R. 2181) to his Prince (A.K.R. 1968), March 17 and 18.

Madge—Shell. F. H. D. Viette's (Ottawa, Ont.) clumber spaniel bitch Madge (Bell—Joan) to H. B. D. Bruce's Shell (Ben—Joan), March 19.

Joan—Shell. F. H. D. Viette's (Ottawa, Ont.) clumber spaniel bitch Joan (Flash—Flirt) to H. B. D. Bruce's Shell (Ben—Joan), March 12.

Juanita—Romulus. John E. Thayer's (Lancaster, Mass.) bulldog bitch Juanita (Tippoo—Josephine) to his Romulus (A.K.R. 389), March 13.

Meersbrook Vixen—Surprise. John E. Thayer's (Lancaster, Mass.) fox-terrier bitch Meersbrook Vixen (Meersbrook Ross—Meersbrook Model) to his Surprise (Ruby Tyrant—Richmond Olive), March 24.

Cricket—Dandy. W. J. Percival's (Stanton, Mich.) beagle bitch Cricket (Bannerman—Pet) to W. J. Percival's Dandy (Ringwood—Dime), March 3.

Rhona—Rapid B. Bayard Thayer's (Boston, Mass.) pointer bitch Rhona (Snapshot—Rose) to his Rapid B. (Bang Bang—Rue), March 13.

Flirt—Slocum. Geo. Ayen's (Providence, R. I.) black and tan bitch Flirt (Holman's Cap—Henan's Gypsie) to John Simpkins's Slocum (Turk—Beauty), March 20.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Muriel. E. Dexter's (Buzzard's Bay, Mass.) English setter bitch Muriel, late Black Eyed Susan (A.K.R. 3584), Feb. 25, ten (six dogs), by his Dashing Rover (Dash II.—Norna).

Rance. E. Dexter's (Buzzard's Bay, Mass.) English setter bitch Rance (A.K.R. 2159), March 19, eight (three dogs), by his Dashing Rover (Dash II.—Norna).

Floss. Geo. W. Schenk's (Burlington, Ia.) Newfoundland bitch Floss (Jumbo—Cricket), March 24, eleven (three dogs), by Scherer's Bluecher (Major—Juno).

Fan. Geo. L. Barnes's (Tyringham, Mass.) foxhound bitch Fan, pedigree not known, Feb. 25, four (two dogs), by his Shot (Jim—Fan).

Mistletoe. Edward Lohman's (New York city) English setter bitch Mistletoe (A.K.R. 712), March 6, six (three dogs), by B. F. Wilson's Count Noble.

Meersbrook Model II. John E. Thayer's (Hillside Kennels) fox-terrier bitch Meersbrook Model II. (Meersbrook Ross—Meersbrook Model), Jan. 29, two (one dog), by his Raby Jack (Mixture—Shame).

Cute. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Cute (A.K. R. 2632), March 12, eight (four dogs), by Dayton Kennel Club's Pop Smizer (A.K.S.B. 4093); two dogs and one bitch since dead.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Bard. Collie dog, by Strephon out of Jeannie Nettles, by Chestnut Hill Kennels, Philadelphia, Pa., to Mr. Bingham, Buffalo, N. Y.

Young Faust. Liver and white pointer dog, whelped May 21, 1883, by Waddell's Clipper out of Bow Queen, by Oakdale Kennels, Westbrook, Conn., to E. G. Emmons, Chester, Conn.

DEATHS.

Verone. E. T. Sprague, Brocklyn, N. Y., announces the death of the smooth-coated St. Bernard dog Verone. Verone was well-known on the bench, having won 17 prizes.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

MUZZLE VS. BREECH MATCH.

A TOURNAMENT of muzzle vs. breechloading rifles will be held at Jamestown, N. Y., May 17 to 20, under the auspices and rules of the Anderson Rifle Club, of Syracuse, N. Y., C. H. Remer, President. The projectors explain that for more than a year the shooting public have been agitating the merits of muzzle and breechloading rifles. On one side can be found a band of earnest, thoughtful sportsmen, who think that wonderful scores in shooting can only be reached by men who use muzzleloading rifles, but on the other hand stand a band of equally careful, intelligent men, who are convinced that such an idea is an error, and who advance logical statements in favor of breechloaders. The controversy that has arisen over such a wide difference of opinion has been waged with ability by the friends of both systems, and there is hardly a sporting paper in the world that has not published logical and well written articles on the subject, which contain apparently good and sufficient reasons why each system is the true one. But unfortunately all of this has really settled nothing, for you cannot alter a fact by citing isolated cases. Because one man has made a wonderful success with a muzzleloading rifle there is no justice in condemning the use of breechloaders. And again, because a phenomenal target score has been made by a second sportsman with a breechloading rifle, it is not wise to call upon sportsmen to cast aside their muzzleloading rifles. Then, there is but one way, and that is to put this question of pre-eminence to the test of practical experiment. Let the best shots in the world who favor either muzzle or breechloading rifles meet in friendly contest, and let the official records decide this question.

The home of the champions of muzzleloading rifles is at Jamestown, Chautauqua county, N. Y., and for this reason the Anderson Rifle Club, of Syracuse, N. Y., has secured the use of the range of the New York, Pennsylvania and Ohio Shooting Club, known to riflemen as the "Nypano Club," located at Falconers, on the N. Y. P. & O. R. R., at the crossing of the D. A. V. & P. R. R., two miles from Jamestown, at which place it will hold a tournament where this momentous question can be fully and fairly decided. Jamestown is easy to reach, has the advantage of a perfectly appointed range, fine hotel accommodations, and visiting riflemen can be assured that they will be hospitably received and fairly treated.

The programme of the tournament has been carefully arranged, with a view of giving both muzzle and breechloading rifles equal advantage.

Each day there will be $75 divided into five prizes, giving $22.50 as the first, $18.75 as the second, $15 as the third, $11.25 as the fourth, and $7.50 as the fifth prize. In addition there will be a cash prize of $10 for the best average made each day by any one contestant, providing that such contestant enters in all of the strings fired during that day. While this applies daily during the shoot, still another cash prize of $50 is offered to the contestant making the best average during the entire tournament.

The conditions of entry will be $5 for a first entry fee each day. Any contestant can re-enter by the payment of $1 for each re-entry.

The shooting distance shall be 40 rods, and the standard weight of rifle 10lbs., not including telescope sights. In determining the weight, where there are fractions of a pound, more than one-half shall be reckoned as one, and less than one-half as nothing. Rifles weighing more than 10lbs. shall be handicapped one-tenth of an inch for every pound in excess of standard on each string of ten shots, and rifles weighing less than 10lbs. shall be entitled to a reduction of one-tenth of an inch for every pound under the standard.

Globe or peep sights shall be regarded as the standard. Telescope sights to be handicapped 10 per cent., and single-muzzle lenses 5 per cent.; open sights to have deduction of 5 per cent.

Muzzleloaders shall be handicapped 5 per cent. of string after all other allowances have been made.

Shooting will be muzzle and shoulder rest, from bench, box or table, which will afford good support for shooter and gun, but muzzle of gun must have nothing attached to it in shape of cross piece or foot rest to hold it level, and the breech must have no support except upon the person of the shooter.

Any shooter may have all the flags he chooses to provide, with the understanding that none are to be placed so they can by any possibility swing into the line of fire of any other contestant.

Address for complete set of rules C. H. Remer, Syracuse, N. Y.

RANGE AND GALLERY.

BOSTON, March 26.—There was a fair attendance at Walnut Hill Range to-day, but the shooting was difficult on account of high wind, and few scores were finished. Following were the best scores finished to-day:

Decimal Off-Hand Match, 200yds.

W Charles (mil.)	8	10	9	10	7	5	8	9	8	8—82
R Davis	10	5	4	10	9	9	6	10	10	7—80
J B Missann	7	9	8	7	8	8	6	9	7	6—75
G B Yenetchi	7	7	9	10	8	6	7	7	9	8—77
A C Alton (mil.)	9	6	6	8	6	7	8	5	7	9—71
F Carter (mil.)	5	7	10	7	7	9	6	10	5	7—70
J P Bates	9	6	4	7	2	10	7	7	7	6—65
D Chardon	6	6	6	4	9	5	5	3	7	8—59

Rest Match, 200yds.

J R Munroe	10	11	10	10	9	9	10	10	10	10—98
R Dadman	10	9	10	10	10	9	9	10	9	8—94
W H Oler	10	9	10	9	10	10	9	9	8	9—93
J B Fellows	9	10	8	9	9	10	7	10	10	10—92
J Hurd	10	6	9	9	8	9	9	10	10	10—90
G B Yenetchi	9	10	9	9	8	10	9	10	7	9—90

ST. LOUIS, March 23.—At the last meeting of the Pistol Club Lee V. D. Perret again won the medal, scoring three times in succession. Under the conditions the medal now becomes his personal property. Mr Perret wished to present the club with the medal, but the members declined it, he having worked hard to win it, and another medal will be shot for under slightly altered conditions. It will be seen by the score that Perret and Clark tied on 115. The following are the scores, possible 120:

L V D Perret	12	12	12	11	11	12	10	12	12	10—115	
W Clark	12	12	12	12	12	12	10	11	12	12—115	
W L Wells	12	11	12	12	12	12	11	10	12	10—114	
W B McDowell	12	12	11	10	11	12	10	12	12	12—114	
W J Lard	11	12	12	10	12	11	12	11	11	12—114	
U G Sims	12	11	11	12	11	12	11	11	12	10—113	
E Mohrstadt	11	11	0	12	10	12	12	12	12	11—112	
H M Jones	12	12	12	12	12	11	11	8	12	11—112	
M C Billmeyer	12	12	11	12	12	0	10	11	11	11—111	
G Alexander	12	10	12	12	11	11	10	12	11	9—110
